**mousikos aner** The cultivated and educated man, learned in *paideia* and the arts of the Muses. Following H. I. Marrou, the term is used to describe the deceased whose \*portraits appear as men of learning or \*philosophers on Roman \*sarcophagi decorated with scenes pertaining to the intellectual life, especially during the 3rd century AD. The deceased, in contemporary \*dress and \*hairstyle, is shown reading, in contemplation, teaching, or declaiming, alone, accompanied by his wife or \*family, or in the presence of a larger audience of historical or mythological figures, such as ancient philosophers or the Muses. These deceased were not necessarily professional men of letters; some were private individuals who wished to advertise their learning. This iconography expressed the deceased's adherence to philosophy as a way of life and as a means of achieving inner peace in the present world and salvation in the next, a preoccupation that certainly resonated with the spirit of the times. This mode of representation was also employed for children, especially boys, and for women, though mostly in order to display their achievements in the \*musical arts. The theme of the learned man is encountered on Christian sarcophagi, though on these it is the study and contemplation of the \*Bible, rather than the Classics, which is proclaimed as the path towards a good life and salvation.

Zanker, *Mask of Socrates*.

**Movses Kaghankatvatsi (Movses Daskhurantsi)**

Traditionally the author of *History of Albania*, the only account of the history of Late Antique Caucasian \*Albania. The treatise was written or preserved in \*Armenian. Movses was most probably of Albanian origin and is also known as Movses Daskhurantsi. The *History* is not a uniform work and has several chronological layers. It has been suggested that Kaghankatvatsi and Daskhurantsi are two different persons, the former living in the 7th century and the latter in the 10th.

**Movses Khorenats'i (Movsēs Xorenačl, Moses of Chorene)**

Author of a *History of the Armenians*, and purportedly a student of Mesrop \*Mashtots', creator of the \*Armenian alphabet c. AD 406. The author of the

*History* claims that it was composed by command of his patron, Smbat \*Bagratuni. Many scholars, however, now maintain that Movses could not have composed his work before the 8th or even the 9th century. Movses is not mentioned before the 10th century. Furthermore, it would have been problematic to claim Bagratid patronage in the 5th century after the apostasy of the Bagratunis and their absence from, if not their total antipathy to, the Armenian cause at the Battle of \*Avarayr in 451. There are, indeed, historical and geographical anachronisms which indicate a late date of composition. Also the *History* makes use of \*Armenian sources written after the stated date of composition as well as sources translated into Armenian well after the 5th century. There are, to be sure, interpreters who insist upon a 5th-century date of composition, as well as interpreters who ascribe the difficulties in the text to faulty copying and corruptions in the textual tradition. But it was after the 10th century, when his work grew popular through quotations from it in other sources, that Movses became known as the *patmahayr*, the father of Armenian history.

Movses begins his work with a Genealogy of Greater Armenia which reconciles the prior history of Armenia with biblical and so with Christian history. For example, the eponymous hero of Armenia, Hayk (from whose name are derived the words Hayot's ashkharh, Hayastan, the names which Armenians give their land), is said to be descended from the biblical house of Torgom. Movses continues by supplying invaluable information for the intervening period about the pre-\*Arshakuni dynasties of the Orontids and the Artaxiads, before concluding with the history of the 4th and early 5th centuries up to the death of Mashtots'.

The *History* certainly has historical merit. Much of what is reported has been substantiated by archaeological and epigraphic witness. Contained in its pages is the oral literary tradition of Armenia's age of \*paganism. It also certainly preserves materials from Western classical and earlier Armenian sources.

Among other works previously attributed to Movses is an important geography which is now generally held to have been composed by the 7th-century Armenian mathematician and scientist \*Ananias of Shirak. LA Thomson, *BCAL* 156–68. ET (with comm.) R. W. Thomson (1978).

**mowbed** Middle \*Persian title of 'Master of the Magi' in \*Zoroastrianism, also attested in \*Armenian as *magpet*. The Zoroastrian high priest \*Kerdir (Karter) was called 'the mowbed of \*Ohrmazd' under \*Hormizd I (r. AD 270/2–3). As an extension of the \*Sasanian legal system, *mowbeds* engaged in administrative and legal duties in the provinces and many \*fire temples preserve caches of *bullae* (sealings), some of which sealed ratified documents. The Romans noticed their function and

\*Agathias states that 'nothing whatever is held to be lawful or right among the Persians unless it is ratified by a Magus' (Agathias, II, 26, 5). YSDV

**Mozarabic Liturgy** The Christian liturgical rites characteristic of Spain until the 11th century, when the Roman rite, brought by monks, displaced local customs. The term 'Mozarabic' refers to Moorish rule (after AD 711), but Mozarabic Liturgy pre-dates the \*Arab conquest. Canon 2 of the Fourth \*Council of \*Toledo of 633 ordered uniformity in the \*liturgy, and \*Isidore of Seville's *De Ecclesiasticis Officiis* provides evidence, as do pre-11th-century manuscripts of the rites themselves—such as the *Liber Ordinum* (CPL 1930). An illustrated book of prayers written at \*Tarragona c.700, the *Orationale Visigothicum* (CPL 2016), survives at \*Verona (Bibl. Cap. lxxxix; Lowe *CLA* 515). MFC CPL 1929–32:

**Mravaltavi** Collection of \*Georgian homilies literally meaning 'many chapters'. *Mravlatavi* is probably one of the oldest genres of Georgian literature. The \*Greek prototype of the *Mravaltavi* is the *Panegyricon*, which consists mostly of homilies on Christ and the Blessed Virgin \*Mary. Initially, the *Mravaltavi* contained some 480 texts. *Mravaltavis* were usually used as homiletical additions to \*Bible lectionaries and were translated and compiled from \*Greek homiletical and liturgical collections. The *Mravaltavi* include both original and translated homiletical works, some of them lost in their Greek originals. Such collections were popular already in 6th–7th-century \*Georgia. The oldest redactions of *Mravaltavi* are the so-called *Khanmeti* fragments (6th cent.). The oldest dated redaction is the *Sinai Mravaltavi* of AD 864. Other notable *Mravaltavis* are the Udabno, Klarjeti, Tbeti, Parkhali, and Athos *Mravaltavis*. NA *Klarjeti Mravaltavi*, ed. (with English summary) T. Mgaloblishvili (1991).

**Mren** Church in Kars vilayet (Turkey) dating from c.638. It is a domed \*basilica, divided on the interior by four piers supporting a \*dome on squinches. The west façade bears an \*inscription naming the Roman \*Emperor \*Heraclius a 'prince of Armenia and Syria', and a local lord and \*bishop. The west portal is carved with images of archangels, Christ, saints, and Armenian nobles. A carved lintel on the north portal most probably represents the return of the \*Relic of the True \*Cross \*to \*Jerusalem by Heraclius. CM

Sinclair, *Eastern Turkey*, vol. 1, 384–6.

**Mshatta** One of the largest of the so-called \*Umayyad desert \*palaces, Mshatta (or al-Mushatta) lies approximately 30 km (18 miles) south of \*Amman and has been attributed by some scholars to the reign of \*Caliph al-\*Walid II (743–4). It is particularly well known for its extensive stone sculptural decoration that embraces figurative, floral, and faunal motifs, as well as utilizing geometric and \*foliage designs on the main \*façade of the palace. This façade is now on display in the Pergamon Museum in Berlin. EL

*EI* 2 vol. 7 (1993) s.v. al-Mushatta, 675–6 (Soucek).

**Mshiha Zka** See *CHRONICLE OF ARBELA*.

**Mtskheta** The most important city of \*Iberia and its capital until the 5th century AD, 20 km (12.5 miles) north of \*Tbilisi at the confluence of the Aragvi and Kura (Cyrus) rivers. \*Ptolemy names it Mestleta (*Geography*, V, 10, 3). A \*Greek \*inscription from Mtskheta records that in AD 75 Roman engineers 'strengthened the walls' for the Iberian king. The capital and its environs, 'Greater Mtskheta', were defended with a system of fortresses of which Armaztsikhe-Baginet (Harmozica) and Seusamora (mod. Tsitsamuri) on the Aragvi River (Strabo, XI, 3, 5; Ptolemy, *Geography*, V, 20, 3) were towns in their own right. The city had three main gates. According to the Georgian chronicles, in pre-Christian times there were statues of local gods Armaz, Zaden, Gac, and Gaim and female deities Ainina and Danina in Mtskheta. A large burial ground at Samtavro and aristocratic burials at Bagineti and Armaziskhevi have produced \*inscriptions in \*Greek and Armazian (a local form of Aramaic), diplomatic gifts bearing Roman imperial images, \*silverware, and \*jewellery, and coins including Roman imperial \*aurei.

Several races, religions, and languages were represented at Mtskheta; there were Jewish and Persian (Magian) districts. Artisans and craftsmen included the chief artist at the royal \*court.

King \*Mirian, a contemporary of the \*Emperor \*Constantine I, declared Christianity a state religion. The first wooden church was built at the site where, according to tradition, the robe of Christ was buried, thus evoking the Holy Sepulchre at \*Jerusalem. It was replaced by a stone \*basilica in the 5th century, the remains of which can be seen in the 11th-century church of Svetitskhoveli (Life Pillar). Jvari (Holy Cross) Church was built by Guaram and Stephanos Eristavi, the rulers of Kartli (586–604), on a hilltop overlooking central Mtskheta, where S. \*Nino had erected a \*cross. Stone relief \*sculptures bear portraits of the donors Stephen, Demetrius, and Adarnarse and the cruciform plan is crowned with a \*dome. Guaram Eristavi also built another small church with \*mosaic decoration nearby. The 6th/7th-century churches at Samtavro called Antioch and Gethsemane allude to the analogy which represented Mtskheta as a second Jerusalem. From the 5th century onwards Mtskheta remained the principal religious centre of Georgia. MO

**Mu'allaqat** A collective term for seven pre-Islamic Arabic \*poems. The name, meaning 'suspended', appears only from the late 9th century onwards; the folk-etymological explanation claims that the poems were hung up in the \*Ka'ba in honour of their prizewinning authors. This custom, however, is not attested in any early source and it appears more likely that the name means 'esteemed'. The first selection of seven renowned poems is said to have been the initiative of the \*Umayyad \*Caliph \*Mu'awiya. The number and names of the *Mu'allaqat*'s authors vary; most medieval Arabic philologists agreed on a list containing Imru'l-Qays, Tarafah, Zuhayr, Labid, 'Antarah, Harith b. Hillizah, and 'Amr b. Kulthum. KMK

**Mu'awiya I b. Abi Sufyan** (595/605–80) \*Caliph (661–80) and founder of the \*Umayyad dynasty (661–750). Mu'awiya is a controversial figure in the Islamic historical tradition, not least because his father \*Abu

Sufyan led \*Meccan opposition to the Prophet \*Muhammad, and converted to \*Islam late in the day (c.630); he did, however, marry his daughter (Mu'awiya's sister) to the Prophet the year before this, presumably indicating a degree of mutual trust, or at least cooperative self-interest.

Mu'awiya's career—seen by his critics as vice-ridden and impious—brought its own controversies. Chief among them, from the medieval perspective, was his involvement in the community's First \*Arab Civil War (\**Fitna*, 656–61) during the reign of the fourth caliph, the Prophet's son-in-law \*Ali b. Abi Talib. This began as a conflict between 'Ali and certain Meccans—notably \*A'isha, the Prophet's most prominent widow—but escalated due to Mu'awiya's demands for redress after the murder of his kinsman, the third caliph \*Uthman b. 'Affan. Mu'awiya and 'Ali clashed at the Battle of \*Siffin (657), before agreeing to turn the matter over to arbitrators. This achieved little except to cause a section of 'Ali's support—later known as the \*Kharijites, 'those who go out'—to desert him; eventually one of these disaffected former followers murdered 'Ali, giving Mu'awiya the chance to seize power.

Modern historians also disagree about Mu'awiya, although primarily in terms of his achievements as caliph. Most have seen him as essentially an Arab \*tribal leader in the traditional mode, ruling through strategic alliances and personal contact rather than the structures of a state. Others, however, have traced a more centrally directed programme of \*administration through documentary, numismatic, and epigraphic evidence. NC *EI* 2 vol. 7 (1993) s.v. Mu'awiya, 263–8 (Bosworth).

**Mucking** Fifth- and 6th-century Germanic settlement and cemetery in Essex, England. The site exemplifies 'settlement shift' as the focus of habitation moved over time. Buildings included post-built 'halls' and \**Grubenhauser*. The \*cemeteries included both inhumation burials and cremations. Some of the deceased were accompanied by important groups of grave goods. These include a 5th-century \*belt buckle in the Quoit Brooch Style that perpetuates the Late Roman tradition of belt sets as symbols of martial status. JFG

**Mugh, Mount (Abghar)** Mountain fortress situated above the Zerafshan River, 120 km (72 miles) east of \*Samarkand, where the \*Sogdian archives of \*Dewashtich, last ruler of \*Panjikent, were discovered in 1932. Dewashtich retreated to Mount Mugh during the Sogdian rebellion of 722. When the \*Arabs besieged his fortress, the Sogdian defenders surrendered, after which Dewashtich was executed. Wooden, leather, cotton, \*silk, and wool artefacts were found at the fortress, in addition to the documents. MLD *Encliran* (2002) s.n. Mugh, Mount (G. Semenov).

**muhajirun** 'Those who have made \*hijra (emigration)'. In Muslim tradition it predominantly denotes those Meccans who accompanied \*Muhammad when he made the hijra from \*Mecca to \*Medina in 622. It also referred more widely to all those who had left their abodes in order to participate in the \*Arab conquest in the 7th and 8th centuries. \*Syriac *mahgraye* and \*Greek *moagaritai* as terms for the Arab conquerors probably imply that *muhajirun* was used by the latter for self-designation. \*Kharijites also insisted often on the duty of hijra for war. Such evidence suggests that the *muhajirun* were those who had made hijra in order to participate in war.

Muslim tradition and many academic scholars tend to see this wider usage as secondary, and to consider those who came to Medina with Muhammad as the true *muhajirun*. It is more likely that there was an evolution in the opposite direction: social and religious change made it less important to encourage migration for warfare, and Muhammad's migration to Medina became the paradigm of hijra. GRH

**Muhallabids** A family of governors and generals under the \*Umayyad and \*Abbasid \*caliphs, who appear frequently in the *History* of \*Tabari. Muhallab

b. Abi Sufra (d. c.702) rose through the ranks to become governor of \*Khorasan in eastern Iran. His son Yazid (d. 720) inherited the position, but rebelled and was killed, along with much of the family. Under the \*'Abbasids, whose rise they supported, the family came to prominence again, particularly as governors in North \*Africa in the 8th century. In the 9th and 10th centuries, the grammarian Niftawayh, the poetry scholar Sukkari, and the vizier and patron of letters al-Muhallabi were all from this same family. NAM *EI* 2 vol. 7 (1993) s.v. Muhallabids, 358–60 (Crone). Anon., *Akhbar al-dawlah al-'Abbasiyyah*, ed. al-Duri (1971). al-'Awtabi, *An Early Islamic Family from Oman: Al-'Awtabi's Account of the Muhallabids*, tr. M. Hinds (1991). Ibn Khallikan, *Wafayat al-A'yan*, ed. 'Abbās.

**Muhammad al-Baqir** (c.676/7–c.732/6) Fifth Twelver \*Shi'i Imam and father of the sixth Imam, \*Ja'far al-Sadiq. He became Imam on the death of his father 'Ali Zayn al-'Abidin (c.712–14). Muhammad al-Baqir is credited with formulating many of the fundamental beliefs of the Twelvers. He is not remembered as outwardly challenging \*Umayyad rule, unlike many of his predecessors, and is mentioned in some seemingly anti-\*Alid accounts as being positive towards certain Umayyads, in particular the \*Caliph \*Umar II b. 'Abd al-Aziz (r. 717–20). RJL Al-Mufid, *Kitab al-Irshad*: ET I. K. A. Howard, *The Book of Guidance into the Lives of the Twelve Imams: Kitāb al-Irshād* (1981), 393–406. A. Lalani, *Early Shi'i Thought: The Teachings of Imam Muḥammad al-Bāqir* (2000).

**Muhammad b. al-Hanafiyya** (c.633–700) Son of \*'Ali and Khawlah bt. Ja'far of the Banu \*Hanifa, hence al-Hanafiyya. As one of the few survivors of the Battle of \*Karbala, he was the focus of \*Alid loyalist aspirations to the \*caliphate in Iraq, where the rebel al-\*Mukhtar declared Ibn al-Hanafiyya to be the Islamic \*apocalyptic figure known as the Mahdi. Ibn al-Hanafiyya appears to have ignored this declaration, and Zubayrids eventually extinguished al-Mukhtar's rebellion. After \*Umayyad forces deposed the counter-Caliph \*'Abd Allah b. al-Zubayr, Ibn al-Hanafiyya recognized the caliphate of \*'Abd al-Malik (r. 685–705). Classical Arabic sources refer to Ibn al-Hanafiyya's supporters, who were politically quietist, as Murji'a. AJD al-\*Baladhuri, *Ansab al-Ashraf*.

**Muhammad b. Marwan** (d. 719/20) \*Umayyad commander and governor, son of the \*Caliph \*Marwan b. al-Hakam, and half-brother of Marwan's successor, \*'Abd al-Malik b. Marwan. In 692, 'Abd al-Malik appointed him as the governor of al-\*Jazira (northern \*Mesopotamia) and \*Armenia, a position that he held until 710. As governor, Muhammad led regular military expeditions across the Arab–Byzantine \*frontier. The principle source for his life is al-\*Baladhuri, *Ansab al-Ashraf*. ARH *EI* 2 vol. 7 (1993) s.v. Muḥammad b. Marwān, p. 408 (Zetterstēen).

**Muhammad the Prophet (Muhammad b. 'Abdallah)** (c.570–632) Political and religious leader from the \*Arabian Peninsula and, according to Muslim belief, the last prophet sent by God who revealed the \*Qur'ān to him.

While the Muslim biographical tradition (biographies and collected sayings of Muhammad (\*'hadith)) describes at length the events that happened during Muhammad's life and extensively comments on his charismatic personality, his habits, and character traits, the vast majority of this source material post-dates the Prophet's lifetime. The first biography (*sira*) was compiled by \*Ibn Ishaq in the mid-8th century. This text is lost and survives only in subsequent quotations and in an abridged 9th-century recension by Ibn Hisham (d. 833). Muslim documentary sources mention Muhammad from the end of the 7th century onwards, and can be linked with the generally not very detailed non-Muslim sources that refer to his prophethood soon after the time of his death. Biographical references from within the Qur'ān are not easily interpreted. While Muslims regard Muhammad as the 'seal of the prophets', affirm his prophetic role in the creed (*shahada*), and consider him an intercessor on the day of the Last Judgement, his person is deemed to be completely human and not divine.

According to the traditional Islamic account, Muhammad was born in \*Mecca into the \*Hashim clan of the \*Quraysh tribe. His father had died before the birth of his son, who also lost his mother soon after and was brought up first in the household of his paternal grandfather, 'Abd al-Muttalib (d. c.578), and then by his uncle, Abu Talib. The latter succeeded his father as leader of the Hashim. Muhammad earned his living mainly as a trader travelling the Arabian Peninsula. It is, however, unlikely that he reached faraway destinations, as suggested by the Muslim sources, which recount a meeting with a Christian monk in \*Bosra. Muhammad entered the service of a rich widow, \*Khadija, whom he married in 595. At the age of 40 (c.610), Muhammad, who used to withdraw several weeks each year in a mountain cave near Mecca, informed his wife that he had received revelations by God through the \*Angel

Gabriel (Jibril/Jibra'il) who commanded him to recite verses, which would eventually form the Qur'an. Muhammad kept his revelations secret, only telling Khadija, who was the first to accept the prophecy, and a circle of close friends, among them \*Ali b. Abi Talib, his cousin, and \*Abu Bakr. About three years after the first revelation, Muhammad started preaching his religion in Mecca; his message predominantly consisted of warnings of the Last Judgement, appeals for charity, and the call for a strict monotheism. While Islam was most likely perceived as a new religion by both Arabs and later non-Muslim observers, it is important to note that Muhammad himself did not regard himself as founder of a religion, but rather as restorer of a monotheistic faith that had already existed in Mecca since the days of Abraham (Ibrahim). After Muhammad had gained a significant number of followers, who came from all strata of society, his sermons attacked polytheism, which was prevalent in Mecca as well as in all of Central Arabia. Muhammad thus soon met with opposition by members of his own tribe, the Quraysh, who had previously only mocked his prophetic claims. The following years witnessed an increasing hostility, culminating in a three-year boycott against the Hashim. In 619, the so-called 'Year of Sorrow', two of Muhammad's strongest supporters, Khadija and Abu Talib, died. The new clan leader, \*Abu Lahab, withdrew the Hashim's protection, so far guaranteed more because of kinship ties than beliefs, making it increasingly difficult for Muhammad to preach.

After some Muslims had left Mecca for \*Ethiopia already in 615, Muhammad, lacking his clan's support, unsuccessfully attempted to establish alliances with tribal leaders from the city of Ta'if. Eventually, he found new supporters in a group from Yathrib (Medina) who promised him their protection at the 'pledges of 'Aqaba'. Muhammad left Mecca with his followers in 622 (the \*hijra) and acted as an arbitrator between rivaling tribes in Medina, creating an alliance between the city's eight tribes and the new immigrants against outside enemies. The document of alliance is preserved in later tradition and is often known as the 'Constitution of Medina'. In Medina, Islam attracted an increasing number of converts, initially from the less powerful tribes, but it soon encompassed the majority of Medina's population. Muhammad's private house functioned as the first gathering place for communal prayer and would become the model for all early Islamic \*mosques. Medina's considerable \*Jewish community proved difficult to win over, and after an initial phase of integrating Jewish rituals into Islam, these practices were abolished. While two Jewish tribes were expelled from the city, a third one was almost completely annihilated after it had sided with the Meccans. While Muslim property left in Mecca had

been seized by the Quraysh in the wake of the hijra, the Muslims started raiding Meccan caravans soon after, with Qur'anic revelations justifying these actions that were followed by several armed clashes: while the Battle of \*Badr (624) ended with a surprising victory for the Muslims, the defeat at Uhud (625) was a significant setback. Following an unsuccessful Meccan siege of Medina (627), both parties were exhausted and eventually reached a truce that allowed Muslims to enter Mecca on \*pilgrimage (628; Treaty of Hudaibiyya). Peace with Mecca gave Muhammad time to conquer the Jewish oasis of Khaybar, where the Muslims accepted a tribute (\*jizya) from the defeated, which would become a model for all subsequent treatments of monotheists under Muslim authority. The treaty with Mecca, however, was dissolved only one year later, and Muhammad launched a large-scale attack against his hometown which culminated in the relatively peaceful conquest of 630, followed by the removal of pagan idols from the \*Ka'ba and by the majority of the population \*converting to \*Islam. Immediately after, the Muslim armies secured a victory against neighbouring tribes from the area of Ta'if in the Battle of Hunayn. In the following year many other tribes accepted Islam following a call for submission. In 632 Muhammad visited the Ka'ba for the last time and regulated the rituals of pilgrimage. He died in Medina on 8 June in the house of his favourite of thirteen wives and concubines, \*A'isha, the daughter of Abu Bakr. While his three sons and three of his daughters had died before him, he was outlived by one remaining daughter, \*Fatima (d. 633), the wife of 'Ali. After his death disagreement over the right of succession arose, until the conflict was eventually won by Abu Bakr who, according to the later Sunni tradition, became the first of the four Rightly-Guided Caliphs. **al-Mukhtar b. Abi 'Ubayd al-Thaqafi** (c.622–c.687) \*Alid rebel against Zubayrid and \*Umayyad forces in Iraq and \*Khorasan. His active pursuit of political influence, socio-economic reform, and greater power for 'Alid notables, such as al-\*Husayn b. 'Ali (d. 680) and \*Muhammad b. al-Hanafiyya, attracted support from disaffected Arab and non-Arab Muslims who opposed what they perceived as unfair \*taxation by the Umayyads in \*Syria and the Zubayrid counter-caliphate during the Second \*Arab Civil War (\*fitna). Al-Mukhtar enjoyed early success in 685, and appointed governors in \*Kufa and surrounding areas in 686, but his coalition began to crumble due to internal disputes and an especially damaging fall-out with al-Ashtar, leading to his eventual defeat and execution at the hands of the Zubayrid governor of \*Basra, \*Mus'ab b. al-Zubayr (d. 691). Though short-lived, al-Mukhtar's propaganda had an enduring impact on the development of Hashimi loyalist and proto-\*Shi'i ideology, especially his popularization of the term *mahdi* (messiah or saviour, lit. 'rightly guided one') in expressing millenarian expectations. AJD

**Mulomedicina Chironis (Chiron's Medicine for Equids)**

A pseudonymous \*Latin compilation of \*veterinary medicine in \*Latin, attributed to Chiron Centaurus (Cheiron the Centaur), written c. mid-4th century in either south \*Italy, the islands, or North \*Africa. \*Vegetius (*fl.* AD 430) paraphrased it and it is through him the work remained known. Two manuscripts of the *Mulomedicina Chironis* survive. It comprises ten books detailing the medical care of \*horses, mules, and donkeys, and includes diagnosis of diseases, bloodletting, surgery, and cures. Material on breeding and mare management (Book 8) is absent from Vegetius. The bulk of the work is selected from \*Apsyrus, \*Gargilius Martialis, and Columella. MD

**mummification** Natural or artificial preservation of the \*dead was long customary in ancient \*Egypt. Mummification by evisceration and removal of the brain probably ceased in Egypt around the 4th century. Whereas, according to his *Life*, S. \*Antony expressed aversion to Egyptian burial traditions (*VAntonii*, 90), \*Abraham, \*Bishop of \*Hermopolis, in the 6th–7th century, requested burial 'according to the customs of the country' (P.Lond. I, 77). ERO

**Mummolus** (d. 585/6) \*Patricius in \*Burgundy (569–81). He replaced his father as \*Comes of Auxerre, and in 568 he led the army of \*Sigibert I and \*Guntram against \*Chilperic I, before being appointed *patricius* by Guntram. He led Guntram's army against \*Saxon and \*Lombard invasions in the early 570s, annihilating a large force of Lombards in 574. In 581 he deserted Guntram and established himself in \*Childebert II's territory at Avignon. He supported the claims of the \*Merovingian pretender \*Gundobald from 582, but betrayed him at the siege of \*S. Bertrand-de-Comminges (585), only to be executed on Guntram's orders. EJ

**music, theory and practice of** In Late Antiquity, perhaps more than in any other period of music history, music is marked by a broad gulf between theory and practice. In the West, the surviving music-theoretical writings are the product and residue of the final stages of ancient Greek music theory, whose practice (and practitioners) had long since been forgotten. Conversely, the distinctively new features of Late Antique musical practice, namely the use of music in early Christian \*liturgy, did not receive systematic (written) theoretical articulation until the 8th and 9th centuries, long after its distinctive forms and practices had originally emerged. In the Persian East, despite abundant literary and iconographical evidence for musical practice, no music-theoretical sources survive from before the \*Arab conquest.

#### *Latin and Greek theoretical sources*

Western theoretical sources sought, in various ways, to preserve and systematize a tradition of scientific speculation on the nature of music and its theoretical underpinnings. None, it must be stressed, reflects (transparently or immediately) the current state of musical practice. The tonal space they describe is that of the Greater Perfect System (a two-octave gamut built from tetrachords with variable internal structures). The tuning of the intervals and the methods of generating and dividing intervals are resolutely \*Pythagorean, premised upon number, not perception, as the primary explanatory ground for describing musical relations.

The basic musical concords (the octave, the fifth, and the fourth) are reducible to super-particular whole number ratios ( $n + 1:n$ ) constituted by the Pythagorean

tetractys: 2:1 is the octave, 3:2 the fifth, and 4:3 the fourth. Subtracting the fourth from the fifth provided the whole tone (9:8). It remained a fundamental premise that these basic arithmetical and musical ratios cannot themselves be divided equally; hence, the tone can only be divided into two unequal semitones (major and minor).

There had been in Antiquity a tradition, most fully represented by Aristoxenus and his adherents, that cleaved to an empirically driven, acoustically grounded music theory, premised upon the division of the tone into equal aliquot parts. No Latin treatise, however, presented this Aristoxenian position in a positive light. Hence, the evidence for Aristoxenian theory that Late Antiquity bequeathed to the Middle Ages was primarily negative, namely, the critique of Aristoxenian positions from a Pythagorean perspective. This had enormous consequences for the philosophical and empirical grounding of Western music theory for the next millennium.

Music-theoretical writings of Late Antiquity can be divided among three primary categories: independent textbooks, encyclopedic compendia, and philosophical commentaries.

1. Independent textbooks on music include \*Aristides Quintilianus' *On Music* (*Peri mousikes*, late 3rd or early 4th cent.), which combines the melodic richness of the Aristoxenian tradition with the mathematical precision of the Pythagoreans; \*Augustine's *On Music* (*De Musica*, 387–91), a Pythagorean treatment of music, defined in the Varronian manner as the *scientia bene modulandi* ('the science of making well measured melody'), originally conceived as one volume in a (never completed) series of works on the liberal disciplines (which was to include \*grammar, dialectic, \*rhetoric, \*arithmetic, music, \*geometry, and \*philosophy: see *Retractationes*, I, 6); and, most influentially, \*Boethius' *On the Fundamentals of Music* (*De Institutione Musica* of c. AD 510), an interpolated translation of a (no longer extant) musical treatise by Nicomachus of \*Gerasa (Books 1 to 4) and \*Ptolemy's *Harmonics* (Book 5), and likewise intended as part of a fourfold mathematical suite (arithmetic, geometry, music, and \*astronomy; cf. \*Cassiodorus, *Variae*, I, 45, 5 to Boethius). Boethius' tripartite division of music into cosmic, human, and instrumental music became a commonplace within later music theory.

2. Several large-scale encyclopedic works treat of music. They include Censorinus' *Birthday Book* (*De Die Natali*), a compendium on the measures and cycles of time (composed for the birthday of his patron Qu. Caerellius in 238). \*Martianus Capella's allegorical encyclopedia of the liberal arts, *On the Marriage of Philology and Mercury* (*De Nuptiis Philologiae et*

*Mercurii*, probably early 5th cent.), in its 9th and final book on *Harmonia* largely follows the first book of Aristides Quintilianus' *Peri Mousikes*; Cassiodorus's *Institutiones* (after 540), in its chapter on music (2, 5), draws on \*Gaudentius (by way of the now lost translation by an otherwise unknown Mutianus) and bears affinities with the Aristoxenian tradition, notably the division of music into hamonics, rhythemics, and metricals. \*Isidore of \*Seville's immense *Etymologiae* (early 7th cent.), in its chapter on music (3, 15–23), cleaves closely to Cassiodorus. Both Cassiodorus and Isidore supplemented the received ancient tradition(s) with fresh reflections on the importance of music within Christian communities, adducing evidence from the \*Bible for the power of music (e.g. Cassiodorus' *Expositio Psalmorum*) and registering the growing formalization of music within the Christian Church (e.g. Isidore's specification of the clerical offices of the *cantor*, *praecantor*, *succantor*, and *concentor* at *Etymologies*, VII, 12, 26–8).

3. Philosophical commentaries within the Platonic tradition witness the continued importance of speculation on the mathematical principles governing the harmonious combination of numbers that were thought to model both the psychological and cosmological domains. \*Calcidius' partial translation of and commentary on Plato's *Timaeus* (early 4th cent.) details the music theory necessary to understanding Plato's harmonic division of the World Soul (*Timaeus*, 35A–36D). Favonius \*Eulogius and \*Macrobius' early 5th-century commentaries on Cicero's *Dream of Scipio* likewise emphasized and explained the mathematical ratios and musical intervals necessary for understanding the harmonic structure of Platonic \*cosmology. Greek philosophical treatises and commentaries (by e.g. \*Porphry, \*Iamblichus, \*Proclus, and \*Simplicius) bear similar witness to the cosmological and therapeutic importance of music within Platonic and Pythagorean philosophy.

### Latin and Greek musical practice

The many polemics against \*pagan music and musical instruments found in patristic sources provide the bulk of evidence for non-Christian musical practices, particularly the use of music in \*drama and dancing, in \*marriage celebrations, and banquets. The instruments most frequently mentioned (the *aulos*, *tibia*, trumpet, and cithara) are familiar from classical sources; there is also concern that singing in religious contexts not be theatrical or, more specifically, performed 'in the manner of tragedians' (\*Jerome, *Commentary on the Epistle to the Ephesians*, III, V, 19; cf. Isidore, *De Ecclesiasticis Officiis*, II, 12). Nevertheless, Augustine recalled how the chanting of the Psalms moved him to tears when he first recovered his Christian faith (*Confessions*, X, 33, 50).

Throughout Late Antiquity, in processes too complex to be easily summarized, Christian liturgies developed into regional practices, including (*inter alia*) in the West, Old Roman, Milanese (\*Ambrosian), Old Beneventan, Gallican, \*Mozarabic, and Celtic chant, and in the East, Byzantine, \*Syriac, \*Armenian, \*Coptic, and Ethiopian chant practices. Through various liturgical reforms these repertoires and ritualized practices became increasingly standardized, and there emerged by the 8th century two dominant practices, Byzantine and 'Gregorian' (a Frankish adaptation of Roman \*chant), though local usages continued well after Late Antiquity.

The precise melodic contours of these early chants, however, are not preserved. While there are a few surviving \*papyri that notate \*Greek chants in Hellenistic alphabetic pitch and rhythmic signs (the sole Christian example is the \*Oxyrhynchus Hymn), these are exceptions. The preservation of the melodies across generations was handled orally and not through pitch-specific notation. As late as the 7th century, Isidore still remarks that 'unless sounds are held by the memory of man, they perish, because they cannot be written down' (*Etymologies*, III, 16, 2). The first widespread notational systems for the transmission of liturgical chant do not surface in the West until the 9th century, although homologies across disparate traditions suggest that the melodies are considerably older.

In the East, rich \*hymn-traditions flourished, including \*troparia, \*kontakia, and *kanones*, composed by \*Greek hymnographers, the best known being \*Romanus the Melodist (d. after 555), \*Andrew of \*Crete (c.660–740), and \*John of \*Damascus (c.675–c.749). The earliest surviving \*Latin hymns are those of \*Hilary of Poitiers (d. c.367), whose *Liber Hymnorum* survives only in fragments. The \*Ambrosian tradition of hymnody, centred in \*Milan and Rome, seems to have had simple enough melodies to allow the congregations to sing them together—Augustine famously recalls that \*Ambrose taught a congregation hymns to sing during the sit-in at a \*basilica at Milan in 386 (*Confessions*, IX, 7, 15). The liturgical distribution of hymns among the canonical \*Liturgy of the Hours is first prescribed in the 6th-century (Gallican) rules of \*Caesarius of \*Arles and Aurelian of Arles, and the *Rule* of S. \*Benedict prescribes hymns at all the Hours, but only specifies the use of the Ambrosian hymns (*Aeterna Rerum Conditor* at Matins, *Splendor Paternae Gloriam* at Lauds, and *Deus Creator Omnium* at Vespers).

### Persian musical practice

\*Zoroastrian and \*Manichaean hymnody is well documented in the Late Antique East, but nothing is known of the (presumably) musical performance of the hymns (though manuscript evidence for Manichaean hymns

preserved in the \**Manichaean Psalm Book* suggests an antiphonal structure). There is, however, direct evidence for the use of music at Zoroastrian \*festivals such as \*Nog Ruz (the Iranian New Year).

Likewise, there is good literary and visual evidence for a lively musical culture at the \*Sasanian \*court, and accounts of social structure in \*Persian literature prescribe a fixed place for minstrels (MP *gosan*), though they differ in the details. The \**Letter of Tansar* claims that \*Ardashir I (r. 224–42) numbered minstrels (along with scribes, physicians, and astronomers) among the third estate of the realm; the much later testimony of al-\*Mas'udi (*Muruj al-Dhahab*) indicates that Ardashir gathered singers, minstrels, and musicians into their own courtly class (within which there were distinctions of rank). The \*Pahlavi dialogue *On King Khosrow and his Page* (*Xusrov i Kavatan ut retak; Khosrow ud Redag*) names at least eight musical instruments, but many identifications are uncertain: the \**chang* (harp), *vin* (a lute type?), *vinkannar* (a lute type?), *mustak* (mouth organ), *tambur* (long-necked lute), *barbut* (a lute type?), *nad* (flute), *dumbalak* (hand drum). Later sources (e.g. Ferdowsi and Tha'labi) also attest to the patronage of minstrels by the Sasanian shahs and nobility, e.g. the accounts of \*Barbad, Sarkash, and Nakisa, the famous musician-poets of \*Khosrow II (r. 590–628). Barbad is traditionally credited with the composition of seven Royal Modes (*khosrovani*) and an additional Thirty Modes (Ar. *si lahn*), but they survive only as (corrupt and often suspect) names in much later sources (Ferdowsi, Manuchehri, Nizami). Whatever their irrecoverable sonic reality, they have become, as best we can tell, a literary construction that forged an imaginary soundscape for the minstrel tradition of the era before the \*Arab conquest. **Mutina** (mod. Modena, \*Italy) *Colonia* in \*Aemilia et Liguria, with visible centuriation, on the Via Flaminia, traversed in 333 by the \*Bordeaux Pilgrim (616) on the way north to \*Milan. The Tetrarchic \*Prices Edict associates the \*city with woollen production (19–21). \*Constantine I's forces besieged Mutina during his campaign against \*Maxentius in 312 (\*Nazarius *PanLat* IV (X), 27, 1). \*Bishops are known from the late 4th century, but none for most of the 6th and 7th centuries. In 589 the city was damaged in serious floods, recorded by \*Paul the Deacon as the worst 'since Noah' (*HL* III, 24), exacerbated by changing \*settlement patterns and land use. Settlements in the area were abandoned; hoards not of treasure but of \*pottery and other domestic articles, deposited by whole communities in c.550–625, have been recovered from eleven wells in the area. From 570 onwards the territory was disputed between the \*Lombards and the Byzantines at \*Ravenna. \*Rothari the \*Lombard defeated the \*exarch nearby on the River Scultenna in 643 (\**Origo Gentis Langobardorum*, 6; Paul the Deacon, *HL* IV, 45). OPN *TIR* L-32, 97–8.

**Myos Hormos** \*Harbour for \*trade in \*incense and Indian Ocean goods on the Red Sea coast of \*Egypt, located 8 km (5 miles) north of modern Qsueir al-Qadim, initially misidentified as Leukos Limen. The harbour was founded in the Ptolemaic period perhaps under Ptolemy II, enhanced in the Roman period by a pier 60 m (197 feet) long, made of \*amphorae and in use until the 3rd century, when the lagoon silted up. Like \*Berenice, the harbour was connected to \*Coptos on the Nile by a path protected by military forts. Although Berenice revived between the 4th and 6th centuries, no archaeological evidence has been found at Myos Hormos past the 3rd century. In the Islamic period (12th–15th cent.) another port settlement was founded outside the lagoon along the northern shoreline of the Red Sea.

KS  
D. P. S. Peacock and L. Blue, *Myos Hormos-Quseir al Qadim* (2006).

**Myra** (mod. Kale or Demre, SW Turkey) Ancient \*city on the Myros/Demre River, metropolis of \*Lycia, now deeply buried under alluvium. \*Pottery, coins, and \*lamps of the 5th–7th centuries have been found under the Middle Byzantine church containing the former grave of S. Nicholas, whose \*relics were brought to Bari in \*Italy in 1098. There was a separate \*harbour town called \*Andriace.

**Mysia** See HELLESPONTUS.

**myth** Graeco-Roman \*paganism had at its core not a set of articulated beliefs but the practice of \*sacrifice. What made sense of the gods and the worship offered to them was not a creed but the multifarious stories which made up classical mythology. It was through these narratives that the character of the gods could be discerned.

In the 1st century BC the polymath Varro, who as a Stoic liked to put things into categories, identified three sorts of pagan theology, namely: mythical theology in the narrow sense articulated by poets and applicable in the theatre, natural or physical theology generated by \*philosophers and applicable to the natural world, and civic theology expounded by pagan \*priests and

applicable to the rites and affairs of \*cities. The division was taken up by \*Augustine (*City of God*, VI, 5; cf. IV, 27) and a similar categorization may be found in the *Preparation for the Gospel* of \*Eusebius of Caesarea.

The myths repeated by poets and civic priests were multifarious and sometimes self-contradictory but they were potent not least because of their familiarity. Mythological scenes appear frequently on \*sarcophagi, where they were open to polyvalent interpretation. The figure who appears most frequently on floor \*mosaics in \*villas in both \*Africa and \*Syria is that of the god Dionysus. Literary interpreters, such as \*Porphyry, could derive from myths and put into words profound insights into Nature, the divine, and the human condition by applying to them the methods of \*allegory. There was also a strain of scepticism about myths in non-Christian thought which went back to Plato's *Republic*.

Christian attitudes to classical mythology ranged from denunciation of the cruelties and vice attributed to the pagan gods (e.g. \*Lactantius, *Inst.* V, 10, 15–16; Augustine, *City of God*, VI, 7–27) to appropriation of the stories as allegorical illustration. At the core of the Christian approach was a conviction that what made sense of the Christian God, the force which made all Nature out of nothing, was not a set of shifting fictions but an understanding of the whole of world history from beginning to end. This enabled Christian thinkers to deploy the techniques of what is conveniently called \*Euhemerism, the belief that stories about the gods whether poetic or civic were actually garbled accounts of the deeds of ancient human kings and their dysfunctional families (e.g. \*Arnobius, IV, 20–8; Lactantius, *Inst.* V, 5–7; Augustine, *City of God*, VII, 27). This then permitted them to assimilate mythology into a Christian account of the overall span of world history (e.g. Lactantius, *Inst.* I, 23, 2–5; II, 13). It also enabled Christians to retain mythical stories as allegories of Christian truths: the floor of the nave of the small 4th-century church at \*Hinton S. Mary in Somerset bore a mosaic showing Bellerophon slaying the Chimaera, an allegory no doubt of Evil being overcome by Christ, whose image is on the floor of the chancel. In less religious contexts it remained possible for \*hunting men to continue still to eat from \*silver plates decorated with the heroic figure of \*Meleager.

The pagan response under \*Julian the Apostate is instructive. \*Sallustius Neoplatonicus wrote *On the Gods and the World* as a short catechism of restored paganism, and in it devoted substantial space to correct methods for interpreting pagan myths in an appropriately neo-pagan manner. At the same time, the \*emperor was forbidding Christians (except his own old tutor \*Proaeresius) to teach ancient literature, because too many \*rhetoricians were, like \*Basil of \*Caesarea, discovering and

expounding characteristically Christian values in classical myths. Not all devotees of the old gods approved of Julian's legislation (e.g. \*Ammianus Marcellinus, XXII, 10, 7; XXV, 4, 20). But clearly some pagans by the mid-4th century felt they could no longer bask in the ambiguities of mythology and felt driven to articulate clear and exclusive definitions of their beliefs. OPN

Lamberton, *Homer the Theologian*.

**myth, interpretation of** In Late Antiquity, a variety of strategies existed for the interpretation and exegesis of myths, particularly when they were obscure or depicted the gods acting with apparent immorality, such as the adultery of Aphrodite and Ares. One option, represented by \*Basil of \*Caesarea's *Address to Young Men*, was to seek out moral precepts in myth, but to reject anything that did not promote virtue. \*Euhemerism, which argued that the pagan gods were merely ancient humans who had come to be worshipped, was also a popular interpretative approach for Christian authors (e.g. \*Lactantius, *Inst.* I, 8–14; \*Isidore, *Etymologies*, VIII, 11, 1–5; \*Eusebius, *Praeparatio Evangelica*, II, 1; II, 5).

Allegorical interpretation was an important exegetical approach, especially among \*philosophers (often drawing on Stoic practice) within the Platonist tradition, as for instance with \*Porphyry's \*allegory of the Cave of the Nymphs in \*Homer. In the mid-4th century, the pagan \*Sallustius Neoplatonicus (*De Diis et Mundo*, 4) classified five types of myth: 'theological', about the nature of the gods; 'physical', concerning the gods' interactions with the universe; 'psychical', about the actions of the soul; 'material', in which physical objects, such as \*wine, are described as gods; and 'mixed', combining two or more of the types. The 'theological' was for \*philosophers, the 'physical' and 'psychical' for poets, and the 'mixed' for religious rites, while the 'material' was dismissed as base and unworthy. Sallustius described the Judgement of Paris and the story of Cybele and Attis as 'mixed' myths, but also explained how Kronos swallowing his children could be interpreted in 'theological', 'physical', or 'psychical' ways. **myth in art** In an empire which was gradually becoming Christianized, Graeco-Roman mythology continued to provide artistic inspiration down to the 7th century and beyond. Floor \*mosaics both public and domestic, \*sarcophagi, \*silver plate and its \*pottery imitations, wall hangings, \*ivory \*diptychs and boxes, garments and \*jewellery, all served as vehicles for a rich repertoire of mythological themes. These included representations of pagan deities and their retinues, the stories of demigods and heroes like Hercules, Achilles, Hippolytus, \*Meleager, and Bellerophon, as well as a host of personifications of aspects of the natural world and Time. While in some cases, especially in the 4th and 5th centuries, the choice of a mythological theme may have been related to the religious beliefs of the owner, this was certainly not always the case, as there is abundant evidence for the adoption of mythological imagery by Christians, as well as pagans. Indeed, being familiar, mythological themes could be employed to convey a variety of messages and concepts irrespective of the owner's or viewer's beliefs, their religious connotations having become neutralized. Thus, Aphrodite could appear as an \*allegory for feminine beauty on a silver casket destined for the Christian \*Projecta, while \*Dionysiac revelry and the tales of heroes could adorn the houses and effects of Christians and pagans as celebrations of \*hunting, love, and the pleasures of a prosperous life. At the same time, mythological imagery in \*houses advertised the classical education of the owner and could have provided the incentive for erudite discussions at social gatherings (like those in \*Macrobius' *Saturnalia*). The moral aspects of certain myths and the message of natural and spiritual rebirth and renewal of others must have also made them appealing in domestic and funerary contexts. Certain mythological figures even infiltrated churches, for instance Orpheus, who was understood as an allegory for Christ.

**myth in literature, Greek** The central role of classical poetry in elite \*education throughout Late Antiquity meant that a knowledge of traditional myths and their characters was an integral part of the *paideia* shared by pagans and Christians. \*Epic poetry was an important medium for the portrayal of myth. Poetic treatments of the Trojan War such as \*Quintus Smyrnaeus' *Posthomerica*, \*Colluthus' *Rape of Helen*, and \*Tryphiodorus' *Sack of Troy* tend to focus on episodes not treated in the poems of \*Homer, while \*Musaeus' *Hero and Leander* treats a less known story. \*Nonnus' *Dionysiaca* is a vast compendium of myths surrounding Dionysus into which are interwoven a wealth of other

stories including foundation myths. The many similarities between Nonnus' Dionysus and Christ illustrate the interaction between pagan myth and Christian theology.

In rhetorical training, stories and characters drawn from tragedy and epic provided the basis for exercises (\**progymnasmata* and sometimes \*declamation); \*Libanius' examples draw on a wide range of mythographic sources. Mythical exempla were used in speeches as part of the argumentation, e.g. by \*Themistius and Libanius. In prose epithalamia, including those for Christians, evocations of Aphrodite, Eros, and the loves of the gods are common. Myths of Aphrodite are also used in speeches connected to the Rose festival in \*Gaza. As an integral part of classical *paideia* and often of civic identity, the traditional myths could be seen as representing a religiously neutral zone. In the specific case of the Trojan War, the stories and characters were often considered to be historical as their inclusion in \*John Malalas' *History* testifies. RW

**myth in literature, Latin** Full-scale mythological narrative poetry is represented in the West by the incomplete *De Raptu Proserpinae*—it breaks off after three books—of the Egyptian-born poet \*Claudian (late 4th/early 5th cent.). A \*Latin Gigantomachy by the same poet did not progress beyond 128 lines. (He had earlier treated the same subject in \*Greek.) In the late 5th century the \*African poet \*Dracontius composed a series of epyllia on mythological subjects: Hylas, the abduction of Helen, Medea (*Romulea*, 2, 8, and 10), and the separately transmitted *Orestis Tragoedia*, covering in hexameters the events of Aeschylus' Oresteian trilogy.

Narratives of a different nature, involving Venus, Cupid, and other divinities appropriate to \*marriage, feature in Late Latin epithalamia—a much practised genre in the period—following the model of Statius, *Silvae*, 1, 2. Epithalamia featuring mythological personnel were written by Claudian, \*Sidonius Apollinaris, Dracontius, \*Ennodius, and \*Venantius Fortunatus. Despite Christian denunciation of them, representations of the \*pagan gods continued to enjoy cultural prestige among the educated elite, lending lustre in such fantasy compositions as the epithalamia to secular ceremonies or appearing, for instance, in the marine thiasos of Venus or the retinue of Bacchus, on highly valued works of art.

In \*panegyric, especially verse panegyric, mythical figures and events, along with figures from Roman history, most often occur in comparisons, in which frequently the person to be praised outdoes his or her mythological counterpart. In his *Consolation of Philosophy* \*Boethius uses mythological exempla, sometimes understood allegorically, to explore themes important to his work. MJR

**Mytilene** Principal \*city on the Aegean island of Lesbos, though the name could refer to the whole island. Its main export was \*wine. Lesbos has yielded \*inscriptions, now dated under \*Valens, with property declarations associated with \*Tetrarchic taxation and \*census reforms. The \*Bishop of Mytilene (first attested in 359) initially had charge of all Lesbos, \*Tenedos, and their mainland possessions. In 536 (when he attended the Second \*Council of \*Constantinople) this was \*Zacharias, the \*Miaphysite author. The island has many Christian \*basilicas. AK

**Mytilene Treasure** A 72-piece hoard of the early 7th century, consisting of \*gold \*jewellery and \*silver, and a \*bronze stamp, excavated along with coins of \*Phocas and \*Heraclius near \*Mytilene on the island of Lesbos, in 1951 and now in the Byzantine Museum at Athens. HAHC

E. Chalkia and I. Touratsoglou, *The Kratigos, Mytilene Treasure: Coins and Valuables of the 7th century AD* (2008).

**Mzhezh Gnuni** (d. 635/7) Armenian general present with \*Heraclius at \*Ganzak in 628. From c.630 he was commander in Roman \*Armenia. In 635/7 he arrested \*David Saharuni for complicity in a plot against Heraclius. However, David escaped and killed Mzhezh. MTGH

*PLRE* III, Mezezius.

\*Sebeos, 131–3.

# N

**Nabataea** The kingdom of the Nabataeans, nomadic Arabs of the late Hellenistic and Roman era, who built up an extensive trade network in \*incense from the \*Arabian Peninsula. Centred around the \*city of \*Petra, their area of influence extended from the \*Hijaz to southern \*Syria as far as \*Damascus, and across the \*Negev Desert to the Mediterranean Sea at \*Gaza. Following the annexation of the kingdom by Rome in AD 106, the territories were incorporated into the \*provinces of \*Syria, \*Palestine, and \*Arabia. \*Petra was made the metropolis of Provincia Arabia. MESW J. Frösén and Z. T. Fiema, *Petra: A City Forgotten and Rediscovered* (2002).

**Nabed (Gk. Nabedes)** Persian noble and general (fl. 541–50). He was driven back to \*Nisibis in 541 by \*Belisarius, whose speech to his soldiers allegedly described Nabed as next in honour to \*Khosrow I himself (\*Procopius, *Persian*, II, 18, 9; cf. *Anecd.* 2, 28). In 543 he defeated a superior Roman army at \*Anglon, near \*Dvin (*Persian*, II, 25), but had little success in \*Lazica in 549/50 (*Gothic*, VIII, 9, 6). GBB PLRE III, Nabedes.

**Nablus** See NEAPOLIS.

**Nacolea** (mod. Seyitgazi, Turkey) City of \*Phrygia Salutaris and today the site of a Bektaşhi monastery that contains numerous Late Antique marbles. \*Valens beheaded the \*usurper \*Procopius at Nacolea in 366 (\*Ammianus, XXVI, 9; 7–11; \*Zosimus, IV, 8, 3), and it was the base of \*Tribigild during his revolt in 399 (\*Philostorgius, *HE* XI, 8). A Church of S. Michael was built by the same Studios who funded the churches of S. Michael at \*Germia and \*S. John Baptist of Studios at \*Constantinople. PhN TIB 7: *Phrygien und Pisidien* (1990). C. M. W. Cox and A. Cameron, *MAMA V* (1937). van Dam, *Roman Revolution of Constantine*, 169–227.

Mitchell, *Anatolia*, II, 60–2.

J. Kramer, 'Architekturteile des Seyitgazi-Tekke (Vilâyet Eskişehir) und die Michaelskirche von Nakoleia', *JbÖB* 22 (1973), 241–50.

**Nag Hammadi** Town in Upper \*Egypt near to which a collection comprising thirteen leather-bound codices was discovered in 1945. Written in \*Coptic translated from \*Greek originals, the Nag Hammadi codices (NHC) represent one of the largest collections of translated literature from Antiquity. Many of the texts in the collection are unique. They include sectarian theological works with biblical and apocalyptic themes, and also excerpts from Plato's *Republic* (NHC VI, 5) and works associated with \*Hermes Trismegistus, the *Asclepias* (NHC VI, 8) and the *Discourse on the Eighth and Ninth* (NHC VI, 6).

The collection may have derived from an Egyptian monastic \*library, and taken together the codices have been dated to around the mid-4th century. A significant number of the individual texts are, however, translations of writings deriving from the variegated Christian world of the 2nd century. A number of prominent works from the library, among others the habitual *Apocryphon of John* (NHC II, 1; III, 1; IV, 1), the *Gospel of Thomas* (NHC II, 2), the *Gospel of Truth* (NHC I, 3), and the *Tripartite Tractate* (NHC I, 5), have been used to argue for a \*Gnostic–Christian orientation to the collection. The library has also been used in the related enterprise of defining the characteristics of ancient gnosticism, and for acuminating gnostic theology and social organization from Late Antiquity, e.g. the division between Sethian, Valentinian, Thomasian, and Hermetic Gnosticism. **Nahr al-Malik** 'King's canal/river' (\*Ammianus Marcellinus, XXIV, 6, 1: *Naarmalcha*), a navigable canal linking the Euphrates and Tigris, joining the latter below \*Seleucia–\*Ctesiphon and irrigating the area in between. Probably identical with the much older *Nār-sarri* (King's Canal), it was dredged and repaired by \*Julian the Apostate. Yaqut records three traditions identifying its founder as Iskandar (Alexander the Great), Aqfurshah b. Balash (Pakor), or Soleyman b. Dawud (Solomon son of David). Istakhri mentions it was crossed by a bridge of boats. DTP Matthews, *Ammianus*, 149–51.

Oppenheimer et al., *Babylonia Judaica*, 196, 224.

M. Streck, *Die alte Landschaft Babylonien nach den arabischen Geographen* (1900), 27.

**Naissus** See NIŠ.

**Najd** Desert plateau in Central \*Arabia crossed by wadis and containing oases where settlements clustered. In Late Antiquity Najd was populated by \*Bedouin tribes over whom the semi-nomadic kingdoms of \*Kinda and the \*Lakhimids, based on the edges of Najd, exercised partial political authority. PAW R. Hoyland, *Arabia and the Arabs* (2001).

**Najran** Oasis in south-west Arabia on the borders of \*Yemen and al-\*Hijaz. Najran was an important site on trans-Arabian trading routes; a citadel that flourished between c. 500 BC and AD 250 has been excavated and pre-Islamic south Arabian \*inscriptions record campaigns against the Najran oasis as early as 685 BC.

In Late Antiquity, Najran's material fortunes declined, but it remained an agricultural and trading centre on the Yemen/Arabian frontier with links to the Eastern Roman Empire through its Christian community. Christianity entered Najran in the 4th century, allegedly by way of a \*Greek-speaking bricklayer called Phemion; there was a bishopric in the 5th century.

The oasis also housed a Jewish community. \*Jews and Christians famously clashed c. 523/4 when a Jewish \*Himyarite king, \*Yusuf Ash'ar, invaded Najran, killing many Christians. The \*persecution of the \*Martyrs of Najran and related wars in southern \*Arabia are documented in contemporary \*Syriac, \*Greek, and south Arabian sources; accounts of the Martyrs' passion circulated (see *HIMYARITES, BOOK OF THE*), and the \*Qur'an 85: 4–8 refers to the burning of believers at al-Ukhduḍ, presumably a reference to the same martyrdoms.

Yusuf Ash'ar did not extinguish Christianity in Najran: the Christian Harith b. Ka'b tribe occupied the oasis in the 6th–7th century and entered into a treaty with

\*Muhammad in 630 permitting them to keep their faith and religious institutions in return for payment made in \*textiles to the Muslim state. Their treaty was upheld by the first \*Caliph \*Abu Bakr. However the second Caliph \*Umar I allegedly ordered their expulsion to purify \*Arabia of non-Muslims. A \*mosque named after 'Umar was constructed in Najran, but it is unclear whether the expulsion orders were implemented: and Christians may have lived in Najran until at least the 10th century.

**Nakchevan** (Arm. Naxčawan, mod. Kocaköy, Kars province, Turkey) Village south of Ani with a tomb perhaps of the 4th century of the Armenian \**naxarar* (*nakharar*; noble) Kamsarakan family, murdered by King \*Arshak II (\**Buzandaran Patmut'wōnk'* IV, 19; \*Movses Khorenats'i III, 30–1). TMvL

Sinclair, *Eastern Turkey*, vol. 1, 422.

R. H. Hewsen, *Armenia: A Historical Atlas* (2001), map 91.

**Nakhchivan** (Gk. Nazouana; Arm. Nashawā; mod. Arm. Naxijewan; post-Soviet Azeri Turkish Naxçıvan) Located north of the Araxes, and known as Naxouana to \*Ptolemy (V, 12, 5), the \*city, in existence already during the Eruanduni/Orontid Armenian kingdom (4th–2nd cent. BC), formed part of the \*road system connecting Iran with the shores of the Black Sea through the successive Armenian capitals of Eruandashat, Armawir, Artashat, and \*Valarshapat (Vałarsāpat). A prosperous town, it was destroyed by the Persian Shah \*Shapur II in 363, who deported its Armenian and \*Jewish population into the \*Persian Empire (\**Buzandaran Patmut'wōnk'* IV, 55). In 650, when the \*Arabs besieged Nakhchivan, the Armenian \*Sparapet (commander-in-chief) \*Theodore Ršhtuni closed a pact with them. In 705, after an Armenian rebellion, the \**naxarars* (*nakharars*; noble) were burned in churches in Nakhchivan and Goltn (Goght'n); thus an entire senior generation of the nobility perished.

The see of the \*Bishop of Mardpetakan region was in Nakhchivan, only one of two bishops' sees of the Armenian Church established in a \*city before the 9th century.

### naming, systems of, Roman and post-Roman

Within the distinctive Roman system of three names (*praenomen*, *nomen*, and *cognomen*), the function of personal identifier had shifted by Late Antiquity from the first to the last, and the *praenomen* had largely fallen into desuetude long before Late Antiquity. After the Constitutio Antoniniana of AD 211 granted Roman citizenship to all free inhabitants of the Empire, the ubiquity of the imperial *nomen* \*Aurelius undermined its utility as a family identifier. By AD 300, many on entering state service were keen to adopt the *nomen* of the imperial family (Valerius under the \*Tetrarchy, thereafter the Constantinian \*Flavius) to differentiate themselves from the majority Aurelii. Evocative nicknames (*signa*) might add differentiation (e.g. the Christian writer Firmianus qui et \*Lactantius, or Proculus *signo* Populonium, \*consul in 340). Christianization enriched the canon of *cognomina* but did not affect the system. At \*Constantinople a new polyonymy emerged, commemorating religious devotion and \*patronage, as well as \*inheritance. Most people made do with a single *cognomen*; in Europe this system blended seamlessly with those of migrating Germanic \*tribes and \*Slavs. RWBS

**Naples (ancient Neapolis)** \*City in south-central \*Italy on the Bay of Naples, whose population in Late Antiquity fluctuated between 10,000 and 20,000. Located in \*Campania c.25 km (15 miles) west of Mount Vesuvius, Naples was affected by a serious volcanic eruption in 472.

### Civic history

Founded as a Greek colony in the 5th century BC, Naples was a relatively minor Roman city, due in large part to the commercial dominance of nearby Puteoli. But with Puteoli's decline from the 4th century, Naples emerged as the most politically and culturally significant city in Campania. It had an especially cosmopolitan citizenry, including Greeks, Romans, Syrians, Africans, later \*Goths and \*Lombards, as well as a sizeable Jewish community.

Late Roman Naples was served by a large Roman \*aqueduct (the Aqua Augusta), which fed a network of channels and \*cisterns capable of holding about 4.5

million cubic metres (990 million gallons) of water. Despite damage in the siege of 536, the aqueduct was evidently repaired, since functioning \*baths are recorded in early medieval times.

Since its origins, Naples was a walled city. The Greek defensive circuit was repaired under \*Valentinian III (425–50), probably in response to the \*Vandals. During the \*Byzantine invasion of Italy, Naples was the only city strongly garrisoned by the \*Ostrogoths. Its walls were tested when \*Belisarius besieged it in 536. He captured the city by cutting the aqueduct and having troops crawl in along its course (\*Procopius, *Gothic*, V, 8–10). The Ostrogoths under \*Totila besieged the city in 542–3, starved the Byzantine garrison into submission and set about razing the walls to the ground (*Gothic* VI, 6–8).

Naples also had a Roman forum, including a covered market in use until the mid-6th century (recently excavated beneath the medieval church of S. Lorenzo). Naples (mint mark NE) minted copper half-*folles* c.663–95. Some low-quality \*gold issues have been attributed uncertainly to the same mint.

Late Antique Naples witnessed a period of intensive ecclesiastical building. While its Christian population dates from the 2nd century, Naples had no prominent local \*martyrs. Consequently, it claimed numerous 'imported' martyrs, notably S. Januarius, a \*Bishop of Beneventum, martyred, according to legend, at Puteoli during the Great \*Persecution. S. Januarius became Naples' \*patron saint in the early 5th century, when his \*relics were brought to the city by Bishop John I (413–32). They were buried in a \*catacomb complex cut into the hill of Capodimonte which came to bear S. Januarius' name ('the Catacombs of S. Gennaro') and which features portraits of Januarius and other Late Roman bishops interred there. According to the \**Liber Pontificalis* (34, 32), \*Constantine I built a forum, an aqueduct 8 Roman miles long, and a church in Naples, which is traditionally, and perhaps anachronistically, identified as that dedicated to S. Restituta (an Ischian martyr whose \*relics were translated to Naples in the 9th century). Built in the (late?) 4th century using \*spolia, S. Restituta is the nucleus of the city's present cathedral. During the 5th century, it was annexed to the richly decorated \*baptistry of S. Giovanni in Fonte (c.400), constructed by Bishop Severus (363–409). Severus is thought to have constructed another major basilica within Naples, later known as S. Giorgio Maggiore. KMS

Grierson, *DOC* II/1.

**Naples Dioscorides** Illustrated Greek herbal manuscript (cod. Neapolitanus, ex Vind. Gr. 1) of

\*Dioscorides' *De Materia Medica*, with a very large series of title miniatures and painted plant pictures. It was written in the late 7th century and is apparently derived from the same ancestor as the \*Vienna \*Dioscorides. NAS

C. Bertelli et al., eds., with introd. by G. Cavallo, *Dioscurides Neapolitanus: Biblioteca Nazionale di Napoli, codex Ex Vin-dobonensis Graecus 1*, 2 vols. (1992).

**Naqlun** Mountain south of Fayyum (\*Egypt), with a \*monastery of the Archangel Gabriel, founded in the second half of the 5th century, a cemetery, and rock-cut hermitages (occupied 5th to 12th cent.). \*Greek, Coptic, and \*Arabic papyri have been found. MCDP

P. Naqlun = *Deir El-Naqlun: The Greek Papyri*: ed. T. Derda et al., 2 vols. (1995–2008).

*CoptEnc* vol. 3 s.n. Dayr Al-Naqlun, cols. 845a–847a (O. Meinardus and P. Grossman).

W. Godlewski, 'Excavating the Ancient Monastery at Naqlun', in G. Gabra, ed., *Christianity and Monasticism in the Fayoum Oasis* (2005), 155–71.

**Naqsh-e Rajab** Cluster of four Sasanian \*rock reliefs located c.2 km (1.2 miles) from \*Staxr and c.4 km (2.5 miles) from Persepolis. They consist of one early relief of \*Ardashir I (divine investiture), two of \*Shapur I (mounted king with nobles and an equestrian divine investiture), as well as a relief (profile bust portrait) and inscription (KNRa) of the priest \*Kerdir. The reliefs are located at a fissure into the northern spur of Kuh-e Rahmat, whose geomorphology indicates an ancient spring flowed from it. MPC

E. F. Schmidt, *Persepolis*, 3 vols. (OIP 68–70, 1953–70), vol. 3, 123–5.

M. Canepa, 'Sasanian Rock Reliefs', in *The Oxford Handbook of Ancient Iran* (2013).

**Naqsh-e Rostam** New Persian toponym for an Achaemenid necropolis and \*Sasanian \*rock reliefs c. 8 km (5 miles) north of Persepolis and c.2 km (1.2 miles) north-west of \*Staxr. The site preserves traces of Elamite reliefs, four Achaemenid tombs, one Achaemenid ashlar tower (the 'Ka'ba-ye Zardosht'), and eight completed Sasanian reliefs. Mud-brick fortifications with rounded Sasanian-style bastions protect the site. \*Shapur I carved a trilingual \*inscription, the \**Res Gestae Divi Saporis* (ŠKZ), on the Kaba-ye Zardosht. The priest \*Kerdir carved a Middle \*Persian inscription on the Ka'ba and one next to the relief of Shapur I. The hills nearby carry numerous Sasanian-era mortuary and funerary features. Soundings by E. Schmidt indicate that the space that the fortifications contain was densely built up in the Sasanian period. Evidence from the inscriptions implies the site hosted memorial \*fires dedicated to the souls of Shapur I and his family.

Some have speculated that the Sasanians reused the Achaemenid tombs. MPC

M. P. Canepa, 'Technologies of Memory in Early Sasanian Iran: Achaemenid Sites and Sasanian Identity', *AJA* 114 (2010), 563–96.

**Narbonensis Prima and Secunda** \*Provinces on the Mediterranean coast of \*Gaul created from the former Narbonensis in the \*Verona List (256, 5–6) as part of the \*Diocesis \*Viennensis, later, e.g. in the \**Notitia Dignitatum*, the \*Diocesis \*Septem Provinciarum (*occ.* III, 27–8). Each province was governed by a \*Praeses (*occ.* I, 113–14).

The \**Notitia Galliarum* (15) lists six *civitates* in Narbonensis Prima: \*Narbonne, \*Toulouse, Béziers, Nîmes, Lodève, and, depending on the manuscripts, Carcassonne or Elne. After 418, parts of the province were protected by the \*Visigothic \**foederati*. By agreement with the Roman authorities, Visigothic military protection was extended to Narbonne after 462 and Nîmes after 464–5. After 476, the whole province was included in the Visigothic kingdom.

Narbonensis Secunda lay east of Narbonensis Prima and, in the *Notitia Galliarum*, is accorded seven *civitates*: Aix-en-Provence, Apt, Riez, Fréjus, Gap, Sisteron, and Antibes. Following the Visigoth–\*Burgundian alliance of 476, the \*cities north of the Durance came under Burgundian influence and their \*bishops took part in the councils of Agde (506) and Epaone (517). After the war of 506–7, the province was controlled by the \*Ostrogoths until 534, when the Ostrogoths ceded the region to the Burgundians. CD

Chr. Delaplace, *La fin de l'Empire romain d'Occident: Rome et les Wisigoths de 382 à 531* (2016).

**Narbonne** (*metropolis civitas Narbonensium*, dép. Aude, France) The Roman *colonia* of Narbo, an important port and provincial capital of Gallia Narbonensis in the early imperial period, became the capital of \*Narbonensis Prima in Late Antiquity. The \*city became a metropolitan see, but with the exception of \*Rusticus (427–58/61), whose church-building is commemorated in a series of \*inscriptions, its early \*bishops appear primarily in the context of resistance to the encroachment of their counterparts in \*Arles upon their prerogatives. \*Ausonius praised Narbonne's professors (*Professores*, 18–19), its commerce, and its monuments (*Ordo*, 19), but the Late Antique topography of the city is poorly known.

Narbonne was besieged by the \*Visigoths in 436, and finally handed over to them in 462 by \*Agrippinus in exchange for their support against \*Aegidius. \*Sidonius rationalized this surrender in a poem (*Carmen*, 23) sent to his friend Consentius that depicted the city as battered but unbowed, and celebrated the hospitality of a resident \*aristocracy that also included Leo and \*Magnus Felix. The city remained in Gothic hands thereafter, despite recurrent Frankish attacks, and as the main centre of \*Septimania, also still known as Gallia \*Narbonensis, played a peripheral but intermittently significant part in the politics of the Visigothic kingdom; Liuva I was elected king there in 568, and it was a focus of unsuccessful rebellions against \*Reccared in 588 and by \*Paul against \*Wamba in 672–3. Narbonne fell to the \*Arabs in 720, before finally coming under the control of the \*Franks in 759. CD; STL *CAGaule*, 11, 1 (2003).

F. Riess, *Narbonne and its Territory in Late Antiquity: From the Visigoths to the Arabs* (2013).

**Narona** (mod. Vid, Croatia) \*City on the marshy estuary of the River Neretva, in the \*province of \*Dalmatia, between \*Salona and \*Epidaurum (Cavtat). Narona was a Hellenistic *emporium* which became a Roman *colonia*, but was eclipsed by \*Salona from the 2nd century AD. The Hellenistic and Roman city walls were extended in Late Antiquity.

Excavation of the \*forum in the Upper City during the 1990s exposed remains of the Roman Augusteum (\*Temple of the \*Imperial cult). This contained broken imperial \*sculpture and \*inscriptions, and had been demolished c. AD 400 and covered with a layer of earth and rubble in which were 6th-century burials.

In the Lower City there were several 5th/6th-century Christian \*basilicas (one built over a \*villa rustica), including, under the present Church of S. Vitus, the 6th-century cathedral, whose \*baptistery walls were painted to resemble \*marble. A \*bishop is last recorded in AD 533. The site was not occupied during the Middle Ages. IDS

### **Narratio de Obitu Theodosii Hierosolymitani**

Short text in \*Syriac relating the \*exile (453), imprisonment, and death (457) of \*Theodosius, \*Patriarch of \*Jerusalem, and the exile and recall of his associate, Abba Romanus. In many ways an appendix to \*John Rufus' *Life of \*Peter the Iberian*; it is transmitted in the

same two manuscripts that contain the *Life* and refers back to it (*Narratio*, 21 Brooks). PMP

BHO 1178.

ed. E. W. Brooks, in *Vitae Virorum apud Monophysitas Celiberrimorum* I (CSCO 7, Scr. syr. III/25, pp. 21–7, 1907; LT: CSCO 8, Scr. syr. III/25, 15–19, 1907).

ET (annotated) C. B. Horn and R. R. Phenix Jr (WGRW, 2008).

**Narratio de Rebus Armeniae** Narrative of \*Armenian affairs which describes Roman–Armenian relations from a decidedly pro-\*Chalcedonian point of view, but is not concerned wholly with ecclesiastical matters. It was written originally in Armenian c. AD 700, but only a \*Greek translation, possibly of the 8th century, survives.

The Armenian Church ratified the decisions of only the first three œcumenical \*councils of the Church. With its rejection of the Christological formulae of the Council of Chalcedon in 451 it gradually distanced itself from the \*Greek- and \*Latin-speaking Churches and through a series of councils and deliberate theological decisions set a distinct \*Miaphysite path away from those Churches. Surviving sources do not permit complete understanding of the events which led to the final rupture between the Churches, as they are mostly written from the point of view of the Armenian Church. However, there clearly remained a minority Chalcedonian element in the Armenian Church structure. LA Thomson, *BCAL* 174.

**narrative in art** Late Antique art often told stories. These are drawn from classical mythology, from the \*Bible, and from current events. Dense sequences of narrative cycles are shown in wall paintings, \*mosaics, illuminated manuscripts, \*textiles, the minor arts, \*sculpture, and various plastic media. Sometimes narratives follow a chronological sequence of scenes, as in the battle scenes on the Column of \*Arcadius, or in the illuminations of such manuscripts as the \*Vatican Vergil, the \*Vienna Genesis, and the 5th-century mosaics at the clerestory level of S. Maria Maggiore in \*Rome. Sometimes such scenes are represented as *totum simul*, where two stages of a story are represented in the same image, as in the figure of Barabbas in the scene of Christ before Pilate in the \*Rossano Gospels. Sometimes images are arranged thematically, as in the choice of scenes on the \*Arch of \*Galerius at \*Thessalonica

illustrating different elements of imperial glory, or in \*hunting sequences like those in the 3rd/4th-century Hunting \*Baths at \*Lepcis Magna which evoke the image of war without its guilt, or in \*circus and arena scenes which symbolize \*victory, as in the floor mosaics at the \*villa at \*Piazza Armerina in \*Sicily. Christian art sometimes presents narrative scenes typologically, so that images of Daniel in the Lions' Den and the Crossing of the Red Sea in the \*Catacombs at Rome and on \*sarcophagi at \*Arles are associated with one another as exemplifying \*persecution and liberation, and the mosaics in the sanctuary of the Church of S. Vitale in \*Ravenna represent types of the \*Eucharist. Sometimes such thematic patterns can be exceedingly subtle, incorporating thematic notions and biographical allusion in a complex series of images, as on the Sarcophagus of \*Junius Bassus of 359. **Narsai** (d. after 496) Director of schools and \*Syriac poet. Narsai was a student, then teacher at the School of \*Edessa. He became director probably around 450. After twenty years, that is c.471 under \*Bishop \*Qura (but before the closure of the school in 489), he was expelled, or fled. He migrated to \*Nisibis, in Persian territory, and under the patronage of the Bishop \*Barsauma assumed charge of a new school. He was still in office in 496 when the *Statutes of the School at \*Nisibis* were published. \*Barhadbeshabba gives him a lifespan of more than 100 years (c.399–502).

Narsai is venerated in the \*Church of the East, where he is called the 'Harp of the Holy Spirit'. As a poet, Narsai cultivated the form of a verse homily (Syriac \**memra*, plur. *memre*). He is credited with 360 *memre*, of which 81 survive, the majority on biblical subjects. Narsai's exegesis draws on earlier Syriac sources (\*Ephrem in particular) but he more closely follows the commentaries and method of \*Theodore of \*Mop-suestia, generally rejecting \*typology and \*allegory. Narsai's *memra* on the 'Greek doctors' \*Diodore of \*Tarsus, Theodore, and \*Nestorius is the first evidence of the canonization of these Antiochene authorities in the east Syriac Church. Chapter 31 of Barhadbeshabba's *Church History* outlines the life of Narsai. There is further biographical information in Barhadbeshabba's *Cause of the Foundation of Schools* (383–7). JFC

ET (annotated with introd.) A. Becker, *Sources for the Study of the School of Nisibis* (TTH 50, 2008), 47–72.

**Narseh** \*Sasanian King of Kings (r. AD 293–302). Before his coronation in 293, Narseh, a devoted Mazdean, had governed two viceroyalties (first Hind, Sakastan, and \*Turan; later \*Armenia). After \*Hormizd I's death (273), \*Bahram I appears to have ignored Narseh's claim to the throne. In 293, the coronation of \*Bahram II's son led to a serious crisis in the \*Persian Empire. Some members of the aristocracy offered the \*crown to Narseh. In the end, \*Bahram III renounced the throne, and Narseh became seventh Sasanian King of Kings.

In 296–8, Narseh undertook an invasion of \*Armenia which ended in disaster for the Sasanians. Narseh himself was able to escape from the battlefield, leaving behind 13 \*elephants, 250 \*horses, and the women of his \*court. The peace treaty of \*Nisibis in 298 dictated by \*Diocletian caused a considerable loss of territory for the Sasanians and of prestige for Narseh (\*Peter the Patrician, fr. 14). JWi

*EncIran* (2016) s.n. Narseh (U. Weber).

U. Weber, 'Narseh, König der Könige von Ērān und Anērān', *Iranica Antiqua* 47 (2012), 153–302.

**Narses** (c.479–c.574) \*Eunuch courtier and general from \*Persarmenia and one of \*Justinian I's closest collaborators. He served successively as \*Sacellarius et \*Primicerius Sacri \*Cubiculi (530–1), \*Spatharius (532), Sacellarius et \*Praepositus Sacri Cubiculi (537/8–554), and \*patricius (559–c.574). During the \*Nika Riot of 532 he rallied \*Blues to the \*emperor by bribery and helped quell the \*disorder. In 535–6 he provided armed support for the anti-\*Chalcedonian patriarch \*Theodosius in \*Alexandria before being dispatched to fight the \*Ostrogoths in \*Italy in 538. He was recalled to \*Constantinople in 539 as a result of disagreements with \*Belisarius. Appointed to supreme command of the war in \*Italy in 551 after the death of \*Germanus, he recruited a heterogeneous force with which he defeated \*Totila at \*Busta Gallorum (Taginae) in June 552. In October 552 he destroyed the remaining Gothic forces under \*Teias (Theia) at Mons Lactarius. He defeated a \*Frankish army at \*Casilinus in spring 554; only in 562 did he capture the last cities loyal to the Goths. He remained at \*Rome as the effective governor of the peninsula until his death. Although he may have failed to accede to a summons to Constantinople by \*Justin II in 568, the later tradition that he invited the \*Lombards to invade Italy is untrustworthy. His military successes may be due largely to the substantial resources at his disposal and to his firm control of his subordinates.

## Narses

PLRE III, Narses 1.

P. Rance, 'Narses and the Battle of Taginae (Busta Gallorum) 552', *Historia* 54 (2005), 424–72.

**Narses** Roman general. In 530 Narses and his brother \*Aratius defected from their native Persian \*Armenia to the famous Roman general \*Narses. As commander at \*Philae in southern \*Egypt, he destroyed pagan shrines of the \*Blemmyes and \*Nubians. Later, he served in \*Italy in 538–40 against the Goths, and died in 543 fighting Persians in Armenia. OPN; FKH PLRE III, Narses 2.

Greatrex, *RPW* 147, 189, 192.

**Narses** Roman general under \*Maurice. In 591 he helped \*Khosrow II defeat \*Bahram VI Chobin and regain the Persian throne. In 602 \*Phocas overthrew Maurice. Khosrow refused to recognize Phocas; Narses revolted, seized \*Edessa, and asked Khosrow for help, but was captured, taken to \*Constantinople, and burned alive. OPN

PLRE III, Narses 10.

**narthex** A narrow passage at ground level running perpendicular to the nave and aisles of a church, providing access to each through \*doors. A double narthex consists of an esonarthex (inner narthex) and an exonarthex (outer narthex). An exonarthex may serve as the rear portico of an atrium, the courtyard preceding a church. JB

**Nasr b. Sayyar** (d. AD 748) The last \*Umayyad governor of \*Khorasan, Nasr was elevated to the title of governor in AD 738, aged 74. While Nasr ended twenty years of war against raiding Turkic tribesmen, the region remained divided, and the elevation of a local Arab with connections to the Mudar (north Arabian) tribes was seen as a way to secure the area once again. Nasr also began a programme of tax reform. With the turmoil around the succession after the death of the \*Caliph \*Hisham (r. AD 723–43), control in Khorasan became increasingly difficult, and troop resupply became sporadic. Soon after Nasr's death, Khorasan was lost to the Umayyads, shortly before the Umayyad caliphate itself fell. RHos

Y. K. Blankinship, *The End of the Jihād State* (1994).

**Nasrids** The term describes an \*Arab dynasty, also known as the Lakhimids, allied to the \*Persian Empire. The earliest evidence for the family is from the \*Paikuli \*inscription, where 'Amr of Lakhm' appears as a vassal of \*Narseh (293–302). \*Tabari (V) reports that one \*Imru'l-Qays, perhaps the same as the individual from the Nemara inscription from \*Syria (328), was also of the family, but the identification is not certain. In

contrast to the \*Jafnids, most detailed evidence for the individual family members is derived from Muslim histories of the dynasty and its base at al-\*Hira in Iraq. However, at certain points the family appears in Graeco-Roman sources. Several incidents involving the Nasrids feature in contemporary reports, including battles near \*Edessa (\*Joshua the Stylite, 51–3), the incursions into Syria of al-\*Mundhir III (Alamundarus; \*Procopius, *Persian*, I, 17, 40–3), the involvement of al-Mundhir's son 'Amr (Ambrus) in treaty negotiations (\*Menander Protector, *fragmenta* 6.1), and the adoption of Christianity by al-\*Nu'man III (Naamanes, 4; \*Evagrius, *HE* VI, 22). Al-Nu'man was deposed by \*Khosrow II in c.602 and the Nasrid dynasty ended. As with the Jafnids, the accuracy of the terminology is contested, but similarly identifying and separating the elite offers analytical benefits. GF

**natalis imperii** See ANNIVERSARIES, IMPERIAL.

**natural disasters** As the means to manipulate the natural environment were very limited in Late Antiquity, the effects of any event that disturbed the fragile balance between humans and their management of nature were often considerable. A number of natural phenomena fall within the category of disasters: climatic anomalies (droughts, floods, excessive cold), \*earthquakes, volcanic eruptions, \*tsunamis, and pests (predominantly \*locusts). They could result both in direct mortality and, more often than not, in affecting livelihoods through the destruction of agricultural production, thus leading to shortages and \*famine.

At times, secondary effects of such events could have important repercussions as well. For example, long droughts would cause nomadic pastoralists to migrate en masse (thus changing demographic patterns and

passively transporting disease), whereas gas emitted through volcanic eruptions would dim sunlight and negatively affect agricultural production, as with the \*Dust Veil of 536. Some of the above phenomena were common, and therefore populations had developed strategies of coping with their effects. When, however, their intensity grew or when more than one disaster occurred in close succession, the coping mechanisms broke down and outside aid was required. This took the form of imperial help for the reconstruction of damaged \*cities, import of foodstuffs, or assisted relocation. A telling account of how populations reacted to multiple catastrophes (plague of locusts, \*epidemic disease, famine, drought) is preserved in the *Chronicle* of \*Joshua the Stylite for the turn of the 6th century in \*Mesopotamia.

In pagan times, the only technology available to vulnerable pagan Mediterranean communities for sustaining normal environmental conditions was to maintain the regular calendar of \*festivals of the gods. These were set by tradition, because too little observance made the gods angry, but excessive worship (Lat. *superstitio*; Gk. *deisdaimonia*), often motivated by fear, was deemed to bring on bursts of divine favour which could not be sustained in the long term. If natural disasters did occur, Greek \*cities might well seek advice from an \*oracle. Roman cities might perform a repetition (*instauratio*) of a festival which had been deemed flawed (e.g. \*Arnobius, VII, 39). Christians were criticized and persecuted precisely because they denigrated efforts to avert the anger of the gods (e.g. Arnobius, I, 1-26; IV, 36). Once cities turned Christian, such means were not available. Furthermore, the thinking behind crisis management shifted. In the first books of the *City of God*, \*Augustine argued against the notion that divine anger was turned on and off in response to individual events or irregularities, whether ritual or moral. Other Christians thought more narrowly in terms of disasters as punishment for sin, or as types of the tribulation which would occur at the Last Times. Their reaction was expressed in \*processions, litanies, and \*prayers, such as those inaugurated in response to earthquakes in 5th-century \*Constantinople, a city which from its foundation by Constantine had taken the risk of doing without a calendar of 'feasts of \*demons' (\*Eusebius, *VCon* III, 48, 2). \*Holy men were often perceived as protectors against such events and as mediators for their cessation once these were under way. In the West, \*Rogation developed precisely as a regular annual ritual for asking God's blessing on the kindly fruits of the earth.

**naval warfare** Fighting by sea, like fighting on land, is a matter of tactics and movement. Hellenistic and Roman \*fleets employed various practices, of which sailing around (Gk. *periplous*) or sailing through (Gk. *diekplous*) were the commonest. The development of faster \*ships under the Roman Empire led to changes in naval tactics. Rather than manoeuvring to a position from which the enemy could be rammed and sunk, naval commanders aimed to degrade an enemy ship's ability to fight, so that it could then be boarded and captured. However, from the 1st to the 5th century AD the Romans lacked significant maritime enemies in the Mediterranean; \*Vegetius excused his cursory coverage of naval matters by saying that 'the sea has long been pacified, and our struggle with barbarian races is played out on land' (*De Re Militari*, IV, 31). The Roman navy up till the 5th century was engaged mostly in providing transport, patrolling the Mediterranean for \*pirates, and guarding the northern \*frontiers of the Empire.

Provisioning an advancing \*army from a fleet sailing alongside was a common military practice. The commissariat of \*Julian's army invading the \*Persian Empire in 363 floated down the Euphrates. The army of \*Belisarius during the \*Byzantine invasion of \*Africa in 534 disembarked five days' journey south of \*Carthage (\*Procopius, *Vandalic*, III, 14, 17; cf. *Aed.* VI, 6, 6-16), and marched up the coast with the fleet alongside providing supplies (*Vandalic*, III, 17, 50).

The ports at Misenum in \*Campania and \*Ravenna at the head of the Adriatic Sea, established in the 1st century BC, provided the bases for a few large vessels, though most of the ships there were three-level \*triremes and smaller \*liburnae. These were the largest warships of Late Antiquity prior to the development of the \**dromon* in the 6th century, a development on which they had a great influence. The \*fleets at Misenum and Ravenna are listed in the \**Notitia Dignitatum* in the early 5th century (*occ.* XLII, 3-11; cf. \*Vegetius, IV, 32). The arrival of the \*Vandals in \*Africa in 428/9

affected the balance of naval power in the western Mediterranean; in 455 they sacked \*Rome, they acquired \*Corsica and \*Sardinia, and were in a position to threaten \*Alexandria (*VDanStyl* 56). \*Leo I's colossal naval expedition of 468, commanded by \*Basiliscus, ended in a crushing Vandal naval victory off Cape Bon. Belisarius' battles with the Vandals took place on land, and the \*Byzantine invasion of \*Italy was also mostly fought out on land, although the \*Ostrogoths were defeated in a naval battle off Ancona in 551 (Procopius, *Gothic*, VIII, 23 8–42). Byzantine reliance as a bridgehead on \*Otranto, the port on the heel of Italy which assures the shortest possible crossing of the Adriatic, suggests a continuing reluctance to cast military fortunes upon the waters of the western Mediterranean.

Roman fleets in the East were involved in naval warfare from time to time from the 6th century onwards. It was thought possible that a hostile \*Lazica might pose a maritime threat to \*Constantinople (Procopius, *Persian*, II, 15, 27 and II, 28, 23), and the Persians found it worthwhile to carry on naval operations around \*Phasis on the Black Sea (\*Agathias, III, 20, 1–8 and 21, 3–9). It is probable that the Persians also deployed fleets in their operations in southern \*Arabia and \*Ethiopia in the 6th century. More seriously, the \*Persian invasion of Asia Minor resulting in the capture of \*Rhodes in 622/3 and culminating in the \*Avar–Persian siege of \*Constantinople in 626 used the sea room off the south coast of \*Anatolia in ways which foreshadowed naval operations during the \*Arab invasions such as the Battle of the Masts in 655 off \*Phoenix of \*Lycia.

By this time naval technology was moving on with the evolution of the *dromon*, the imperial galley which developed into the Byzantine *dromon* of the medieval period. This sort of *dromon* is first mentioned in sources of the 6th century, the *Chronicle* of \*Marcellinus Comes (*ad ann.* AD 508) and \*John Lydus (*Mag.* II, 14; III, 43). The *dromon* was fully decked, approximately 25 m (82 feet) in length, with banks (one or two) of 25 oarsmen on each side. Some had decking to provide a platform for \*archery and \*artillery. *Siphones* for projecting \*Greek Fire also came to form part of their armament. Changes in technology led to changes in tactics; the objective was less to sink enemy ships than to exchange missiles until grappling onto them made it possible to take possession by boarding them. With the exception of the Early Byzantine shipwrecks excavated from the \*harbour at Yenikapı at \*Constantinople, there are very few archaeological discoveries of Late Roman seafaring warships, but it seems that Roman naval superiority at the end of Late Antiquity derives principally from three factors: Greek fire, the *dromon*, and the *chelandion*, a variant on the *dromon* with greater cargo capacity, first attested for the mid-8th century.

The northern limits of the Empire also enjoyed naval protection. A series of naval bases on the east coast of \*Britain and the north coast of \*Gaul provided a bilateral system of defence which the *Notitia Dignitatum* states was under the command of the \*Comes of the \*Saxon Shore. It was his subversion of this system which made possible the usurpation of \*Carausius in the early years of \*Diocletian.

The *Notitia* also gives details of the fleets stationed on the river all along the Danube \*frontier, but Vegetius, in the abrupt final sentence of *De Re Militari* (IV, 46), disclaims knowledge of their methods of operation. It was the collapse of this system in the 5th century which ultimately made possible \*Gepid domination of much of the middle Danube in the time of \*Justinian I, and so permitted \*Slavs in their \*monoxyls to take part in successive sieges of \*Thessalonica, inspiring the chapters on waterborne warfare in the *Strategicon* of \*Maurice.

**naval warfare, Arab** Surviving Egyptian \*papyri tell us much about \*Umayyad-era naval organization: the requisitioning and pay of skilled workers for shipyards, the apprehension of fugitive workers, and the fleets' chains of command. Egyptian shipyards included \*Alexandria and \*Clysma (Suez); in \*Syria, activity was concentrated in \*Tyre and Acre. Initially, shipbuilders and sailors were mostly Christians or \**marwali* (non-Arab converts to \*Islam), and the on-board troops mostly Arab Muslims; the latter earned higher salaries.

Muslim naval warfare combined naphtha bombardment with ramming and boarding. Fleets were used for sea battles (e.g. the Battle of the Masts, against the Byzantines, off \*Phoenix of \*Lycia in 655), to blockade and besiege ports (notably \*Constantinople, 674–8 and 717–18), and to land raiders on islands (including, during the 7th century, \*Crete, \*Cyprus, Rhodes, and \*Sicily). **Navan Fort** Artificial mound and ring fort in Co. Armagh, \*Ireland, identified with *Emain Macha*, ancient seat of the kings of Ulster. Much evidence from the site indicates an important 1st-millennium BC political and cult centre. In Late Antiquity, the site was prominent in folk memory: tales in the Ulster Cycle (perhaps in existence by c.400) mention it, later genealogies suggest erroneously it fell in the 5th century, around the time of the establishment of the Christian centre at \*Armagh. **navicularii** \*Shipowners or masters, often organized into a \*guild, obliged to perform public service transporting goods for the Roman state, especially \*grain from \*Egypt and North \*Africa to \*Rome and \*Constantinople. *Navicularii* financed and organized the construction, repair, and operation of \*merchant ships and enjoyed a range of privileges and exemptions from \*taxation and \*tolls (CTh XIII, 5). They conducted private shipping business, though the state legislated to limit such activity and to prevent profiteering from government cargoes (CTh XIII, 5, 24, and 26). Some *navicularii* were ship's captains while others might hire captain and crew and might include women and slaves (\*Digest, XIV, 1, 1, 15). The primary connection with shipping seems progressively to have disappeared but *navicularii* were still involved in the Late Roman \*food supply system. Their state obligations could be transmitted hereditarily or through the sale of landed property upon which such burdens were imposed. JC; AG

**navigation** Ancient Mediterranean \*ships utilized a pair of side rudders (technically called quarter-rudders), while North Sea ships used a single side rudder. The stern rudder was not unknown, but generally appears to have been reserved for river craft. Both square sails (for sailing with the wind) and triangular lateen sails (for tacking against the wind) were in widespread use.

Mediterranean sailors long navigated by the simple system of pilotage, not sailing out of sight of land and even pulling up on the shore every night. Warships had

difficulty carrying enough food or water for a voyage and needed to stop frequently. This system relied on landmarks, such as the \*lighthouse at \*Corunna and the \*temple on the \*Bosporus whose \*demons S. \*Daniel the Stylite considered had lured earlier mariners into danger. No doubt the pillar of S. \*Symeon Stylites the Younger, set high on the mountain overlooking \*Seleucia Pieria, the port of \*Antioch, was also a guide to mariners. Reliance on landmarks required no knowledge of the stars, but for sailing at night knowledge of the stars was necessary and for merchant ships, unlike warships, such sailing was desirable.

For this purpose many \*astronomical texts were available. Aratus and \*Ptolemy were popular throughout Late Antiquity and \*Avienius translated Aratus into \*Latin in the 4th century. Many geographical aids, such as the *Ora Maritima* of Avienus, were produced in the 4th century. \*Gregory of Tours in the 6th century wrote *De Cursu Stellarum*, a handbook for telling the time of night by the stars.

Sailing speed with a following wind was 4–6 knots (making it a two–three-day trip from \*Rome to \*Carthage, seven days from Rome to Cadiz) but with poor winds speed was closer to 1–2 knots (30 days from \*Marseilles, 7 days from \*Alexandria to \*Cyprus). Favourable winds are more likely as one moves clockwise around the Mediterranean. Puteoli–Alexandria could take 8 or 9 days but Alexandria–Puteoli could take 50–60 days. Rowing at 'ramming speed' got up to around 7–9 knots.

Because of these prevailing winds and currents, ships generally sailed the Mediterranean in an anticlockwise direction. The \*grain fleet sailing from Alexandria to \*Rome routinely stopped in Cyprus and Rhodes, for example. Travel along the coast of \*Africa was possible in both directions due to the very strong land and sea breezes. To sail against the prevailing winds could take five times as long as the reverse journey.

Additionally, as \*Vegetius indicates, the Mediterranean had an annual closed season between 10 November and 10 March) dictated by the winter storms that made winter sailing dangerous and marked in pagan times by the ceremonies of the ship of \*Isis. In the Indian Ocean, as \*Cosmas Indicopleustes well knew, the monsoons meant that merchants could only travel in one direction before the season changed (June to October, in this case). ALB

**naxarar** (*nakharar*) \*Armenian term meaning a noble dynast. The phrase 'naxarar system' is used in modern scholarship to describe the dynastic system of social organization that predominated in Armenia between the 4th and 7th centuries. 'Naxarar' did not

## Nazareth

constitute a title or rank, but denoted members of the hereditary nobility in general. The dynasts possessed 'immemorial rights' including inalienable properties, privileges, and offices that derived from their sovereign status prior to the establishment of the monarchy. Property was held in common and administered by the head of the family; succession was agnatic. Although the *naxarars* were theoretically considered to be of equal rank, in practice there existed a hierarchy among them that was reflected in the 'seat' (*gab*) that a *naxarar* occupied at court. The rights possessed by the *naxarars* often limited the powers of the king who was obliged to consult with the council of nobles. The *\*Buzandaran Patmut'wunk'* (late 5th cent.) constitutes the principal source for the *naxarar* system in the 4th century, prior to which the sources do not permit a precise understanding of its development. **Nazareth** A Jewish town in \*Galilee where in the time of \*Constantine I, according to \*Epiphanius of Salamis, there were no pagans, \*Samaritans, or Christians (*Panarion*, XXX, 1, 9–10). The \*Piacenza Pilgrim records that Nazareth had the most beautiful women among the Hebrews, and he found the surrounding countryside as fertile for \*grain as \*Egypt and better for \*wine and \*olive oil and fruit. In the \*synagogue he saw the bench where Jesus had sat as a boy with the other children, and also the house of the Virgin \*Mary which had been turned into a \*basilica. Arculf spent two days and nights in Nazareth, which, so he told \*Adomnán (*De Locis Sanctis*, II, 26), had no circuit of walls, but had two enormous churches, one over the house where Jesus grew up and the other over the house where the Annunciation occurred.

The remains of a Late Antique \*mosaic floor of the Annunciation Basilica were uncovered in 1892 by B. Vlaininick. Systematic excavations were directed by B. Bagatti in 1955 and extended over the area of the Romanesque Crusader basilica and adjoining buildings.

**Nazianzus** Small bishopric in \*Cappadocia Secunda, near modern Bekârlar (formerly Nenizi), 30 km (20 miles) east of Koloneia (Aksaray). The father of \*Gregory of Nazianzus built a \*domed octagonal church with two perambulatories (Gregory of Nazianzus, *Oration* 18, 39), which does not survive. PJT

*TIB* 2 (1981) *Kappadokien*, 244–5.

R. Van Dam, *Families and Friends in Late Roman Cappadocia* (2003), 40–58.

**Nea Anchialos** (ancient Thebes of Thessaly; Thebai Phthiotides) Third \*city of the \*province of \*Thessalia, and an important port on the Pagasitic gulf. Originally two settlements; the Romans moved the main habitation to the coastal location, known as Thebai Phthiotides in texts but Thebai on coins and \*inscriptions. The city's prosperity of the 4th to 7th centuries declined after a catastrophe, which included a fire.

The \*bishop attended the \*Council of \*Nicaea in 325. Extensive excavations have revealed the remains of nine early Christian churches, including a \*basilica with two \*baptisteries. Its episcopal church (Basilica A), of the 5th/6th century and dedicated to S. \*Demetrius, has a twin-towered atrium similar to the Acheiropoietos church in \*Thessalonica. \*Procopius records that the walls were renewed under \*Justinian I (*Aed.* IV, 3, 5). A \*pottery workshop has been identified in the marketplace, together with \*baths, a restaurant, and other basilicas. PA; OPN

*TIB* 1 (1976), 271–2 *s.n.* Thebai Phthiotides.

O. Karagiorgou in Albani and Chalkia, *Heaven and Earth*, 156–67.

**Neapolis** (mod. Nablus) City in Palestine, between \*Gerizim and Ebal, c.57 km (37 miles) north of \*Jerusalem and c.1.5 km (1 mile) west of biblical Shechem (mod. Tel Balāta) of Samaria. It was founded as Flavia Neapolis on the site of an older village in AD 72 by Vespasian and made a Roman *colonia* in 244.

The \*bishop attended the councils of \*Ancyra (\*Ankara, 314) and \*Nicaea.

The pilgrim guide of \*Theodosius (2) mentions Jacob's well and the bones of Joseph. The \*Piacenza Pilgrim (6) saw in the \*Basilica of S. John the well and the fig tree where Jesus spoke with the Samaritan woman. \*Procopius describes the Samaritan uprising of \*Justasas under \*Zeno, after which the summit of Mount Gerizim was turned into a Christian sanctuary, and that under \*Anastasius I (*Aed.* V, 7); he does not mention the rising of 529 under \*Justinian I, during which many churches and \*estates were burned and the \*usurper \*Julian laid on chariot racing in the Neapolis \*circus, thereby claiming an imperial prerogative (\*John Malalas, XVIII, 35). The \*Madaba Map showed it still a substantial \*city in the 6th century. In 636, the city, together with the greater part of Palestine, was conquered by the Muslims.

**Negev** The southern desert in the present state of Israel, representing more than a third of its territory. It extends from the south of the \*Gaza strip to the Dead Sea and from the Beersheva plain to the northern edge of the Red Sea. Its eastern and western edges are the Egyptian and Jordanian borders. During the Late Roman period, the Negev was the largest part of the \*province of \*Palaestina Tertia. The ruins of ancient towns, mostly of Nabataean origin, were discovered in the 19th century but excavated much later. Christianity was introduced into the region in the 4th century by monks from \*Gaza (\*Jerome, *Life of Hilarion*, 25); \*inscriptions and literary references attest to the development of the Church.

**Negev, churches and synagogues of** Following the introduction of Christianity in about AD 350, churches were built in all the towns and villages of the \*Negev, and their ruins have been excavated in \*Elusa, \*Oboda, \*Sobata, \*Nessana, \*Memphis (Mampsis), Ruheibeh, Birosaba, Horvat Karkur 'Illit, Tel Qerioth, and others. They are large \*basilicas, with two rows of columns separating the nave and aisles and ending with

one or three \*apses, all facing east. \*Baptisteries, chapels, and \*diaconicon and \*prothesis chambers were annexed to many of them. Independent chapels have also been excavated, particularly in \*monasteries, such as Tel Masos and Tel Ira. In contrast, the only evidence for the existence of any \*synagogues in the region is a chancel pillar with an \*Aramaic \*inscription discovered in Birosaba.

**Nehardea** Place near \*Mahoze in Persian \*Mesopotamia, identified with Tell Nihar/Quhr Nihar. At the end of the period of the Tannaim, the rabbinic sages whose views are recorded in the Mishnah, Samuel ben Abba established the reputation of its Jewish academy, which came to be considered one of the main centres of Babylonian Judaism. After its destruction in 259, scholars studied at \*Pumbedita.

In the 4th–5th centuries, Nehardea became again an important place of scholarship because of renowned Amoraim sages such as Amemar, mentioned in the \*Talmud for his liturgical innovations. Nehardea was the seat of the Jewish \*exilarchate before it was transferred to \*Sura.

**Nemesianus, Marcus Aurelius Olympius** (*fl.* 283/4)

\*Latin poet of didactic and pastoral poetry. Nemesianus, a native of \*Carthage, was celebrated as a poet in his lifetime. The *Historia Augusta* claims he participated in a poetry competition with the future \*Emperor \*Numerian (*HA* Carus 11, 2). The titles of a number of didactic poems are attested, but only the first 325 lines of his *Cynegetica*, about hounds and \*hunting, have survived. Nemesianus' reference in that work to the 'brave sons of deified Carus' (line 65) implies a date between \*Carus' death (283) and the death of his son Numerian (284). He also wrote four pastoral poems transmitted in manuscripts as part of the corpus of Calpurnius Siculus. Two fragments of a poem *De Aucupio* ('On Bird-Catching') have also been ascribed to him, doubtfully.

For Nemesianus, hunting symbolizes an idyllic retreat from the \*city and from urban and political concerns. Allusions to the danger and excitement of hunting, and the moralizing and imperial overtones of his Augustan predecessor Grattius, are replaced by Nemesianus with \*praise of hunting as an activity appropriate to \*otium. His pastoral poems, more nostalgic and idealizing in tone than those of Calpurnius, are intricately intertextual, reworking names, phrases, and even entire lines from \*Vergil and Calpurnius into new situations.

## Nemesius of Emesa

PLRE I, Nemesianus 2.

**Nemesius of Emesa** \*Bishop of Emesa (mod. Homs, \*Syria), late 4th century, known only from his *De Natura Hominis*. This remarkable work, in the apologetic tradition, explores the nature of the human being as a supreme example of divine providence, discussed in the final chapters, thereby demonstrating a Christian view of God and the cosmos. As an apologist, Nemesius draws extensively on the classical philosophical (and medical) tradition, outlining, with citations, the different views of the \*philosophers, before expressing the Christian view. The work adds greatly to our knowledge of, especially, Hellenistic philosophy. Unmentioned until its use by \*Maximus the Confessor in the 7th century, it thereafter became, together with \*Gregory of \*Nyssa's *De Opificio Hominis*, a popular source for Byzantine anthropology. **Nennius** See HISTORY OF THE BRITONS.

**Neocaesarea** (mod. Niksar Tokat vilayet, Turkey) \*City of \*Pontus, about 112 km (70 miles) inland from the \*Black Sea, formerly Hellenistic Cabeira, named Diospolis in 64 BC and Neocaesarea by c. AD 100. It was apparently Christianized in the 3rd century by its \*bishop \*Gregory the Wonderworker, a local man who had studied with \*Origen. It became the metropolis of the \*Tetrarchic \*province of \*Pontus Polemoniacus. In 344 an \*earthquake destroyed the whole city except the church and those in it (\*Jerome, *Chron.* 236c Helm); the same thing happened again in an earthquake \*Theophanes places in 502/3.

For Neocaesarea of \*Euphratensis (\*Syria) see DIBSI FARAJ.

Bryer and Winfield, *Pontos*, 107–10.

**Neoplatonism** The name given by modern scholarship to the school of Platonic philosophy that developed

in the 3rd century AD. Platonic philosophy had already undergone some radical changes in the period labelled \*Middle Platonism, where it was combined with various elements from Aristotelian, Stoic, and Pythagorean philosophy. From this emerged Neoplatonism which must be linked first to Ammonius Saccas, the teacher of \*Plotinus, even if Plotinus is commonly regarded as its founder. Having studied with Ammonius Saccas in \*Alexandria, Plotinus settled in \*Rome where he set up his own school. There is no secure evidence to suggest that this survived his death, but Neoplatonism continued in \*Syria (\*Iamblichus) and at \*Athens (\*Proclus) in a revived Academy in the early 5th century until the \*Emperor \*Justinian I caused its closure in 529. At Alexandria Neoplatonism continued for another century after that.

### Plotinus and Neoplatonic doctrine

The *Enneads* of Plotinus contain the standard account of Neoplatonic philosophy. This work is composed of six books of nine treatises each; hence the title, nines (*Enneads*). \*Porphyry, a pupil of Plotinus, is responsible for this ordering of the treatises, to which he prefaced a biography of Plotinus. The *Enneads* contain a reading of Platonic philosophy which supports a radical development of Plato's metaphysics, combined with concealed Stoic and Peripatetic doctrines. In particular, Aristotle's *Metaphysics*, as Porphyry notes, is concentrated in them. Neoplatonism, then, was a synthesis of the ideas of Platonists, Stoics, Aristotelians, and Pythagoreans, uniquely and distinctively blended by Plotinus to produce a coherent philosophical doctrine. At the heart of his metaphysics is a triad of principles: the One, Intellect (*Nous*), and World-Soul. The One is beyond being and yet is the source of all being. As complete unity it is perfection and as such it overflows (emanates), the result of which is the next ontological level, Intellect. This is the One in multiplicity. Intellect contains the archetypes of all that exists; this is the world of Plato's Forms. This is the realm of being (fullest life) and thought. Intellect, too, overflows, the result of which is World-Soul. At this level exist individual human souls, which have a foot in both camps, the realm of Intellect above and the material world below, which is the product of the emanation of World-Soul. The relationship between the three principles is a-temporal and a-spatial and may be regarded as one of ontological dependence. Individual souls, tied to Time and Space in the material world, the result of ontological degradation, through a rigorous \*asceticism can return to the highest level of being (Intellect), and ultimately to unity with the One, Plotinian ecstasy. In Plotinus' view the human soul is able to do this because a part of it never comes down from the Intelligible World; the practice of philosophy enables one to regain consciousness on this level of soul. This

essential doctrine was developed and expanded by later members of the school, allowing Neoplatonism to become the dominant philosophy in the ancient world for over 200 years after Plotinus' death.

### Successors

The most important figures in the development and spread of Neoplatonism were Porphyry (AD 234–c.305), Iamblichus (AD c.245–c.325), and Proclus (AD c.412–85). Porphyry, a scholar as well as philosopher, wrote prolifically on a great variety of topics but, relatively speaking, only a small portion of his oeuvre is extant. It is clear that his interests were much more wide-ranging than those of Plotinus, but it is difficult to gauge on the basis of his surviving work whether he differed significantly from Plotinus. In terms of metaphysics some claim, on the basis of assigning an anonymous commentary on Plato's *Parmenides* to him, that Porphyry raised the One to an 'ineffable' status, but the authorship of the commentary is in dispute. In his psychology and ethics he displays a close affinity with Plotinus but it is clear that they differed in their attitudes to escape from embodiment and reincarnation. Porphyry shows an interest in \*pagan religion and \*magic, though he confined it to the material world and did not see it as a substitute for philosophy. Undoubtedly he influenced Iamblichus, who seems to have introduced serious modifications to Plotinian metaphysics. The One 'beyond being' while yet being the source of being caused him to introduce a second One, which he termed the 'Ineffable', designed to safeguard the unity of the First Principle. In addition, he introduced a number of additional levels on the chain of being to account for further plurality and which also accommodated numerous pagan deities in his system.

Iamblichus was a firm believer in \*theurgy, which he considered essential for the human soul to regain its position on the highest ontological level. The performance of certain rites, which brought the help of various deities, was indispensable to the return of the soul. In his belief in theurgy Iamblichus was at odds with Porphyry, who considered that theurgy belonged only to the material world; it is believed that they had a serious disagreement about this. This expanded metaphysical system and man's place in it was extremely influential for later Neoplatonists, especially Proclus, although some scholars consider that the expanded chain of being belongs to Proclus, and not to Iamblichus.

Proclus, like his predecessors, followed the Plotinian triad of principles but also either accepted from Iamblichus or introduced the expanded ontology. Like Iamblichus, he was also keen to illustrate the harmony of pagan theology with Platonic philosophy, endorsing the authority of the \**Chaldean Oracles*. He, too, stressed

the importance of theurgy for the human soul in the process of salvation, a human soul which, like Iamblichus and against Plotinus, he believed descended in its entirety into body.

Neoplatonism had a major influence on Christian theology through S. \*Augustine and, later, \*Dionysius the Pseudo-Areopagite, while the Renaissance saw Marsilio Ficino spark a revival in interest in Neoplatonic thought.

**Nepheros, archive of** Collection of 42 \*papyrus documents of the \*priest Nepheros (fl. c.350–99), consisting of \*letters, accounts, and loans, predominately in \*Greek though two are in Coptic. The \*monastery of Hathor, where Nepheros lived, was near the \*village of Neson in the \*Heracleopolite \*Nome of Upper \*Egypt. The monks were \*Meletians. Whether Nepheros was the head of the monastery is a matter of dispute.

Some of the documents refer to religious affairs (e.g. locals sought the aid of Nepheros when they were ill), but most of the \*archive is more mundane and illustrates the internal business of running the monastery, and relations between the monks and local villages and villagers. There are, for example, loans, transfers of property, and other such transactions. Many of the papyri are personal \*letters between the monks.

**Nepotianus** Briefly \*Augustus at \*Rome in June 350. The son of \*Eutropia, \*Constantine I's half-sister, and the Roman \*senator Virius Nepotianus (\*consul 336), he exploited his dynastic connection to seize power at Rome following the murder of \*Constans I in January 350, but was overthrown and killed, along with his mother, in a bloody purge of opponents by \*Magnentius (\*Zosimus, II, 43, 2–4; Aurelius \*Victor, *Caesars*, 42, 6–8).

JDH

PLRE I, Nepotianus 5.

**Nerses I the Great, S.** \*Catholicus of Greater \*Armenia, c.353–73, the son of At'anagines and Bam-bishn a princess of the royal Arsacid (\*Arshakuni) house, and great-great-grandson of S. \*Gregory the Illuminator.

Nerses was educated in \*Caesarea of \*Cappadocia and was possibly married there. He may have entered a military career and become *senekapet*—a term perhaps signifying the royal sword-bearer. He was the last Armenian patriarch to be consecrated at Caesarea in Cappadocia. As patriarch he led at least one embassy to \*Constantinople resulting in the release of royal hostages. Nerses reorganized the Armenian Church after a disputed council at Ashtishat in c.354. He established charitable institutions throughout Armenia, alms-houses, asylums for lepers, and \*hospitals.

Nerses opposed the Arianizing policy of the Arsacid kings, a stance which led eventually to his murder, and more immediately to his \*exile after the Council of Seleucia in 359. He returned to the Armenian court at the enthronement of King \*Pap in c.368, but King Pap had Nerses killed in 373.

The \**Buzandaran Patmut'wkn'*, composed in the 5th century, although uncritical in its \*praise, is the main source for Nerses' life. It is the source for the unreservedly panegyric *Life* of him written later. Interpolation into the *Buzandaran* of elements from hagiographic material on S. Basil (Barsel in \*Armenian) causes anachronisms and other inaccuracies, such as the statement that Basil was present at his consecration.

**Nessana (Ar. 'Auja el-Hafir)** Late Antique town of Nabataean origin in the western \*Negev, extending on the plain along a *wadi* that surrounds an acropolis. The ruins of two churches on the plain were reported as early as 1896 and 1909, but no traces exist today. British-American excavations in 1934–6 exposed the ruins of two churches on the acropolis, one of them a \*monastery flanking a Byzantine fort. The \*Nessana papyri, an \*archive of \*Greek texts of the 6th and 7th centuries, contains literary, economic, and juridical documents, private and official \*letters, and lists of offerings to the Church. Israeli excavations between 1987 and 1995 have revealed another church on the plain and a second monastery to the north of the acropolis. PFi

D. Urman, ed., *Nessana—Excavations and Studies*, vol. 1 (2004).

**Nessana Papyri** Collection of c.150 \*Greek and \*Arabic \*papyri dating from the 6th and 7th centuries, discovered in 1935–7 during excavations in the Nabataean \*city \*Nessana in the \*Negev (\*Palaestina Tertia). The texts give an insight into the daily life of the city in Late Antique and Early Islamic times as well as into administrative, military, economic, and ecclesiastical matters. Among the literary texts are a Greek glossary to \*Vergil's *Aeneid* as well as fragments of \*saints' lives and the Gospels. The documentary texts include the \*archives of the local military unit (505–96), church records of the abbot Patrikios, son of Sergios, personal papers of a certain Georgios, son of Patrikios, and an Islamic poll-tax register for the years 687–9. The majority of individuals mentioned in the papyri carried Arab names, but their lives, prior to the \*Arab conquest of the region, formed part of Christian Graeco-Roman culture. The documents therefore make visible a transition in state involvement over this period: while there is little noticeable identification with the Late Roman Empire, the connection between \*village bureaucracy and centralized power becomes clearer in early Islamic times. **'Nestorian Church'** See CHURCH OF THE EAST; PERSIAN EMPIRE, CHRISTIANS IN; NESTORIUS AND NESTORIANISM.

**Nestorius and Nestorianism** Nestorius (d. 451) was \*Patriarch of \*Constantinople from 428 to 431. He subscribed to a dual-nature Christology rejected at the First Council of \*Ephesus in 431 and not affirmed at the Council of \*Chalcedon in 451. Nestorius was a student of \*Theodore of \*Mopsuestia and a \*priest from \*Antioch whom \*Theodosius II selected to be Patriarch of Constantinople. Nestorius was installed in April 428 amid dissenting factions among the clergy, \*bishops, and monks of the \*city. Some said that the Virgin \*Mary should be called \*Theotokos ('Mother of God') and others that she should be called 'Mother of Man'. As a conciliatory gesture, Nestorius proposed the title 'Mother of Christ' to demonstrate that Christ was both God and man.

When \*Cyril, Patriarch of \*Alexandria, heard about Nestorius' teachings from monks who had brought his \*sermons to \*Egypt, he wrote three doctrinal \*letters to

Nestorius (June 429, 430, and November 430) and enlisted the support of Celestine of \*Rome. Cyril said that Nestorius rejected the personal union of God and Man in Christ and so divided the one Lord Jesus Christ into two Sons. Nestorius defended his doctrine and criticized Cyril's in a letter to Celestine, but made the tactical error of mentioning \*Pelagians he had received into communion. Celestine concluded that Nestorius' doctrine was heretical and excommunicated him at a synod held in Rome (August 430). In December 430, the \*emperors Theodosius II and \*Valentinian III summoned a council to meet at \*Ephesus at Whitsun 431. The First \*Council of \*Ephesus eventually met on 22 June 431 to evaluate Nestorius' orthodoxy. Nestorius was formally deposed, excommunicated (22 June 431), and sent into \*exile in Upper \*Egypt.

Among the \*letters, sermons, and treatises the council considered was Nestorius' fourth book on dogma, an exegetical elaboration, based on the \*Bible, of his dual-nature Christology. Using the term 'Son' to designate the duality of natures, Scripture describes generation from the Virgin by saying 'God sent his Son', not 'God sent the Word'. This generation then became the Son of God by conjunction with the deity. Before the Incarnation, God the Word was understood to be both Son and God, united with the Father. But after the Incarnation, the Son who had been separated could no longer be called 'Son'.

Nestorius was criticized by his contemporaries (and continues to be criticized today) for promoting a two-Sons doctrine through his failure to establish an ontological basis for the union between the humanity and divinity of Christ. To answer his critics he wrote in \*exile the *Bazaar of Heracleides*, which located the principle of union between the eternal Logos and the Son of Mary in the *prosopon* that each has taken of the other, there being one *prosopon* for both. Nestorius believed that his orthodoxy was vindicated by the exoneration of Flavian of Constantinople.

Nestorianism flourished in \*Edessa until the Emperor \*Zeno closed its \*school in 489. The \*Church of the East in the \*Persian Empire officially accepted Nestorianism at the \*Council of \*Seleucia-Ctesiphon in 484, and the teachers and students who fled from Edessa founded the School of \*Nisibis in Persian territory. Missionary activity expanded after the \*Arab conquest of Persia in 642, during which Nestorians were neutral toward the \*Arabs. Favourable political conditions along the \*Silk Road in the early 7th century allowed Nestorian missionaries, consisting of \*merchants and medical \*doctors, to spread Nestorianism eventually to the \*Arabian Peninsula, \*India, \*Central Asia, and \*China. In 781, a Nestorian monk erected the \*Xi'an Stele at the imperial capital city of Chang'an which recounts the history of 150 years of Nestorianism.

Documents, stone \*inscriptions, wall paintings, and \*bronze \*crosses also attest to the presence of Nestorians in China. SW

**Neustria** One of three main kingdoms of the \*Franks, alongside \*Austrasia and \*Burgundy, which developed from the recurrent divisions of the \*Merovingian realm among the sons of a deceased king. Neustria was centred on the Seine and Oise valleys of northern France, and bounded by the Loire to the south, \*Brittany to the west, and the \*Silva Carbonaria to the north-east; its major \*cities included \*Rouen, \*Paris, and \*Soissons. Although the term is sometimes retrospectively applied by historians to the share of the kingdom held by \*Chilperic I in the later 6th century, it is first attested only in an incidental reference by \*Jonas of Bobbio c.642 to the rule of Chilperic's son \*Chlothar II over the 'Neustrasian Franks' (*VColumbani* 1, 24). The chronicle of \*Fredegar, written c.660, then routinely employs it as a spatial and political entity, in counterpoint to Austrasia and Burgundy. Its meaning is obscure, but it seems to have been used by outsiders to refer to Frankish areas or peoples that were neither Burgundian nor Austrasian; Neustrian sources suggest that they thought of themselves as the Franks. For much of the 7th century, under Chlothar II and \*Dagobert I, and latterly \*Balthild and the \*Mayor \*Ebroin, Neustria was the dominant kingdom, having absorbed Burgundy, but the defeat of the Neustrians by the Austrasians under \*Pippin II at \*Tertry in 687, and the succession of similar victories by \*Charles Martel at \*Amblève in 716, \*Vinchy in 717, and \*Soissons in

718, culminated in the rise of the Carolingians, and the downgrading of Neustria to a secondary administrative unit. EMB; STL

**Nevitta** \*Consul 362, and military commander of \*barbarian origin. He served in \*Gaul when \*Julian was \*Caesar, becoming \*Magister Equitum in 361. He sat on the tribunals at \*Chalcedon, and was consul for 362 with Claudius \*Mamertinus. He went on the Persian expedition of 363 and survived Julian. SFT *PLRE* I, Nevitta.

**Nezak (Tarkhan Nezak)** (d. 710) Prince who opposed the \*Arab conquest of \*Central Asia. He belonged to a \*Hephthalite dynasty also called Nezak, based in southern \*Tukharistan (7th–8th cent.). Mentioned in Arabic sources and seemingly preserving the remnants of Hephthalite leadership after their defeat by the \*Persian Empire and the \*Türks (556–61), the dynasty is possibly that referred to as the Nezak Shahs on the legends of 7th-century coins from Kapisa, north of Kabul. Kapisa is described by the Buddhist traveller \*Xuanzang (I, 54–68), who notes the flourishing of \*Buddhism in the area. The most famous member of the dynasty, Tarkhan Nezak, initially resisted the Arab invaders from his fortress in Badghis, but made peace with \*Qutayba b. Muslim in 705 and accompanied him on subsequent campaigns in \*Sogdiana. However, after Nezak led a joint Hephthalite–Türk rebellion against the Muslims in 709, Qutayba captured him by trickery in 710 and executed him. The conquest of Tukharistan was essential to establishing Arab authority north of the \*Oxus. MLD

### Niall Noígiallach (Niall of the Nine Hostages)

Ancestor of the Uí Néill, the dominant midland and northern dynasties of medieval \*Ireland. Sources claim that Niall reigned during the 5th century and that his

raiding brought him as far as the English Channel. They also present him as establishing the Uí Néill's claim to the kingship of \*Tara. Among his many reputed sons were Eógan and Conall Gulban, the ancestors of Cenél nEógain and Cenél Conaill, northern dynasties who were to claim the kingship of Tara from the 6th to the 12th centuries. EB

*ODNB* s.n. Niall Noígiallach (Kelly).

T. M. Charles-Edwards, *Early Christian Ireland* (2000), 441–68.

**Nicaea** (mod. Iznik, Turkey) With its neighbour \*Nicomedia, Nicaea was one of the two most important \*cities of ancient \*Bithynia. After being sacked by the \*Goths in 257, the city was equipped with a magnificent 5-km (3-mile) circuit of walls, much of which survives. The imperial \*palace where the \*Council of Nicaea of 325 convened was still standing under \*Justinian I; its site has not been identified. The cathedral Church of the Holy Wisdom, the site of the Seventh Œcumenical Council (787), should probably be identified with the extant 5th- or 6th-century \*basilica at the city's central crossroads. The late 7th-century Church of the Dormition, destroyed in 1924, retained much of its remarkable \*mosaic and \*opus sectile decoration. A vaulted \*tomb in the north-east necropolis has fine 4th-century figurative wall painting. The city had an important cult of S. Tryphon (*BHG* 1856–7), allegedly martyred under \*Decius. PJT

Janin, *Grandescentres*, 105–10, 119, 121–4.

C. Foss, *Nicaea: A Byzantine Capital and its Praises* (1996).

**Nicaea, Council of** (325) First Œcumenical \*Council of the Church, which met at Nicaea (mod. Iznik) in \*Bithynia in May–July 325. The council was summoned by \*Constantine I shortly after he defeated \*Licinius and united the Empire under his sole rule in September 324. Traditionally known as the Council of the 318 fathers (the number of Abraham's servants in Gen. 14:14), the true number of \*bishops in attendance is estimated at 220–50. Only a few westerners took part, including \*Ossius of \*Cordoba, Caecilian of \*Carthage, and two \*priests representing the \*Bishop of \*Rome. The vast majority of those present were from the \*Greek-speaking Eastern half of the Empire, with delegates also arriving from the Crimea, \*Armenia, and the \*Persian Empire. While not fully ecumenical (literally in \*Greek, 'worldwide'), the council was easily the largest church council yet held and one of the most remarkable events of Constantine's reign.

No formal record of the council's discussions survives, but \*Eusebius of \*Caesarea and \*Athanasius of \*Alexandria (who attended as \*deacon to his bishop Alexander) both left eyewitness accounts. The theological issues debated at Nicaea revolved around the

teachings of the Alexandrian presbyter \*Arius concerning the divinity of God the Son and the relationship between Father and Son in the Trinity. Arius himself was exiled during the council, and the most notorious views attributed to him were anathematized. In the original Nicene Creed, the Son was declared to be 'true God from true God' and *homoousios* ('consubstantial', 'of one essence') with the Father. The term *homoousios*, which happens not to be used in the \*Bible, proved highly controversial, and the creed failed to resolve the Trinitarian debates which continued for more than half a century. Revised at the Council of \*Constantinople in 381, however, the Nicene Creed became, and remains, the premier statement of orthodox Christian faith.

The bishops at Nicaea attempted to establish uniform practices for calculating the date of \*Easter each year. They also sought to reconcile to the Church the rigorists of the \*Meletian Schism, which had emerged in the aftermath of the Great Persecution and the Novatianist Schism. Twenty canons addressed a variety of disciplinary issues, most significantly concerning the authority of the leading sees of Rome, Alexandria, \*Antioch, and \*Jerusalem (can. 6–7). The council concluded with the inaugural celebration of the twentieth \*anniversary (Vicennalia) of Constantine becoming an \*emperor. Eusebius compared the celebration to 'an imaginary representation of the kingdom of Christ' (*VCon* III, 15).

The Seventh Œcumenical Council of 787 was also held at Nicaea. It was summoned in 787 by the Byzantine \*Empress Irene. This council resolved the \*Iconoclast Controversy, in language repeatedly invoking the council of 325.

**Nicephorus** (c.750/8–828) \*Patriarch of Constantinople 806–15. A prominent iconophile theologian, polemicist, and historian, Nicephorus wrote the *Breviarium Historiae*, probably 775–87, a work of history in the classical manner, perhaps deliberately continuing the classicizing tradition extending from \*Procopius to \*Theophylact Simocatta. The work covers the years 602–769, but omits all but the merest mention of \*Constans II's reign. It exists in two distinct versions,

one ending in 713, both probably unfinished. Despite its brevity and anti-\*Iconoclast sympathies, the *Breviarium* incorporates earlier sources otherwise unknown and, alongside \*Theophanes, is a key Roman source for the 7th and 8th centuries. Nicephorus also composed the *Chronographicum Syntomum*, a brief universal chronicle listing rulers from Creation down to 829.

**Nicephorus Callistus Xanthopolus** (before 1256?–c.1335?) Author of a huge *Church History* (the first since \*Evagrius in the 6th century), also covering secular events, from Christ to AD 610 in eighteen books; the preface includes a summary of an additional five books reaching to 911, possibly never written. Probably a priest at the Church of the \*Holy Wisdom with access to the patriarchal \*library and eventually a monk, Nicephorus made considerable use of surviving ecclesiastical histories and chronicles, but also preserves valuable information from sources now lost, particularly on matters of \*heresy and \*liturgy; *HE* XVII, 28 [292A], for instance, is the sole source for the \*Emperor \*Maurice's introducing the \*festival of the Dormition of the \*Theotokos on 15 August. As he also wrote extensive liturgical, exegetic, and hagiographic works, some in verse (including a poem on \*beer), his historical material is based on good research. Though basically a compiler, Nicephorus did not simply copy but intelligently combined material from various sources. For instance, he alone preserves together four variant stories of \*Marcian's justification of himself as God's chosen emperor, otherwise only known as individual stories in separate accounts.

**Nicetas** (d. after 618) \*Patricius. Nicetas was a cousin of \*Heraclius and supported Heraclius' bid to overthrow \*Phocas. In 609–10 he led the expedition which secured \*Libya and \*Egypt for Heraclius, serving as \*Praefectus Augustalis from 610. He nominated \*John the Almsgiver as the \*Melkite (Chalcedonian) \*Patriarch of \*Alexandria. He then replaced \*Priscus as \*Comes Excubitorum and fought in \*Palestine

against the Persians in 612–14. He achieved a truce or small victory over Persians at \*Emesa, to commemorate which an equestrian statue was erected. He fled Alexandria with John before the Persians captured the city in 619. It is possible that he served as \*Exarch of \*Africa after 619, and died sometime before 630. RCW

PLRE III, Nicetas 7.

Kaegi, *Heraclius*.

**Nicetas of Remesiana** (d. after 414) \*Bishop in \*Dacia Mediterranea, a \*province ecclesiastically dependent on \*Rome but politically joined to the East. He visited \*Italy and \*Nola in 400 and 403 (\*Paulinus of Nola, *Carmen* 27, 329–44; *ep.* 29, 14), and in 414 received Pope Innocent's *ep.* 17. Paulinus of Nola's *pro-pempticum* dedicated to him in 400 (*Carmen*, 17) praises his missionary activity on the Danube \*frontier. \*Gennadius (*Vir. Ill.* 22) credits him with a catechetical handbook, partially extant. Other surviving treatises include works on the names of Christ, vigils, and \*hymn singing. Assignment to him of the \*Te Deum and several other writings remains controversial. DET

**Nicetius of Lyons** (c.508–573) \*Bishop of \*Lyons (552–73). A career cleric of senatorial family, recommended by his uncle Sacerdos as his episcopal successor. After his death, a cult soon developed at his tomb in Lyons, and his maternal great-nephew \*Gregory of \*Tours drew on personal experience to complement a short anonymous *Life* (BHL 6088) with his own concise hagiographical treatment, in which Nicetius comes across as a saintly but somewhat stern figure (*Lives of the Fathers*, 8 = BHL 6089). The existing Church of S. Nizier marks the site of his burial; in 1308, it still

contained his epitaph (CIL XIII, 2400), as well as those of several other bishops of Lyons. EJ; STL

**Nicetius of Trier** \*Bishop of \*Trier (c.525/6–c.566/7). Abbot from \*Aquitaine, appointed bishop by \*Theuderic I. Nicetius repeatedly challenged Theuderic's successors \*Theudebert I and \*Chlothar I and their entourage over their behaviour, reproached the \*Emperor \*Justinian I over his theological position (*Ep. Aust.* 7), and encouraged the Frankish Princess Chlodowintha to follow the example of her grandmother \*Chlothild in working for the \*conversion of her husband the \*Lombard King \*Alboin (*Ep. Aust.* 8). Five \*letters to Nicetius are also preserved within the \**Epistulae Austrasiacae*, showing his contacts with \*Italy (*Ep. Aust.* 5, 6, 11, 21, 24). \*Venantius Fortunatus (*Carmina*, 3, 11–12) praises his ecclesiastical building projects and his lavish rural residence on the Moselle. \*Gregory of \*Tours praises his holiness, wrote a brief *Life* (*Lives of the Fathers* 17) based on information provided by Nicetius' protégé \*Aredius of Limoges, and mentions his posthumous \*miracles (*Lives of the Confessors*, 92). **Nicolaus Rhetor of Myra** Teacher of \*rhetoric (fl. 5th cent.). Nicolaus is the author of the latest known \**Progymnasmata* handbook from Antiquity. Some model exercises are variously attributed to him and to \*Libanius but are likely to be the work of a different

author. The *\*Suda* distinguishes two different rhetoricians by the name of Nicolaus: one, of unknown origin, who was a contemporary of *\*Proclus* (*\*Marinus*, *VProcli* 10), and another from *\*Myra*, brother of *Dioscurides* (= *PLRE* II, *Dioscorus* 5), *\*grammaticus*, *\*Praefectus Urbi* at *\*Constantinople* (where he taught the daughters of *\*Leo I*) and *\*Praefectus Praetorio* (472–5 and 489). The *Suda* attributes to the former the *Progymnasmata* as well as declamations which are now lost, and to the latter a *Techne Rhetorike*.

The *Progymnasmata* handbook attributed to Nicolaus is particularly rich in its introductory discussion of the nature and use of these elementary exercises, providing valuable information about pedagogical practice. The instructions for the individual exercises are also unusually full and often preserve earlier doctrines; they were reused in Byzantine commentaries on *\*Aphthonius's Progymnasmata*. RW

**Nicomachus Flavianus** *\*Senatorial aristocrat*, son of *Virius \*Nicomachus Flavianus*. As a young *\*Proconsul Asiae* (382–3), Flavianus was praised by *\*Himerius* (*Oration* XII, 36, 43), but was dismissed for flogging a *\*city councillor*. He was *\*Praefectus Urbi* at *\*Rome* during the usurpation of *\*Eugenius* which culminated in the *\*suicide* of his own father in 394. His subsequent return to official favour is documented in 81 *\*letters* of his father-in-law *\*Symmachus* (in Book VI, spanning the years 394 to 402). He may have become a Christian (perhaps referred to by *\*Augustine*, *Civ. Dei* V, 26, 1). He was *Praefectus Urbi* a second time in 399–400 and

again at an uncertain date. As *\*Praefectus Praetorio Italiae* in 431–2 he had *\*Valentinian III* restore his father's statue in the Forum (*CIL* VI, 1783). His name appears three times in subscriptions of *Livy's* first decade.

**Nicomachus Flavianus the Elder** (?330s–5/6 November 394) Roman aristocrat and administrator; author of now lost works. The birthdate of 334 sometimes asserted for *Virius Nicomachus Flavianus* depends on his misidentification as the *\*Praefectus Urbi* attacked in the *\*Carmen contra Paganos*. It cannot, however, be far wrong, as Flavianus' son *\*Nicomachus Flavianus the Younger* held offices in the early 380s. Flavianus was *Pontifex Major*, *\*Vicarius \*Africae* c.377, *\*Quaestor Sacrae Palatii* to *\*Theodosius I* c.388–90 and *\*Praefectus Praetorio* of *\*Italy*, *\*Illyricum*, and *\*Africa* c.390–2, and again 392–4 under the *\*usurper \*Eugenius*, who appointed him *\*consul* for 394. He committed *\*suicide* during *Eugenius'* defeat at the River *\*Frigidus*, *\*Rufinus'* account of which polemically portrays him as a *\*pagan fanatic* (*HE* XI, 33). His son arranged a formal rehabilitation with a statue in the Roman Forum in 431 (*CIL* VI, 1783 = *ILS* 2948).

Book II of *\*Symmachus'* *\*Letters* contains 92 letters to Flavianus, more than to any other addressee. *Symmachus'* daughter married Flavianus' son and *Symmachus'* son *Memmius* later married Flavianus' daughter. In fictional guise he is one of the learned pagan interlocutors of *\*Macrobius'* *Saturnalia*, along with *Symmachus* and *\*Praetextatus*. It is as one of these 'last pagans of *\*Rome*' that Flavianus has become controversial in modern scholarship. *Rufinus'* portrayal, combined with the almost certainly erroneous association with the *Carmen contra Paganos*, leads some to see him at the centre of an alleged pagan revival in the 390s.

A lost historical work, the *Annales*, is attested in two inscriptions (*CIL* VI, 1782–3 = *ILS* 2947–8). It has been cast as a pagan interpretation of the 3rd and 4th centuries—despite its scope being unknown and its dedication certainly being to the Christian *\*Emperor Theodosius*. It has also been claimed as a source for *\*Ammianus*, the *\*Historia Augusta*, *\*Eunapius*, and the *\*Epitome de Caesaribus*, as well as (via the so-called 'Leoquelle') *\*Zonaras*. Equal uncertainty surrounds other writings. Flavianus may have translated, or

perhaps just transcribed, \*Philostratus' *Life of Apollonius* (\*Sidonius, *ep.* VIII, 3, 1). He has sometimes been identified as the Flavianus who wrote the *De Vestigiis sive de Dogmatis Philosophorum*, cited in John of Salisbury's *Policraticus*, II, 26, VIII, 11–12 for anecdotes about \*philosophers. **Nicomedia** \*City of \*Bithynia (mod. İzmit, formerly Iznikmid), founded in 264 BC by Nicomedes I.

Nicomedia became the principal imperial residence under \*Diocletian, who had been proclaimed \*emperor outside Nicomedia on 20 November 284 (\*Lactantius, *Mort.* 17–19). The city was extensively reconstructed, with a \*palace, \*circus, and \*weapons factory, 'to make it the equal of the City of \*Rome' (*Mort.* 7, 8–10), and was ringed with a massive 6-km (c.4-mile) circuit wall, parts of which survive. Diocletian equipped Nicomedia with a mint c.302, which operated until c.474. It reopened in 498 and issued coins until 627.

The main source for \*Tetrarchic Nicomedia is \*Lactantius, who gives a vivid eyewitness account of the outbreak of the Great Persecution at Nicomedia in February 303 (*Mort.* 12–15). The city retained its prominence under \*Licinius, who resided at Nicomedia between 317 and 324, and \*Constantine, whose ecclesiastical policy was strongly influenced by the \*Arian \*Eusebius, Bishop of Nicomedia from c.320 to 337.

Nicomedia lost its imperial status to \*Constantinople in 330. A vivid picture of the city in the mid-4th century is provided by \*Libanius, who taught \*rhetoric there AD 344–9 (*Oration*, 1, 48–75). The city was destroyed by an \*earthquake in AD 358 (\*Ammianus, XVII, 7; Libanius, *Oration*, 61), foretold by \*Arsacius, a local \*holy man, and commemorated in \*Ephrem the Syrian's sixteen *Hymns on Nicomedia* (359), which survive in \*Armenian translation. Despite counterclaims from its neighbour and old rival \*Nicaea (*ACO* II, 1, 3, 415–21), Nicomedia remained the civil and ecclesiastical capital of \*Bithynia throughout the 4th and 5th centuries, though imperial visits became progressively less frequent. Repeated earthquakes disintegrated the urban fabric, and the regional economy was further damaged by \*Justinian I's diversion of the main Anatolian highway and \*Cursus Publicus from Nicomedia to Nicaea (\*Procopius, *Anecd.* 30, 8–11). The city

was visited by S. \*Theodore of \*Sykeon in 612, who found a thriving market town with merchants, a large poorhouse, and a \*Jewish community; the weapons factory was still functioning, and hermits inhabited unoccupied parts of the Diocletianic city walls (*VTheod-Syk* 156–60). PJT; RRD

**Nicopolis (Egypt)** \*City on the Mediterranean coast about 8 km (5 miles) east of \*Alexandria, site of the principal legionary fortress of Roman \*Egypt, built by Augustus. Remains of a fortress of Late Roman appearance with massive walls of stone with \*brick courses, remains of \*baths, and a \*mosaic with \*Dionysiac themes were still visible in the late 19th century. GS; OPN  
R. Alston, *Soldier and Society in Roman Egypt: A Social History* (1995), 192–3.

**Nicopolis (Emmaus)** The town called Emmaus (Hebr. Hammath, Arabic 'Amuas) was situated west of \*Jerusalem. It became a toparchy during the Hasmoneans, and a \*city with the name Nicopolis from AD 221. Its identification with Emmaus of the Gospel (Luke 24:13) was unanimous in the Byzantine period, despite the disagreement about its distance from Jerusalem (60 or 160 stadia, c.7 or 19 miles (11 or 30 km)) in the manuscript tradition. The \*apse of a Late Antique \*basilica and the walls of a Crusader church have been excavated there, as well as a \*baptistery, \*mosaic floors, and several \*inscriptions. \*Theodosius the pilgrim (4) mentions a \*martyrium. PFi

H. Vincent and M. Abel, *Emmaüs, sa basilique et son histoire* (1932).

K.-H. Fleckenstein, M. Louhivuori, and R. Riesner, *Emmaus in Judäa* (2003).

**Nicopolis ad Istrum** \*City of the \*province of \*Moesia Secunda, founded c. AD 110 by Trajan, and of military and commercial importance through the 6th century. Located to the north of the Balkan Mountains near the confluence of the Rositsa and Yantra rivers, Nicopolis served as a second line of defence for the Danube \*frontier behind the port cities of Novae (mod. Svishtov) and Sexaginta Prista (mod. Ruse). It was also a trade hub between the Danube and the \*Diocese of \*Thracia.

Nicopolis was urbanized under Hadrian and Antoninus Pius with a major renewal programme in the Severan period after the Costobocci sacked it in the 170s. The \*Goths overcame the city in 270 but it was

re-fortified in the late 3rd and 4th centuries. New defences were constructed in the mid- to late 5th century following devastation by the \*Huns in 447. The city was Christianized in the 4th and 5th centuries and had a \*bishop by 458. The city was later occupied in the Slavic period.

The plan of the city is well known thanks to excavation and geophysical surveys by Bulgarian and British archaeologists. Given the relatively level topography of the site, the Romans established an orthogonal \*street plan. The public district of the city has been well excavated and consists of a \*forum with a rectangular courtyard and \*basilica, a covered theatre (*odeon*), and a monumental meeting hall (*thermoperipatos*). The wealth of the city is attested by \*marble architectural sculpture and statues. Geophysical surveys have revealed the plans of domestic features, and a small number of \*houses have been excavated. Water was supplied through a system of wells and an \*aqueduct; associated with the latter, a *castellum aquae* and \*cisterns have been identified. The Late Roman fortification wall is composed of concrete masonry with monumental \*city gates and towers.

A separate fortified area immediately to the south of the city probably served a military function at first. In the Late Roman period, this area was occupied by a Christian basilica and a smaller church as well as buildings that served domestic, storage, and craft purposes.

**Nicopolis of Epirus** Port and \*city, north of modern Preveza (\*Greece), on a promontory between the Aegean Sea and the Ambracian Gulf and opposite the heel of \*Italy. It was founded by Augustus as a Roman *colonia* to commemorate the Battle of Actium, and was metropolis of the Late Roman \*province of \*Epirus Vetus. Fish were plentiful (\**Expositio Totius Mundi*, 53).

S. Paul wintered there (Titus 3:12), and \*Eusebius claims that \*Origen found an obscure version of the OT at Nicopolis (*HE* VI, 17, 2). A \*bishop is first attested at the Council of \*Serdica of 343. \*Jerome (*Prologue to Commentary on Titus*) notes that the senatorial \*family of his ascetic friend \*Paula owned property here. \*Letters from 516–17 between the new Bishop John and \*Hormisdas in \*Rome are preserved in the \**Collectio Avellana* (*epp.* 117–23 and 134–5).

The Emperor \*Julian was praised in a \*panegyric for repairing the Nicopolis \*aqueducts (Claudius \*Mamertinus, *PanLat* III (VIII), 8, 2), damaged perhaps in an \*earthquake. The city's coastal position made it important strategically. \*Alaric savaged \*Epirus (\*Claudian, *In Eutropium*, II, 215, cf. \*Socrates, VII, 10, \*Zosimus, V, 7). \*Geiseric the \*Vandal captured Nicopolis to strengthen his position in negotiations with an emissary of the \*Emperor \*Zeno in 474 (\*Malchus, fr. 5 Blockley = 3 Müller *FHG*). An \*Ostrogothic naval expedition under \*Totila sacked Nicopolis in 551 (\*Procopius, *Gothic*, VIII, 22, 31).

The monumental 5th-century walls of Nicopolis are modelled on those of \*Constantinople. Five Christian \*basilicas were constructed in the 5th and 6th centuries. Three of them have architectural similarities to 4th-century churches in \*Milan and \*Ravenna, including a tripartite transept plan and \*brick construction. The largest was possibly the city's cathedral, for which Bishop Alcison (491–516) sponsored renovations. The subjects of the \*mosaics of the bishop's palace and a \*villa suggest Aegean influences and a local school of mosaicists. \*Slav incursions in the late 6th century caused the collapse of civic structures, and the location was abandoned shortly afterwards.

**Niederdollendorf Stone** Frankish gravestone found in 1901 in Niederdollendorf, now part of Königswinter, on the Rhine 8 km (5 miles) south of Bonn. One side depicts a spear-carrying man with a circle on his chest and rays (or \*hair) surrounding his head, possibly in representation of \*Christ. The other side, one of the best-known examples of Frankish sculpture, is more deeply carved: the man carries a \*scramasax, and appears menaced by three serpent heads. Some have taken this as a depiction of the dead warrior lying in his \*tomb.

**Nihawand, Battle of** Decisive battle between Muslims and Persians in 640/2 (\*Tabari, XIII, 179). Following the loss of \*Mesopotamia to the \*Arab conquest of 635–8, \*Sasanian armies mustered in the Iranian Plateau to block the Muslims' path across the Zagros. Several Sasanian generals met the Muslims at Nihawand. The battle lasted several days with heavy losses to

both sides; Muslim victory is ascribed either to a ruse or to the arrival of reinforcements. Victory led to Muslim conquest of al-Jibal and \*Khuzestan, and \*Isfahan fell soon afterwards.

**Nika Riot** The largest uprising against the \*Emperor \*Justinian I, which took place over nine days in \*Constantinople in January 532. It is well documented in contemporary sources, such as \*Procopius, \*John Malalas, and later in the \**Chronicon Paschale* and *Chronicle* of \*Theophanes.

After Justinian became sole emperor in August 527, he reined in the excesses of the \*circus \*factions. On 10 January 532, seven partisans were sentenced to death; the execution of two of them, one \*Blue and one \*Green, was bungled, and they were given sanctuary. Both factions clamoured in vain for their release in the Hippodrome on the following Tuesday; they then united with the slogan 'Nika' ('Victory') and burned down many buildings. Justinian sought to appease the rioters by continuing games on Wednesday, but they demanded the dismissal of the \*Praefectus Praetorio, \*John the Cappadocian, and other officials, to which the emperor assented. Rioting continued nonetheless. Justinian brought in reinforcements from \*Thrace, who met with stiff resistance in fighting on the Saturday. That evening the emperor dismissed \*Anastasius I's nephews \*Hypatius and Pompeius from the palace and on Sunday morning made a renewed appeal to the people in the Hippodrome. The people preferred Hypatius, who arrived soon afterwards. But a brutal assault on the assembled populace quashed the revolt, leaving 30,000 dead and the \*city in ruins. Hypatius and Pompey were executed the next day. Whether Justinian deliberately provoked or encouraged the riot is debated.

**Nikiu** Fortified market town in the Nile Delta usually identified with Pshati/Ibshadi on the east bank of the \*Nile opposite Terenouthis, and reputedly a stopping place for the Holy Family during the Flight into \*Egypt. Nikiu's \*bishops were staunch supporters of the \*Patriarchs of \*Alexandria during the 4th and 5th centuries. Nikiu's strategic location made it an important military objective for both the Persians and the \*Arabs in their respective conquests of the delta in the 7th century; the *Chronicle* of \*John, Bishop of Nikiu,

though starting with the Creation, provides an important, if lacunose, contemporary account of the \*Persian invasion and \*Arab conquest. By the 10th century, Nikiu had declined to the point where it was no longer the seat of a bishop.

*CoptEnc* 6 s.v. Nikiou 1793b–1794a (R. Stewart).

**Nile and Nilometer** 'Egypt is the work of the Nile' (\*Libanius, *Oratio*, 30, *Pro Templis*, 35). The vast majority of the Egyptian population in Late Antiquity lived in the Nile Valley and the river was their principal thoroughfare. The annual flooding of the river provided the fertile silt and \*irrigation that made \*farming in Egypt the most productive in the Late Antique world. Nile irrigation channels were protected by law (*CTh* IX, 32 = *CJust* IX, 38). \*Nilotic scenes, such as those woven into Egyptian \*textiles or depicted in \*mosaics at the church at \*Qasr el Lebia, symbolize fertility and abundance. As late as Libanius, the rise and fall of the Nile, and the plenty it guaranteed, was seen as sympathetically linked to the due performance of pagan rites (*Oratio*, 30, 35).

Ancient observations of the varying extent and character of the annual Nile flood are of use to modern historians of \*climate change. The flood could normally be seen in July in southern Egypt. In August the region of the First Cataract at Aswan was in full flood, and the high water then moved north over the course of the next four to six weeks. The flood levels were measured in cubits (Gk. *pechus*; Lat. *ulna*) and recorded at intervals along the river by a series of Nilometers. The novelist \*Heliodorus, who regarded the flooding of the Nile as a mystery, describes a Nilometer with stilling wells of polished stone marked in cubits and fed with river water from below.

The best-known Nilometer was housed in the \*Serapeum of \*Alexandria. No remains of the Roman Nilometer (as distinct from that of the Ptolemaic period) have been found—it seems indeed to have been a portable instrument. \*Constantine I ordered it to be moved from the Serapeum to a church, but it was reinstated in the Serapeum under \*Julian (\*Socrates, I, 18, 2; \*Sozomen, V, 3, 3). The Serapeum was sacked by Christians in 391, and everyone feared that as a consequence the Nile would not rise, as if Serapis 'were responsible for the swelling and flooding of the waters'; however the river rose and the measuring instrument was removed 'to the church of the Lord of the Waters' (\*Rufinus, *HE* II, 30).

Christian Egypt continued to measure the rise of the Nile in cubits. Among the pagan paraphernalia confiscated from Gesios of \*Panopolis by his rival Abba \*Shenoute was an instrument for measuring the rise of the Nile, identical in appearance to one used by the Church. The technology was similar, but it was

hallowed by different rites. \*Holy men such as \*John of \*Lycopolis came to be known for their ability to discern the extent and character of the annual flood (\**Historia Monachorum in Aegypto*, I, 11). After the \*Arab conquest, under the \*Umayyads, a Nilometer was constructed on Roda Island at Cairo; it was described by \*Dionysius of Tel-Mahre after his visit to Egypt in 830, and, although considerably restored, was in use into the 20th century. **Nilotic scenes** Derived from Roman art, representations of the \*Nile and its flora and fauna were popular until the 8th century and symbolized fertility and abundance, as in the \*mosaic of the Nile personified in the Nile Festival Building at \*Sepphoris. Christians such as the author of the \**Chronicon Paschale* identified the Nile with the Gihon or Gion River, one of the four rivers of Paradise of Genesis 2:10–14. In churches, Nilotic scenes could signify abundance, as in the wall paintings of the Church of S. Stephen at \*Gaza described by \*Choricus (*Laudatio Marciani*, 2, 50), good fortune, as on Egyptian \*textiles, or appear as natural elements in scenes of the \*Earthly Paradise. SVL

**Nilus, Narrations of** Early 5th-century text merging Graeco-Roman and Judaeo-Christian genres, such as (travel) romance, \*martyr narrative, and hagiography. The *Narrations* are particularly rich in ethnographical details concerning \*Arab nomads and the geography of the Late Antique \*Sinai and \*Negev; their language is rich in allusions to the Old Testament. The narrator (Ps.-Nilus, wrongly identified with \*Nilus the Ascetic, otherwise known as Nilus of Ancyra) describes a \*'Saracen' raid, in which his son was abducted, and their reunion in the \*city of \*Elusa. **Nilus of Ancyra** See NILUS THE ASCETIC.

**Nilus of Sinai** See NILUS, NARRATIONS OF.

**Nilus the Ascetic (Nilus of Ancyra)** (fl. c.390–430) Monk and author active in Ancyra (mod. \*Ankara), \*Galatia, and a pupil of \*John Chrysostom, not to be confused with Nilus of \*Sinai (or Ps.-Nilus), author of the *Narrationes* (see NILUS, NARRATIONS OF). Little about Nilus is known for certain, as his earliest witness dates to the 9th century and there is limited autobiographical information in his works. These include a large corpus of \*letters (CPG 6043), in addition to commentaries and treatises on the monastic life, notably his *Commentary on the Song of Songs* (CPG 6051), the *Ascetic Discourse*, and *On Voluntary Poverty* (CPG 6048). While the letters can be used cautiously to outline Nilus' network and thought, there is no modern edition and the collection is rife with critical difficulties, including doublets, spurious letters, and questionable authenticity of titular headings (Cameron, 182–6). Nonetheless, Nilus' surviving works are of tremendous value for the study of monasticism in 4th–5th-century \*Anatolia. SEI

**nimbus** The disc surrounding depictions of the head of a sovereign or divine entity. The disc nimbus appears first on Kushan coins as an attribute of kings and gods. In the Roman Empire, it emerges as an attribute of a ruling sovereign first under \*Diocletian in the \*Lyons Lead Medallion, appearing as standard in the \*Luxor wall paintings. Both \*Constantine I and \*Licinius used it.

By the late 4th century Christian \*iconography began to appropriate the nimbus. Sasanian \*silver plate incorporates the disc nimbus in the late 5th century to represent the \**xwarrab*; it later appears in coins and relief sculpture. MPC

Canepa, *Two Eyes*, 193–6.

**'Nine Saints'** Ethiopian traditions relate that a number of Christian holy men came to \*Aksum from parts of the Roman Empire during the late 5th and early 6th centuries. They dispersed over areas adjacent to the capital and over outlying areas further east, where they are recalled as having been responsible for the establishment of \*Christianity and the foundation of \*monasteries including Pantalewon near Aksum, Afse at Yeha, Za-Mika'el at \*Dabra Damo, and \*Garima near Adwa. The dating of such developments more than a century after the initial royal \*conversion is in accord with evidence from other sources. Later traditions tended to group these individuals together and to attribute to them a Syrian origin that is incompatible with some of the individual versions. Although these sources generally agree that they numbered nine, the lists of nine names and locations show significant variation. Commentators have noted the probability that the arrival of the 'Nine Saints' was linked to Ethiopia's non-adherence to the doctrinal rulings of the \*Council of \*Chalcedon in 451. DWP

**Nineveh and Mosul (Ar. Al-Mawsil)** Important settlement on the Tigris in northern Iraq: Nineveh refers to the town on the east bank of the Tigris, Mosul to that on the west bank.

Nineveh, the ancient capital of Assyria, remained mostly unoccupied from its obliteration in 612 BC until the Seleucid period when the province of \*Adiabene was established. The capital of Adiabene was \*Arbela (mod. Erbil), but Nineveh was resettled and there is evidence of occupation through the Parthian and Sasanian periods. By the 2nd century AD it began gaining a significant Christian population. Nineveh does not appear to have been a \*Sasanian administrative centre, but was large enough to merit its own bishopric of the \*Church of the East: \*bishops from Nineveh attended church \*councils in AD 554, 576, and 585 (Chabot, 678). Late Antique Nineveh also appears to have housed a small Jewish population (Oppenheimer, 313).

In Late Antiquity Nineveh's population was concentrated on the east bank of the Tigris. The west bank was mostly unoccupied except for a garrison fortification ascribed to the Sasanian monarch \*Khosrow II. Other

Sasanian-era walled enclosures appear to have been erected as refuges for local farmers against nomadic raiding. In the late 6th century monastic construction began on the west bank too: the \*holy man Īshō'yāhb founded a \*monastery, Mār Īsha'yā, in c.570 (\**Chronicle of Seert*, 200), perhaps near an existing Sasanian fortress. Another monastery, Mār Elia, was built nearby, c.595 (\**Chronicle of Khuzestan*, 23). The name Mosul (Ar. al-Mawsil) is not attested to describe these west-bank settlements before \*Islam; the west-bank fortifications were perhaps known as Hesnā 'Ebrāyē (the Jews' Fort), but the toponyms remain unclear and the east-bank town of Nineveh was clearly the dominant regional centre.

On 12 December 627, Nineveh was the site of the decisive battle between the East Roman \*Emperor \*Heraclius and the Sasanian general Rozbihan (MP Rōzwehān, Gk. Razates, Ar. Rāhzār). This Roman victory opened the path to \*Dastgird, the Sasanian royal residence and estate in central \*Mesopotamia, and signalled the end of \*Khosrow II's reign and ultimate Roman success in the \*Persian–Roman war of 602–28 (\*Theophanes, AM 6118).

Muslims led by 'Utba b. Farqad conquered Nineveh and the fort on the west bank of the Tigris in 20 AH/AD 641, and shortly afterwards the Muslim commander Harthama b. 'Arfaja constructed a new garrison town (Ar. \**misr*) with a congregational \*mosque near one of the west-bank Sasanian-era monasteries or churches (al-Azdi, 147). The Muslims' new town took the name al-Mawsil, and was the administrative centre for Muslim rule over the surrounding steppe (which the early Muslim state called 'Dār Rabi'a'). In the late 7th century AD the \*Caliph \*'Abd al-Malik b. Marwān reorganized northern Iraq and northern \*Syria into the cohesive \*jund of 'al-\*Jazīra, and al-Mawsil became its principal town, witnessing extensive urban expansion under the later \*Umayyads (Robinson, 77–89). Al-Mawsil was predominantly a Muslim \*city, but pre-Islamic landowners continued to manage the surrounding agricultural lands, and nearby monasteries thrived in the Umayyad period, notably those of Rabban \*Hormizd and \*Mar Mattai.

Al-Mawsil's Umayyad-era expansion eclipsed the old town of Nineveh, which became a suburb where Christian populations continued smaller-scale construction. Nineveh was mostly ruins in the early 13th century AD; one of its churches was transformed into a mosque and shrine of the Prophet Jonah (Ar. Yūnis). Arabic folklore linked the site by the Tigris to the location where Jonah was swallowed by the whale (al-Harawī, 63); it became a place of Muslim \*pilgrimage (Fiey, 33) until its destruction in 2014. **Niš** (Serbia, Roman Naissus) \*City of \*Dacia Mediterranea, where the Balkan \*Via Militaris crossed roads leading north-east to \*Ratiaria and the Danube \*frontier and south to Scupi and \*Thessalonica. \*Gallienus or \*Claudius II Gothicus defeated Germanic invaders near Niš in AD 268/9. \*Constantine I was born there, as was, later, \*Constantius III. It was while at Niš on his march eastwards to \*Constantinople along the Via Militaris that the \*Caesar \*Julian heard that his kinsman and rival the \*Augustus \*Constantius II had died (\*Zosimus, III, 11, 2).

The city had a military factory (\**Notitia Dignitatum*, XI, 37) and probably an *officina* of the imperial mint processing locally mined \*silver. It was famous for its Christian \*martyrs (\*Victricius of \*Rouen, *De Laudibus Sanctorum*, 11, 1), though no authentic \*martyr passion survives. Niš (or \*Serdica) was the see of the heretical Bishop Bonosus (*fl.* c.390).

\*Attila sacked Niš in 441, massacred its inhabitants, and demanded that it become the place of commercial exchange between \*Huns and Romans. He sacked it again in 448. \*Priscus of Panium found the place empty except for sick people in the \*hostels, and the banks of the river littered with the bones of those who had died in the fighting (fr. 11, 2 Blockley = 8 Müller *FHG*). The \*Ostrogoths captured it in c.473 (\*Jordanes, *Getica*, 285). Further sacks occurred in 480 and 540. \*Justinian I restored the city (\*Procopius, *Aed.* IV, 1, 31), but it soon came under \*Avar control and remained so during the 7th century.

The 18th-century Ottoman fortress of Niš overlies the Late Roman fortified city, which occupied about 40 ha (about 100 acres). Excavations have revealed parts of the ancient city walls, \*streets, a 4th-century \*house, cemeteries with Christian tombs, and four \*basilicas, one of which was a mausoleum or \*martyrium (Jagodin Mala). Finds include a \*porphyry statue of an \*emperor of the Tetrarchy and a \*bronze portrait-head of Constantine I.

In the locality of Brzi Brod, about 8 kms. (5 miles) south-east of Niš, excavations and survey have located a settlement of 40 ha (about 100 acres), consisting of a sumptuous \*villa flanked by two large compounds of \*barns (*horrea*) and barracks. The site is identified with \*Mediana, the military campus of Niš mentioned as 3 Roman miles from the city by \*Ammianus Marcellinus (XXVI, 5, 1). Built in the early 4th century, the buildings were abandoned and taken over by a rural settlement before 400. ER

**Nishapur** \*Sasanian \*city in north-east Iran (\*Khorasan). Founded by \*Shapur I in the late 3rd century, Nishapur was the capital of the province of Abaršahr, which encompassed three Parthian provinces. The New

York Metropolitan Museum's excavations (1935–40 and 1947–8) found only early Islamic material. MPC *Enclran* (2010) s.v. Nishapur i. (C. E. Bosworth).

**Nisibis** \*City described by \*Ammianus as 'the strongest bulwark of the Orient' (XXV, 8, 14), modern Nusaybin in south-east Turkey, south of \*Tur 'Abdin and by the River Mygdonius (modern Çağcağ). Nisibis appears in Assyrian inscriptions as Nasibina. It was refounded in Hellenistic times as Antioch on the Mygdonius, but in Late Antiquity the population was predominantly \*Syriac-speaking. The city changed hands between Armenians, Parthians, and Romans until the 40 years of peace between the Roman and \*Persian Empires (AD 298–337). According to the peace treaty of 298, Nisibis became, despite Persian objections, the point of contact between the two empires (\*Peter the Patrician, fr. 14), and also capital of the newly enlarged Roman \*province of \*Mesopotamia and headquarters of the \*Dux of Mesopotamia. Considerable international \*trade was transacted at Nisibis, though the export to the Persian Empire of \*bronze and \*iron was forbidden by law (\**Expositio Totius Mundi*, 22).

The Persian Shah \*Shapur II besieged the city in 338, 346, and 350. The last \*siege is documented in the \*Emperor \*Julian's \*panegyrics of his kinsman \*Constantius II, and by the renowned Syriac poet \*Ephrem the Syrian, a native of the city who lived through all three sieges and in his *Carmina Nisibena* praised three successive \*bishops, \*Jacob, Babu, and Vologeses, for inspiring the city's defenders. After Julian's disastrous Persian expedition of 363 \*Jovian surrendered the city to the Persians (\*Ammianus, XXV, 7–9; \*Jerome, *Chron.* 243c Helm; \*Zosimus, III, 31, 1 and 33, 1–34, 2; etc.), to the disgust of Ephrem (*Carmen contra Julianum*, III). The population of the city was forced to move out, mainly to \*Amida where a new suburb was built for them (Zosimus, III, 34, 2; \*John Malalas, XIII, 27; \**Chronicon Paschale* ad ann. AD 363), though Ephrem settled at \*Edessa. Roman sources claim that the cession of Nisibis was for a term of 120 years (\*Eutropius, *Breviarium*, X, 17, 1).

Under the Sasanians, Nisibis remained the main point of commercial exchange; a Roman \*law of 408/9 made it one of three permitted places for international trade (*Cjust* IV, 63, 4, pr. and 1). In 410 the Bishop of Nisibis attended the Synod of Isaac, at \*Ctesiphon, the first \*Council of the \*Church of the East, as \*metropolitan of the five provinces which had previously, between 298 and 363, been the Roman \*Transtigritanae regiones. In the 470s \*Narsai, a well-known Syriac poet and former teacher at the \*School of Edessa, established a \*school in Nisibis together with Bishop \*Barsauma. When \*Zeno closed the school in \*Edessa in 489, many of Narsai's colleagues and students joined him and made

Nisibis the main centre of theological studies for the Church of the East. The Monastery of Mar \*Abraham of Kashkar on Mount \*Izla, the escarpment north-east of the city, initiated a monastic revival in the Church of the East in the second half of the 6th century.

There was relative peace between the Roman and Persian empires during the 5th century, though Nisibis suffered a brief Roman siege in 421/2. However, in 502 \*Qobad I attacked Roman territory, rejecting the Roman claim that the Persians had for years been enjoying the tax revenue of Nisibis illegitimately (\*Joshua the Stylite, 18–20). In response \*Anastasius I built the fortress-city of \*Dara about 26 km (c.15 miles) west-north-west of Nisibis and only about 10 km (c.6 miles) inside the Roman \*frontier. The Persians claimed that this contravened treaty obligations, as it had the purpose of blocking future Persian advances westward across the flat land of the Mesopotamian plain. The two fortified cities confronted one another throughout the \*Persian–Roman wars of the mid-6th century. Although the Romans tried many times to retake Nisibis during the 6th century, they never succeeded in capturing it and the city eventually fell to the Muslim \*Arabs in 639.

Ancient sources mention a citadel, towers, and numerous churches, but modern Nusaybin has few remains from Late Antiquity. This may partly be due to an \*earthquake in 717 which devastated the city. Columns with Corinthian \*capitals survive in the modern frontier zone between Syria and Turkey and some fragments of Late Antique architectural \*sculpture are displayed in the public park of the municipality. Very little is known of the church buildings of the city under the \*Sasanians. In the 7th century the church at Nisibis had five doors (\*John Moschus, 185). The *Life* of S. \*Symeon of the Olives, a monk of the \*Syrian Orthodox \*Monastery of Mar \*Gabriel at Qartmin and later Bishop of \*Harran, records the saint's building and renovation of churches in the early years of \*Arab rule (cf. *Syriac*, \**Chronicles of 817 and 846*, ad Ann. Gr. 1018).

The only standing Late Antique monument in Nusaybin is part of the \*baptistery built in 359 by Bishop Vologeses, as recorded on a surviving \*Greek \*inscription. The baptistery was probably divided into three parts. The northern aisle was restored, probably in 758/9, and came to be known as the Church of Mar Jacob (Ya'qub), after the city's first known bishop who built the cathedral in 313–20. His \*sarcophagus is still in a crypt under the baptistery. Excavations between 2000 and 2005 and later in 2007 and 2008 in the area around the baptistery uncovered remarkable building remains, as yet unpublished. These include substantial evidence of the 4th-century cathedral.

**Nisibis, schools at** \*Barhadbeshabba in his work on the foundation of the schools at \*Nisibis claims that the apostle \*Mari inaugurated the first Christian teaching at Nisibis. An association was made between this and \*Jacob, Bishop of Nisibis (d. 337). In 363, the \*Emperor \*Jovian handed Nisibis over to the Persians and \*Ephrem the Syrian and other citizens were obliged to migrate to \*Edessa in Roman territory.

In the late 5th century teachers and students came to Nisibis, including \*Narsai. At the time, there was a little school managed by Simeon Garmkaya. Bishop \*Barsauma asked Narsai to administer another establishment, which he endowed with statutes. What was known as the second school of Nisibis was enlarged under \*Abraham of Beth-Rabban with collective houses, a \*hospital, and \*baths. The school was called the 'Mother of Sciences' and made an important contribution to the education of the leaders of the east Syrian community and the \*Church of the East. It taught \*medicine as well as theology.

To limit the impact of \*Henana's teaching when he was directing the school, Bishop Elijah in 570 founded another scholastic institution near the \*martyrium, the school of Beth-Sahde, and this became the focus of east Syrian orthodoxy in Nisibis. Progressively, the centre lost its influence and its leadership as the school in Seleucia-\*Ctesiphon progressed. CJ

**Nisibis, Statutes of School at** In 496, the founder of the second school of \*Nisibis, \*Narsai, drew up a set of statutes. The particularly austere rules reinforced the former ones, now lost. This document reveals the life of students and teachers in 5th-century Nisibis. All had to have faith in the Dyophysite Christology, the belief that there were two separate Natures in Christ, the Divine and the Human. A semi-monastic lifestyle was followed (celibacy, liturgical offices, a form of \*tonsure, \*dress). The students were to live in collective cells, where all common activities took place, under the authority of a leader: meals, work, sleep. Students could have private possessions; but they could not practise a profession except during summer holidays. The calendar was divided into two annual sessions. \*Abraham of Beth-Rabban reorganized the education programmes, especially biblical and exegetical studies. The rule of Narsai presented some gradual penalties, which were strengthened under \*Henana's direction; exclusion from the school was the most severe, particularly for breach of discipline (chastity), usury, robbery, or \*heresy. Public punishments were allowed for less important offences such as quarrels or slanders. CJ ed. (with ET) A. Vööbus, *The Statutes of the School of Nisibis* (1961).

**Nitria** The largest monastic settlement of lower \*Egypt, founded AD 325/30. Reportedly founded by \*Amoun of Nitria, it was located on the western edge of the \*Nile Delta, 64 km (40 miles) south-east of \*Alexandria, at modern al-Barnuj. Its name comes from its proximity to an area where nitre, an important cleansing agent in antiquity, was extracted. \*Palladius, who lived there 391–2, claims it had 5,000 inhabitants living in a variety of arrangements: as hermits, in pairs, and in larger houses (*Lausiac History*, 7). They made their living especially by manufacturing linen. Its best-known leader was Abba Pambo (d. 373), some of whose sayings survive in the *\*Apophthegmata Patrum*. Because the site was easily accessible by boat, it was the most visited and thus the best-known Egyptian desert monastic settlement; among its celebrated visitors was S. \*Melania the Elder. \*Rufinus of \*Aquileia visited

## Nivelles

Nitria in the 370s and gives a vivid account of the warm hospitality he received (*\*Historia Monachorum in Aegypto*, 20 Latin). JWH

H. G. Evelyn-White, *The Monasteries of Wadi 'n Natrûn*, 3 vols. (1926–33). Harmless, *Desert Christians*.

**Nivelles** (prov. Brabant wallon, Belgium) \*Austrian \*monastery, known from \*saints' lives and extensive archaeological excavations. It was founded by \*Itta, widow of the \*Mayor of the Palace \*Pippin I in c.648/9, with the encouragement of Bishop \*Amandus of Maastricht. Its first abbesses were S. \*Gertrude, Itta's daughter, and Vulfetrude, daughter of Itta's son \*Grimoald. It was originally a female community, but soon became a double monastery in 651 through the addition of a community of Irish monks, notably Foilan and Ultan, the brothers of S. \*Furse. Closely linked to royal power, the abbey retained its aristocratic connections and developed considerably in the Carolingian and Ottonian periods. ADier

**Nobades** See NUBIA AND NUBIANS.

**Nocera Umbra** One of the best-known \*Lombard-period \*cemeteries in central \*Italy, from the territory of the Duchy of \*Spoleto. The necropolis explored at the locality Il Portone in 1897 was probably connected with a nearby fortress, originally Byzantine, protecting the Via Flaminia. In total, 165 \*burials were excavated: the cemetery chronology, based on the burial artefacts (weapons, \*dress fittings, \*belt typologies, and decoration) extends from c. AD 570 to 690, though there was probably also a pre-Lombard presence. High-status burials stand out, including males with \*gold weapon fittings, riding equipment, decorated shields, and \*hunting gear; and females with necklaces, brooches, drinking horns, and \*silver jugs. \*Gold sheet \*crosses indicate 7th-century Christianity. Two other (poorly explored) burial sites of c. AD 600 are known, both probably linked to the nearby habitat of Nocera Umbra, at Pettinara and Piazza Medaglie d'Oro. NJC

**nomads and semi-nomads** Perennially or temporarily non-sedentary groups, often pastoralists, lived predominantly on the margins of large Late Antique states. Literary sources depict the nomadic lifestyle as radically different from sedentary life, tending to demonize nomads as thieves or marauders; the distinction between 'nomad' and 'barbarian' easily becomes blurred within these texts. Accounts also exist that idealize certain aspects of nomadic life. In both cases, nomads were often employed as a literary device to provide a 'pristine' alternative to an author's own culture. Documentary sources, by contrast, show that nomadic and sedentary groups lived in a complex system of mutual exchange and interaction. Recent scholarship has argued that nomads rarely posed a serious threat to urban or rural communities.

While nomadic groups also lived within the Late Roman Empire (e.g. in southern \*Anatolia), the main regions in which the sedentary population came into contact with nomads were border areas around the Black Sea, North \*Africa, and the steppe along the Arabian \*frontier, the Limes Arabicus. The latter, although originally dating to the 1st century AD, was rebuilt under the \*Tetrarchy and re-fortified under \*Justinian I. It was, however, not meant to function as a military barrier against nomadic tribes, but rather as a permeable security belt monitoring their movements.

As \*Islam originated in a sedentary environment, the \*Qur'ān is inclined to present pejorative portrayals of the nomadic \*Bedouin of the \*Arabian Peninsula. However, \*Umayyad and especially \*Abbasid depictions became somewhat more positive once it came to be recognized that Bedouin were the best sources for pre-Islamic traditions (particularly on questions of the

correct use of language). Nevertheless, their depiction as harsh people and unreliable allies persisted. KMK

**nomads and semi-nomads, Central Asia** Beginning in the 7th century BC, a succession of polities based on pastoral nomadism (\*sheep, \*horses, \*cattle, \*camels), mounted warfare, and transcontinental \*trade—\*Scythians, Xiongnu, \*Huns, \*Hephthalites, Juan-juan, \*Avars, \*Türks, \*Bulgars, \*Khazars, \*Uighurs, and others—flourished in the steppe regions of Eurasia (from Mongolia to \*Central Asia to the Pontic Steppe). Usually called 'barbarians' in Chinese, Persian, and East Roman sources and often much more ephemeral than these surrounding empires, steppe polities shared many characteristics with their detractors, including well-organized administrative and military systems, coinage, taxation, \*trade networks, and sophisticated artwork; many also utilized writing systems and some became semi-nomadic, incorporating urban and agricultural elements (although the ruling elites frequently preferred a traditional nomadic lifestyle).

Many of these states were \*tribal confederations, mixtures of Iranian and/or Turkic peoples, usually led by a charismatic clan which claimed the 'mandate of heaven' to rule; they were rarely if ever ethnically uniform. Although most such states had short lifespans, the constituent tribes were usually absorbed into subsequent steppe polities, reappearing under a different name, ruled by a new dynasty. Steppe nomad societies were stratified between the \*aristocracy, common warriors, poor, and slaves and were typically patrilineal, but women generally had higher status than in sedentary societies. Nomads generally lived in tents and often

used ox-pulled wagons when travelling from camp to camp. In some cases (Huns, Hephthalites, Avars, Bulgars, Khazars), these highly mobile groups were able to migrate vast distances across the Eurasian steppe, whether in flight from other nomads, in search of better grazing grounds, or in military expansion.

Relations with neighbouring civilizations were dynamic and frequently challenging; thus, cultural interchange, \*diplomacy, trade, \*tribute, and \*warfare figure frequently in the interplay between 'steppe and sown'. Good relations between steppe nomads and their sedentary neighbours were necessary to ensure the steady flow of trade from which they benefited. The Chinese and later the \*Arabs, when ruled by strong central governments, could put steady military and economic pressure on the nomads. Conversely, a combination of dynastic weakness in the sedentary states and strong nomadic leadership enabled the latter to flourish and expand their territorial base and military and economic power. **nomes of Egypt** From early times, the territory of \*Egypt was divided into units called nomes. While changes occurred in the number of nomes and their boundaries, this system of land administration was maintained by the Ptolemies and then the Romans. Nomes allowed the rulers to assess and collect tax revenues easily. Under the Romans, the administrator of the nome was called the \*strategos.

Nomes were subdivided into toparchies and \*villages, each with their own officials. In 307/8, the imperial \*administration replaced the toparchies with new subdivisions called \*pagi; the nome was thereafter administered by a *logistes*, and the *pagi* and \*villages by a *praepositus pagi*.

During the course of the 4th century, nomes were grouped and regrouped into sub-provinces of Egypt and even independent \*provinces, as had been done earlier under the Ptolemies. By the end of the 4th century there were four groups, each headed by a *praeses*. JSM

Lallemand, *L'Administration civile*.

**Nonnosus** Author of an account of embassies to the Kindite \*Arabs and to \*Aksum under \*Anastasius I, \*Justin I, and \*Justinian I. The memoir was summarized by \*Photius (cod. 3).

Nonnosus' grandfather Euphrasius (*PLRE* II, Euphrasius 3) had been sent to al-\*Harith (Arethas) the \*Hujrid ruler of Kinda in the Central \*Arabian Peninsula in 502 to form an alliance and to bestow on al-Harith the title of \*phylarch. Nonnosus' father Abraham (*PLRE* II, Abramius 2) went on a similar mission to \*Qays (Caisus), the son of al-Harith, in 523/4, to renew the alliance.

Nonnosus himself was sent, probably in 530/1, to Qays as part of a diplomatic initiative to get help from \*Himyar in southern \*Arabia and from Aksum for Justinian's war against the \*Persian Empire. Nonnosus' mission was to remove Qays to \*Constantinople and to report to \*Julian, who was leading the embassy to Aksum and Himyar. He did not persuade Qays to move, but a subsequent mission led by his father Abraham succeeded in this.

The accounts of \*Ethiopia given by \*John Malalas (XVIII, 56) and \*Theophanes (AM 6064—the date is wrong) may draw on Nonnosus' memoir as well as Julian's report. Photius' summary of Nonnosus mentions the three 'sacred months' of the pre-Islamic \*Arabs when fighting was forbidden, and the strange climate of Ethiopia, shy fish-eating pygmies encountered on an island of the Red Sea, and a herd of nearly 5,000 \*elephants seen between Aksum and \*Adulis.

**Nonnus of Panopolis** (fl. mid-late 5th cent.) Greek \*epic poet from \*Panopolis in \*Egypt. Best known as the author of the *Dionysiaca*, an epic of c.21,000 lines on the prehistory, life, and subsequent apotheosis of the god \*Dionysus, written in 48 books. The core of the poem (Books 25–40) engages creatively with the main episodes of the *Iliad* and focuses on Dionysus' campaign against the Indians, his killing of the Indian leader Deriades, and the capture of the Indian city. The last books of the epic conclude with a period of Odyssean wandering, but Nonnus' literary ambitions extend far beyond 'father Homer' (*Dion.* 25, 265). On one level his work may be seen as an attempt to replicate the whole Epic Cycle of Greek mythology including elements of Titanomachy and a reworking of Apollonius of Rhodes' *Argonautica*. It is a work that also seeks to encompass the whole of Greek literature: from

\*hymns and the stories of the foundation of cities (such as \*Beirut, \*Tyre, and Byzantium) to Greek tragedy (Books 43–6 recast Euripides' *Bacchae* as epic poetry), Hellenistic poetry (including the *Hecale* of Callimachus and the *Erigone* of Eratosthenes) and the Greek novel (Book 40 in the city of Tyre takes us into the territory of Achilles Tatius). As with much later Greek poetry there is little evidence for any sustained engagement with \*Latin poetry and in spite of several references to the positive benefits of the Roman Empire the work concludes on a firmly Hellenic note in the \*temple of \*Eleusis outside \*Athens. The metrical control and verbal exuberance of Nonnus' *Dionysiaca* had a profound influence on the later Greek poets including \*Colluthus, \*Agathias, Musaeus, \*John of Gaza, and the much-maligned \*Dioscurus of \*Aphrodito. Thanks to the efforts of F. Vian and his team of editors the *Dionysiaca* is now accessible in an edition comprising a translation, newly edited text, and extensive notes.

Another team of critics led by E. Livrea is working towards completing a commentary on another hexameter work attributed to Nonnus: the *Paraphrase* of S. John's Gospel. Theologically this work relies closely on the commentary on S. John's Gospel by \*Cyril of \*Alexandria, but in terms of language (e.g. use of compound adjectives and imagery) it is closely related to the *Dionysiaca*. The two projects of Vian and Livrea have tended to maintain a clear divide between these two different versions of Nonnus: the *Dionysiaca* is seen as an epic poem in the classical tradition with little real connection to the world of Late Antiquity; the *Paraphrase* has been seen as a work rooted in the theological debates of Late Antiquity, but with little real sense of engagement with classical literary culture. This division has its roots in the early 20th century when it was seen as too difficult to accept that the author of a 'serious' poem on the life of Christ should also be responsible for the 'frivolous' epic about Dionysus and his drunken adventures (including homosexual encounters, scenes of voyeurism, and the brutal rape of \*virgins). As a result it was suggested that the poet must have experienced a religious conversion that caused him to reject '\*pagan' epic in favour of the poetry of Christ. More recently, however, critics have begun to explore deeper connections between the two poems: Dionysus and Christ have begun to emerge not as contradictory or antithetical characters but as complementary figures in a wide-ranging debate about the nature and power of divinity, about chastity and virginity, and more broadly about the relationship between Christian and classical cultural traditions in a new Late Antique world. ### Noricum Mediterraneum, Noricum Ripense

Two Late Roman \*provinces in modern western Austria. Noricum Ripense was immediately south of the Danube \*frontier with \*Raetia upstream to the west, \*Pannonia Superior downstream, and Noricum Mediterraneum to the south. The more mountainous Noricum Mediterraneum bordered \*Venetia et Histria to the west, Pannonia Superior to the east, and \*Savia to the south. The \*Verona List placed both in the \*Dioecesis \*Pannoniae, and the \*Notitia Dignitatum listed them in the Dioecesis of \*Illyricum (*occ.* II, 33 and 34). Both were governed by a \*Praeses. \*Eugippius' *Life* of S. \*Severinus gives vivid details of life in 5th-century Noricum. \*Franks took over both provinces in c. 536 while \*Slavs and \*Avars and the \*Baiuvari overran the region around 600. ABA

*TIR* L-33 (1961).

Alföldy, *Noricum*.

**notaries (tabelliones)** Public scribes who composed legal documents, such as \*contracts, \*petitions, and \*wills (\**Digest*, XLVIII, 19, 9, 4–8), for private customers, so distinct from \*notarii, who worked for the state, from lawyers, who provided legal advice and representation, and from \*shorthand writers. The *Formula Baetica* (Riccobono, *FIRA*<sup>2</sup> vol. 3, 92 = *CIL* 2.5042), a \*contract template or \*formula, attests to their practices and work, as do the frequent abbreviations in petitions on \*papyrus (e.g. P. Oxy. LI 3611). A common presence in the \*provinces from at least the Early Empire—two signed a petition from \*Aphrodito—rules limiting their place of business and conduct were promulgated by Justinian I (*NovJust* 44 of 537, cf. *CJust* IV, 21, 17 pr., 535). **notarii** Secretaries, originally \*shorthand writers, and still sometimes attested as such in Late Antiquity, notably in the church bureaucracy. The *notarii* of \*Licinius are the earliest attested working for an \*emperor (\**Suda*, A 4450). Imperial *notarii* were incorporated in a \*Schola under the \*Primicerius Notariorum before 428 (*CTh* VI, 2, 26). They mostly ranked as \*tribunus (cf. for other ranks, *CTh* VI, 10, 2–3 [381]). During the 4th century they took on various tasks, and eventually knowledge of shorthand was no longer required for service in the *schola*. Their number increased; there were 520 *notarii* in 381 (\*Libanius, *Or.* 2, 58). From at least 381 they had the \*title of \*clarissimus (*CTh* VI, 10, 2–3), and could claim certain privileges (*CTh* XI, 16, 15 [382]). HCT

Jones, *LRE* 572–5.

Teitler, *Notarii*.

Delmaire, *Institutions*, 47–56.

**Notitia Antiochena** List of bishoprics of the Patriarchate of \*Antioch from the end of the 6th century, republished by Honigmann in 1925. The accusation by Devreesse that it is a 9th-century forgery is convincingly rejected by both Honigmann (1947) and Laurent. It provides a list of the \*cities of the \*provinces of \*Cilicia (I and II), \*Syria (I and II), \*Euphratensia, \*Osroene, \*Mesopotamia, \*Phoenicia Maritima and Libanensis, \*Arabia, and \*Palaestina (I and II). Together with the 6th-century *Synecdemus* of \*Hierocles and the later *Descriptio Orbis Romani* of \*George of \*Cyprus, it is an important tool for the study of the geography of the Late Roman Near East. V. Laurent, 'La Notitia d'Antioche: origine et tradition', *REB* 5 (1947), 67–89.

**Notitia Dignitatum** A problematic, yet invaluable, illuminated document which lists a minimum of 2,360 civil and military offices of the Eastern and Western Roman Empire (*Notitia Dignitatum Omnium Tam Civilium Quam Militarium*). Its internal structure and the titulature of army regiments suggest that it originally dated to AD 395, with some chapters of the Western part emended up to c. 408. The oldest known manuscript was the lost 9th-century Codex Spirensis, itself probably based on an earlier Carolingian copy. Several 15th–16th-century copies of Codex Spirensis are extant.

Both halves of the *Notitia* follow a broadly similar structure, commencing with an overall list of officials, then descending in seniority. Each post to the level of

\*Dux has its staff (\**officium*) listed with the titles of its personnel. The \*Praefecti Praetorio were the senior civil administrators, two in each half of the Empire (*per Italiam, Galliarum, Orientem, Illyricum*). Under them are listed \**dioeceses* headed by \*Vicarii (10 west, 6 east), and 122 \*provinces under \*governors with the \*titles \*Consulares, \*Praesides, and \*Correctores. Next comes the \*Praefectus Urbi Romae (\*Constantinople is missing). The senior military commanders were two \*Magistri in the west (\*Magister Peditum praesentalis, \*Magister Equitum praesentalis) and five in the east (two *in praesenti*, and Magistri per Orientem, Thracias, Illyricum). They are listed with regiments under their command and their \*insignia pages depict the purported shield-blazons of those units.

Next come the high offices of the \*palace domestic staff and the central \*administration. The \*Magister Officiorum administered bodyguard regiments (\**scho-lae*), imperial \*intelligence (\**agentes in rebus*), secretariats (\**scrinia*), and armaments centres (\**fabricae*: 20 west, 15 east). The \*Comes Sacrarum Largitionum oversaw officials of the \*mines and mints, payment of \**stipendia* to soldiers and civil servants, clothing manufacture and issue to troops. Under the \*Comes Rei \*Privatae were the administrators of \*imperial estates, rents, and acquisitions. \*Comites Domesticorum were responsible for crack bodyguard regiments (\**domestici*). The \*Primicerius Sacri Cubiculi and the \*Castrensis Sacri Palatii oversaw administration of the imperial chamber, palaces, and secretariats. The \*Primicerius Notariorum issued commissions to various \*field army (\**comitatenses*) and \*frontier (\**limitanei*) regiments.

Subordinate to the Magistri are \*Comites Rei Militaris (6 west, 2 east), and Duces (12 and 13) who have regiments under them listed by commander's rank (mainly west), unit title, and place name location. Units fall within two broad categories: the field armies of \**vexillationes equitum*, \**legiones*, and \**auxilia* under Magistri and Comites Rei Militaris; the frontier forces of *legiones*, *equites*, *alae*, *cohortes*, *numeri*, *milites*, and river \*fleets (*classes*). Overall 937 military formations are listed, some dating back to Julius Caesar and Augustus. The *Notitia* was most concerned with the distribution of western field army regiments (*Notitia Dignitatum*, occ. 5–7), and surviving versions are probably based on a copy used in the *officium* of the Magister Peditum. Many sections had become outdated, and the original document was a richly illuminated presentation copy, rather than a practical, working document. JNCN

**Notitiae Episcopatum** Lists from the Eastern Roman Empire of the sees of \*bishops arranged in the order of precedence of individual \*dioceses. The earliest to survive is that of pseudo-Epiphanius which appears to date from the reign of \*Heraclius in the 7th century. Together with the lists of \*provinces and \*cities in \*Hierocles, *Synecdemus*, and \*George of \*Cyprus, the *Notitiae* are important in attempts to chart the presence of Christianity, particularly in the \*Balkans, in the early Byzantine period. OPN

ed. J. Darrouzès, *Notitiae Episcopatum Ecclesiae Constantinopolitanae* (1981).

**Notitia Galliarum** List of the seventeen \*provinces of Roman \*Gaul, grouped under headings naming the two 4th-century \**dioeceses*, \*Galliae (with ten provinces) and the \*Septem Provinciae. Under each province is listed its metropolitan/capital \*city and other *civitates* (cities), described by their ethnic titles (e.g. *civitas Arvernorum* for modern \*Clermont), some 115 in total, along with six or seven *castra* (lesser, fortified settlements) and a *portus* (\*harbour).

In its original form the *Notitia* probably dates from the reign of \*Magnus Maximus (383–8); it typifies the emphasis on written records which characterized the Late Roman \*administration, and was also necessitated by frequent imperial provincial reorganizations (cf. the \*Verona List). The *Notitia Galliarum* is headed by a rubric, stating that the list was adopted at the formal request of the \*bishops (*ordo pontificum*) 'lest antiquity be overturned by any eventuality', and that it was to be used to settle disputes over \*metropolitan authority. Some scholars have concluded that the list reflects episcopal organization in Gaul in the late 4th century, but since many of its features are incompatible with what is known of that period from \*saints' lives, conciliar lists, and local traditions, it is more likely that the list was recycled for church use later, probably in the 6th century, and that both the rubric and the *castra* (most of which had acquired bishops by the 6th cent. but not the 4th) and *portus* were added then. The text continued to be much copied, and updated, throughout the early Middle Ages. JDH

ed. O. Seeck, *Notitia Dignitatum* (1876), 261–74.

J. Harries, 'Church and State in the *Notitia Galliarum*', *JRS* 68 (1978), 26–43.

**Notitia Urbis Constantinopolitanae** A short text addressed by its unknown author to the \*Emperor \*Theodosius II. The *Notitia* provides an invaluable account of the new \*city of \*Constantinople only a century after its foundation, identifying more buildings and institutions than are known from any other single source. Although the Theodosian circuit wall is noted in the preface, the account is concerned with the

Constantinian foundation, accurately recording the distance from the original Golden Gate to the sea. Like old \*Rome, the new city had fourteen \*regions, the last lying outside the later core, its location still a matter of dispute. The regions are listed from the east, thus the 1st, 2nd, and 3rd included the Great \*Palace, the Great Church of the \*Holy Wisdom, and the \*Hippodrome respectively. Most importantly for a city hardly known from archaeological excavation, the lists present the diversity of urban structures and functions, from the \*houses of the great, major public and private \*baths, \*harbours, storehouses and bakeries, the grand colonnades and lesser \*streets, warehouses, markets, \*cisterns, and nymphaea. No pagan \*temples are listed but fourteen churches are.

J. F. Matthews, 'The *Notitia Urbis Constantinopolitanae*', in Grig and Kelly, *Two Romes*, 81–115.

**Notitia Urbis Romae** One of the \**Regionary Catalogues* of \*Rome, closely related to the \**Curiosum Urbis Romae Regionum XIV* and an essential source for the history of the urban fabric of Rome. It inventories many major buildings and monuments in the \*city, as well as *insulae* and *domus*, listed region by region, and enumerated in total at the end. It is usually dated to the later 4th century, after 357, due to its inclusion of the \*obelisk erected by \*Constantius II. It provided a model for the later \**Notitia Urbis Constantinopolitanae*. As with its counterparts, the accuracy and purpose of this document have been much debated.

LHCG

ed. Jordan, *Topographie*, 2/2, 539–74.

**Novatianus** (251–c.258/9) and **Novatianists** (3rd–7th/8th cents.) First \*bishop of the separatist Church named after him which opposed the readmission to communion of Christians who apostatized. The question of readmission had become urgent because of those who had lapsed during the \*persecution under \*Decius in 249–51, chronicled by \*Cyprian (*epp.* 44–55) and \*Eusebius (*HE* VI, 43–6). When Cornelius, who favoured readmission, was elected to the see of \*Rome in 251, the minority rigorist party chose the learned presbyter Novatianus as bishop. He was excommunicated by a Roman synod in the same year.

Novatianus himself died in 258/9, probably by \*martyrdom, but his view that only God, and not the Church, could forgive the gravest sins, won sympathetic hearing in various quarters, and his Church spread gradually across the whole Empire, being known in the East as the Katharoi ('puritans'). The orthodoxy of the Christological and Trinitarian doctrines of Novatianus and his followers was never questioned. His *De Trinitate*, a rich and skilful defence of the Roman \*creed against Adoptionism on the one hand and Modalism

on the other, succeeds in expounding the doctrine of redemption without reducing Christ to a substantially subordinationist position.

Novatianist adherence to Nicene orthodoxy won them toleration from the mainstream Church in the eastern half of the Roman Empire. The church historian \*Socrates had known the Novatianists well since his boyhood in \*Constantinople (where they had four churches) and provides considerable information about their strength in the hinterland of \*Anatolia. They lasted perhaps into the 8th century, but were driven from Rome under Celestine I (422–32). Whether their views on \*penance remained quite unchanged to the end is disputed.

**Novels, imperial** (Lat. *novellae* [*leges/constitutiones*], lit. 'new [laws/constitutions]') Acts of imperial legislation promulgated after the \**Theodosian Code* in 438 and the second edition of \*Justinian's *Code* in 534, respectively. Unlike constitutions excerpted and adapted for the Codes, the texts of *Novels* are generally preserved complete. In contrast with the preceding parts of the *Corpus Iuris Civilis*, Justinian's *Novels* were composed mainly in \*Greek, reflecting the extent to which \*Latin was being supplanted as the language of \*law and \*administration in the 6th century.

Meyer's edition of the post-Theodosian *Novels* includes 26 acts of \*Theodosius II (*NovTh*) and 36 of \*Valentinian III (*NovVal*), twelve of \*Majorian (*NovMaj*), five of \*Marcian (*NovMarc*), two of \*Libius Severus (*NovSev*), and three of \*Anthemius (*NovAnth*). A *Novel* of \*Glycerius (*NovGlyc*) is also extant.

Schöll and Kroll's edition of the *Novels* of \*Justinian I (*NovJust*) is based largely upon the so-called Greek Collection of 168 constitutions, including four of \*Justin II (*NovJustmin*) and three of \*Tiberius II. Unknown in the medieval West, it includes material used by the Byzantine epitomators Athanasius of \*Emesa and Theodore Scholasticus in the late 6th century and the compilers of the *Basilica* in the 9th century. One of the two manuscripts preserves thirteen additional Greek constitutions known as the *Edicts of Justinian* (*EdJust*).

Supplementing this material are: (i) the *Epitome of Julian*, named after \*Julianus Antecessor, a law professor from \*Constantinople and the chief source of Justinianic legislation in early medieval Europe, containing abridged Latin translations of 124 constitutions; (ii) a collection of 134 constitutions in the

original Latin or a literal but unreliable Latin translation, rediscovered in the 12th century and called the *Authenticum* because Justinian was believed to have authorized it. A handful of constitutions is known from other sources.

### Novels of Justinian (Lat. *novellae constitutiones*)

The *Novels* or 'new constitutions' are a collection of over 150 unabridged imperial constitutions issued by \*Justinian I after the promulgation of \*Justinian's *Code* in 529. The majority were issued before the death of \*Tribonian (c. 542/3); about 30 more were issued between the death of Tribonian and that of Justinian in 565.

The *Novels* are written predominantly in \*Greek, the language of the Eastern Empire; constitutions intended specifically for Justinian's newly conquered western provinces, especially \*Africa and \*Italy, are the chief exception. The language of the *Novels* is grandiose and rhetorical throughout: Justinian both introduces law and justifies it in the same texts. The *Novels* primarily address \*administration and procedure (e.g. *NovJust* 8, against the bribing of officials) and ecclesiastical law (e.g. *NovJust* 5, on \*monasteries and monks), but also introduce substantial amendments to private law, for example \*marriage (*NovJust* 22) and intestate \*succession (*NovJust* 118), and regulate a variety of other subjects (e.g. *NovJust* 14, on pimps).

Although printed as the third volume of the *Corpus Iuris Civilis* today, the *Novels* were never codified in an official collection, as Justinian had hoped. Thus, unlike the *Code*, the *Novels* circulated in unofficial collections and are not systematically arranged in titles, although Athanasius of Emesa subsequently accomplished this in his *Syntagma* (AD 572–7). The most important sources for the *Novels* are the *Epitome Iuliani* (see JULIANUS ANTECESSOR), the *Authenticum*, and the *Collectio Graeca*. The *Epitome Iuliani* is a contemporary abridged \*Latin version of 124 novels presumably composed for instruction; copies proliferated in the West during the early Middle Ages. The *Authenticum* contains 134 novels,

giving the Latin novels in the original and the Greek novels in an infelicitous Latin translation; it would eventually supplant the *Epitome* in the West. The third collection, the *Collectio Graeca*, is by far the most important, compiled in the reign of \*Tiberius II and containing 168 novels down to AD 575 in the original Greek. The *Collectio Graeca* was used in the compilation of the *Basilica* under \*Leo VI and serves as the basis of the modern critical edition of the *Novels*. In the edition of Schöll and Kroll, the Greek constitutions are printed alongside the translation of the *Authenticum*, with a modern Latin translation below. Thirteen edicts of Justinian are preserved independently and appended to the *Novels*.

### Novempopulana

\*Province in south-west \*Gaul carved from the former province of \*Aquitania in the late 3rd century and included in the \*Verona List as Novem Populi in the \*Dioecesis \*Viennensis. It lay between the River Garonne, the Pyrenees, and the Atlantic; Éauze (Roman Elusa) was its capital. The \**Notitia Dignitatum* lists it as governed by a \*Praeses under the \*Vicarius of the \*Dioecesis of the \*Septem Provinciae and the \*Praefectus Praetorio per Gallias, (*occ.* I, 112; III, 26; XXII, 34) and having a cohort of troops under the \*Magister Militum Praesentalis (*or.* XLII, 18–19), but \*Visigoths settled around the area from 418 and it became the centre of the \*Frankish Duchy of Vasconia in the early 7th century. ACR NEDC 212–13.

### Noviodunum

(mod. Isacea, Romania) \*City, fort, and naval base on the Danube in \*Scythia Minor.

A fort was built under the \*Tetrarchy as part of an elaborate strengthening of the lower Danube \*frontier. In 369 \*Valens crossed the Danube at Noviodunum to campaign against the \*Goths. The \*Rugian chieftain Valips conquered it for the \*Huns in the 430s (\*Priscus, fr. 1). \*Anastasius I and \*Justinian I restored it. According to \*Jordanes (*Getica*, V, 36), it lay at the southernmost end of \*Slav territory. Its archaeological remains include parts of the stone fortification (enclosing c.10 ha, c.25 acres) and earthen ramparts, buildings, and small finds, including lead \*seals. A \*basilica with a \*martyrium containing the intact tomb of the \*martyrs Zotikos, Kamasis, Attalos, and Philippos was found in the nearby village of Niculițel in 1971. ER

**Nubia and the Nubians** Name of the land and people south of \*Egypt in Antiquity, comprising modern southernmost Egypt and northern Sudan.

In the first half of the 4th century, the kingdom of Meroe (which had dominated Nubia from the 3rd century BC until the 3rd century AD) began to disintegrate, resulting in a complex transitional phase about which we are best informed in Lower Nubia. In 298 the \*Emperor \*Diocletian withdrew the southern frontier of \*Roman Egypt northwards to the Aswan region (\*Procopius, *Persian*, I, 19, 27–37). A complex tribal society then arose south of the frontier in the 4th and 5th centuries consisting of the indigenous Nubian population, called Noubades or Nobades in the 5th-century sources and concentrated in places such as Primis (\*Qasr Ibrim), and tribes of \*Blemmyes, in places such as Talmis (\*Kalabsha).

Several texts provide detailed information about these peoples, most notably the \*inscription recording the victories of the Nobadian chieftain Silko over Blemmyan tribes at Kalabsha (*Sammelbuch*, V, 8536). The growing organization of the Nobades in the 5th century led to the emergence of one of the three Christian kingdoms of Nubia in the 6th century, the kingdom of Nobadia. The historian \*John of \*Ephesus (*HE* III, 4, 6–9; 49–53) reports three Byzantine missions sent to Nubia at this time: the first to convert the Nobadian king (536–48), the second to provide Nobadia with its first \*bishop (569), and the third to convert the King of Alodia (Alwa; 579/80), another kingdom further south. Moreover, according to \*John of Biclar, Makouria, the third kingdom situated between

Nobadia and Alodia, adopted Christianity in 569. The three Nubian kingdoms thus became officially Christian in the 6th century, although the process of religious transformation was considerably more complex than these literary sources suggest. We know, for example, that through frequent exchanges with Egypt Christianity started to spread in Lower Nubia already before the 6th century. By the end of the 6th century Christianity was firmly established in Nubia, as appears for example from the churches built in the capitals of Nobadia and Makouria, Faras and Old Dongola. The medieval Nubian kingdoms remained Christian until c.1500. JHFD

**number symbolism** In \*Greek usage, numerical signs coincided with letters: alpha is one, beta is two, and so forth. The practice of differentiating numbers from letters by marking a cardinal number with a bar and an ordinal (or a sexagesimal part) with an apex probably dates back to the early development of mathematical \*astronomy. \*Diophantus (mid-3rd cent. AD) introduced signs denoting the numerical species studied in his *Arithmetics*; these are made by the initial letter(s) of the name(s) of two basic species, followed by a superscript  $Y$ :  $\Delta^Y$  for *dynamis* (a square),  $K^Y$  for *kybos*

## number symbolism in art and architecture

(cube),  $\Delta K^Y$  for *dynamokybos* (a square multiplied by a cube having the same side). An indeterminate species was denoted by the sign that since Late Antiquity was adopted as an abbreviation for 'number'.

The relationship between letters and numbers contributed to \*allegorical interpretation of texts, in particular the \*Bible. This might be a matter of a simple correspondence susceptible of typological interpretation: Neron (the Greek form of Nero) notoriously adds up to the Number of the Beast of Revelation (13:8), and so does one form of the \*Vandal King \*Geiseric, when spelled Genserikos, as a later redactor of the commentary on Revelation of \*Victorinus of Poetovio pointed out (*Recensio Hieronymi*, XVII, 4). But allegorical interpretations of numbers could also point to deeper truths. They grew from a sense, shared with Stoics, that there were no mere coincidences in nature, number, history, or literature, and from a conviction, shared with Pythagoreans, that the basis of reality is in some way mathematical. When \*Methodius of Olympus wrote (*Symposium*, 8, 11) that 'it is clear that the entire creation of the world was achieved out of the harmony of the number 6', he had in mind not only the six days of Creation, as frequently commented on in Christian \**hexaemeron* literature, but also the mathematical qualities of the number. FA; OPN

**number symbolism in art and architecture** See MATHEMATICS IN ART AND ARCHITECTURE.

**Numenius** (fl. 2nd cent.) Neopythagorean \*philosopher from Syrian \*Apamea. Fragments of his otherwise lost works are preserved primarily in \*Eusebius and \*Proclus. \*Middle Platonists and \*Neoplatonists valued his theological and ontological formulations, and his privileging of Eastern wisdom. APJ ed. (annotated with FT) E. des Places (1973).

**numerarii** Senior financial staff, heading specialized bureaux within the \**officium* of a \*Praefectus Praetorio, \*Vicarius, \*governor of a \*province, and in military *officia* (CTh VIII, 1, 14–15). Appointment by internal promotion appears to have been usual. The office survived in the kingdom of the \*Visigoths (*Leges Visigothorum*, 12, 1, 2). AGS Jones, *LRE* chs. 13, 16–17 *passim*.

**Numerarius** In Visigothic \*Spain, a tax-collector appointed by either the \*Comes Patrimonii or the \*bishop and *populus* of individual \*cities. CMG P. D. King, *Law and Society in the Visigothic Kingdom* (1972), 69–70. D. Fernández, 'What is the *Fisco Barcinonensi* about?', *AntTard* 14 (2006), 217–24.

**Numerian** \*Emperor 282–4. After \*Probus died in 282, the new Emperor \*Carus (282–3) made his sons Numerian and \*Carinus \*Caesars. \*Nemesianus dedicated his *Cynegetica* to the brothers. Numerian accompanied Carus on his Persian campaign, and after his father's death returned with the \*army through \*Anatolia. On reaching \*Nicomedia, he was found dead and decomposing in his travelling litter. Diocles, captain of the guard, paraded the troops, accused Numerian's father-in-law Aper, the \*Praefectus Praetorio, of murdering Numerian, ran him through with his sword, and promptly received \*acclamation as the Emperor \*Diocletian. OPN

PLRE I, Numerianus.

CAH XII (2005), 57–8.

**numerus** An elastic term used to denote a military formation. In the 1st to 3rd centuries these might be detachments of legionaries or auxiliaries, or 'national' *numeri*, units of infantry or cavalry recruited from barbarian groups (Palmyrenes, \*Sarmatians, \*Moors, Germans, Britons) for their military specialisms, so as to make use of the manpower of allies, or to siphon off warriors from defeated enemies. The term remained as a generic usage for 'unit', but only sixteen appear in the \**Notitia Dignitatum*, almost all in \*Britain (*Not. Dig. occ.* XXVIII, 13, 15, 20–1; XXXV, 32; XL, 22–31, 47). JCNC

Hoffmann, *Bewegungsheer*, 335–9.

P. Southern, 'The Numeri of the Roman Imperial Army', *Britannia* 20 (1989), 81–140.

**Numidia, Cirtensis, and Militana** Provinces of the \*Dioecesis \*Africae situated between \*Mauretania Sitifensis and the Ampsaga River to the west and \*Africa Proconsularis and \*Byzacena to the east; the latter border ran to the west of the *territorium* of \*Hippo Regius, \*Theveste, and the Chott Djerid. In 303 Numidia was divided into Cirtensis governed from \*Cirta, and Militana, with its capital at \*Lambaesis; both are in the \*Verona List. The provinces were reunited during 314. The \*governors had the title \*Praeses until 320 or earlier when the governor became a \*Consularis, as he still is in the \**Notitia Dignitatum*. The province was ceded to the \*Vandals in 435. After the \*Byzantine invasion of 534 \*Justinian I organized it (*CJust* I, 27, 10) with a Praeses as governor. GMS

**nummus** Late Roman \*bronze coin and smallest monetary unit of account. By AD 498 the *nummus* had become physically tiny and fiscally almost worthless.

Anastasius I's coinage reform of 498 retained the *nummus* as a unit of account, but produced only multiples of it as physical coin types. In 512 the *nummus* coin was reintroduced.

RRD

Grierson, *Byzantine Coinage*.

**Nydam** \*Weapon deposit site in a wet meadow in south-eastern Jutland, which changed from an open lake into a bog during its period of usage. Since 1859 more than 15,000 items of equipment suitable for military use have been excavated at Nydam; they represent at least six large-scale \*sacrifices of military equipment which took place between c. AD 240 and 480. As well as metal artefacts of weaponry and warrior equipment, wooden items are especially well preserved in Nydam and give particular insight into the organic components of Germanic \*arms and armour, e.g. complete wooden shields, bows, arrows, and quivers. Particularly noteworthy are the three large rowing \*ships which were associated with sacrifices of military equipment. Among them is a clinker-built troop carrier

propelled by fifteen pairs of rowers and 23 m (over 75 feet) long, discovered almost intact and then reconstructed in 1863 (the Nydam Boat). A collection of gilded \*silver components of 5th-century sword scabbard fittings discovered in Nydam in 1888 gave its name to the 'Nydam style' of chip carving technique. The position of the sacrificial site in south-eastern Jutland and the archaeology of the surrounding area indicate that Nydam served as a central site of \*votive offerings for the political entity of the continental Angles.

**Oasis (Great Oasis)** Fertile depression in the Western Desert of Upper \*Egypt, with two main agglomerations of sites, Kharga to the east and Dakhleh to the west. After a population growth in Roman times, the Oasis was more lightly populated from the end of the 4th-century, but retained a wealthy economy and active cultural life. Roman forts were built in the Oasis's northern part to defend trade routes; many of these forts (such as Umm el-Dabadib and el-Deir, which may have housed Ala I Abasgorum: *Not. Dig. or.* 31, 55) show occupation by civilians in Late Antiquity (also with cemeteries), and in some cases until around the 10th century. The Oasis had a lively Christian community: Kharga was a bishopric from the 4th to the 14th century; 4th-century churches and a cemetery have been found in the area of Dakhleh. A monumental necropolis (both pagan and Christian), used from the 1st to the 7th century, has been found in el-Bagawat (Kharga) with a three-aisled church of the 5th century; fine Christian paintings have been uncovered in the mausolea of the necropolis. \*Kellis (mod. Ismant el-Kharab), in the Dakhleh Oasis, is the best-known Christian centre of the Oasis from the 4th century, with a \*Manichaean community and also three churches (one a Constantinian three-aisled \*basilica) and a cemetery. Kellis has yielded numerous \*papyri (P. Kellis) in \*Greek, Demotic, Coptic, \*Latin, and \*Syriac, as well as \*ostraca, and wooden codices. Both \*Athanasius and \*Nestorius were sent into \*exile at Kharga. MCDP

**oaths** In Late Roman society oaths were used in a very broad variety of contexts, from solemn international treaties and \*courts of law, to mundane commercial transactions or many kinds of domestic promise. They continued to hold a firm place in the Byzantine, Islamic, and barbarian states.

The day-to-day swearing of oaths is most visible in the written records of commercial transactions extant in Egyptian \*papyri from the 4th and 5th centuries. The \*Qur'an and the earliest works of Islamic jurisprudence from the later 8th century were also concerned in detail with domestic oaths. Oaths were fundamental to the conduct of warfare and establishment of treaties. Although there is some anxiety in Christian exegesis about the status of non-Christian oaths, oaths were commonly sworn across religious and cultural boundaries.

Oaths were used also in more domestic politics. \*Theodosius II and \*Valentinian III imposed an oath on provincial \*governors in 439, which concentrated on avoiding corruption. Roman soldiers swore annual oaths of loyalty to the \*emperor. In early Islamic societies, the *bay'a*—pledge of loyalty—was an important political tool. By the mid-7th century, \*Visigothic kings were demanding personal oaths of loyalty from all the free inhabitants of the kingdom, while kings themselves swore loyalty to their people. There is evidence in \*Cassiodorus' *Variae* for similar oaths among the \*Ostrogoths, and there survive texts of oaths of loyalty to the king from \*Merovingian Francia, although only in the Carolingian period were such oaths demanded of all the \*Franks.

In the papyri from Roman Egypt, oaths were sworn by the health or the \*victory of the emperor. From the mid-5th century they also mention the Trinity, while other oaths developed more explicitly Christian imagery and sanctions. \*Justinian I's oath for provincial

governors, for example, specified that a violator of the oath would suffer the fate of Judas. This is the first so-called 'Judas curse' to have survived. In the Islamic world, 8th-century \*hadith specified that oaths may only be sworn by Allah, and while the principal sanction for breaking an oath was a painful doom and a barring from paradise, worldly sanctions could also be specified, such as divorcing one's wife, feeding paupers, or freeing slaves.

Weighty oaths could involve elaborate ritual. \*Procopius recounts how the Persian King \*Peroz swore on \*salt, and \*Theophanes describes Leo IV's generals swearing by \*relics of the True \*Cross, and depositing records of the oaths on the \*altar of the Church of the \*Holy Wisdom. The barbarian law codes generally encouraged swearing on the \*Bible, relics, or other sacred objects, while also describing swearing on or with weapons.

Despite the ubiquity of oath-taking, Late Antique Christian exegetical texts show an anxiety concerning the place of oaths in society, largely based on Jesus' injunctions against oaths in the Sermon on the Mount (Matt. 5:33–7). \*Augustine eventually reconciled himself to the prevalence of oaths, although he warned of the dangers of perjury and of oaths sworn rashly. \*John Chrysostom, however, uncompromisingly forbade the swearing of oaths in any context.

In judicial procedure, Chrysostom's views are thought to have influenced Byzantine practice. By the 8th century, witnesses in Byzantine courts were no longer sworn in before their testimony could be heard, as had been the case under Justinian I. Rather, oaths were used only for confirmatory purposes at the end of a court session. In the barbarian kingdoms, however, oaths came to take a far more prominent and distinctive role in the settlement of disputes.

Oaths were used extensively in Roman law, but in barbarian law codes they appear as the most common method of proof, while narrative accounts preserve many accounts of purgation by oath, and cautionary moral tales warning of the dangers of perjury. These oaths were sworn by a number of 'oath-helpers' alongside the protagonist.

**obelisks** Several of the enormous tapering granite monoliths erected outside the \*temples of Pharaonic \*Egypt, where they were associated with the cult of the \*Sun, were brought to \*Rome and other Roman \*cities by \*emperors from Augustus onwards.

Two obelisks from Sais were erected under the \*Tetrarchy at the Temple of \*Isis at Rome. One is now outside the \*Pantheon at Rome, the other at Urbino.

The pink Aswan granite obelisk, now 32 m (105.5 feet) high, which has stood outside the \*Lateran Basilica at \*Rome since 1588, was originally erected by Thutmosis IV at \*Thebes, from where it was removed under \*Constantine I, who may or may not have intended it for \*Constantinople (*ILS* Dessau, 736). A special \*ship with 300 oars was built to transport it. It was placed on the *spina* (central reservation) of the \*Circus Maximus at Rome in 357 at the time of \*Constantius II's only visit to the city. Its removal was no sacrilege, said \*Ammianus Marcellinus, a \*pagan, because Rome is the 'temple of the whole world' (XVII, 4, 13).

In 390 \*Theodosius I erected on the *spina* of the Circus (Hippodrome) at \*Constantinople an obelisk originally placed at Thebes by Thutmosis III (*CIL* III, 737 = *ILS* Dessau, 821; \*Marcellinus Comes *s.a.* 390, 3). This may be the obelisk for which Constantius II had a ship built and which \*Julian requested the people of \*Alexandria to send to Constantinople, his native city (*ep.* 57 = 49 Wright). A relief carved on the south-west side of its base shows it being shipped from Egypt and winched into position. As late as the 6th century, \*Corippus, while affirming that Sun-worship had been supplanted by worship of the Creator of the Sun, saw in the chariots in the four colours of the \*factions revolving around the Hippodrome a cosmic symbolism of the \*seasons and the Sun (*In Laudem Justinii Minoris*, I, 315–65).

The obelisk which has stood outside the Church of S. Trophime at \*Arles since 1676 bears no \*inscription, \*Latin, \*Greek, or \*Egyptian, and is made of pink granite from the Troad in modern north-west Turkey. It comes from the *spina* of the circus, which was in use from soon after AD 149 into the \*Visigothic period, and it may have associations with Constantine or his sons.

**Oberdorla** Bog site in north-west \*Thuringia which has been interpreted as the location of numerous sanctuaries used for over a millennium, from the 5th century BC late into the period of the \*Barbarian Migrations. The waterlogged environment preserved wooden remains, which include structures interpreted as \*altars and more than 30 anthropomorphic figurines designated 'idols' by the excavators. Prominent among the other finds are bones of animals and humans, \*tools, ornaments, and \*pottery.

*RGA2 s.v.* Oberdorl, XXI (2002), 466–76 (Dušek).

**Oboda** The Greek name of the Nabataean town of 'Avdat (Ar. 'Abdeh) in the \*Negev. The original road-station developed into a religious centre and a military camp, and later into a town. The \*temple on the acropolis was later replaced by two churches; one, the \*Martyrium of S. Theodore, had a \*monastery attached. Behind this complex was a fortified area. On the acropolis slope, rock-cut houses and installations attest to the agricultural work carried out in the *wadi* to the west. Recent excavations show that Oboda was destroyed by an \*earthquake.

## observatories and astronomical instruments

The temples of ancient Babylonia, staffed by priestly scribes who preserved astronomical observations in archives, constituted the most substantial 'observatories' of the ancient world. Though observations began in the early second millennium, the astronomical diaries—records of night-by-night watching—started probably

by the 8th century BC. The middlebrow Christian apologist \*Lactantius (*Inst.* VII, 14, 4) knew of Chaldean astronomy from Cicero (*De Divinatione*, I, 36) and recognized its authority.

In the Greek world, astronomical observation was more the province of the individual astronomer. The oldest dated Greek observation is Meton and Euctemon's work on the summer solstice of 432 BC, but systematic observation did not begin until the Hellenistic period. Important observers include Timocharis (3rd cent. BC), Hipparchus (2nd cent. BC), and Claudius \*Ptolemy (2nd cent. AD).

The most important ancient account of observing instruments is in Ptolemy, *Almagest*, but discussions by \*Pappus (early 4th cent. AD), \*Theon of \*Alexandria (late 4th cent.), and \*Proclus (5th cent.) add valuable details. The \*gnomon (a vertical stick) could be used to determine the cardinal directions and the rough dates of equinoxes and solstices. The meridian \*quadrant (or meridian ring) could be used to measure the noon altitude of the \*Sun: measurements at summer and winter solstice yielded the obliquity of the ecliptic, a fundamental parameter of astronomy. The equatorial ring, fixed in the plane of the celestial equator, could be used to establish the time of an equinox, when the lower part of the ring was shaded by the upper. According to Ptolemy (*Almagest*, III, 1), there was such a ring in the Square Stoa in Alexandria in Hipparchus' time, and there were two such in the Palaestra in Alexandria in his own day. Several kinds of dioptra are attested. One sort was used by Archimedes, Hipparchus, and Ptolemy to measure the angular diameter of the Moon. This instrument consisted of a graduated stick, at one end of which was a plaque with a sighting hole. A small cylinder could be slid along the stick until the cylinder was seen to just cover the moon.

The armillary sphere equipped with sights—called by Ptolemy the 'astrolabic (Gk. star-taking) instrument'—was the most complex observing instrument of the ancient astronomers. It could be used for direct, though clumsy, measurement of celestial longitudes and latitudes of the stars and planets. Ptolemy describes also a 'parallactic instrument' for taking zenith distances. This is sometimes called 'Ptolemy's rulers' and gave rise to the medieval *triquetrum*. In later antiquity, the plane \*astrolabe came into vogue—a portable instrument useful for telling the time, but not a tool of precise astronomy.

**octagonal buildings** The single- and double-shelled octagonal buildings of Hellenistic and Roman architecture were a precedent for such Late Roman buildings as the Tetrarchic Palace Octagon at \*Thessalonica and the octagonal Mausoleum of \*Diocletian at \*Split (now the city's cathedral). Octagons and other centrally planned buildings encourage circumambulation round a central focal point; octagonal plans were often adopted for places of Christian \*pilgrimage (such as the Church of the Nativity at \*Bethlehem) and \*martyr shrines (such as that of S. Philip at \*Hierapolis of \*Phrygia). Other churches were also octagonal, including the lost Golden Octagon, probably the cathedral, built by \*Constantine I at \*Antioch, and S. Vitale at \*Ravenna, for which \*Agnellus (87) uses the term \*basilica. Some octagonal churches (e.g. Ss. Sergius and Bacchus at \*Constantinople) were associated with imperial \*palaces, but by no means all. \*Baptisteries, including that endowed by \*Constantine I at the Lateran Basilica in \*Rome and both the Arian and the Orthodox (Neonian) Baptistry at Ravenna, were also often built on an octagonal plan. An \*epigram formerly inscribed on the baptistry at \*Milan, and attributed to \*Ambrose, notes the peculiar appropriateness of the octagonal plan to a place where salvation is received (*ILCV* 1841 = *CIL* V, 617, 2). This arises from a sense, common to Christians and to \*philosophers from Pythagoras onwards, that individual numbers have particular qualities, and that patterns ascertainable by \*mathematics and the science of numerology were essential to harmony in nature and \*astronomy, in \*music and \*architecture. This conviction persisted into Islamic culture, where the \*Dome of the Rock continued the tradition of domed octagonal sacred buildings. JTPi; OPN Mango, *Byzantine Architecture*.

**Odaenathus** (c.220–266/7) Septimius Odaenathus ruled the Empire of \*Palmyra c.260–6/7. Descended from a leading Palmyrene family, in the aftermath of the capture of \*Valerian by \*Shapur I he became the most powerful Roman in the Near East, acquiring the titles of king and \*Corrector Totius Orientis. His second wife, \*Zenobia, bore him at least one son. Odaenathus and his son from his first marriage were killed at \*Emesa in a dynastic dispute in 266/7 (\*Zosimus, I, 39) and were replaced by his son Vaballathus, with Zenobia as regent. Politically adept and a skilled general, Odaenathus' greatest achievements were establishing a semi-independent kingdom between the Roman and the \*Persian Empire and repelling a Persian threat. SGB

**Odes, Seven Golden or Hanging** See MU'ALLAQAT.

**Odes of Solomon** (2nd or 3rd cent.) A coherent collection of 42 lyric poems, preserved most completely in \*Syriac, partially in \*Greek and \*Coptic. A single verse is quoted in \*Latin by \*Lactantius (*Inst.* IV, 12, 3). The original language is uncertain, though Greek or Syriac is the most likely. The *Odes* exhibit a Jewish–Christian provenance, and their clear soteriological and eschatological focus offers demonstrable connections to Johannine and Pauline material. The *Odes* were readily received and transmitted within \*Gnostic circles. KSH

**Odessos** (mod. Varna, Bulgaria) Commercial \*city in \*Moesia Inferior with a \*harbour on the Black Sea coast, founded as a colony of \*Miletus in the 6th century BC, prosperous in Late Antiquity, despite its exposed position near the Danube \*frontier. \*Justinian I made it the administrative and military centre of the \*Quaestura Exercitus. Four bishops are known: Dittas in 458, Johannes in 518, Martin after 565, and Danail from an inscribed tombstone. The Late Antique \*cemetery included tombs with wall paintings and more than 70 \*epitaphs, some of ordinary craftsmen and \*merchants but also of a presbyter, a \*reader, and even one Abba Markelios.

The largest, probably the cathedral, in Chan Krum Street, a three-aisled \*basilica with \*apse, \*narthex, exo-narthex, atrium, and \*baptistry, was the last of three churches constructed on the same site between the early 5th and early 6th centuries; in the second of these churches, built in the mid-5th century, an undisturbed crypt with preserved stone \*reliquary was found at the south side of the presbyterium. Four other basilicas are known within the city; one was rebuilt from a \*pagan \*temple. Of several churches in the vicinity, one at Djanavara Tepe displayed an unusual plan with square rooms at the four corners of a single nave church; it contained a \*gold and jewelled reliquary. The city of Odessos was abandoned and destroyed in the early 7th century.

**Odilo** (d. 748) Appointed \*Dux of \*Bavaria in 736/7 by \*Charles Martel, whose daughter he married. During the rebellions that followed S. \*Boniface's establishment of four episcopal sees in Bavaria in 739, Odilo temporarily fled to the Frankish \*court, but, after Charles died, he led an unsuccessful revolt against the \*Franks in 743.

MDi

*RGa2* s.v. Odilo, XXI (2002), 559–61 (H. Wolfram).

**Odoacer (Odovacar)** (433–93) Ruler of \*Italy (476–93) after the deposition of \*Romulus Augustulus, the last \*emperor of the West. Odoacer's lifetime is emblematic for the 5th century, being shaped by \*diplomacy with the \*Huns, the settlement of barbarians in the Roman Empire as \**foederati*, and the truncated influence of the Western imperial \*court in Italy.

Odoacer was the son of Edeco, a commander under \*Attila. He is commonly assigned to the \*Sciri; this may refer to a family name as opposed to an ethnic group. Sources refer to Odoacer variously as Scirian, \*Rugian, and Gothic, reflecting the fluid affiliation of ethnic groups after the dismemberment of Attila's Empire. \*Gregory of \*Tours claims that Odoacer competed with \*Childeric for control of the Loire region of \*Gaul (*HF* II, 18), possibly representing opportunistic activities of Attila's former warlords. \*Eugippius later places him in the company of S. \*Severinus of \*Norium while en route to Italy in 469/70 (*VSeverini* 7, 1). Odoacer may have been part of a group of Rugians and \*Heruli received in Italy as *foederati*. When *foederati* later revolted against \*Orestes in Italy, Odoacer's subsequent elevation as Rex Italiae may indicate that he previously held a prominent position

among the Huns, where many of these soldiers had previously served.

Odoacer is generally regarded as a successful ruler. After the deposition of Romulus, Odoacer returned imperial \*regalia to the Emperor \*Zeno in Constantinople and accepted the title of \**patricius*. While not recognized as emperor, he performed the same functions as previous 5th-century \*Magistri Militum in Italy, although in 493 he did attempt to elevate his son as \*Caesar. He maintained good relations with the \*Senate, appointing \*senators from \*Rome to high offices (including the \*consulship); he abolished the *praebitio tironum* (the levy which obliged senators to furnish military recruits) and refurbished senatorial seats at the Colosseum. In 477, he negotiated the return of \*Sicily from the \*Vandals, thereby benefiting senatorial landowners.

Odoacer's other diplomatic activities include a treaty with Childeric to prevent \*Alamans from invading Italy (Gregory of Tours, *HF* II, 19). In 482, after the death of \*Julius Nepos (the last Western emperor recognized by the Eastern court), Odoacer reclaimed \*Dalmatia for the Praetorian Prefecture of Italy. Disputes with Zeno prompted Odoacer to lead a military force into \*Illyricum and against Rugians in Noricum in 487. His brother Onoulf evacuated some portion of the population of Noricum, settling refugees in Italy in 488. This population included monastic communities founded by S. Severinus of Noricum, who translated Severinus' \*relics to Castellum Lucullanum in \*Campania. With Zeno's encouragement, \*Ostrogoths commanded by \*Theoderic invaded Italy in 489. After two defeats in the field, Odoacer retired to \*Ravenna for three years until reaching terms to rule jointly with Theoderic. Odoacer was reportedly slain by Theoderic at a banquet, followed soon after by his family and supporters.

**Odzun (Öjun, Awjun)** The church of Odzun (Lori region, Armenian Republic) is a domed \*basilica with four piers supporting a \*dome on squinches. An arcaded portico flanks the north and south walls and terminates in exterior \*apses. Its date is uncertain, but most scholars agree on a 7th-century foundation date with subsequent renovations. Odzun bears relief \*sculpture on each façade. North of the church, elevated on a stepped podium, are two large stelae bearing carved scenes related to the \*conversion of \*Armenia to Christianity.

P. Donabédian, *L'Âge d'or de l'architecture arménienne* (2008), 110–14; 206–9.

**officina** Subdivision of a Roman or Byzantine mint, often translated as 'workshop'. *Officinae* divided responsibility within mints, presumably to increase regulation, though whether the division was by physical spaces, work groups, overseers, or otherwise is unclear and may have varied. *Officina* marks (usually letters or numbers) often appear on precious- and base-metal coins and may suggest relative mint sizes. For example, 4th-century \*Constantinople operated twice as many *officinae* as any other mint. However, when in AD 298/9 \*Rome's mint expanded to seven *officinae* output was not significantly larger (*RIC* VI, p. 46).

RRD

Grierson, *Byzantine Coinage*.

*RIC* VI.

**officium** The bureau that supported such Roman officials as \*governors, \*Vicarii, the \*Praefectus Praetorio, and \*Praefectus Urbi. The most important evidence for their composition and membership comes from the \**Notitia Dignitatum*, \*John Lydus' *De Magistratibus Populi Romani*, and \*Cassiodorus' *Variae*. The size of *officia* differed according to the status and rank of the officials they served. Thus, the *officium* of a Praefectus Praetorio contained more than 2,000 staff members called (*officiales*) *cohortini* or \**cohortales*, whereas the *officium* of a governor consisted of about 100 (cf. *CJ* XII, 57, 9). The *officia* were responsible for civil \*administration (both financial and judicial) and formed a stable component in government, as the members of a staff were not replaced when new Praefecti, Vicarii, or governors were appointed.

**ogam (ogham, ogom)** The earliest alphabet in \*Irish, consisting of twenty letters with further letters added for later sound changes. It was designed by an inventor who knew \*Latin script and \*grammar and consists of scores of various lengths incised along the edges of stone pillars, designating consonants and

vowels. Approximately 300–400 \*inscriptions survive, with a marked concentration along the southern and south-western coast of \*Ireland. A large number, many with corresponding Latin inscriptions, survive in south Wales and reflect the existence of Irish settlements in that region. They are also found in Cornwall, the \*Isle of Man, and Scotland. Most inscriptions date to between the 5th and 7th centuries.

The inscriptions had a dual function as memorial and as proof of title to land. The inscriptions follow particular formulae, the most common of which is 'X MAQQI Y AVI Z', 'X son of Y descendant of Z'. Although they were commemorative, very few mark burials and early Irish \*laws suggest that they were used as boundary markers. With the widespread adoption of the Latin alphabet from the 6th century, the use of ogam declined, but knowledge of it endured throughout the medieval period. Manuscripts such as the 14th-century Book of Ballymote contain keys to the cipher. Later scholars resurrected an interest in ogam, the archaeologist R. A. S. Macalister being the first scholar to record the inscriptions systematically. EB; MAH

**Oghurs (Urog)** Turkic group that, along with the \*Onoghurs and \*Saraghurs, was originally part of the Turkic Tiele (T'ieh-le) tribal confederation in \*Central Asia (\*Zacharias Rhetor, *HE* XII, 7k, ix). They spoke Oghur-Bulghar Turkic and moved into the western Siberian steppe after the \*Huns left for Europe. \*Priscus (fr. 40 Blockley = 30 Müller, *FHG*) describes how c.463 'the Urogi' (scribal error for Oguri) were attacked by the \*Sabirs, who had themselves been attacked by the \*Avars. \*Theophylact Simocatta (VII, 7, 13–8, 6) summarizes, not unconfusingly, their subsequent relations with the Avars (cf. \*Menander Protector fr. 10, 4 Blockley). The Oghurs, Onoghurs, and Saraghurs eventually settled on the Pontic–Caspian steppe. Subsequently, the Oghurs—whose name means 'grouping of tribes' (equivalent to *Oghuz* in Common Turkic)—seem to have taken over former Hun territory. The related \*Bulgars probably contained Oghuric elements.

**Ohrid (Ochrid)** See LYCHNIDUS.

**Ohrmazd (NP Hormizd, Av. Ahura Mazda, Gk. Hormisdas)** Middle \*Persian (Pahlavi) form of the name of the supreme deity in \*Zoroastrianism and namesake of several Persian kings (NP Hormizd) and nobles, including a Persian defector to the \*court of the Roman Emperor \*Constantine I and his sons.

The \**Denkard* describes Ohrmazd as the 'greatest knowledgeable one, who nurtures and protects, who is beneficent and pure, whose deeds are good, who forgives, whose judgements are good, who has all powers, and whose worship is great and enduring' (*Denkard*, 3, 81) and that 'every good thing was created by Ohrmazd and every bad thing was created by \*Ahriman' (*Denkard*, 6, B1). He holds an account of all humanity's thoughts, words, and deeds through his omniscience (\**Dadistan-e Denig*, 13, 3).

The variant of Zoroastrianism promoted by the \*Sasanian court appears to have privileged Ohrmazd in a way not seen under Arsacids, for whom \*Mihr may have played a more prominent role. First appearing in fully anthropomorphic form in the \*rock reliefs of \*Ardashir I (r. AD 224–39/40) at \*Firuzabad (Gor), \*Naqsh-e Rostam, and \*Naqsh-e Rostam, the supreme deity appears in several other Sasanian reliefs where he invests the King of Kings with the diadem and, in some cases, tramples \*Ahriman in a manner compositionally similar to the earthly sovereign's treatment of his enemies, be they Arsacid, Roman, or internal.

**oikos** (Gk. for house, \*'household, estate; cf. Gk. *syn-geneia* and Lat. *domus, familia*) Basic, though multi-form and dynamic, unit of society ('microstructure') and of the \*census, perhaps made more stable by legal changes and ecclesiastical involvement in the Later Roman Empire.

In \*Egypt the term refers also to a tax-gathering institution, in effect a legal personality whose compulsory public \*service (*munus*) was based on fiscal 'shares' (*merides*) assigned (initially and sometimes heritably) to important landlords both for their own \*tenants and for tenants of landowners who had not been assigned 'shares'. The principal example is the *oikos* of the \*Apion family of \*Oxyrhynchus. This ensured that Egypt's large \*estate owners did not usurp the tax-collecting authority of the state, but acted in cooperation with it.

**olives and olive oil** The olive (*Olea europaea* L.) has been exploited since at least Neolithic times, and along with \*grain and \*wine formed one of the staples of the Mediterranean diet. The olive is a hardy, easily tended, but slow-growing tree well adapted to hot, drier conditions. While universally grown in the Mediterranean climate zone, the olive generally does not grow above 1,000 m (3,281 feet) altitude and cannot survive prolonged cold. \*Egypt was a rare exception to the olive culture; it produced only limited quantities.

In Persian lands, olives were cultivated mainly around the Caspian. Plantations near medieval \*Nishapur and in \*Fars may indicate \*Sasanian-era production there, possibly encouraged by the transferral of Roman captives. Olives were important in Aramaic-speaking northern \*Mesopotamia, but could not be grown in lower Mesopotamia, where sesame oil was the staple. On the whole, however, olive cultivation was always marginal in Persian society.

Olive oil was used widely for industrial purposes, as a lubricant for machinery, and as a base for many drug mixtures and ointments for human and veterinary \*medicine. It was also used in \*cosmetics and perfumery and was used as a rub in \*baths and gymnasiums. Holy oil had important uses in both \*pagan and Christian ritual, and was an item of \*trade at temples and places of \*pilgrimage; numerous \*pilgrimage flasks of holy oil from Christian pilgrimage shrines survive. Lighting was another major application, as oil was used as \*lamp fuel.

The most significant use of olive oil, though, was as food. Oil was used as a cooking fat, as a condiment, and as a preservative in cuisine throughout the Roman world. The Early Roman state went to great lengths to provide olive oil to its officials and soldiers stationed on the \*frontiers, as evidenced by the distribution and quantity of Dressel 20 oil \*amphorae known from Roman \*Britain and along the Rhine \*frontier. From the reign of Septimius Severus (193–211) oil was part of the free \*food supply of \*Rome.

The olive thrives in rocky limestone soils where cereals cannot grow, making it an ideal crop in many marginal landscapes of the Mediterranean basin. Vast

olive plantations in Roman North \*Africa began to produce significant surpluses during the Late Republic: Caesar's fine of three million pounds (c. 1,000 tonnes) of oil on \*Lepcis Magna is a famous example of the surpluses available (Mattingly, 89). African oil shipments to the city of Rome, the wider Mediterranean world, and the Rhine frontier are well established archaeologically. These had declined by Late Antiquity, but the region remained a major producer, shipping to urban markets in \*Gaul, \*Spain, and the Levant. \*Baetica in southern Spain also developed an important oleiculture; its output is best attested by the gigantic refuse dump that forms Monte Testaccio in Rome, a hill composed almost entirely of Dressel 20 Spanish oil jars. In the 3rd century Baetican production declined, apparently due to Severan confiscations and state appropriations, and though it did not completely disappear, Baetica had assumed a secondary role in the oil trade by the 4th century (Reynolds, 39). African oil began to dominate the trade, and \*Carthage continued to export quantities of oil into the 6th and 7th centuries (Leone).

Another major shift in the oil trade occurred with the foundation of \*Constantinople. Just as olive cultivation expanded in southern Gaul, Spain, and North Africa during the early imperial period, in Late Antiquity new plantings were started throughout \*Greece and the Levant in response to increasing urban and state demands. A reorganization of trade is attested by the appearance and wide distribution of Late Roman Amphorae 2 (LRA 2) vessels from mainland Greece and LRA 1 from the eastern Aegean, \*Cyprus, and the north Levantine coast of \*Cilicia and \*Syria. Similar to earlier Dressel 20 jars, LRA 2 is prominent along the militarized frontiers, which may indicate state \*taxation and distribution, though its appearance in Egypt and elsewhere may be purely commercial. Syrian oil continued to be prominent in the diet of the Islamic era; the prophet \*Muhammad called the olive the 'blessed tree' and *rikābi* oil was prized throughout the Near East (Tha'alabi, tr. Bosworth, 118). After the \*Arab conquests, the long-distance maritime trade in oil declined and the Mediterranean region returned to reliance on local production, while areas outside the olive belt turned to other plant oils and animal fats for subsistence and industrial purposes.

**Olybrius** (d. 472) Western \*emperor, 472. A leading senatorial \*aristocrat, he fled to \*Constantinople when the \*Vandals attacked \*Rome in 455. The Emperor \*Leo I sent him to \*Italy to reconcile \*Ricimer with \*Anthemius. Ricimer made him emperor in April 472. He died seven months later.

ADL

*PLRE* II, Olybrius 6.

**Olympia** \*City and \*pagan sanctuary on a low-lying plain in the north-west Peloponnese, now 22 km (nearly 14 miles) from the coast, but in Antiquity closer. Olympia was famous from ancient times for its \*Temple of Zeus and for the \*Olympic Games. A \*bronze plaque bearing the names of Olympic winners from the 1st to the 4th century has been found, but the Games are said to have ceased in the reign of \*Theodosius I (\*George Cedrenus, I, 573, 1). The temple buildings were enlarged c. AD 300 and archaeological evidence suggests that pagan religious activities continued into the early 5th century.

There was a fire at Olympia in 426. Later in the 5th century ancient bronze statues were arranged, without their statue bases, along the southern colonnade of the temple, perhaps with the intention of displaying them as works of art. A church was built in the Workshop of Pheidias in the first half of the 5th century, and at least fourteen wine \*presses were operating at the site.

The famous \*gold and \*ivory statue of Olympian Zeus, the height of a three-storey house, had been removed by 426 to \*Constantinople, where it stood in the Quarter of Lausus, and was probably destroyed in a fire in 475 (Cedrenus, I, 564 and 616, cf. \*Zonaras, XIV, 2 = \*Malchus, 11 Blockley).

By the 6th century a peristyle court complex with a notable marine-themed \*mosaic floor was being reused as a winery and for the manufacture of \*pottery. Fires, \*earthquakes in 523 and 551, and flooding damaged the site. The last coins found have been of \*Phocas. From 630 into the 8th century the Hill of Kronos was used as a \*Slav cemetery. Core-sampling of the overburden on the site, in places over 4 m (13 feet) thick, has suggested that \*tsunamis may have overwhelmed the coastal hills and flooded Olympia with water which could not then drain back to the sea.

**Olympic Games** Athletics contests as elements of pagan religious \*festivals were widespread in the ancient world, but the Olympic Games held at the sanctuary of \*Olympia in the north-west Peloponnese every four years in August or September were so important that the four-year \*Era of the Olympiad (starting in 776 BC) was a common way of reckoning the year in the Greek world. \*Sacrifices and feasting were integral parts of the ceremonies. Competitors came from all over the Greek world, and \*Movses Khorenats'i (III, 40) claims, possibly apocryphally, that a King of \*Armenia of the late 4th century had been a winner in his youth.

Prior to the late 3rd century special local civic \*coinage was struck by cities to mark festivals, but the widespread circulation of Roman \*coinage caused this supplementary evidence to disappear during the 3rd century. Although the games are said to have ceased in the reign of \*Theodosius I (\*George Cedrenus, I, 573, 1), their reputation survived. A proposal by Leontius, \*Praefectus Urbi at \*Constantinople, to establish Olympic Games at \*Chalcedon in 434/5 was thwarted by the active opposition of S. \*Hypatius, Abbot of the \*Rufinianae \*monastery (*Vita Hypatii*, 33). However, the Olympic Games that had been established by the Emperor Claudius at \*Antioch on the Orontes continued until abolished by \*Justin I in 521. PA; OPN

**Olympiodorus** (365/80–after 425) A native of Egyptian \*Thebes, openly \*pagan, and a friend of the \*philosophers Leontius of \*Athens and Hierocles of \*Alexandria, he called himself a poet, although his career was in \*diplomacy within and outside the Empire.

A narrative poem on fighting with the \*Blemmyes (\*nomads beyond the border of Upper \*Egypt), which survives in \*papyrus fragments, has plausibly been ascribed to him. His important work, however, is an account in 22 books of events from 407 to 425, dedicated to the \*Emperor \*Theodosius II. It survives in a summary by \*Photius (80), in the last part of \*Zosimus' *New History* (V, 26–VI, 13), which drew exclusively on it, in passages in the *Ecclesiastical Histories* of \*Sozomen and \*Philostorgius, and, possibly, in a passage in \*Procopius' *Vandalic War*.

As a diplomat with excellent connections (his friend Leontius was the emperor's father-in-law), Olympiodorus was well placed to collect good information on events, some of which he witnessed himself. The majority of his narrative deals with events in the West and with relations between the two halves of the Empire, and is an especially important source for the \*Barbarian Migrations to the West and the activities of such leading figures as \*Stilicho, \*Alaric, \*Athaulf, \*Boniface, Galla \*Placidia, and \*Constantius III.

Olympiodorus' work, although secular in its orientation, does not conform to the style of the classicizing histories of the period. Indeed, Photius says that its style was 'formless and inept' and that the writer himself termed his work 'material for history'. It is possible that the published work, of which fragments survive, represents the compilation and expansion of a series of reports and briefing notes, and is thus a document of primary importance. **Oman** See MAZUN.

**Onchesmus** (mod. Saranda, Albania) Remains include a hilltop church dedicated to the \*Forty Martyrs, and a further \*basilica that was previously a \*synagogue, also a major circuit of walls (with a *proteichisma*) built under \*Anastasius I. WB

W. Bowden, *Epirus Vetus: The Archaeology of a Late Antique Province* (2003).

**Onoghurs (Onogundurs)** Turkic group that, along with the \*Oghurs and \*Saraghurs, was originally part of the Turkic Tiele (T'ieh-le) \*tribal confederation in \*Central Asia (\*Zacharias Rhetor, *HE* XII, 7k, ix). They spoke Oghur-Bulghar Turkic, and moved into the western Siberian steppe after the \*Huns left for Europe. \*Priscus (fr. 40 Blockley = fr. 30 Müller, *FHG*) describes how c.463 they were attacked by the \*Sabirs, who had themselves been attacked by the \*Avars. The Oghurs, Onoghurs, and Saraghurs eventually settled on the Pontic-Caspian steppe. \*Theophylact Simmoca (VII, 8, 13) mentions Bakath, an Onoghur city with a \*Sogdian name, suggesting historical ties with \*Sogdiana. The Onoghurs—whose name means 'ten *oghur*' (*oghur* meaning 'grouping of tribes')—seemingly mixed with the related \*Bulgars and \*Kutrigurs (\*Theophanes, *AM* 6171). They were absorbed into the expanding First \*Türk Empire c.576, but also played a role in the \*Bulgar State; \*Kubrat, the first Bulgar ruler, is called 'lord of the Onogundurs' (\*Nicephorus, 22) and they accompanied \*Asparukh's Bulgars to \*Moesia in 679. The ethnonym 'Hungarian' can also be traced back to 'Onoghur', suggesting a past association between the two peoples. A Hun chieftain who came to \*Constantinople to be baptized c.619 (Nicephorus 9) was probably an Onoghur. Passing references to the Onoghurs are made by \*Movses Kaghankatvatsi' (I, 29–30; II, 1–2) and \*Menander Protector (frs. 5, 2 and 19, 1 Blockley). MLD

**ophthalmology** \*Eye diseases were very prevalent in the ancient world, especially around the Mediterranean, where the \*Sun caused predictable but unavoidable damage. The anatomy of the eye was an area of interest among physicians from early times, and Greek physicians developed a sensible and precise range of analytical tools to deal with eye-related ailments: Hellenistic and Roman texts display a rich terminology and a complex pathological approach.

The picture is no different in Late Antiquity. All great medical compilers of the period (\*Oribasius, \*Aëtius of \*Amida, and \*Paul of Aegina), as well as other medical writers, wrote about eye diseases and their cures (surgical, pharmaceutical), often using Demosthenes Philalethes as a source. A rich knowledge of eye salves and other recipes was available in many parts of the Roman Empire. Surgical instruments dedicated to such ailments as trichiasis and even cataract have been preserved. In the Christian spheres, \*miracle narratives involving eye trauma and cure are to be found in almost every collection, for example \*Sophronius of \*Jerusalem's *Miracles of Ss. Cyrus and John*, written in the early 7th century. As in other areas of ancient \*therapeutics, cures could include magical elements such as incantations and \*amulets. The Late Antique \*Latin translation of a large excerpt (chs. 16–20) on eye diseases and surgery from the *Introduction, or the Physician*, ascribed to \*Galen, demonstrates that medical interest in the diagnosis and cure of eye diseases was not limited to the Greek world, but existed in \*Italy as well. Similar material of unclear authorship and date can be found in early Islamic medical texts and in Byzantine manuscripts. CP

Schulze, eds., *Der Kommentar in Antike und Mittelalter*, vol. 2: *Neue Beiträge zu seiner Erforschung* (2004), 35–40.

**Opsikion Theme** Element of the \*theme system, commanded by a \*Comes resident at \*Nicaea, the Opsikion descended from the army of the \*Magister Militum Praesentalis. Stationed in north-west \*Anatolia and originally responsible for the defence of \*Constantinople, the Opsikion and its \*Comes were important participants in imperial politics. MTGH

Brubaker and Haldon, *Iconoclast: History*, 723–43. *TIB* 4, 59–62.

**Optatan Appendix** A dossier of ten documents relating to the early history of \*Donatism, especially the validity of the consecration of Caecilian, \*Bishop of \*Carthage, by Felix, Bishop of \*Abthungi, and the activities of Felix and Donatist bishops during the Great \*Persecution. It survives in an appendix to \*Optatus of \*Milevis's treatise *Against the Donatists*, but is probably part of an earlier compilation made by an opponent of the Donatists with access to public \*archives in \*Africa.

The first and lengthiest document in the collection is the *Gesta apud Zenophilum*. This records proceedings held at \*Cirta in 320 before Domitius \*Zenophilus, \*Consularis of \*Numidia, which incriminate the opponents of Caecilian. The second document is a \*report of proceedings acquitting Felix of the charge of handing over scriptures to be burnt. The remaining documents comprise one \*letter from the bishops at the \*Council of \*Arles to \*Sylvester, Bishop of \*Rome, six letters from the \*Emperor \*Constantine I, and a travel pass for Donatist bishops issued by the office of the \*Praefectus Praetorio.

The collection attests to Constantine's interest and effort in resolving the dispute between Donatists and Catholics, and to his growing support of the Catholic party in \*Africa. The authenticity of some of the documents, such as the letter of Constantine to Aelafius, has been questioned. SJL-R

**optics** Late Antique optical works include significant contributions to the science of burning mirrors. The incomplete tract *On Wondrous Machines* by \*Anthemius of \*Tralles contains approximate constructions of an elliptical mirror and of a parabolic \*mirror burning at a given distance. The first construction is grounded on the identification of single points on the line, resulting from the fact that the angles made between the 'broken' straight line drawn from a point of the ellipse to the two foci and the tangent to the line through that point are equal. The second construction, that of the parabolic mirror, uses the focus-directrix property and the fact that the tangent to the line at the point of incidence of a ray bisects the angle between the incident ray produced and the reflected ray.

The *Fragmentum Mathematicum Bobiense* is a very short and incomplete fragment that contains an elegant proof of the focal properties of a parabola and a result about spherical mirrors. Its anonymous author must be a contemporary of Anthemius.

The Aristotelian commentator \*Olympiodorus transmits a \*Greek version of the proof provided by \*Hero of Alexandria that, because visual rays travel along the shortest distance, reflection occurs at equal angles. The original work of Hero is attested under the name of \*Ptolemy, in \*Latin translation only and in a severely abridged form. The 6th-century compiler Damianus wrote an elementary tract on *Optical Hypotheses*; this is the only source which assigns this proof to Hero. FA

**optimates** (barbarian) \*Latin term signifying 'best men' or 'leading men', originally used to refer to the political elite of the Roman Republic, and then less specifically in the Vulgate for biblical notables, and to designate high-ranking members of post-Roman barbarian societies. In Late Antique sources the term is roughly synonymous with *principes*. It is also used of noble barbarian women, for instance of the \*Gothic kinswomen of Hunila, the wife of the \*usurper Bonosus (*HA Vita Firmi et al.* 15, 6). Barbarian *optimates* are recorded among the \*Alemanni (\*Ammianus, XXIX, 4, 7), the \*Vandals (referring to King \*Geiseric's opponents in AD 442, \*Prosper Tiro, *Chron.* 1348), and the \*Franks (*Annales Mettenses*, 316). GMB

**optimates** (Roman military) An elite \*cavalry regiment of the late 6th century, mentioned in the \*Strategicon of \*Maurice (II, 6, 29–40). Along with the \*foederati and the \*bucellarii they were probably raised by \*Tiberius II and attached to the Eastern imperial \*army based at \*Constantinople. Many members were of Germanic origin. HE

Haldon, *Byzantine Praetorians*.

**opus sectile** Polychrome \*marble inlay on walls and floors. Aristocratic \*houses of the 4th century in \*Rome and \*Ostia have opus sectile wall revetments, including figural scenes. At the \*Lateran Baptistery in \*Rome and at the \*Holy Wisdom in \*Constantinople, marble wall revetment is combined with an inlaid vine rinceau, at S. \*Sabina in Rome with inlaid images of chalices. At S. Vitale in \*Ravenna and at the Basilica of Eufrasius in \*Poreč, the \*apses are clad in geometric marble patterns. Geometric opus sectile also occurs on floors, particularly in the Near East. **Oracle of Ba'albek** A \*Greek \*apocalyptic text of the reign of \*Anastasius I. The *Oracle* is set on the Capitoline Hill and recounts the \*Sibyl's interpretation of the vision of the 100 'judges' of \*Rome. The nine suns of the vision are interpreted as nine generations,

including the time of Christ (which interpretation gives rise to a query by the priests of the Hebrews about God begetting a son), the \*emperors from Augustus to Anastasius, and a series of eschatological emperors concluding with the Antichrist and Christ's Second Coming. The *Oracle* was based on an earlier Greek apocalypse of the late 4th century (probably written between 378 and 390), now lost, which was translated into \*Latin before 390; this Latin translation, also lost, formed the basis of a number of texts from the late 10th or 11th century attributed to the Tiburtine Sibyl. The surviving Greek text was composed between 502 and 506, in the midst of Anastasius' \*Persian war (the latest historical event mentioned), by an adherent of the Christology adopted at the \*Council of \*Chalcedon. It makes special reference to the monuments and region of \*Heliopolis (Ba'albek) in \*Syria, hence the name of the *Oracle* and its probable attribution to a native or inhabitant of Heliopolis. The *Oracle* notes the diminution of Rome and takes a pessimistic attitude toward the prospects of \*Constantinople and the Roman Empire. BMG

ed. P. J. Alexander (with ET and comm.), *The Oracle of Baalbek: The Tiburtine Sibyl in Greek Dress* (DOS 10, 1967).

**Oracle of the Potter** A prophetic text composed in \*Egypt probably in the 2nd century BC. Attributed to a legendary potter who is the incarnation of the god Khnum, it prophesies the imminent downfall of the ruling Ptolemaic dynasty, the destruction of Egypt, and its restoration under the leadership of a saviour. It survives in \*Greek in \*papyri from the 2nd and 3rd centuries AD; papyrus fragments show that the text was brought up to date in the 3rd century to express hostility against Romans and \*Jews. **oracles and oracle collections** Prophetic communications thought to be from the gods, delivered through inspired persons, whose individuality was generally suppressed. The term 'oracle' may refer to the

prophecy itself, to the human uttering it, or to the site, normally a sanctuary, where prophesying took place.

The oracular shrines at ancient Greek Panhellenic sanctuaries had varied fates in Christian Late Antiquity. The victorious forces of \*Licinius in 313 had taken violent action against the *prophetes* of \*Didyma whose oracles had supported the Great \*Persecution (\*Lactantius, *Mort.* 11, 7; \*Eusebius, *Preparatio Evangelica*, IV, 2). \*Theodosius I's \*edict banning oracular activity in 391 (*CTh* XVI, 10, 9) was not wholly effective. \*Severus of \*Antioch declared in the late 5th century that all major pagan oracular centres had been closed and overturned, but this may have been wishful thinking. The sanctuary buildings of oracular sites such as Didyma, \*Delphi, and \*Dodona were converted to secular uses or neutralized by the building of churches. Christianization, especially the burying of \*martyrs, interfered with the operation of oracles; the proximity of S. Babylas' \*relics to the shrine of Apollo at \*Daphne outside \*Antioch was said to have silenced the god (\*John Chrysostom, *De Sancto Babyla*, 73). In some cases, the closure of a shrine was spurred by political rather than religious motivations, as with the Abydos Bes shrine in \*Egypt.

Despite the decline and closure of shrines, the utterances of oracles could still be consulted as written texts, whether recorded in \*inscriptions, or circulated in collections such as \*Porphyry's *Philosophy from Oracles*. Many Christian writers were hostile to the notion of oracular prophecy, deeming it a pagan practice which was either fraudulent or, when it worked, operated by \*demons (\*Lactantius, *Inst.* II, 16; \*Augustine, *De Divinatione Daemonum*). However, Christians were also aware of the role of oracles in their own history and scripture, and adopted and adapted oracular practices and traditions. The procedure of the so-called ticket oracle was practised at saints' shrines in Egypt; a questioner would submit two written queries describing contradictory courses of action he was considering, and the oracle would return to him the 'ticket' which described the action it advised him to undertake. In these cases, the personal holiness of the saint mediated between the enquirer and God.

Christians also exploited the monotheistic character of some pagan oracles, using them to demonstrate the truth of their religion to pagans. The *\*Sibylline Oracles*, a varied collection of hexameters including monotheistic and messianic oracles, were partly produced by \*Jews and Christians; Lactantius adduced them plentifully (though Augustine did not: *City of God*, XIX, 22). The late 5th-century Christian *Theosophia*, partly preserved in the *\*Theosophy of Tübingen*, assembled a collection of Greek and Sibylline oracles which agreed with scripture and proclaimed Christian truth. **orarium** A rectangular linen napkin or neckerchief. In 301 the Tetrarchic \*Prices Edict (26, 162–82) lists 21 different qualities of *orarium* by origin and price, catalogued among minor accessories of linen. In the \**Vision of Dorotheus* (c.400) (Bremmer, 86, line 332) the *orarium* is wrapped scarf-like around the neck of a palace guard. \*Jerome (*ep.* 52, 9) equates it with the (military) *sudarium* and in emergencies it could be used as a blindfold (*Passio of Julius the Veteran*, 4, 4) or to tie up a wound (\*Augustine, *City of God*, XXII, 8). \*Deacons of the 4th-century church wore the *orarium*; \*subdeacons did not (Canons of \*Laodicea, 22, 23). Later, an elongated form of the *orarium* was conflated with the *stola*, worn over both shoulders as a \*vestment of a Christian \*priest. JPW

- J. Bremmer, 'An Imperial Palace Guard in Heaven: The Date of the Vision of Dorotheus', *ZPE* 75 (1988), 82–8.

**Orcistus** Town in the upper Sangarius basin (Turkish Alikân, now Ortaköy), at an important road junction of eastern \*Phrygia. \*Constantine I granted the settlement \*city status (c. AD 324/6) on grounds of its physical advantages (water-\*mills, agora, suitability as a posting-station for the \*Cursus Publicus) and its Christian population (*MAMA* VII, 305). PJT

**Ordines Romani** \*Latin \*liturgical rites (*ordines*), of various lengths, originally celebrated in churches of \*Rome during Late Antiquity. The extant texts, however, reveal distinctive Frankish emendations, for they were taken northward from \*Rome by pilgrims or monks in the early Middle Ages.

*Ordines* I–X were rites celebrated by the \*Bishop of \*Rome. *Ordo* XI is a rite of \*baptism; *Ordines* XII–XIV are for the \*Liturgy of the Hours. *Ordo* XV contains pontifical rites for various celebrations during the year and *Ordo* XVI adapts *Ordines* XIV and XV for a \*monastery. *Ordo* XVII does the same for *Ordines* XV and XVI. *Ordines* XVIII and XIX supply rules for the hours of \*prayer and for meals in Roman monasteries. *Ordines* XX–XXXIII prescribe certain rites for \*festivals and seasons of the church year. *Ordines* XXXIV–XL are rites for the ordination of bishops and \*priests, prescribing the \*Ember season for ordination rites. *Ordines* XLI–XLIII regulate the consecration of churches in Rome and the deposition of \*relics in them. *Ordo* XLIV prescribes the ritual cleaning of the *Confessio* of the \*Vatican Basilica. *Ordines* XLV–XLVIII lay down the rite for the \*coronation of the \*emperor. *Ordo* XLIX provides a ritual for the dying and for the disposal of the \*dead. *Ordo* L is among the latest and longest of the *Ordines*; it lays out the calendar of liturgical \*festivals, and clearly draws on other details in the *Ordines*. **ordo** See CITY COUNCILS AND COUNCILLORS.

**Orestes** Father of \*Romulus Augustulus. A \*Pannonian, he served \*Attila as a \*notarius in 449 and 452. In 475 he was given command of Roman troops to go to \*Gaul, but instead marched on \*Ravenna. The Western \*emperor \*Julius Nepos fled and Orestes proclaimed Romulus emperor. The following year Orestes was captured by \*Odoacer and killed near Placentia. OPN

*PLRE* II, Orestes 2.

**organ** (Lat. *organum hydraulicum*, *hydraulus*) A keyed musical instrument activated by air (regulated by hydraulic pump or bellows) forced through pipes, as described by \*Hero of \*Alexandria (*Pneumatica*, 42)

and \*Vitruvius (*De Architectura*, X, 8). Evidence from Tertullian (*De Anima*, 14, 4–5) onwards indicates a larger instrument than anything attested in classical sources. The smaller, pneumatic (bellows) organ was first distinguished from the hydraulic (water) organ in Julius Pollux's *Onomasticon* (4, 69–70); in later centuries, *hydraulus* (or *hydraula*) continued to be the name for both types, though the pneumatic organ seems to have gradually supplanted its hydraulic predecessor, especially in the Eastern Empire.

Widely attested in literary and iconographical sources, the organ is (*inter alia*) cited as a mechanical marvel (\*Cassiodorus, *Variae*, 1, 45), hailed as art imitating nature (\*Theodoret, *De Providentia*, Oratio 3), and allegorized by the church fathers (\*Gregory the Great, *Moralia*, 20, 41, 78–9). There exist only two known archaeological remains of organs from Late Antiquity, both dating from the 3rd century: the \*Aquincum organ (discovered in 1931) and the organ fragments of Aventicum, excavated in 1865 but identified as an organ only in 1996. **Orhay** See EDESSA.

**Oribasius** (c.325–395) Physician to the \*Emperor \*Julian (\*Augustus 361–3) whom he accompanied in \*Gaul and Persia. Oribasius is perhaps most famous for his massive medical encyclopedia in 70 books, which had a decisive influence on such later authors as \*Aëtius of \*Amida, \*Alexander of \*Tralles, and \*Paul of \*Aegina. This work, entitled *Medical Collections*, deals with most aspects of \*medicine, ranging from hygiene and \*diet to diagnosis, \*therapeutics, \*pharmacy, and anatomy. He also composed a medical *Overview for Eustathius* in nine books; and a monograph on *Drugs that are Easy to Procure*, for Eunapius, perhaps the contemporary \*Eunapius of \*Sardis, who wrote his life (*Lives of the Philosophers*, 21) and for whom he wrote a memoir of Julian's Persian campaign. PEP

**Oriens** (Gk. Ἐῶνα) \**Dioecesis* governed from \*Antioch on the Orontes by the \*Comes Orientis, answerable to the \*Praefectus Praetorio Orientis (\**Notitia Dignitatum* or. II). The eighteen \*provinces it comprised in the \*Verona List included those of

\*Libya and \*Egypt as well as the Levant, \*Isauria, and \*Cilicia. Egypt was made a separate *dioecesis* in c.370 (*Not. Dig. or.* XXII) and \*Cyprus was separated from Oriens in 535/6. MMs

Jones, *LRE* 47–8, 141, 280–1, 373–4.

CAH XII (2005) appendix 1, 709 (J. Wilkes).

**orientation of churches** From the 4th century onwards church buildings were commonly aligned on an east–west axis, with the \*apse and \*altar at the east end. This was not universal; in order to incorporate the shrine of S. Peter, the \*Vatican Basilica was built with the altar at its west end. But it was sufficiently engrained to make \*architects undertake considerable effort to accommodate it, for instance in building substructures into the side of the hill at \*Qalat Seman so that the apse and altar might stand east of the pillar of S. \*Symeon Stylites.

The \*church order known as the \**Didascalia Apostolorum* (XII, 2, 57) requires that 'you pray toward the east, as knowing that which is written: *Give ye glory to God, who rideth upon the heaven of heavens toward the east*' (Psalm 67:34 LXX). Christian authors also expected that at the Second Coming Christ would appear in the eastern \*sky and that the Sign which would precede Him (Matthew 24:27; 26:64) would be the \*Cross. Crosses are depicted in the vaults of church sanctuaries as far apart as S. Apollinare in Classe near \*Ravenna and the Monastery of Mar \*Gabriel on the \*Tur 'Abdin near the Persian \*frontier. **Orientius** (d. after 439) Generally identified with Orens, \*Bishop of Auch, the author of a poem of moral exhortation in two books of elegiac couplets, conventionally entitled *Commonitorium* and dated to the first decades of the 5th century. The poem is a call to \*conversion to the virtuous Christian life. After recommending the biblical commandments to 'love the Lord your God' and 'love your neighbour as yourself', the poet goes on to denounce a series of vices: wantonness, envy, greed, vainglory, lying, gluttony, and drunkenness. For those for whom these precepts are hard, he reminds them of the shortness of human life, the eternal punishment that the wicked will suffer, and the happy lot of the saved. MJR

**Origen** (184/5–253/5) Christian scholar, teacher, and writer who worked at \*Alexandria and \*Caesarea of \*Palestine. Origen was born into a Christian family in \*Egypt and received a broad education in classical and Christian literature before becoming a teacher. He may have studied with the Platonist Ammonius Saccas (\*Eusebius, *HE* VI, 19), and was certainly well acquainted with a range of \*pagan \*philosophy. When Origen was 17 in the reign of Septimius Severus, his father was martyred, and shortly afterwards Origen took on catechetical responsibilities against a background of \*persecution. He was eventually recognized as Clement of Alexandria's successor as head of the catechetical school at Alexandria (\*Jerome, *Vir. Ill.* 54). There he taught a range of subjects, both secular and Christian, for almost three decades, and amassed large numbers of pupils. His encounters with rival groups and teachers, particularly \*Gnostics such as the Valentinians, stimulated him to write a systematic and anti-heretical outline of Christian theology, *On First Principles*. In this period Origen apparently demonstrated his commitment to the \*ascetic life by castrating himself, taking the injunction at Matthew 19:12 literally.

This, as well as differing ideas about authority to teach, generated tension with Demetrius, \*Bishop of Alexandria (Eusebius, *HE* VI, 8). Origen made journeys from Caesarea to \*Rome (c.215) and \*Antioch (231); when en route to the latter via Palestine, he was ordained \*priest at Caesarea by Bishop Theoctistus. However, he was excommunicated shortly afterwards by a synod called by Demetrius and removed from the priesthood, and the excommunication was reaffirmed by Heraclas, Demetrius' successor at Alexandria.

Origen moved to Caesarea in c.234, where the sentence of excommunication was ignored, and he founded a new school there whose curriculum shared much with that of Alexandria. At Caesarea he built up another large circle of followers including figures such as \*Gregory the Wonderworker, whose *Eucharisticum (Thanksgiving to Origen)* is a detailed appreciation of the teaching he received over a period of several years. Origen made use of the city's learned \*Jewish population to further his understanding of Hebrew and practice of biblical textual criticism. This enabled him to produce the \**Hexapla*, which tabulated in six columns the Hebrew text, Greek transliteration, and four Greek translations of the Old Testament. Towards the end of his life (c.248), Origen produced a blow-by-blow refutation of a much earlier anti-Christian treatise in his apologetic *Against Celsus*.

Having lost his father to martyrdom when young, Origen suffered imprisonment at the end of his life during the \*persecution of \*Decius, but survived it, only to die shortly afterwards. His zeal for martyrdom is visible in many of his works, and especially in his *Exhortation to Martyrdom*. Some of Origen's works and teachings attracted considerable controversy, among them the notion of the pre-existence of souls, and the doctrine of universal salvation. After his death, theologians disputed his legacy for almost two centuries before a local council at \*Constantinople in 543, summoned by \*Justinian I, condemned a number of \*'Origenist' doctrines. Origen was a formidable scholar and a prolific writer but, partly because of the controversial reputation which attached to his theology, only a small number of his thousands of works survive, and many of these are in a fragmentary state: only a portion of a large number of exegetical homilies and biblical commentaries remains, and only two of a great body of \*letters survive. More of his works are preserved in \*Latin translations by the likes of \*Rufinus than in their original \*Greek. The patchy transmission of Origen's works makes it hard to reconstruct some of his teaching, and to assess how authentically 'Origenist' were those doctrines later condemned as such. SJL-R

**Origenism and Origenist controversies** There were two major Origenist controversies in Late Antiquity, one in the late 4th and early 5th centuries, and one in the mid-6th century. 'Origenism', in this context, refers primarily to ideas suggested by \*Origen's doctrine of the *apokatastasis*, in which an immaterial supreme God created numerous immaterial rational beings in a state of intellectual unity with Him; these beings then fell away from union and descended into material bodies, leading to the creation of the material world but ultimately all rational beings will reunite with God. Origenists held, or were accused of holding, one or more of the following ideas (and variants of these) suggested by this doctrine: that anthropomorphic language cannot properly be used to describe an immaterial God; that the supremacy of God the Father implies that the Son is inferior to him; that at the Resurrection humans will return to a bodiless state; and that all rational beings, including the Devil, will become equal in rank in the final reunification. Modern scholars question the extent to which Origen held these views.

The history of the first Origenist controversy is complex. Origen's ideas appear in Egyptian ascetic texts in the mid-4th century, and \*Evagrius Ponticus developed them into a comprehensive spiritual programme during his ascetic career in \*Egypt, beginning in the mid-380s. Many monks found troubling Evagrius' suggestion that anthropomorphic imagery hindered contemplation of an immaterial God (Evagrius, *De Oratione*, 66, 67, 72; \*John Cassian, *Conlationes*, X, 1–3). Negative reactions to this idea led \*Theophilus, \*Patriarch of \*Alexandria, to condemn Origen's writings in 400, after Evagrius had died, and to expel Origenists from the \*monasteries of \*Nitria. Four Origenists known as the 'Tall Brothers' left Nitria and were welcomed in \*Constantinople by \*John Chrysostom. At Theophilus' urging, Chrysostom was condemned at the Synod of the \*Oak in 403, although many considered the condemnation to be politically motivated.

In the mid-390s, as controversy unfolded in Egypt, \*Epiphanius of \*Salamis travelled to \*Palestine to encourage the condemnation of Origenist ideas, particularly the subordination of the Son to the Father, the pre-existence of souls, bodiless resurrection, and the salvation of the Devil. Epiphanius clashed with \*Bishop \*John II of \*Jerusalem (\*Jerome, *Contra Iohannem*, 4), and ascetic communities in Palestine were divided. Jerome renounced Origenism, although he had previously used and translated Origen's works; he nonetheless maintained that Origen's writings contained much that was useful (Jerome, *ep.* 85). \*Rufinus of \*Aquilaia

refused to condemn Origen, claiming that apparent divergences from orthodoxy in Origen's writings were due to corrupt manuscripts (Rufinus, *De Adulteratione Librorum Origenis*); Rufinus began to translate Origen's works into \*Latin in 397. The quarrel between Jerome and Rufinus brought the controversy to \*Italy, and in 400, Pope Anastasius condemned Origen's writings. After Epiphanius' death in 403 and the deposition of Chrysostom in the same year, the controversy waned.

Sources for the 6th-century controversy are scant, and it is unclear to what extent those accused of Origenism, such as \*Leontius of Byzantium, actually held Origenist ideas. \*Cyril of \*Scythopolis claims (*VSab* 188–198, 5) that in the mid-530s several monks from the New Laura in \*Palestine, including Leontius, began to promote Origenism aggressively and sometimes violently, temporarily taking over leadership of the New Laura and the nearby Great Laura. In 543, the \*Emperor \*Justinian I publicized ten anathemas against Origen and Origenism, and in 553, the Second \*Council of \*Constantinople added fifteen similar anathemas to its condemnations of non-Chalcedonian Christology. According to Cyril (*VSab* 199–200), Origenist monks were then expelled from the New Laura, and orthodox monks replaced them in 555; this ended the second Origenist controversy. CMC

**Origo Constantini Imperatoris** Alternative name for the first part of the *\*Anonymus Valesianus* (or *Excerpta Valesiana*), itself named after its first editor. The text survives in a single 9th-century manuscript (Berolinensis 1885). It is a short, stylistically plain *\*Latin* *\*biography* of *\*Constantine I*, from 305 to 337, and is generally dated c. AD 390. It is a broadly sympathetic treatment of Constantine and has a pro-Christian perspective; the narrative is dominated by military and political matters, with occasional indulgences in anecdote, and strong and direct portrayal of the leading characters. Nonetheless, and despite its silence on certain episodes, such as the deaths of *\*Crispus* and *\*Fausta*, it is deemed generally reliable, and is particularly informative about Constantine's dealings with *\*Licinius*, where other sources are thinner. It does not disclose its sources. RDR

**Orléans** (départ. Loiret, France; *civitas Aurelianorum*)

*\*City* located at a strategic road junction and river crossing on the Loire, which acquired a circuit of walls enclosing around 25 ha (c.61 acres) in the mid-4th century, and was relieved of a siege by *\*Attila* and the *\*Huns* in 451. Under the *\*Franks*, it became the capital of the share of the kingdom ruled by *\*Chlodomer* (511–24), and *\*Guntram* (561–92), but the latter more often resided at *\*Chalon-sur-Saône*, and the last king to use it as his base was *\*Theuderic II* (587–613). A succession of important Frankish church *\*councils* were also held there in the first half of the 6th century, beginning with that summoned by *\*Clovis I* in 511. Its most prominent bishop was Anianus (fl. 451), renowned for organizing his city's resistance to the Huns; the *\*basilica* that housed his *\*tomb* was deemed an important church in the later 7th century. RVD; STL

CA Gaule 45 (1988).

Topographie chrétienne, vol. 8 (1992), 81–96.

**Orosius** Historian and polemicist (fl. 414–18). Orosius, sometimes referred to as Paulus Orosius (*\*Jordanes, Getica*, 9), was a Spanish *\*priest* (*\*Gennadius, Vir. Ill.* 39). He travelled to *\*Africa* 411/14, and was

dispatched as \*Augustine's representative to \*Jerome in 415 (Augustine, *ep.* 166). In the same year, Orosius attended the Synod of \*Jerusalem, where he argued unsuccessfully against \*Pelagius. Shortly afterwards, he composed the *Liber Apologeticus* as a reassertion of his own doctrinal position. Orosius settled in Africa in 416, after political upheaval in \*Spain made a return to his homeland impossible.

Orosius is best known for his *Seven Books of History Against the Pagans* (*Historiarum Adversus Paganos Libri Septem*), apparently written at the behest of Augustine and intended to serve as a historical appendix to the latter's *City of God*. (Orosius, *Hist.* praef.) Orosius states that he began his composition after the completion of the tenth book of *The City of God*, and the work was certainly finished by 418. The *History* was founded upon the contention that the sack of \*Rome in 410 by the \*Visigoths was relatively insignificant when set against the great tableau of human suffering. The final book presents a relatively positive image of the Visigoths as the new Christian allies of Rome, and exhibits an optimistic attitude towards the future. Orosius' misgivings at the magnitude of his task seem to have been justified: modern scholars have frequently condemned his eccentric emphases, and Augustine made no reference to his work in the later books of *City of God*.

Nevertheless, the *Seven Books of History Against the Pagans* was an important work of Late Antique \*historiography. It was at once the first universal Christian history, and the first narrative Christian history to be written in \*Latin. In presenting the whole of secular history within a Christian eschatological framework, moreover, Orosius was attempting something unprecedented. Although Orosius clearly aspired towards a genuinely comprehensive history, and the geographical survey with which he opens the *History* covers the whole of the known world, the narrative itself was largely limited to the familiar world of the Mediterranean. The first book traces the history of the world from its origin to the war between Athens and Sparta; Book II opens with an account of the four great empires of history (identified here as Babylon, Macedonia, Carthage, and Rome), and describes Roman history from the foundation of the city to the Gallic Sack of Rome; Book III runs from the Peloponnesian War to the death of Alexander the Great, and discusses Roman expansion within Italy; Book IV is an account of Roman consolidation in Italy and the Punic Wars and ends with the destruction of Carthage; Books V and VI narrate the later history of the Republic, the Spartan revolt, Civil War, and the rise of Augustus; the last book traces recent history from the Incarnation to the time of writing.

Orosius drew heavily upon secular sources in the composition of his *History*, particularly the works of

Livy, Florus, \*Eutropius, the *\*Historia Augusta*, and (in the epitome of Justin) the work of Pompeius Trogus. He also referred directly to Sallust, Tacitus, and Suetonius, and readily exploited these authors' condemnation of contemporary Roman *mores* in supporting his own polemical position. Predictably, Orosius also depended heavily upon the *Chronicle* of \*Eusebius, through the translation and continuation of Jerome, but the continuous narrative of the *History* was no slavish reproduction of this work.

The *Seven Books of History* was very widely read in later centuries, as the large number of manuscript copies attests. Famously, the text was translated into Old English (with a substantially expanded geographical introduction) at the court of King Alfred. Elsewhere, Orosius' narrative historiography proved almost as influential as the *Chronicle* of Eusebius-Jerome, and \*Jordanes, \*Gregory of \*Tours, Paul the Deacon, and \*Bede all cited his work as an inspiration. **orphanage** Many \*children grew up without parents, but no actual institutions devoted to the care of orphans appeared before Late Antiquity. The first

orphanage, the Orphanotropheion, was established at \*Constantinople in the mid-4th century. In 472 \*Leo I confirmed the privileges of the institution 'under the care of Nikon . . . \*priest and Orphanotrophos' (*CJust* I, 3, 34 [35]). \*Theophanes records the building of a church of Ss. Peter and Paul 'at the Orphanotropheion' under \*Justin II. \*Andrew of Crete, the hymn-writer, was Orphanotrophos in the early 8th century.

Less specialized institutions devoted to the care of the indigent are attested in other regions of the Empire and \**xenodocheia* frequently functioned as de facto orphanages. Basil's great hospital at \*Caesarea of \*Cappadocia cared for orphans (\*Gregory of \*Nazianzus, *Oration*, 43, 63, and 81), As \*monasteries became common, they often brought children up; by the 6th century rules governed their care (*RegBen* 30, 37, 59, 70). Kaster, *Guardians*, 325–7.

**Osrhoene** Roman \*province bounded on the south-east by the Persian \*frontier, on the north-east and north by the Roman province of \*Mesopotamia, and on the north-west, west, and south by the River Euphrates and the province of \*Euphratensis. It was taken under direct Roman rule during the 3rd century from the client kings of the Abgar dynasty ruling from Edessa. The \*Verona List places Osrhoene in the \*Dioecesis of \*Oriens, as does the \**Notitia Dignitatum* (*or.* II, 21; XXII, 12 and 28), which gives the \*governor's title as \*Praeses (*or.* I, 92) and lists considerable bodies of troops under the command of the \*Dux Osrhoenae (*or.* I, 46; XXXV). \*Hierocles (713, 12–714, 6) enumerates eight cities in Osrhoene, headed by \*Edessa.

Edessa was the principal centre of \*Syriac civilization in the Roman Empire and Christian from an early date. Osrhoene was on the invasion route of \*Shapur I in 260 when \*Valerian became one of a series of Roman commanders to be defeated in the \*Harran region (\**Res Gestae Divi Saporis*, 24–6). The province's military dispositions are frequently mentioned by \*Ammianus and by \*Procopius and his continuators. \*Joshua the Stylite gives a vivid account of the effect on the local population of the invasion of \*Qobad I, and from then until

the \*Arab conquest the province was heavily garrisoned. Edessa was captured by the Arabs in 639, and under them Osrhoene became part of the province of Diyar Mudar in al-\*Jazira. PWMF

**Ossius of Cordoba** (d. 357/8) \*Bishop of \*Cordoba (\*Spain) and, as religious adviser of \*Constantine I, an important participant in church politics in the early 4th century. Little is known about his background in Spain; he emerged as Constantine's principal ecclesiastical adviser from the 310s. After Constantine defeated \*Licinius in 324 and controlled the eastern half of the Empire, Ossius took a leading part in attempts to resolve the \*Arian Controversy. He was Constantine's envoy to \*Alexandria and \*Antioch in 324/5, appointing a new \*Patriarch of Antioch, calling the \*Council of Antioch of 325, and drawing up the council's \*letter. More significant was his contribution to the Council of \*Nicaea (325), over which he presided. He and Constantine developed the doctrine that God the Son was *homoousios* (of one substance) with God the Father, the formulation ratified at the Council of Nicaea.

Ossius lived to over 100 and in later life came under pressure from \*Homoeans (\*Arians), who after the death of Constantine could count on the support of his son \*Constantius II. He was summoned to the Council of \*Sirmium (357) and forced to subscribe to the \*Anomoean \*creed. This was received negatively in the West and he retired back to Cordoba at the end of his life. **Ostia** The old \*harbour \*city of \*Rome, located c.25.7 km (16 miles) from the capital. Thought to have declined during the Third Century \*Crisis, Ostia

is known to have led a more vigorous life even as it was separated administratively from \*Portus under \*Constantine I. Earlier studies that characterized the town as exclusively one of grand \*houses, for example, have been revised in light of the persistence of apartment-living into the 3rd century and beyond. Some bakeries and granaries continued to function into the 5th century, \*baths and the city centre remained well kept, and traditional \*paganism remained a visible part of city life. \*Maxentius opened a \*mint, probably employing personnel from \*Carthage, which operated between AD 308/9 and 313. The first quarter of the 4th century produced the first visible Christian architecture, a \*basilica located within the walls, though sources (\**Liber Pontificalis*, 34, 28 and *AASS Junii VII*, 33–4) disagree about its dedication. Three other basilicas, none of which can be dated before the start of the 5th century, were later added to the territory outside the walls; and it was not until the 6th or early 7th century that a campaign was organized to erect \*epitaphs for Ostia's 3rd-century \*bishop Cyriacus, as well as for S. Monica (d. 387), the mother of \*Augustine, whose death at Ostia is treated in the *Confessions* (IX, 8, 17).

RIC VI.

**ostraca** Famously associated with voting ballots from classical Athens on which names of candidates for ostracism were scratched, ostraca were pottery sherds and also pieces of limestone widely employed as writing surfaces for a broad range of texts. While often no bigger than the palm of the hand, ostraca come in many different shapes and sizes, from very small tags that were lodged into the lids of jars to identify their contents to \*amphora-sized pieces containing lengthy registers. They were best for brief, everyday texts, such as tax receipts, orders for payment, memoranda, lists, \*letters, or school exercises. From later periods there also survive sometimes lengthy biblical writings and prayers, particularly in Coptic. Ostraca were freely available so, though cumbersome to transport, were a less costly alternative to \*papyrus.

Ostraca were the dominant writing material in areas such as the Eastern Desert of Egypt, but have also been found alongside \*papyri throughout the \*Nile Valley, Fayyum, and Western Desert, as well as in other parts of the ancient world including Afghanistan, North

\*Africa, and Europe. They are not associated with any particular language: from Late Antiquity there are texts in \*Greek, \*Latin, Coptic, and \*Arabic, though the latter is less well represented in the published record. Recent discoveries at \*Elephantine of Arabic ostraca may provide new perspectives on the use of the medium in the Islamic period.

A. Bülow-Jacobsen, 'Writing Materials in the Ancient World', in R. S. Bagnall, ed., *The Oxford Handbook of Papyrology* (2009), 14–17.

**Ostrogoths** A group of Germanic people, traditionally viewed, on the basis of \*Jordanes' *Getica*, as one of two groups created when the originally unified \*Goths split as they rose to prominence north of the Black Sea in the 3rd century. The name is first recorded in the Vienna palimpsest fragments of \*Dexippus' *Scythica*. There were, however, probably several independent Gothic groups on the north side of the Black Sea in the 4th century, and if, as is customary, the term 'Ostrogoth' is reserved for the group which \*Theoderic the \*Amal led to \*Italy in 489, then the Ostrogoths were in fact a new political unit of Goths whose \*ethnogenesis occurred in several phases in the course of two political generations from c. AD 450.

#### Early history

First, Valamer and his two younger brothers—Thiudimer and Vidimer—eliminated a series of rivals to unify a number of previously separate Gothic warbands (at least three male dynastic lines are briefly documented). These had all been subject to the overlordship of the \*Huns, and the unification process certainly contributed to the new-found ability of the Amal-led Goths to throw off Hunnic dominion and reassert independence, as many other former Hunnic subjects were also doing, in the years after \*Attila's death in 453. According to Jordanes, it was also at this time that the group first took possession of part of the old Roman \*province of \*Pannonia beside Lake Balaton in the Middle Danube basin. From there, in the later 450s and 460s, the group found itself periodically at war not only with different sons of Attila who were seeking to restore their domination, but also with a series of former Hunnic subjects (\*Sciri, \*Rugians, \*Gepids, and \*Suebes amongst others) who had also asserted their independence and were now struggling with one another both for regional domination and for profitable alliances with \*Constantinople. Even in the latter context, the Amal-led Pannonian Goths were not shy of using force, and a first intrusion into East Roman \*Illyricum in 462 led to the negotiation of a treaty which saw Valamer's Goths receive 200 pounds of \*gold per annum and Theodemer's son \*Theoderic sent off to Constantinople for a decade as a \*hostage.

Jordanes reports that the Pannonian Goths were always victorious in their wars, but Valamer was killed in one conflict with the Sciri, and, in 473, their new overall leader Theodemer reunited with his son, led the Goths decisively out of the Middle Danube and into the East Roman \*Balkans. At that point a second large body of Goths (both of these groups could field at least 10,000 warriors) already established in \*Thrace as long-standing Roman allies (perhaps since the 420s) had risen in revolt because their political position was threatened by the \*Emperor \*Leo I's elimination of their \*patron \*Aspar. Conceivably, it was Theoderic the Amal himself who brought news of the revolt back with him on his return to his father from Constantinople in 471/2, but it was certainly the revolt of the Thracian Goths which prompted the Pannonian leadership to move south. Over the subsequent decade, Theoderic (after his father's death in c.474) consistently presented his Goths as a more effective set of allies for Constantinople, attempting to supplant the position of the Thracian Goths, no doubt with his eyes on the 2,000 pounds of gold per annum (ten times the \*subsidy Valamer had extracted) which they customarily received for their services.

Constantinople itself was in turmoil in these years. The \*Isaurian Emperor \*Zeno had levered himself into power and faced stiff opposition not only from within the old extended imperial \*family, but also periodically from a rival Isaurian general, \*Illus, and from the Thracian Goths, whose influence had been undermined by the removal of \*Aspar. The result was a kaleidoscopic series of short-term political manoeuvrings which took until the mid-480s to work themselves out, by which time Zeno had eliminated a series of imperial challengers, including Illus, and the leaders of the Thracian Goths. Zeno's success came at the price, however, of a new problem: Zeno had been forced to allow Theoderic to absorb the bulk of the Thracian Goths into his following—after Theoderic had assassinated the last of their leaders; Theoderic was thus transformed into a classic overmighty subject. By the later 480s, the united Goths were in revolt and any semblance of trust in the \*emperor (who habitually followed political deals with assassination attempts) had completely broken down. In late 488, it was agreed therefore that emperor and Goth would solve their problems at the expense of \*Odoacer, the post-Roman ruler of Italy and \*Dalmatia, and the newly united Goths (reinforced by some Rugians) left the East Roman Balkans forever.

### *Theoderic in Italy*

Theoderic duly arrived in \*Italy and in 493, to secure his victory, eventually assassinated Odoacer in person at a banquet. At this point he began to renegotiate the terms

he had agreed with Zeno (now safely dead), for a series of agreements was required before Constantinople would acknowledge the greater independence which he now arrogated to himself.

Older scholarship was much concerned with these negotiations. More recently, two different questions have attracted attention. First, exactly how did Theoderic pay off the forces which, by 493, had been following him for twenty years and, after numerous battles, had put him in control of Italy? W. Goffart has argued that he did so by reallocating existing tax revenues, rather than by granting his soldiers actual land. Discussion continues, but consensus now seems to be coalescing around a compromise position that original land grants (in strategic positions covering the Alpine passes, around the political capital at \*Ravenna, and along the Via Flaminia between Ravenna and \*Rome) were supplemented by the payment to registered male 'Goths' who were of militarily active age of \*donatives amounting to a third of normal tax revenues.

Second, to what extent did Theoderic lead to Italy a culturally distinct population group—a 'people' or \*tribe in traditional terms—and did the group retain any cultural coherence after the settlement process was complete? Attempts to argue that the Ostrogoths did not consist of a population group mixed in age and gender—the minimalist position on group identity—are unconvincing. And, while none of these characteristics is exclusively 'Gothic' (but then no feature of identity ever is), military service allied to a privileged landholding status, a non-Latinate culture, and \*Homoean (\*Arian) Christianity provided enough identifiable elements common to the group to hold many of Theoderic's followers together as a distinct unit in the Italian landscape until the 530s.

At that point, when the \*Byzantine invasion of Italy occurred, a minority was ready to surrender (e.g. half the Goths of \*Samnium) to the forces of the Emperor \*Justinian I. But the majority was ready to fight to retain its privileges and it continued to do so for the next twenty years. This would not have occurred if an Ostrogothic identity, fed by the benefits that had arisen from the conquest of Italy, had not created at least a strong political loyalty on the part of most of the Ostrogoths, even though Theoderic's followers certainly included some (how many is unclear) population elements which were not Gothic (such as, among others, the Rugians) at the point when they joined the group. Group consciousness was maintained by distributions of donatives, by the appointment of local leaders for each region of settlement, and by the social ties which operated between the important second-rank leaders and a broader rank and file of freemen which was itself a minority (perhaps around a quarter) of the total population which had moved into Italy in 489.

### *Collapse of power*

Some accounts blame the eventual collapse of Ostrogothic power in Italy on longstanding fissures between the Goths and key elements of the Roman senatorial \*aristocracy who retained a yearning for direct rule from Constantinople. This is based on a traditional view of the fall of \*Boethius and \*Symmachus at the end of Theoderic's reign, a view which now looks mistaken. The issue was not direct Constantinopolitan rule, but that when the king's chosen heir predeceased him Boethius and his father-in-law had backed the succession to the Ostrogothic kingship of Theoderic's nephew \*Theodahad rather than that of his grandson \*Athalaric. There were, of course, tensions within the Ostrogothic kingdom, as there are within any state, but none of sufficient substance to have undermined its functioning in any fundamental way. What actually destroyed it was Byzantine armed intervention from 535 onwards (when \*Belisarius' forces occupied \*Sicily) and especially from 536 when Belisarius' army moved into Italy proper. The Roman population in the struggles which followed was basically neutral. Both sides attempted to constrain its loyalty, and, as the violence became more pronounced towards the war's climax, much collateral damage was inflicted on Italo-Roman interests by both parties. In the end, Justinian's (eventually) implacable determination to end the war by \*victory rather than through negotiation generated a series of punishing campaigns which, after the Byzantine victories at \*Busta Gallorum and Mons Lactarius in 552, certainly destroyed the political will of most of the remaining Goths to continue the fight and possibly even their actual ability to do so. \*Procopius' detailed narrative in the *Gothic War* brings out the political and military importance of the elite freeman class among the Goths, and one key effect of the war was to inflict such losses on this element of the population that they could no longer sustain their group identity in the face of overwhelming force. **Oswald, S.** (c.603/4–642) King of Northumbria, 633/4–42. Son of Æthelfrith, King of Bernicia, north Northumbria (\*Bede, *HE* I, 34). When Æthelfrith died (616), Oswald was exiled to \*Ireland, where he became

a Christian. In 634 he returned, defeated Cadwallon at Heavenfield on \*Hadrian's Wall (*HE* III, 2; \*Adamnan, *VColumbae* 1), assumed control of both Bernicia and Deira for eight years, and exercised extensive influence: Bede (*HE* II, 5) names him as one of seven lords with 'imperium' (\*Bretwalda). He requested missionaries from \*Iona to convert Northumbria, and gave \*Bishop \*Aidan \*Lindisfarne as a \*monastery. Oswald sponsored Cyne-gils of Wessex for \*baptism (c.635). He was killed 5 August 642, at Maserfeld (perhaps Oswestry, Cheshire) by \*Penda of Mercia; his brother \*Oswy retrieved his dismembered body in 643. Bede records numerous post-humous \*miracles. Oswald was venerated as a saint as far afield as Ireland and \*Frisia (*HE* III, 13). HFF

*ODNB s.n.* Oswald (Craig).

C. E. Stancliffe and E. Cambridge, eds., *Oswald: Northumbrian King to European Saint* (1995).

**Oswy (Oswiu)** (611/12–670) King of Northumbria 642–70. Son of Æthelfrith of Bernicia (northern Northumbria), brother of \*Oswald, he shared Oswald's exile in \*Ireland, where they became Christian and Oswy had a son. He became King of Bernicia on Oswald's death (642), retrieved Oswald's \*relics the following year, and married \*Edwin's daughter Eanflæd, having been previously married to a British princess, Rhiainfellt. In 651 Oswy had Oswine, King of Deira (southern Northumbria), murdered at Ingetlingum, perhaps \*Gilling (\*Bede, *HE* III, 14). Deira was thereafter ruled as a sub-kingdom by Oswy's nephew and then his sons, one of whom persuaded Peada, son of \*Penda of Mercia, to become Christian (*HE* III, 21). In 655 Oswy killed Penda in battle at the River Winwæd, perhaps near Leeds (*HE* III, 24). Oswy is seventh in Bede's list of overlords [\*Bretwaldas]. He convened the Synod of \*Whitby (664), which determined Northumbrian practice for dating \*Easter (*HE* III, 25). HFF

**otium** \*Latin term (Gk. σχολή) conventionally translated as 'leisure', but more accurately denoting private life, as opposed to *negotium*, the business of public and civic life. Romans were keen to disavow an Epicurean idleness; Cicero quoted Scipio Africanus as saying that he was never busier than when he was *in otio* (*De Officiis*, III, 1; *Republic*, I, 17, 27; cf. Pliny, *ep.* I, 9). For the poet \*Nemesianus, \*hunting was *bilaris labor*, delightful exertion which could promote the innocent love of virtue, and even have a divine dimension (lines 1, 188, and 86–98). The philosophical \*senator \*Praetextatus teased \*Symmachus by telling him he spent his time in the country in hunting and idleness; Symmachus wrote back saying that he knew that

actually Praetextatus was busy polishing his literary talents (*ep.* I, 53; cf. I, 47).

The life of the mind blended with the practical management of rural estates. When \*Ausonius appealed to his former pupil \*Paulinus of Nola for a shipment of \*grain to feed his household, his letter was sealed with iambs casting witty aspersions on the business ethics of his bailiff and evoking the great famines of ancient history (*ep.* 20a Green= 26 Evelyn White). In the case of Paulinus, rural *otium* slowly became something more purposeful, the practice of Christian *philosophia* away from the allurements of the world. It was in this spirit that \*Augustine immediately after his \*conversion went to spend the winter of 386–7 in a borrowed \*villa at \*Cassiciacum near \*Milan, engaging in strenuous philosophical discussion, living *Christianae vitae otium*. **Otranto (Gk. Hydrous, Lat. Hydruntum)** Port on the extreme south-east coast of \*Apulia, \*Italy, the closest \*harbour in \*Italy to \*Greece and the south \*Balkans. The \*Bordeaux Pilgrim (p. 609, 5) passed through in 333, proceeding along the extension of the Via Appia to \*Rome.

After the \*Byzantine invasion of Italy, Otranto (referred to by \*Procopius as Dryus; cf. *Gothic*, V, 15, 20) became an important base and bridgehead, particularly in the 540s when the Byzantines were fighting \*Totila and \*Teias (e.g. *Gothic*, VII, 30 in AD 548; VIII, 26, 4; VIII, 34, 10). \*Ostrogothic armies besieged it in 544 (Procopius, *Gothic*, VII, 9, 22–10, 9) and in 546 (*Gothic*, VII, 18, 4–6). Sometimes it was the only port left to the Byzantines south of Ravenna (*Gothic*, VIII, 23, 17 for 551; cf. VII, 22, 22 and VII, 23, 13 for 546/7).

The Frankish invasion of 554 reached as far south as the Terra d'Otranto (\*Agathias, II, 1, 5). Eventually, after 710, the \*city fell to the \*Lombards, but returned to the Byzantines in 758. GK; OPN

**ounce** (Latin *uncia*) One-twelfth of a Roman pound, and the metrological basis for Late Roman \*coinage. Fractions of an ounce were used as the basis for denominating both precious- and base-metal coinage in the Roman Empire; thus the \*gold \*solidus was struck to

1/72 of a pound, while the copper \*terunciani weighed one-third of an ounce. RRD

Grierson, *Byzantine Coinage*.

*RIC* V/1; V/2; VI, VII, VIII, IX, X.

**Oxus, River (Amu Darya, Jayhun)** River marking the traditional border between Iran and Turan (non-Iranian lands), mentioned by Strabo (XI, 7, 3–4; XI, 8, 8; XI, 11, 2–5) and \*Ptolemy (VI, 9, 1–2; VI, 10, 1–2; VI, 11, 1–2; VI, 12, 1, 3). From its headwaters in the Pamirs, it flows north-west to the Aral Sea, dividing ancient \*Tukharistan, \*Bactria, and \*Khorasan to the south from \*Transoxiana and \*Khwarezm to the north. The \*Arabic name Jayhun refers to the biblical name Gihon. The lower course has shifted over time, possibly flowing into the Caspian Sea in antiquity. Arab geographers to give accounts include Ibn Khurdadhbih (135, 138–40), Ibn al-Faqih (385), Ibn Rusta (102–4), and al-\*Muqaddasi (23, 252–9). MLD

**Oxyrhynchus** The \*city of Oxyrhynchus (Gk. 'city of the sharp-nosed fish', and mod. al-Behnesa, in Middle \*Egypt), known in \*Coptic as Pemje, was located to the west of the main course of the \*Nile, on the Bahr Yusuf (Canal of Joseph), at the point where an ancient trade route from the Bahariya Oasis reached the \*Nile Valley. It is first attested under its Egyptian name of Per-Mejed in the 7th century BC serving as a regional or \*nome capital, and the settlement continued to prosper in the Hellenistic and Roman periods. The city arguably reached its apogee in the 6th century AD, by which point it was capital of the \*province of \*Arcadia and served as the seat of a \*bishop who according to a calendar of 535/6 (P.Oxy. XI, 1357) performed a Christian \*stational liturgy encompassing nearly 40 churches. The city survived both the \*Persian invasion and the \*Arab conquest in the 7th century, remaining an important centre for economic activity (especially \*textile production) into the Mamluk period.

The ecclesiastical and monastic communities of Oxyrhynchus were strong and prosperous; the author of the \**Historia Monachorum in Aegypto* (5) counted twelve churches and said that 'the very walls resound with the voices of monks'. In other ways the city would appear to have been broadly similar to other Late Antique provincial capitals of Egypt. It possessed, for example, the same types of public monument, including several public \*baths and a \*circus which seated c.13,000 people. The architectural remains are now fragmentary.

The city's main historical significance, however, lies not so much in the scale or splendour of its buildings, but rather in the huge number of literary and documentary \*papyri that the ancient rubbish tips of the city have bequeathed to posterity. The papyrological deposits were first systematically excavated by the British classicists Grenfell and Hunt between 1897 and 1907. These and subsequent excavations included fragments of classical poetry by Pindar, Sappho, and Callimachus and of plays by Euripides, Sophocles, and Menander, early examples of both canonical and non-canonical Gospels (including a piece of the \*Vetus Latina), a 3rd-century \*hymn with musical notation (P.Oxy. XV, 1786), \*letters, and theological writings.

At the same time, amongst the documentary papyri uncovered by Grenfell and Hunt were \*libelli from the \*persecution of \*Decius, documents giving details of the city's \*grain dole, and part of the private \*estate \*archive of the \*Apion \*family, which had come to acquire extensive landed interests in and around the city by the 6th century, and whose members also held high office in \*Constantinople. The discovery of this archive arguably established the Oxyrhynchus papyri as the single most important source yet identified for the agrarian history of any part of the Late Roman or Early Byzantine world. As a result, they have been the focus of much study and debate, especially concerning the

nature and role of aristocratic landownership in Late Antiquity. PS

**Pacatus Drepanius** Poet from \*Gaul, probably Agen (\*Ausonius, *Praefatio*, 4.10–14 Green; *Technopaegnon*, 1; *Ludus Septem Sapientium*, 1–18; \*Sidonius, *ep.* VIII, 11, 1–2). His two surviving texts are the Christian poem *De Cereo Paschali* and a prose \*panegyric to \*Theodosius I (*PanLat* II (XII) of AD 389), delivered after the emperor's victory over the \*usurper \*Magnus Maximus. Pacatus may have been a professor of \*rhetoric at \*Bordeaux. He may also have been the editor of the *XII \*Panegyrici Latini*. \*Symmachus wrote him three extant \*letters (*epp.* VIII, 12; IX, 61 and 64). He was \*Proconsul of \*Africa in 390 (*CTh* IX, 2, 4) and \*Comes Rei Privatae to Theodosius in 393 (*CTh* IX, 42, 13), a post he would have held in \*Constantinople.

**Pachomius** (c.292–346) One of the pioneers of Christian \*monasticism. Pachomius was brought up as a \*pagan, but was converted to Christianity after being discharged from the Roman \*army in 313. He became a monk around 316 and was an apprentice for seven years under an anchorite named Palamon. Pachomius eventually settled in \*Tabennese in Upper \*Egypt and, between 330 and 346, gradually organized and governed a confederation of huge \*monasteries, known as the *Koinonia* (Gk. for 'fellowship'). He also composed the first known set of monastic rules. He is sometimes described as the 'founder of coenobitic monasticism'; this now seems imprecise given that there is evidence for sizeable \*Meletian monastic confederations somewhat prior to those of Pachomius. Pachomius' career

was celebrated in a series of biographies composed in the 390s and preserved both in \*Greek and in dialects of \*Coptic (Sahidic, Bohairic). Scholars have also discovered \*letters and catecheses attributed to Pachomius and his immediate successors, Theodore and \*Horsiesios.

**pack animals** These included \*camels, donkeys, and mules, and occasionally \*horses. The absence of \*roads,

or their poor condition, made them necessary. Linking animals in caravans increased freight capacity and security. Donkey and mule caravans were commonly used to move goods around \*Egypt, the Levant, and \*Mesopotamia and are noted frequently in the rabbinic literature (*Babylonian Talmud*, *Baba Mesi'a*, 7.1). Donkey caravans could move about 25 km (15 miles) in a ten-hour day, while camel caravans, also commonplace throughout the Late Antique East and North \*Africa, could shift heavier burdens up to 40 km (25 miles) in the same time. The ubiquity of pack animals throughout the East means we should give no credence to the theory that their use led to alterations in the form of the classical \*city (Kennedy). MD

**paganism** A widely understood term used to describe collectively the full varied range of Graeco-Roman religion outside the Judaeo-Christian tradition. The construction of paganism as a unified and monolithic religious opponent was in part the polemical creation of Late Antique Christians. It is therefore necessary to recognize that the terms 'pagan' and 'paganism' are shorthand for a considerable variety of cults, beliefs, and ritual practices, many of them unconnected with each other.

### Terminology

The term 'pagan' entered the English language in the late Middle Ages, replacing the earlier Middle English 'paynem'. Both derive from late \*Latin *paganus*. This was an ancient label which Christians applied collectively to adherents of a wide variety of polytheistic and henotheistic religions and philosophical cults, whose common characteristic was simply that they were not Christian or Jewish. In secular parlance, 'paganus' denoted a non-adept individual excluded from professional practice, and had an association with the rustic ('country bumpkin', American 'hick'); its use as a religious label was thus both pejorative and polemical. Christians also applied other terms such as 'Gentile' (*ethnikos* in Greek) to their opponents; anti-pagan tracts are sometimes entitled *Adversus Gentes*. Pagans understandably preferred other terms of self-description, with the \*Emperor \*Julian adopting 'Hellenism' and 'Hellenene' as labels for his revived 'neo-pagan' religion and its adherents; Christian contemporaries reacted angrily to this appropriation of broad terms of language and culture (\*Gregory of \*Nazianzus, *Oration*, IV, 5, 79). Pagans and Christians alike stigmatized each other as atheists, those without their god(s).

### Polytheism and monotheism

Rome had a long history of incorporating the cults of newly conquered peoples into its religious framework and many pagans in Late Antiquity put their trust in or

worshipped multiple gods, whether Olympian, chthonic, extra-Roman, or other. However, this pantheon was also relatively fixed by Late Antiquity, and new cults thus often incorporated elements familiar from the cults of established gods; the promotion of the cult of the \*Sun by the Emperor \*Aurelian thus recalled Apollo. Late antique pagans could choose to favour particular gods, or to practise different cults in different settings, whether the *lares* and *penates* of the domestic sphere or the Olympians who were central to civic religious observance, or gods such as \*Mithras or \*Isis who offered a more personal protection. Civic polytheism was intended to placate the gods and also to promote concord and a balance of power between them, the *pax deorum*; \*Homer's *Iliad* describes what happens when gods get angry with each other.

Although many pagans subscribed to a polytheistic world-view, it was also possible to cultivate the observance of one god above others, and some scholars have characterized Late Antiquity as a period of monotheistic preoccupation which in part enabled the Abrahamic faiths to flourish. Some pagans adopted the henotheistic view that the multiple gods worshipped by humans were in fact manifestations of a single supreme deity. Most Graeco-Roman philosophical traditions were firmly grounded in a view of the cosmos which assumed the existence of gods, a supreme god, or a disembodied divine mind or reason, and in Late Antiquity some philosophical traditions developed rich theological dimensions and sets of ritual practices. \*Neoplatonists built on Platonic cosmology to construct an account of the human soul as alienated from the divine, and \*philosophers such as \*Plotinus, \*Porphyry, and \*Iamblichus refined and promulgated techniques for facilitating the ascent of the soul to reunion with the divine. They differed among themselves as to the relative efficacy of mental contemplative exercises, and of ritual practices such as purificatory \*asceticism, \*sacrifice, and \*theurgy. From the point of view of their Christian opponents, pagans were defined and unified by their failure to acknowledge the Christian God, the Trinity, the Incarnation, and the Resurrection; and by their over-investment in sacrifice, \*temples, and statues of divine beings (themselves redefined as demonic idols).

### *Paganism and politics*

The choice of emperors to associate themselves with particular gods had a long history. It was further affirmed under the \*Tetrarchy when \*Diocletian was associated with Jupiter, \*Maximian with Hercules, and their \*Caesars with a variety of other gods, and individual emperors were deemed to have the same effect on their surroundings as their divine \*patrons. The worship and honouring of emperors as the highest of men and the lowest of gods was also an established part of Roman

political and religious culture, and acknowledged that political power was in some sense a force of Nature. However, the ancient connections between the health of the Roman Empire, the welfare of its rulers, and the peace or happiness of the gods assumed a new urgency in the period from the mid-3rd to the early 4th century, when Roman emperors from \*Decius to Diocletian commanded, under severe penalty, that their citizens sacrifice to the gods for their health. This demand was deemed by Christians to be \*persecution, and those who refused to sacrifice were variously sent into \*exile or killed as \*martyrs, until persecution was relaxed by emperors (notably by \*Gallienus in 260, briefly by \*Galerius on his deathbed in 311, and by the \*Letter of \*Licinius in 313).

The sense, which had its roots deep in normal \*city paganism, that contemporary misfortunes could be connected to the anger of neglected gods was revived by pagans in the 4th century, in the face of growing Christianization. The Emperor Julian's attempt (361–3) to restore paganism, indeed to renew it in a consolidated institutional and practical form which borrowed from the example of the Christian Church, was as short-lived as his reign. However, after his death pagans continued to campaign on behalf of pagan cult, for public funding for priesthoods, and for the return of the \*Altar of Victory to the Roman \*Senate House—their argument being that the benefits which flowed from pagan worship were public prosperity and victory, so that the public cult should be sustained from its traditional public endowments.

Some kinds of pagan pursuits had always been somewhat marginal and murky. In particular, divination and magical practices had always operated on the margins of what was tolerable in the Roman world. The Christianization of the Empire in the 4th century saw the entrenchment of such critiques, based in particular on the association of such practices with the work of \*demons. Divination of the future had a dubious reputation given the dangerous desire of some practitioners to forecast the futures of emperors, and in a series of high-profile trials at \*Rome and \*Antioch in the 370s, individuals were prosecuted on the intertwined grounds of \*magic and \*treason.

### *The end of paganism*

There is considerable debate about what happened to paganism in the Later Roman Empire. According to some, pagan culture never decisively ended. There is evidence for the persistence of paganism, especially in rural areas, well into \*Justinian I's reign. From the 4th century onwards, many elements of pagan culture (broadly conceived) were adopted into and transformed by Christian usage, from the incorporation of practices like incubation and oracular enquiry into the cult of saints to the employment of classical literary forms. It

was sometimes possible for educated men to pursue ecclesiastical careers with minimal adjustments to their philosophical beliefs, as in the case of the Neoplatonist \*Synesius of \*Cyrene, who continued to maintain serious reservations about central items of Christian doctrine after his elevation to episcopal orders. It is also unclear whether paganism was afflicted by violent attacks and forcible conversions in Late Antiquity, or whether it rather slid of its own accord into a decline visible in the abandonment of cult and temples. Literary and archaeological evidence for both are patchy, and the former unreliably partisan. The truth may lie somewhere between the two.

There is plenty of evidence for logistical and material attacks on the apparatus of pagan cult. From \*Constantine I onwards, Christian emperors made repeated legislative attempts to ban sacrifice and close temples. \*Gratian confiscated the funding of pagan sacrifices and ceremonies, abolished the exemption of religious officials from compulsory public duties, and refused to replace the Altar of Victory in the Roman Senate House. The hostility of many Christian clerics and ascetics, not to speak of the laity, was exercised against pagan temples and worshippers in incidents such as the destruction of the \*Serapeum at \*Alexandria in 390. However, in some accounts pagans are held responsible for their own abandonment of sacrifices and temples (Julian, *Misopogon*). Archaeological evidence can testify to the abandonment of sanctuaries, and \*inscriptions to the passive neglect of temples, but both phenomena are notoriously hard to identify and date.

**paganism, Celtic** The diverse group of peoples commonly known as the Celts shared a common inheritance that affected such aspects of society as hierarchical structure and art, and before their \*conversion to Christianity they engaged in generically similar polytheistic religious practices. They transmitted their traditions and beliefs orally, so ancient literary evidence for their religion comes entirely from classical authors (mostly of the Roman period), whose writings must be read in light of their attitudes towards people they regarded as geographically marginal. Archaeological evidence is also important, and the presence and excavation of sacred sites, as well as the testimony of memorial inscriptions and images from Celtic regions provide insight into the number of deities worshipped. Extended written sources from Celtic regions only emerge in the Christian period, and while not contemporary, they offer an appreciation of the workings and mythology of pre-Christian worship.

The written sources show that Celtic society and religion was governed by a structured hierarchical order. According to classical writers, the religious orders were divided into three classes: \*druids, bards, and *vates*. This hierarchy is also attested in later \*Irish vernacular writings which highlight the cognate role of the druid and the *filid* (bardic class). Julius Caesar writes that the druid was the most important of these grades and central to all things sacred. A learned class, they were the custodians and purveyors of religious knowledge (e.g. Caesar says the druids taught the people about their common descent from Dis Pater), fulfilled the role of judge, and practised \*divination. They were also pivotal in the observance of sacrificial ceremonies.

Of the classical writers, Julius Caesar is the most informative about the gods of the Celts. As a Roman, he applies to these deities the technique of *interpretatio Romana*. For instance, he identifies the most popular Celtic deity, Lug or Lugus, as the Roman god Mercury.

Inscriptions found in Celtic regions also point to the number of deities worshipped and are often the only record for their local names. Indeed, of the approximately 400 gods recorded, 300 names appear only once. Nonetheless, many of these deities share the same origin and are comparable in function rather than in name. Common aspects of Celtic paganism include the worship of nature and the landscape, the tendency to venerate certain deities as part of a triad (especially goddesses), and a proclivity for semi-zoomorphic gods.

By the 7th century the Celtic regions were predominantly Christian. Aspects of this transformation remain elusive, but elements of pagan culture, such as worship at holy wells, were adapted by the new religion, while others, such as the role and status of the druid, were discouraged and stamped out. **paganism, Germanic** A vast literature on this matter has been generated since the 19th century, but it is unlikely that anything like a common Germanic paganism ever existed. Older scholarship was inclined to build upon the assumption that Germanic culture and beliefs enjoyed temporal and spatial continuity. This made it possible to link, for instance, Tacitus' observations on the religion of the Germani with Icelandic sagas of the 13th century. An additional problem arises from the fact that there are nearly no written sources about Germanic paganism by a Germanic pagan author; all written information comes from Roman, Greek, or Christian authors, and writers such as \*Bede were inclined to assimilate Germanic realities to classical and biblical phenomena familiar to them from reading. A further difficulty arises from the fact that the term 'paganism' embraces a great variety of different religious phenomena, which are not necessarily connected to each other.

Few Late Antique authors provide detailed information on religious practice among Germanic groups. \*Agathias describes \*Alaman worship of trees, rivers, and hills, and their sacrifices of \*horses, \*cattle, and other animals by beheading them (*Histories*, VII, 1). S. \*Boniface famously set about felling a sacred oak in Hesse (\*Willibald, *Life of S. Boniface*, 6). Other authors record the presence of Germanic gods in the genealogies of contemporary royal families; Bede, for instance, mentions that 'Uoden' was an ancestor of both \*Hengest and Horsa and many other royal families (*HE* I, 15).

The names of the days of the week in Germanic languages are derived from the names of obviously

important gods: Tiw/Tyr (Tuesday), Woden (Wednesday), Thor (Thursday), and Freya/Frige (Friday). Since the Germanic day names are translations from \*Latin, Germanic gods may be associated with parallel divinities in the Roman pantheon, so that Woden/Odin recalls Mercury, because *dies Mercurii* = Wednesday = Old Norse *Öðinsdagr*. The full complement of Germanic gods is attested only in some Germanic areas, but never in all; from the 7th century onwards, for example, Woden is known among western continental Germans and \*Anglo-Saxons, but not in Scandinavia, where his functions are performed by Odin.

Archaeological sources for Germanic paganism are often ambiguous. It is not clear, for example, whether or not the great halls excavated in some \*Migration Period settlements in Scandinavia such as \*Gudme (Funen, Denmark) actually served for ritual assemblies, as some scholars assume. In southern Scandinavia and northern Germany, bog offerings, especially \*weapon deposits, are quite common. However, apart from the problematic site of \*Oberdorla (Thuringia, Germany), there is a lack of similar sites with repeated offerings verified by archaeology in other parts of the Germanic sphere.

According to some scholars, a few artefact types do depict Germanic gods or mythological scenes, in particular some types of \*gold \*bracteates (which are found mainly in Scandinavia, much less frequently in England and Germany), and the \*gold foil figures (Danish *Guldgubber*), which are found frequently in Denmark, especially on Bornholm. Some written sources mention images of gods, such as the *idola* which Bede says were destroyed by the pagan priest Coifi at the conversion of King \*Edwin in Northumbria (*HE* II, 13). It is not clear, however, what these might have looked like, or if the wooden idols found in northern Germany and Scandinavia really depict gods. Furthermore, many of these wooden idols are too old to be 'Germanic', as they date from the Pre-Roman Iron Age or even the Bronze Age.

Several sources also mention \*temples among Germanic peoples; the *idola* of Bede, *HE* II, 13, were at a *fanum* near \*York. No such temple, however, has been verified archaeologically. HF

**pagus and pagarch** The *pagus* was an administrative unit within the Roman Empire and the pagarch was the official responsible for tax collection within it. From the \*Tetrarchy onwards a *pagus* denoted the smallest administrative unit within a \*province. Pagarchy indicates both the office and the district under the control of a pagarch, who collected taxes, including from \*villages, hamlets, and minor settlements. The office was a liturgical patrimonial burden, an inherited duty (Lat. *munus*), and could be performed by individuals or collegially. Pagarchs were personally responsible to the state. In the 6th century, they came mainly from large landowning families, such as the \*Apions in \*Egypt, and often performed their duties through local representatives, being themselves resident in \*Constantinople or elsewhere. Women holding the pagarchy through representatives are attested. In Egypt, where the *pagi* corresponded roughly with the \*nomes, pagarchs are attested from the late 5th century to after the \*Arab conquest. RM

**Pahlavi** See PERSIAN LANGUAGES.

**paideia** See EDUCATION AND SCHOOLS, GREEK.

**Paikuli** Pass on the road between Baghdad and Kurdistan. At its southern access is the ruin of a \*Sasanian square tower faced with stone blocks, with a \*bilingual \*inscription in Middle \*Persian and Parthian on opposite sides, erected to celebrate and explain the accession to the throne of \*Narseh (r. 293–303), the youngest son of \*Shapur I (r. 242–72) after the removal of Narseh's grand-nephew \*Bahram (Wahram) III (r. 293), son of \*Bahram II (r. 276–93). The location was probably chosen as the place where Narseh, at the time viceroy of \*Armenia, met the \*Sasanian dignitaries to accept the throne. Caesar and the Romans are mentioned among the congratulants. The monument was first described by E. Herzfeld, who also provided the first edition of the inscriptions carved on the blocks, many of them now missing. Herzfeld later found several more blocks, and the inscription on them was re-edited by H. Humbach and P. O. Skjærvø. POS

**palaces, Arab** Elite residences in the \*Arabian Peninsula and the Syrian Desert long pre-date the rise of \*Islam. Archaeologically extant examples from pre-Islamic Late Antiquity include the palace and other large residences of the \*Kinda at their centre of \*Qaryat al-Faw on the north-western edge of the Empty Quarter, and palaces at Tamna', the capital of Qataban in south \*Arabia. The \*Ghassanid and Lakhimid allies of the Romans and Persians respectively also had palatial residences on the fringes of the Syrian Desert. The \*Nasrid leadership of the Lakhimid federation resided at al-\*Hira, near \*Kufa in Iraq. The Ghassanids were more peripatetic, with a number of permanent centres in the Roman \*province of \*Arabia. Ghassanid-era palatial architecture is extant at al-Rusafa (\*Sergiopolis) and \*Qasr ibn Wardan, among other locations.

With the coming of Islam, the Arabian conquerors of Roman and Persian territories established new administrative and government centres in the conquered territories. Traces of the foundations of palaces have been excavated at Kufa and \*Wasit in Iraq. \*Amman and \*Jerusalem are examples in \*Umayyad \*Syria of existing urban centres that were adopted by the conquerors, and archaeological traces of Umayyad palaces are extant there. In Amman, the ancient acropolis was made into a palace around 720 and is thought to have remained the regional administrative centre until the fall of the Umayyad dynasty in 750. In Jerusalem, al-\*Walid I (705–15)

constructed a terraced palace complex to house himself and his entourage to the south of the al-Aqsa Mosque and the \*Dome of the Rock. As with the residence in Amman, this was also intended to act as an administrative building, and the presence of a number of pillared courtyards and hypostyle halls suggests that it was used for meetings and housed a significant permanent bureaucracy. It was destroyed in an \*earthquake in 749, so that much of the archaeological record was preserved beneath the destruction level. At al-\*Rusafa in northern Syria, the remains of the Umayyad palace complex and associated buildings and settlements have been excavated adjacent to the old Roman and Ghassanid town. The development of al-Rusafa is particularly associated with the \*Caliph \*Hisham (r. 724–43), who made it one of his capitals.

Elsewhere, there are sites sometimes described as 'new towns' where new urban centres which included palatial residences and governmental buildings were constructed, either almost from scratch as at \*Anjar in the Beq'a Valley in modern Lebanon, or adjacent to existing settlements, as at al-\*Aqaba, on the Red Sea coast. The settlements at \*Madinat al-Far in northern Syria, which is associated with the Umayyad commander \*Maslama b. 'Abd al-Malik (d. 738), and at \*Qasr al-Hayr al-Sharqi, associated with the Caliph Hisham (r. 724–43), are also both extensive enough to be considered 'new towns' by some scholars.

The Umayyad period of Islam (644 or 661–750) also witnessed extensive rural palace building by the Umayyads and their allies across the former Roman provinces in the Levant. These so-called 'desert castles' had diverse purposes, but the fact that many of the sites were first developed in the Umayyad period and then abandoned shortly afterwards indicates that the specific needs of the Syrian imperial elite prompted their construction. Many were associated with the peripatetic form of Umayyad rule. For example, \*Huwwarin and al-Qaryatayn, both en route between \*Damascus and \*Palmyra, are associated with \*Yazid I b. Mu'awiya (r. 680–3) and al-\*Walid I (r. 705–15), respectively; al-Sinnabra (identified with Khirbat al-Karak), on the western shore of Lake Tiberias, was used by Mu'awiya (r. 661–80), Yazid I, \*Marwan (684–5), and \*'Abd al-Malik (685–705), and perhaps others, too. Some of these sites are particularly well known because of the extensive preservation of Umayyad-era palace decoration in carved stone, wall painting, \*stucco, and \*mosaic. \*Qusayr 'Amra in Jordan, \*Khirbat al-Mafjar in Jericho, and \*Qasr al-Hayr al-Gharbi in Syria are among the best-preserved and best-known examples, all three from the last decades of Umayyad rule. Qusayr 'Amra is famous for its wall paintings, the latter two sites for carved stone, stucco, and mosaic. More recent scholarship has also focused on the social, political, and economic functions

of these sites, notably those with associated agricultural developments, some of which appear to be simply \*hunting enclosures, but others of which were designed for profitable exploitation of the land.

Many of these Umayyad 'castles' used a square floor plan with only one monumental entry in a plan that later became common in *khans*, both those used as way-stations on \*trade routes and those in city souks. This was adapted from the Roman *castellum* plan and in several cases we know that the Umayyads annexed and renovated existing Roman or Ghassanid foundations for their use, as at \*Qasr al-Hallabat and Qasr al-Hayr al-Gharbi. Whilst this square layout with crenellations and perimeter towers became standard for Umayyad palace architecture, not all complexes followed the same rules. In Qusayr 'Amra, the 'palace' comprised only a \*bathhouse with attached audience hall and only two auxiliary chambers off the main chamber.

There are also various examples of early Islamic-period elite residences in the towns and countryside of the conquered lands that are less closely associated with the Umayyads themselves. At \*Humayma, in modern Jordan, the residence of the \*Abbasid family has been discovered and excavated. More modest aristocratic dwellings that may date from before or after the \*Arab conquest, or were perhaps in use across the period, can be seen at locations such as Umm al-Jimal in north Jordan.

**palaces, Persian** (MP *dar*, *šābigān*) The palace architecture of the \*Sasanian dynasty developed from late Parthian palatial traditions. As seen at the Parthian palace of Assur, early Sasanian palatial façades were decorated with surface ornament such as engaged columns and blind \*windows. Carved \*stucco and, in the late period, \*mosaic decorated the interiors. Palaces shared their architectural vocabulary with \*fire temples and regularly featured a large barrel-vaulted \**ayvan* and domed central chamber.

\*Ardashir I's two palaces in \*Firuzabad are the best-preserved Sasanian palaces and both of them are built with rough stone and gypsum mortar decorated with stucco. The earliest palace, the Qal'a-ye Dokhtar, consists of a domed, central hall preceded by a barrel-vaulted *ayvan*. Its square central chamber supports a \*dome on squinches, and communicates with three rooms on the north, east, and west. In Ardashir I's Great Palace, an *ayvan* leads to a square domed chamber, flanked on either side by domed chambers of similar size. Both palaces integrate an upper storey with private chambers. Windows allowed the ruler to view proceedings in the public spaces below from the upper storey.

The massive 6th-century palace at \*Ctesiphon, the \*Taq-e Kesra, preserves similar forms, though carried out on a colossal scale in baked brick. At \*Qasr-e Shirin and Kangavar, two late Sasanian palaces associated with \*Khosrow II, the palatial structures are placed on platforms accessible by Achaemenid-inspired, addorsed stairways. Persian palatial architecture deeply influenced \*mosques and palaces in the Islamic period.

**palaces, Roman and post-Roman** The \*Latin word \*Palatium denoted the \*emperor's \*court as well as his place of residence. For that sense, see ADMINISTRATION, ROMAN CENTRAL CIVIL.

### *The Tetrarchy and Maxentius*

From the early 3rd century until the death of \*Theodosius I (395), emperors were regularly on the move. Under the \*Tetrarchy a series of \*cities situated close to \*frontiers was provided with residences appropriate, to a lesser or greater extent, to the imperial dignity. These stretched from \*York, \*Trier, and \*Arles north of the Alps, through \*Milan and northern \*Italy to \*Aquileia, and then by way of the \*Via Militaris through the north \*Balkans (e.g. \*Sirmium, \*Serdica, and \*Niš), or along the \*Via Egnatia through \*Thessalonica, to \*Nicomedia of \*Bithynia and \*Antioch in \*Syria. The Tetrarchs also built residences for themselves in their native \*Balkans, \*Diocletian's retirement home at \*Split, \*Galerius' eventual burial place at \*Gamzigrad, and \*Šarkamen, which has been associated with \*Maximinus Daza. During the years he ruled (perforce) from \*Rome (306–12), \*Maxentius also built a residence, together

with a \*circus and mausoleum, south of the city on the Via Appia.

In the urban palaces, the \*circus is the feature that formed the pivot between people and government. The palace at Thessalonica is in many ways the most thoroughly studied of those in these imperial cities. It was laid out alongside the existing city and the circus could be entered directly from the city by the people and directly from the palace by the emperor and his entourage. Maxentius similarly sited his villa alongside his circus; the model was the Circus Maximus juxtaposed to the imperial residence on the Palatine Hill in Rome. As well as monuments celebrating imperial glory, such as the \*Arch of \*Galerius at Thessalonica, and audience halls with imposing \*façades, such as the Trier Basilica, such cities also often boasted an imperial mausoleum.

### *Constantinople*

When \*Constantine I came to control the eastern half of the Empire in 324 and founded \*Constantinople, he clearly had the Tetrarchic capitals in mind. There are obvious differences; the area he added to the small city of Byzantium is very many times larger than the addition made to cities like Thessalonica. Further, Byzantium was not possessed of a broad fertile plain, and it was necessary to feed Constantinople on tax \*grain from \*Egypt (thereby giving the \*emperor complete control of the \*food supply).

But there are similarities in the layout. There are great processional routes, particularly that leading from the \*Hebdomon through the Forum of Constantine, down the Mese to the \*Senate House, the \*Great Palace, and (after its consecration in 360) the Church of the \*Holy Wisdom. The Church of the \*Holy Apostles formed the imperial mausoleum, albeit a mausoleum equipped for Christian \*prayer. The Great Palace was situated next to the circus, so that the emperor could climb the Cochlias Stair to enter the imperial box without having to go outside into the street. The Chalke Gate with the image of the Saviour over it, the principal entrance from the Augustaeum where the \*Senate House stood, provided a fine frame for ceremonial appearances. Reimagining the layout of the peristyle courts and halls of the palace itself, a working administrative network of buildings as well as a residence, presents large problems; the relevant texts come mainly from the Middle Byzantine period and the archaeology is difficult to date.

The Great Palace was not the only imperial residence in the Constantinople area, especially once the court came to rest on the shores of the \*Bosporus at the end of the 4th century. On the road along the \*Marmara shore, at the \*Hebdomon, the site of the ceremonial parade ground where imperial \*accessions often occurred, was the palace of the Magnaura, and later also that of

Jucundianae or Secundianae, built by \*Justinian I (\*Procopius, *Aed.* I, 11, 16). In 469, following a fire in the city, \*Leo I built on the European shore of the Bosphorus an imperial palace with a circus and a \*harbour named after \*S. Mamas at \*Sykai (mod. Dolmabahçe) across the Golden Horn from the city.

On the Asiatic shore, the palace of \*Rufinianae near \*Chalcedon became imperial property when \*Rufinus, \*Praefectus Praetorio (392–5) was disgraced and died; being near a \*monastery, it was a favourite of the sisters of \*Theodosius II, and Justinian gave it to \*Belisarius. Nearby at \*Chalcedon, a small palace of Theodosius II was replaced by a larger one in the 7th century. Further up the Bosphorus, a palace was turned into the Monastery of \*Metanoia by the \*Empress \*Theodora to provide for reformed \*prostitutes. Theodora's favourite place to escape the summer heat in the city, though, was the palace of \*Hieria with its own harbour, on a promontory south of Chalcedon (*Aed.* I, 11, 16–22); \*Heraclius liked it too. In 568, \*Justin II built the Sophiane for his powerful empress \*Sophia in the suburb where he had lived before he became emperor; he also built a palace on one of the Princes' Islands in the Sea of Marmara.

### The West

The palace at \*Milan, the principal imperial residence in the West from \*Valentinian II to \*Honorius, has proved difficult to locate. When Honorius moved to \*Ravenna for safety in 402 he seems to have expanded a peristyle \*villa on the south-east side of the city to accommodate himself and his administration, and to have expanded the city walls to surround and protect it. Theoderic the \*Ostrogoth inherited the palace at Ravenna, and the \*mosaic depicting the Palatium in the church known as S. Apollinare Nuovo, his palace church, shows that the palace was endowed with a fine façade, which, so \*Agnellus notes, was called Ad Calchi, like that at Constantinople. Theoderic was probably responsible for a triclinium added to the palace. He built his own substantial mausoleum and a further palace on an off-shore island. The Ravenna palace remained a centre of power until the exarchate of \*Ravenna ended in 751.

The palace of \*Attila was not in one of the cities he had conquered, but was a series of well-crafted wooden buildings of some luxury set in a courtyard surrounded by a high wall. \*Priscus, who accompanied a Roman delegation visiting the \*Hun in 449, was impressed by the way Attila settled disputes standing before the gate of his residence, and by the ceremoniousness of his feasts (frs. 11, 2 and 13, 1 Blockley = 8 Müller *FHG*). The \*Vandals in \*Africa inherited the palace of the \*Proconsul of Africa at \*Carthage. The \*Visigoths, when in \*Gaul, established themselves at \*Toulouse; \*Sidonius Apollinaris describes Theoderic the Visigoth

sitting in state behind a \*curtain there (*ep.* I, 2). In \*Spain they resided at Barcino (\*Barcelona), and finally, after they had left Gaul, at Toletum (\*Toledo), though also they had residences in other cities.

The urban and rural residences of the \*Merovingians are equally difficult to visualize. A story told by \*Gregory of \*Tours suggests that even an urban palace such as that at \*Metz was surrounded by a park large enough for \*hunting (*HF* VIII, 36). The extent to which such palaces were on the sites of Roman \*governors' residences is problematic. The typical rural *villa regia* seem to have been placed, like the palace of Berny-Rivière on the Aisne near \*Soissons, on a slope near a river, or near a Roman \*road, rather than, say, reoccupying a pre-Roman hillfort site; the *villa regia* clearly accommodated many functions, from episcopal \*councils to judicial executions. The residences of \*Anglo-Saxon kings, if we may judge from the excavated example at \*Yeavering, had more in common with the mead-hall of \*Beowulf than with the stately \*ceremony of Justinian's Constantinople.

**Palaestina Prima, Secunda, and Tertia (Salutaris)** \*Provinces in the \*Dioecesis of \*Oriens listed in the \**Notitia Dignitatum* as Palaestina Prima, Secunda, and Salutaris (*or.* II, 9, 16 and 17; XLIII).

Palaestina Prima stretched from the northern \*Negev northwards up the coast to Dora, and included Samaria, the bulk of Judaea, and southern Peraea east of the Jordan, with a \*Consularis at its capital \*Caesarea Maritima. Palaestina Secunda, under a \*Praeses, incorporated the Jezreel Valley and Lower Galilee west of the Jordan, and to the east the Golan Heights (\*Gaulanitis), the region of \*Pella in the eastern Jordan Valley, and \*Gadara south of the Yarmuk River, with its capital at \*Scythopolis. Palaestina Tertia was known more commonly as Palaestina Salutaris until this name was superseded by Tertia in the 5th century; it covered the \*Sinai Peninsula, the \*Negev, and southern Transjordan up to the Wadi al-Hasa and later (between 451 and 453) the River Arnon/Wadi Mujib, under a Praeses at \*Petra. Military authority in all three provinces was exercised

by the \*Dux Palaestinae (*Not. Dig. or. XXXIV*). \*Hiero-cles and \*Justinian I list the same provinces and \*gov-ernors except that Justinian lists the governor of Palaestina Secunda as a Consularis (*NovJust VIII*).

These arrangements dated from the later 4th century. The \*Verona List of the early 4th century lists one prov-ince of Palaestina, along with two provinces called \*Arabia. The more southerly of the latter (Arabia Petraea) became Palaestina Salutaris in 357/8 and was further divided by the time of the *Notitia*. PWMF

**palatini** (civil) Officials of the \*Comitatus (the imperial \*court). There were several important palatine ministries, each forming a distinctive branch of service. These included the \*notarii and \*referendarii, \*silentiarii, officials of the Sacra \*Scrinia, and \*agentes in rebus. They also included staff in the \*officium of the \*Comes Rei Privatae and that of the \*Comes Sacrarum Largitionum.

Civil palatini were required to be highly literate, and were therefore recruited from among those who had an \*education in \*rhetoric. Appointments to these posts were highly sought after by civic \*aristocrats. Palatine careers could be lucrative, and senior palatini received high honours, if not in service at least when they retired and became \*honorati. Senatorial rank became a normal reward in the late 4th and early 5th centuries—at various dates across the different branches of the civil \*administration. AGS

Jones, *LRE* 547–8, 572–86.

**palatini** (military) A category of crack military units in the \*field army. The term is first attested in a law of 365 (*CTh VIII, 1, 10*), where palatini are differentiated from \*comitatenses. As the term implies, they were asso-ciated with the palace (\*palatium), albeit not in the sense of acting as guards. Rather, as the \*Notitia Digni-tatum makes clear, palatini were under the command of the \*Magistri Militum Praesentales—senior command-ers 'in the imperial presence', whose forces were based near \*Constantinople or in \*Italy. All units of \*auxilia were assigned to this prestigious category, together with selected \*legions and \*vexillationes. ADL

Jones, *LRE* 125–6.

**palatium** (Gk. *palation*) Both an institution and a place (for architecture, see PALACES, ROMAN). Derived from the name of the Palatine Hill in \*Rome, palatium came to denote any imperial residence. These proliferated under the mobile \*emperors of the 3rd century. Some were simply lodgings (cf. *CTh VII, 10, 1*); the \*Tetrarchy erected elaborate complexes in \*cities near \*frontiers. After emperors settled at the end of the 4th century, \*Constantinople housed the principal palace in the East, and \*Ravenna that in the West. Palatium also denoted the officials of the central \*administration (\*palatini).

**Palazzo Pignano** Site of a \*villa complex 29 km (18 miles) east of \*Milan. Initial excavations in 1963 focused on a nearby parish church and expanded to the surrounding area. Subsequent excavations (1969–99) revealed a villa complex and adjacent rotunda-style chapel with \*baptistry. The villa dates from the 4th century and was preceded by a 3rd-century rural settle-ment. The western sector (closest to the chapel) includes a number of circular, semicircular, and hex-agonal rooms adorned with \*mosaic floors and arranged around a massive octagonal peristyle. The portico of the peristyle was paved in \*marble. Rooms of the east-ern sector are more rectilinear, although this area includes a large \*apsidal reception hall. A hypocaust system heated the villa in colder months. During the first half of the 5th century, the villa underwent modification, primarily involving the compartmental-ization of certain spaces. Construction of the baptistery and chapel is contemporaneous with the 5th-century phase. MSB

E. Roffia, 'Il complesso di Palazzo Pignano: la villa', in *Milano Capitale dell'Impero Romano 286–402 d.C.* (1990), 266–7.

**Palestine** Term deriving from the Assyrian term *Palashtu* denoting the southern coasts of the Levant inhabited by the Philistines, also known in biblical texts as the Land of the Philistines. The Roman \*Emperor Hadrian renamed the \*province \*Palaestina after the defeat of the Jewish revolt in AD 135.

Under \*Constantine I Palestine became an important destination for \*pilgrimages with the building of shrines, \*monasteries, and \*hostels. The most import-ant sites include the Holy Sepulchre in \*Jerusalem, the Church of the Nativity in \*Bethlehem, the Eleona on the Mount of Olives, Gethsemane, and Bethany.

Population and settlement growth reached its peak in the early 6th century, and the stability and prosperity of the region was reflected in the quality of the church building and decoration. The area was populated by various religious communities: Christians, \*Jews, \*Samaritans, and in \*Gaza into the 5th century, pagans. The Christian community gradually became dominant, and was represented by 50 \*bishops at the church \*councils of the 6th century. The main centres were Jerusalem and the metropolitan sees in \*Caesarea, \*Scythopolis (Beth Shean), and \*Petra. During the 5th and 6th centuries, \*paganism continued to recede as \*temples were demolished, and urban centres expanded beyond former Roman limits. Imperial endowment played a crucial role: \*Justinian I rebuilt the Church of the Nativity in \*Bethlehem, founded the Nea Ecclesia in Jerusalem, and built the Catholicon of the Monastery on Mount \*Sinai. An increasing number of \*synagogues with \*mosaic decoration were built, and several large suburban \*villas have been discovered near \*Caesarea and Ascalon. Numerous farmsteads and \*villages were established, several cities and large settlements developed in the \*Negev Desert, and monasteries flourished in the \*Judaean Wilderness and in the southern \*Sinai Peninsula.

The Persians captured Jerusalem and devastated Palestine in 614. The Romans recovered it, but the city then fell to the Arabs in 637. After the \*Arab conquest, Palestine was divided into two military districts (\*junds). The Jund al-Urdun encompassed \*Phoenicia Paralia and part of Palaestina Secunda, including the plain of Esdrelon and Mount Carmel, with its main centre at \*Tiberias on the Lake of \*Galilee. The coastal, central, and southern areas became Jund Filastin, with the capital first at \*Lydda and then in the \*Abbasid period at Ramla.

**Palestine, churches and monasteries of** The earliest archaeological evidence for the ecclesiastical history of Palestine is from the time of \*Constantine I with his endowment of the Church of the Holy Sepulchre and the Church of the Eleona (the Mount of Olives) in \*Jerusalem, the Church of the Nativity at \*Bethlehem, and the church at \*Mamre. Of these

churches, only two are extant and both of them are subject to conjecture on their original appearance. Three of these commemorate the birth, preaching, and death and resurrection of Christ, the fourth commemorated the hospitality of Abraham at the oak at Mamre indicating the early Christian veneration for Old Testament sites in the \*Holy Land as well as New Testament sites. Because many of the churches in the region were built at sites with unique biblical significance, they utilized a wide variety of architectural types to accommodate those visiting on \*pilgrimage.

A varied spectrum of religious practice and the presence of Christians in the Holy Land from many places both account for the wide variety of early types of Christian architecture found in Palestine. Crowfoot records that \*basilicas, cruciform churches, and churches built on centralized plans were all built in the region between the 4th and the 7th centuries, and it may be argued that this reflects the wide variety of influences arriving from \*Egypt, \*Syria, and \*Constantinople as well as from the West. An example of this is the pilgrim Arculf's description (preserved in \*Adomnán's *De Locis Sanctis*) of the church at Shechem (\*Nabulus) around Jacob's Well; its cruciform plan with doors on each arm of the cross and the well in the centre is an exact replica of the martyrion of S. Babylas at Qausiyeh east of \*Antioch where the relics of the saint were displayed on the centrally placed \*bema in a location analogous to that of the well.

This diversity can also be seen in the monastic archaeology of Palestine. Notable \*monasteries were built in the \*Judaean Wilderness. Research by P. Figueras on the monastic foundations of the \*Negev has revealed that alongside the expected Greek- and Egyptian-influenced \*coenobia, the monastic population of Late Antique Palestine was remarkably diverse and included communities living alongside the secular population in towns and \*villages or running agricultural establishments, as well as evidence for the more widely studied coenobitic and eremitic monastic traditions. These archaeological traces range from annexes attached to urban churches to cells and chapels carved from caves. This underlines that, as the place where Christianity was born, Palestine was a cultural melting pot that absorbed the architectural and ritual practices of the faithful from across the Christian world.

**Palestine, Jews in** After the Bar Kokhba war, AD 132–5, \*Jews no longer dwelled in \*Jerusalem, now renamed Aelia Capitolina, nor in ancient Judaea, the heartland of the ancient 'Land of Israel', but their numbers increased in the north—in the Jezreel Valley, central and eastern \*Galilee, and the \*Gaulanitis (Golan). Communities also flourished in coastal \*cities such as \*Caesarea, and in a belt of \*villages south of Judaea called Daromas ('the South'). Sources considered \*Sepphoris, \*Tiberias, and \*Lydda to be 'Jewish', but this may mean only that they contained large and prosperous Jewish communities which coalesced around \*synagogues on the fringes of these cities, or in their suburbs and \*villages. By contrast, many \*villages often were mostly Jewish, as Katzrin in the Golan, but sometimes Jews shared village space with Christians, apparently peaceably, as in \*Capernaum on the Sea of Galilee. The wealthier Jewish landowners served on the \*city councils. Emerging among them, synagogue 'rulers' (*archisynagogoi*, more generally *primates*) led the communities, and from c.200 the \*Patriarch (*nasi*), a member of a dynasty allegedly descended from the 1st-century BC sage Hillel, headed the Jews of Palestine. The Patriarch collected taxes from Jews and instituted local leaders and councils of elders (*synhedria*). In 429 the last scion of the dynasty died, and the patriarchate fell into abeyance.

Imperial legislation remained hostile, but Jews in Palestine flourished nevertheless in their areas of settlement. Destruction after uprisings in 351 (the revolt of \*Patricius against \*Gallus) and 421 appears not to have been widespread. Recent archaeological survey indicates demographic decline in eastern Galilee in the later 4th century, but elsewhere Jewish numbers stabilized or increased. Construction of new synagogues blossomed in the 4th century and continued in the 5th and 6th, despite an imperial law of 438 prohibiting such building. Monumental synagogues were 'long houses' or \*basilicas, featuring austere exteriors but interiors ornamented with classical architectural motifs and colourful \*mosaic pavements, often displaying images of the temple cult—soon to be renewed, it was hoped—along with signs of the \*Zodiac circling the \*Sun or an abstract image for the Jewish God. \*Inscriptions in \*Greek or Aramaic recorded numerous donors, and thus a broad distribution of wealth.

By 200 the \*rabbis had coalesced as a movement. Scholars now think of them as well-to-do landowners or tradesmen who gathered circles of disciples about them in 'study houses', mainly in cities, for learned discussions of (e.g.) rules for women, for ritual purity, or for tithing the produce of Jewish land. Increasingly, they arbitrated disputes and stepped forth as community leaders. Redacted in the written Mishnah, the Palestinian \*Talmud, and the \*Midrash (commentaries

on biblical books), the oral discourses of the rabbis represent them as Jewish sages in a Roman \*province who 'organized to express their non-Romanness' (H. Lapin).

**Palestine, synagogues of** The earliest archaeological evidence for \*synagogues in \*Palestine dates from the 1st century BC (e.g. Gamla) and 1st century AD (e.g. Masada). Flavius Josephus, the New Testament, and rabbinic literature corroborate the existence of numerous synagogues at this time, e.g. in \*Jerusalem, \*Caesarea, Dor, \*Tiberias, \*Capernaum, and \*Nazareth. Following the destruction of the Temple at \*Jerusalem and up to the end of Antiquity, archaeology and rabbinic literature are our primary sources of information.

No synagogues dating from the century or more following the Bar-Kokhba revolt of the early 2nd century have been discovered in \*Palestine (apart perhaps from that at Nabratein), although their existence is well attested in the tannaitic literature of the 1st and 2nd centuries AD. Physical evidence of synagogues reappears only from the second half of the 3rd century. Over 100 sites have been identified as synagogues from the 4th to 7th centuries, primarily in \*Galilee and \*Gaulanitis (some 50 and 25, respectively), but also in virtually every part of the country.

The dating of synagogues has been revolutionized over the past generation. Until recently it was assumed that synagogue architecture throughout Israel evolved in three stages (early Galilean-type, intermediary broadhouse-type, and late \*basilica-type), beginning in the late 2nd to early 3rd centuries. However, this neat coupling of typology with chronology has been called seriously into question by numerous archaeological discoveries (e.g. at \*Capernaum), which indicate that these sites date from no earlier than the late 3rd century; in fact most date from the 4th and 5th centuries. It is now assumed that diversity reigned in synagogue architecture, as it did in other aspects of the synagogue and in Jewish life generally.

Finds from synagogues reveal a delicate balance between similarity and uniqueness. Common features include orientation toward \*Jerusalem, the presence of the Torah shrine in the main hall, and the enhanced religious status of the synagogue. Each building, however, exhibits a unique architecture and layout, the varied

use of \*inscriptions, and a range of languages (\*Aramaic, \*Greek, Hebrew). An instructive example of this balance and diversity can be found in the five synagogues discovered in the Beth She'an (\*Scythopolis) region, all dating from the 5th and 6th centuries and all sharing the particularities and differences noted above.

A new phenomenon in Byzantine synagogues was the central role assumed by art, most apparent in the \*mosaic decoration of floors. Synagogues in more remote areas often followed a conservative line, utilizing almost exclusively geometric and \*foliage designs as well as religious symbols. Others used figural art and displayed such biblical scenes and figures as the 'Aqedah (the Sacrifice of Abraham), Noah and the Flood, David, Daniel, or Samson. Still others, some half a dozen altogether, placed the \*Zodiac and the \*Sun in the centre of their mosaic pavements. Such pronounced use of figural art of pagan origin is a far cry from the strictly aniconic stance that prevailed in the late Second Temple period.

**Palladas** (d. after 331) Author of c.150 \*epigrams in the \**Greek Anthology*. Several of these allude to conditions during \*Constantine I's sole rule (324–37), including the recent reversal of fortunes suffered by \*pagans, with whom Palladas identifies. The latest securely datable allusion is to Constantine's edict restricting unilateral divorce (*CTh* III, 16, 1). He was a native of \*Alexandria but may have visited \*Constantinople near the time of its foundation (330). His epigrams are almost exclusively epideictic, protreptic, or scoptic (*Anth. Pal.* 9–11) and frequently employ caustic humour. Palladas projects a consistent authorial persona: an impoverished and victimized old \**grammaticus*, a misogynist, and a misanthrope.

**Palladius** (c.375–c.450) \*Latin agricultural writer of uncertain date. Palladius Rutilius Taurus Aemilianus used the work of Vindonius \*Anatolius, and his \*title *uir inlustris* must post-date c.375. His *Opus Agriculturae* comprises thirteen books: the first treats general matters (e.g. location, building, \*beekeeping), while Books

2–13 address tasks appropriate for each calendar month. A fourteenth book treats \*veterinary medicine. Appended are elegiac verses on grafting addressed to an unknown Pasiphilus. Sources are primarily literary: Columella, \*Gargilius Martialis, supplemented by Anatolius ('Graeci') and \*Faventinus' epitome of \*Vitruvius (unnamed). Occasionally—often enough to be revealing of his world—there are desultory personal views and descriptions of contemporary practices. The work of 'Aemilianus' was recommended by \*Cassiodorus (*Inst.* I, 28, 6). Books 1–13 formed a convenient and practical text widely circulated in the Middle Ages.

**Palladius** \*Bishop sent to Christians in \*Ireland (\*Scotti) by Pope Celestine in AD 431 (\*Prosper, *Chron.* 1307). In later Irish accounts his mission is said to have failed, so that S. \*Patrick could be portrayed as the apostle of the Irish.

**Palladius and the *Lausiaca History*** (d. c.431)

\*Bishop, monastic biographer. A native of \*Galatia, Palladius went to \*Egypt c.388, studying initially with \*Didymus the Blind in \*Alexandria, then becoming a monk in the desert \*monasteries of \*Nitria and \*Kellia where he spent nine years as a disciple of \*Evagrius Ponticus. He left Egypt around 400, probably because of the \*Origenist controversy. He was ordained Bishop of \*Helenopolis in \*Bithynia by \*John Chrysostom. After John's downfall, he went to \*Rome and lobbied on John's behalf. In 406 he was arrested and sent into \*exile in Upper Egypt. There he composed his *Dialogue on the Life of S. John Chrysostom*. Around 412, he was allowed to return to Galatia.

In the 420s, Palladius composed the *Lausiaca History* or *Paradise*, a memoir of his years in Egypt, dedicated to the imperial chamberlain \*Lausus. The work contains 70 brief portraits of holy figures Palladius had met or heard about on his travels. These include colourful morality tales shaped by Evagrian theological perspectives. The work, originally written in \*Greek, was eventually translated into \*Latin, \*Coptic, \*Syriac, \*Armenian, and Ethiopic. Recent scholarship has focused on the Coptic version, which preserves longer biographies of four monastic leaders: Pambo, \*Macarius the Great of Egypt, \*Macarius of Alexandria, and Evagrius Ponticus. It has been argued that these were originally independent

- biographies Palladius had written years before the *Lausiac History*, while he was still a monk. JWH

**pallium** (Gk. *himation*) A draped mantle in the form of a large rectangular cloth wound around the body in such a manner as to leave the right hand free, worn by both men and women over their tunics, especially in the eastern provinces of the Roman Empire. The term apparently was also used as a generic designation for a mantle (cf. *CTh* X, 21, 3 of 424).

The *pallium* was also considered as the identifying garb of the professional man of learning. Far less cumbersome than the Roman *toga*, it was promoted in the 2nd century AD by Tertullian as a symbol of the simple Christian life dedicated to spiritual matters, as opposed to the *toga*, which symbolized involvement in mundane civic preoccupations and spiritual decline (*De Pallio*). In art, the *pallium* (together with a full beard) was the distinguishing attire of a *\*philosopher*, the 'philosopher's cloak'; a law of 369 (*CTh* XIII, 3, 7) stigmatized those who adopted philosophical dress illegitimately in order to avoid their civic duties. The holy figures of Christianity, such as Christ and the Apostles, also wear the *pallium* when depicted as dressed in the antique manner.

By the late 5th century the term *pallium* was employed to designate an ecclesiastical *\*vestment* of an entirely different appearance, namely the narrow white woollen scarf adorned with crosses worn draped over the shoulders by the *\*Bishop of \*Rome* and by bishops upon whom he chose to bestow this honour (cf. *VCaesarii* 1, 42, *\*Gregory I the Great, epp.* III, 54–7 and V, 11 and 15 re *\*Ravenna*; Gregory I the Great *apud \*Bede, HE* I, 27, *quaestio* VII, with Plummer's note). **Palmyra** (Aramaic Palmyrene; Arabic Tadmur) Oasis *\*city* between *\*Damascus* and the Euphrates. After *\*Aurelian* had quelled the usurpation of Vabalathus and *\*Zenobia* and the Empire of *\*Palmyra* in 272, the city rebelled again in the following year and was destroyed by Roman troops.

Although Palmyra undoubtedly faced a period of decline compared to the grandeur it had enjoyed during the 2nd and 3rd centuries, its distinctive non-classical art continued to thrive, particularly in the field of funerary *\*sculpture* (commonly misnamed 'Parthian style'). The city was rebuilt on a smaller scale under the *\*Tetrarchy*. Palmyra was walled and its existing legionary fortress expanded and integrated it into the fortifications along the Limes Arabicus, the *\*Strata Diocletiana*.

After 527, *\*Justinian I* ordered the repair of Palmyra's walls, securing them with artillery towers, and providing funds for restoration of the churches of the Palmyrene bishopric. There is no archaeological evidence for a Persian occupation between 611 and 629, but the military camp was certainly abandoned during this period.

Palmyra surrendered to the Muslim army of *\*Khalid b. al-Walid* in 634. While Christianity remained an important part of Palmyra's religious life, the Muslim community gathered for *\*prayer* within the spacious ruins of the Bel Temple, which had previously been used as a church. Three *\*basilicas* have been excavated, and the last Bishop of Tadmur was consecrated in 818. Recent archaeological work has revealed the existence of an *\*Umayyad* market built into the city's Great Colonnade. This evidence points to a regional importance and a certain economic prosperity until the city was gradually abandoned during the political turmoil towards the end of the Umayyad era. After Tadmur unsuccessfully rebelled against *\*Marwan II*, its walls were dismantled. There is then little archaeological evidence until the Burid emirs transformed the Bel Temple into a citadel in the 1130s. KMK

**Palmyra, Empire of** (ended 273) Short-lived, expansive empire that sprang from the wealthy Syrian desert \*city of \*Palmyra on the Roman–Persian \*frontier. Its origins have been variously traced to personal ambition, assertion of ethnic sovereignty, and a self-help initiative by its inhabitants wishing for security for their wealthy trading city in the era of \*Shapur I's attacks on Roman territory.

\*Palmyra had grown to prominence as a vital frontier station for the Roman Empire. It also lay on an important merchant route linking the Far East to the Mediterranean world. In the mid-3rd century, exploiting its strategic importance, Septimius \*Odaenathus (r. c.260–6/7) skilfully nurtured a semi-independent kingdom. It may have been Roman suspicions about his intentions or the greater ambition of his wife, \*Zenobia, that led to his killing in 266/7. Following his death she became regent for their son, Vaballathus, and moved to place her own stamp on the kingdom. The impetus for outright rebellion against the Roman Empire was probably weakness at the centre of Roman affairs. In 269 Zenobia invaded \*Egypt and in the following year organized a successful campaign into \*Anatolia. The eastern third of the Empire was now under the control of Palmyra, whose strategy appears to have been to try to placate the Roman authorities by presenting itself as their junior partner; coins minted by Zenobia at \*Antioch, for instance, show her son on one side and \*Aurelian on the other with the singular title of \*Augustus (*RIC V/1*, 308, no. 381). Complementing this approach, Zenobia strengthened the physical boundaries of the domain, building or improving fortresses, including, according to \*Procopius, the one named after her on the Euphrates (*Aed.* II, 5; *Persian*, II, 8, 8), and she developed relations with the \*Persian Empire.

The Roman response, when it came, was unpromising. Once he had secured the western provinces Aurelian (270–5) marched east, defeating Palmyrene forces near Antioch and then at \*Emesa in 272. Palmyra itself was besieged and Zenobia and many of her inner circle, including \*Longinus the Athenian scholar, were captured near the Euphrates as they sought to escape. Despite these setbacks the city did not abandon its imperial ambition and a second revolt in 273 declared as emperor one Antiochus, possibly another son (or a pretender) of Zenobia. Aurelian hastened back and this time razed the city (\*Zosimus, I, 60–1).

**Pammachius** \*Proconsul (perhaps of \*Africa) before 396, Roman \*senator, \*friend and former fellow student of \*Jerome, prominent \*ascetic. A member of the Gens Furia, Pammachius was married to Paulina, daughter of \*Paula, a close associate of Jerome. Upon Paulina's death (c.396) he embraced the ascetic life, established a \*hostel for \*pilgrims at \*Portus Romae, and devoted himself to charitable works. Jerome dedicated several commentaries on the \*Bible to Pammachius. \*Augustine mentions his efforts to convert the \*Donatist tenants on his estates in \*Numidia (*ep.* 58). He died at \*Rome in 410. DGH

**Pamphilus of Caesarea** (c.240–310) Christian \*priest who managed \*Origen's \*library and school at \*Caesarea of \*Palestine. \*Eusebius, his most celebrated student, wrote his life in almost three (lost) volumes (\*Jerome, *ep.* 34, 1). Pamphilus was imprisoned in 307 during the Great \*Persecution. Just before his \*martyrdom (movingly described in Eusebius' *Martyrs of Palestine*) he wrote the *Apology for Origen*, which survives in a partial \*Latin translation made by \*Rufinus. RJM

**Pamphylia** \*Province in south \*Anatolia north of the Bay of Antalya (\*Attaleia), including the major \*cities of \*Perge and \*Side. It was the most south-easterly province of \*Dioecesis \*Asiana, still attached to \*Lycia in 313 (*CTh* XIII, 10, 2), but subsequently placed separately under the administration of a \*Consularis. Troops under a \*Comes were stationed in the province by the \*Emperor \*Leo to counter the \*Isaurian threat. Perge was initially the main administrative and ecclesiastical centre but its status was challenged in the 5th century by Side. There were other major cities at Attaleia and \*Aspendus, and the province flourished between the 4th and 6th centuries thanks especially to \*olive oil production, which was exported to \*Constantinople and elsewhere. Eastern Pamphylia was a centre of the \*Messalian heresy (Epiphanius, *Panarion*, 80), condemned at a council in Side in 383. SM

**Pamprepius of Panopolis** (29 September 440–November 484) Poet, astrologer, and political agitator. The account of his life given by \*Damascius and a horoscope by Rhetorius allow us to reconstruct Pamprepius' life story in unusual detail. A poverty-stricken poet and \*grammaticus in his native \*Egypt, he made his way at the age of 32 first to \*Athens and then to \*Constantinople, where he made an impression on \*Illus, who rewarded him with offices including that of \*Quaestor Sacri Palatii. He joined Illus' revolt against \*Zeno in 484, attempting to win the support of his fellow \*pagans in \*Alexandria and elsewhere, but was accused of treachery and executed. Fragments survive of a verse encomium of the Athenian \*Theagenes, plausibly attributable to Pamprepius by date, and of a sophisticated poem evoking the natural world and its activities, including allusions to the cult of Demeter.

**Pan, Caves of** Two caves on Mount Parnes and Hymettus in Attica contained shrines to Pan. The large

number of later Roman \*inscriptions and \*lamps found there suggests they were visited by pious \*pagans to at least the late 5th century. The Hymettus cave in particular may have been frequented by later Platonists. EW

G. Fowden, 'City and Mountain in Late Roman Attica', *JHS* 108 (1988), 48–59.

**panegyric** The two branches of epideictic oratory were panegyric and \*invective. Educational material, such as \*Menander Rhetor's *Basilikos Logos*, suggests that instruction in, and demand for, panegyric was widespread. Our best evidence is for panegyric performed in \*praise of, or in the presence of \*emperors, but other dignitaries, such as provincial \*governors or \*consuls, could also be their subject. The occasions and contexts for panegyric were many and various: they included imperial \*accession, imperial \*adventus to cities, birthdays, weddings, \*victories, \*anniversaries, consulships. Panegyrics could be performed in \*courts or \*cities, in \*palaces, \*basilicas, and council chambers, where they were an important component of public \*ceremony. On such occasions, the addressee would be the focus of attention of the assembled crowd, comprised of courtiers, local aristocrats, office-holders from the imperial \*administration, delegates from other cities, and \*honorati; sometimes several speeches (from different speakers) would be delivered in succession.

Panegyrics must have been delivered in their thousands, and have varied enormously in quality, interest, and veracity (\*Augustine, *Conf.* VI, 6, 9). Most have perished. The majority of surviving examples are quite short, but not all. Moot points in considering prose panegyrics include the extent to which speeches were extemporized, and the degree of revision they may have received before publication—extant examples often indicate attempts, characteristic of the genre, at literary sophistication, abounding in rhetorical flourishes and references to canonical literature, including poetry. Panegyrics imparted news of recent events and engaged with the conventions of contemporary imperial ideology. They could also be a vehicle for personal and local representation, as in the case of the two panegyrics from \*Autun (*PanLat* IX [4] and VIII [5]). The orators were often independent of the imperial \*administration and could therefore express the consent of the governed to being ruled. Because it appears to have had a tendency to exaggeration and flattery, panegyric is rightly deemed unreliable by historians, but its political function was more nuanced than that of 'propaganda'. Panegyric thrived in both \*Greek and \*Latin, and in both prose and verse. Traces of it can also be detected in other genres, such as \*historiography, \*biography, \*saints' Lives, \*letters, and \*funeral orations. RDR

MacCormack, *Art and Ceremony*.

Mary Whitby, ed., *The Propaganda of Power: The Role of Panegyric in Late Antiquity* (Mnemosyne Suppl. 183, 1998).

**panegyric, Greek** The most traditional form of \*Greek panegyric was a prose oration composed along the lines commended by \*Menander Rhetor. In that form, Greek panegyric survived into the 6th century. Whereas most preserved texts date from the 4th century (\*Themistius, the \*Emperor \*Julian, \*Libanius, \*Himerius), the \*genre remained popular: imperial panegyric is exemplified by \*Procopius of \*Gaza (for \*Anastasius I), whilst his pupil \*Choricus also wrote \*praises for \*bishops and officials. Panegyric also assumed more indirect guises, most obviously in the 6th century: \*Justinian I was praised in an \*ecphrasis of the Church of the \*Holy Wisdom by \*Paul the \*Silentiary and by an account of his building works by \*Procopius of \*Caesarea (*Aed.*).

Another form is the verse panegyric. Some were shorter pieces, such as those by \*Dioscorus of \*Aphrodito. From the 5th century onwards panegyric \*epics are attested in Greek, mostly with a focus on military successes, for instance Eusebius Scholasticus (*PLRE* II, Eusebius 8) on \*Gainas, and \*George of \*Pisidia on \*Heraclius.

Other genres were influenced by panegyric. Contemporary \*biographies of \*Constantine I are clearly indebted to panegyric (e.g. \*Praxagoras), as are, for example, the histories of \*Socrates and \*Sozomen when discussing \*Theodosius II. It was not only professional orators and poets who practised panegyric; high- and medium-ranking officials, such as \*Tribonian and \*John Lydus, are attested as authors of panegyrics of the emperor and high officials. At the same time, panegyric remained a standard element of local \*festivals and celebrations in \*cities, as demonstrated by Libanius, Procopius of Gaza, and Dioscorus of Aphrodito. The genre could also be subverted as satire, as in Julian's *Misopogon*. LVH

R. J. Penella, *Man and the Word: The Orations of Himerius* (2007).

**panegyric, Latin** Although panegyric had its origins in \*Greek civic culture, and was occasionally identified and denounced as unRoman by \*Latin authors (e.g. Cicero, *De Oratore*, II, 341 cf. \*Lactantius, *Inst.* I, 15, 13; \*Isidore, *Etymologies*, VI, 8, 7), for some provincial orators, competent panegyric was a badge of Roman

civilization. Despite suspicions about its reliability, value, and motivation, Latin panegyric was widespread in prose and verse form in Late Antiquity. Most surviving works are addressed to \*emperors and seem to have been deliberately preserved for posterity. Prose panegyric tended to restrict itself to a relatively narrow canon of subject matter, such as details of the addressee's biography, ethics, and achievements; some verse panegyrics more readily adopt commonplaces of the Latin poetic tradition, such as \*ecphrasis, \*myth, and prosopopoeia. In prose and verse, Cicero and \*Vergil are regular cultural reference points from the classical period, and a rich intertextual character exists across the various panegyrics themselves. In addition to the *XII \*Panegyrici Latini*, which are headed by the Younger Pliny's *Panegyricus* but otherwise date from the \*Tetrarchy and the 4th century, prose panegyrics survive (some in fragmentary form) from \*Symmachus, \*Ausonius, the general Flavius \*Merobaudes, the cleric \*Ennodius, and \*Cassiodorus. In verse, panegyrics survive from Optatianus \*Porphyrius, \*Claudian, \*Sidonius Apollinaris, \*Priscian, \*Corippus, and \*Venantius Fortunatus. Among these names there is a strong Gallic and Italian presence. Most of the surviving texts tend to be high in literary ambition and inventiveness; it is notable, for example, that the prose panegyrics by Ausonius and \*Pacatus are by men generally celebrated as poets. Without being as reliable as documentary evidence, Latin panegyric is a valuable source for Late Antique cultural history, illuminating, for example, courtly protocol, aristocratic politics, and the relationships between literature and power and between the imperial centre and wider Roman society. Latin panegyric was notably slow to accommodate Christianity and continued to present addressee-emperors as quasi-divine long after the changes wrought by \*Constantine I. RDR

S. MacCormack, 'Latin Prose Panegyrics: Tradition and Discontinuity in the Later Roman Empire', *REAug* 22 (1976), 29–77.

**panegyric, Arabic** Panegyric, or *madih*, featured less prominently in pre-Islamic \*Arabic \*poetry than *fakhr*, boasting of one's own kin, due to Arabia's tribal social structure. However, many famous poets praised the 6th-century \*Ghassanids and \*Lakhimids, Arab vassal-kings of the Romans and \*Sasanians respectively. \*Praise revolved around generosity in times of need, bravery in battle, noble lineage, and *hilm*, a mixture of clemency, resolve, and leadership. Poems written in \*praise of the Prophet \*Muhammad during his lifetime, such as the famous *Burda* ode by Ka'b b. Zuhayr, do not depart significantly from conventional topoi.

Under the \*Umayyads (661–750), not only the \*caliphs, but nearly every significant political or military figure patronized the composition of panegyric poetry. Praiseworthy qualities expanded to include beneficent and just Islamic rule as well as religious piety and zeal. Panegyric for the caliphs in particular served a strong legitimizing function, and included inflated claims to religious guidance.

The work of the prominent poets of this period, \*Jarir, al-\*Farazdaq, and al-\*Akhtal, consists mostly of panegyric. They standardized the pre-Islamic conventions of a panegyric ode, which described in sensuous detail the departure of a beloved and her tribe, then an arduous desert journey, before concluding with praise. \*Patrons rewarded dazzling poems with robes of honour, \*gold, \*horses, and slaves. Prose, which emerged in government \*letters and letter writing at this time, did not enjoy comparable prestige. NAM

**Panegyrici Latini XII** A collection of twelve Latin prose \*panegyrics in \*praise of various \*emperors, from Trajan in AD 100 to \*Theodosius I in 389, including \*Maximian, \*Constantine I, and \*Julian. It is the largest antique collection of Latin oratory to survive after Cicero's *oeuvre*, and the best example of Roman epideictic \*rhetoric. With the exception of the earliest speech (the so-called *Panegyricus* to Trajan by Pliny the Younger), the speeches originated in \*Gaul (\*Trier and \*Autun) and/or were given by Gallic orators. The collection, discovered in 1433 in Mainz, does not preserve the speeches in chronological order. Scholarly citation systems combine manuscript and chronological sequence; in ODLA the manuscript number is cited first, followed by the chronological number in brackets.

The collection seems to have been put together in Antiquity, perhaps by the author of the latest speech, Drepanius \*Pacatus. Some of the speeches, which vary considerably in length, are anonymous. Other named authors are \*Eumenius, \*Nazarius, and Claudius \*Mamertinus; some scholars have attributed speeches of AD 289 and 291 to another \*Mamertinus. The speeches were delivered on a variety of occasions, such as imperial \*anniversaries, birthdays, weddings, and military triumphs, for instance to celebrate \*Constantius I's recovery of \*Britain (*PanLat* (VIII [V], 4), Constantine's victory over \*Maxentius (XII [IX], 9 and IV [X], 19), and Theodosius' defeat of \*Magnus Maximus (II [XII], 12). They constitute important evidence for contemporary affairs, the workings of provincial government, imperial \*ceremonial, religion, politics, and oratory.

The orators generally seem to have been graduates of and teachers in Gallic Schools of Rhetoric, such as those at Autun and \*Bordeaux. Their Latin is polished, generally classical but with a few Late Latin characteristics and some neologisms; there are no overt Gallisms. Allusions to Cicero and Pliny are common, and also to poets, notably \*Vergil. Although they conform largely to the recommendations of epideictic handbooks, the speeches display individual characteristics and preferences. The 15th-century MS Harleianus 2480 is generally recognized as a reliable guide to the original texts. RDR

**Panjikent (Penjikent)** \*Sogdian city in modern Tajikistan, 60 km (38 miles) south-east of \*Samarkand (in mod. Uzbekistan), excavated by Russians since the 1930s. \*Dewashtich, the last Sogdian ruler of Panjikent, fled to Mount \*Mugh, where he was captured and then executed by the \*Arabs in 722. Like Sogdian cities of the time, Panjikent had a fortified citadel and a walled city. Nearby were Dewashtich's palace and a necropolis. Two temples in the city centre promoted a local variant of \*Zoroastrianism, incorporating the worship of various deities; architecture and iconography exhibit Hellenistic, Mesopotamian, and Hindu elements. Both the temples and larger houses contained elaborate wall paintings and statues of the gods; artistic styles and subject matter demonstrate Sogdian knowledge of \*Greek, \*Persian, and Indian literature. In the wake of Dewashtich's defeat, Panjikent was reconstructed c.738 and continued to exist for several more decades, but was abandoned in the 770s. The conversion of Dewashtich's former palace to Arab barracks, and the destruction of \*fire altars and defacing of religious murals in local homes, are evidence of Arab–Sogdian conflict during the transition from \*Umayyad to \*Abassid rule. **Pannoniae** \**Dioecesis* in the north-west \*Balkans, comprising, according to the \*Verona List, the seven \*provinces of \*Pannonia Superior and Inferior, \*Savia, \*Valeria, \*Noricum Ripense and Mediterraneum, and \*Dalmatia. The \**Notitia Dignitatum* lists all these provinces except Valeria as forming the Dioecesis of \*Illyricum (II, 28–34) and indicates no \*Vicarius, presumably because the \*Praefectus Praetorio of \*Italy administered Pannoniae directly when resident in \*Sirmium (e.g. \*Ammianus, XXIX, 9). \*Justinian I in 547/8 bestowed on the \*Lombards the 'fortresses of Pannonia' (\*Procopius, *Gothic*, VII, 33). \*Hierocles (657, 7–9) lists only two \*cities of Pannonia (\*Sirmium and Bassianae).

OPN

Barrington *Atlas*, 101.Jones, *LRE* 373.Mócsy, *Pannonia and Upper Moesia*.

**Pannonian emperors** Term used (especially by the Hungarian scholar A. Alföldi) to denote \*Valentinian I, \*Valens, \*Gratian, and \*Valentinian II, whose family originated in the \*Balkan \*frontier \*provinces of \*Pannonia.

OPN

**Pannonia Prima** (Superior) and **Pannonia Secunda** (Inferior) Two \*provinces in the \*Balkans, both assigned in the \*Verona List to the \*Dioecesis \*Pannoniae. The \**Notitia Dignitatum* assigns them to the Dioecesis of \*Illyricum, where Pannonia Prima is governed by a \*Praeses (*occ.* II, 32) and Secunda by a \*Consularis (*occ.* II, 29).

Pannonia Prima, on the Danube \*frontier, was that part of the pre-\*Tetrarchic Pannonia Superior lying north of the River Drava and was governed from \*Savaria. Pannonia Secunda was the part of the pre-Tetrarchic Pannonia Inferior south of the River Drava and was governed from \*Sirmium. \*Ostrogoths settled in Pannonia in the 5th century, and then \*Gepids. \*Justinian I handed the territory to the \*Lombards but by the mid-8th century it was dominated by \*Avars and \*Slavs.

**Panopolis** (mod. Akhmim) \*City of the \*Thebaid on the east bank of the \*Nile, in Upper \*Egypt, c.600 km (c.375 miles) south of \*Alexandria. The history of this religious and cultural centre covers almost 1,000 years from Alexander the Great to the \*Arab conquest and reflects the use of various languages (late classical Egyptian, Demotic, \*Greek, and \*Coptic).

In Late Antiquity Panopolis (Gk. for City of Pan) was a centre of Hellenic culture and the locus of a \*pagan intellectual resistance to Christianity, a reaction

intensified by the proximity, across the Nile, of the \*White Monastery, founded around the middle of the 4th century. Its first father was a disciple of \*Pachomius; in 385 \*Shenoute of Atripe became head of the White Monastery.

In the Panopolite \*nome considerable literary activity in the indigenous languages accompanied openness towards Greek learning. \*Zosimus of Panopolis (c.300) was an important writer on Greek \*alchemy. The town was the birthplace of the pagan \*aristocrats \*Ammon Scholasticus and his brother, the imperial panegyrist \*Harpocration, in the 4th century. It also produced such literary figures as \*Cyrus, \*Nonnus, \*Pamprepius, and \*Triphiodorus, all active in the 5th century. From the surrounding territory came the writers Andronicus of Hermopolis, \*Christodorus of \*Coptos, \*Horapollon of Phenebith, and \*Olympiodorus of Thebes.

Sources for Graeco-Roman Panopolis are numerous and diverse. The \*Panopolis \*papyri include the \*archive of \*Ammon scholasticus as well as documents and literature in several genres and languages. Architectural remains of \*temples and churches, and artefacts including \*textiles have also been found.

**Panopolis Papyri** A wide range of documentary and literary \*papyri in Egyptian, Demotic, \*Greek, and \*Coptic has been recovered from \*Panopolis (mod. Akhmim) in Upper \*Egypt.

Most of the material has survived thanks to its reuse for different purposes. The sheets of P.Panop.Beatty I and II were two rolls of official correspondence which were cut up and bound together as a codex, so that the blank backs of the \*letters could be reused for tax receipts (dated 340–5). Roll 1 contains the outgoing correspondence from the \*Strategos in September 298 and is much concerned with arrangements for a personal visit by the \*Emperor \*Diocletian. Roll 2 consists of \*letters from Aurelius Isidorus, Procurator of the Lower \*Thebaid, to the Strategos of the \*Nome in February 300. The documents provide copious detail about how Roman provincial \*administration worked (or failed to work) in matters as various as \*water transport, \*taxation, paying soldiers, and collecting \*animals for \*sacrifice.

The \*archive of \*Ammon Scholasticus (3rd–4th century) is collected as P.Amm. I and II. Greek codices

from Panopolis include classical and Christian authors, such as the \*Homer in P.Amm. II, 1 and P.Köln 9, 362; 12, 468. The Homer of P. Bodmer I has a land register (after 213–14) written on the front of it. P.Berl. Bork. is a register of houses of c.315–30.

The library of Panopolis was probably the source of the biblical P. Beatty, and of the \*Bodmer manuscripts which include Homer, Menander, and Old and New Testament books. The Coptic P.Achm. 6–9; 41a, b, often said to be from the \*White Monastery, contain documents reused for codices of Exodus and of Greek \*sermons.

**Pap (Papa)** Son of \*Arshak II of the \*Arshakuni dynasty and Queen Parādzem, Pap became King of \*Armenia Magna after his father's death c. AD 368. Most of our information about Pap comes from the \**Buzandaran Patmut'wkn'*, from \*Movses Khorenats'i, *History of the Armenians*, and from \*Ammianus Marcellinus whose testimony is often hard to reconcile with the Armenian sources.

Although at first viewed with kindness by the Roman sources, relations between the king and the Roman Empire worsened; some scholars have attributed this to his following the \*Arian heresy, and to the accusation against him of the murder of the Armenian Patriarch \*Nerses the Great. These events also account for his demonization and the characterization of his 'perversions' in the Armenian sources. Ammianus reports his murder by the Romans c. AD 374.

**Papag** Father of \*Ardashir I. In 205, Papag was a \*Zoroastrian priest of the \*fire temple of \*Anahid at the city of \*Istakhr in the province of \*Fars. He dethroned the local ruler of Istakhr, Gozihr from the Bazrangid family (\*Tabari, V, 816). Ardashir I, son of Papag, came to power after him and established the \*Sasanian dynasty. Papag is mentioned in Sasanian \*inscriptions, but he is mythologized in texts stemming from the dynasty's official epic history, for instance in the \**Karnamag-e Ardashir-e Pabagan*.

TD

Daryaei, *Sasanian Persia*.

**Papas** \*Pagarch of Apollonos Anō (mod. \*Edfū) in Upper \*Egypt from 649 to 688. A group of \*Greek and \*Coptic \*papyri discovered in a large ceramic jar in 1921–2 form the private and official \*archive of the landholder and local governor Flavius Papas. Before Papas succeeded his father Liberios as pagarch in 649, he was \*Dioiketes of Apollonos Anō where he also possessed lands. The official \*letters that Papas received from the \*Arab \*governor from \*Fustat, from the \*Dux, *amir*, or his representative the Topoteretes in \*Antinoe, from his fellow pagarchs and other local officials demand regular taxes, services, and materials for the fleet or building projects in Fustat. They illustrate the way the fiscal system was organized, with Arab officials travelling south to collect revenue and Papas being summoned to Fustat. Accounts and other documents relate to the management of Papas' estate, which produced wheat, barley, \*vegetables, \*wine, and \*meat, and where donkeys, \*camels, and \*horses were kept.

**Paphlagonia** \*Province of north central \*Anatolia governed by a \*Praeses, and part of the \*Diocesis \*Pontica. It extended from Gangra, the capital, across the high range of Mount Olgassys and the broad valley of the River Amnias to the \*Black Sea coast at Amastris and Abonuteichos/Ionopolis. The western city of Hadrianopolis was attached to \*Honorias after 387, but \*Justinian I in 535/6 ruled that Paphlagonia and Honorias should be reunited into a single province under a \*Praetor (*NovJust* 29). The preface to this ruling contains the ingenious fancy that the Paphlagonians, who were linked in \*Homer's *Iliad* with a tribe known as the Eneti, were kinsfolk of the Veneti of the Adriatic region of \*Italy. It appears that Honorias was again separate by c.560.

Paphlagonia was a poor province, overshadowed by its neighbours, and noted in the 4th and 5th century for \*asceticism (\*Socrates, IV, 28). A \*council was held at Gangra in the mid-4th century which tried to control excessive rigorism in Christian conduct. In the mid-5th century its \*bishop was nominated, against normal practice, by the \*metropolitan of Ancyra (\*Ankara) in \*Galatia (Council of Chalcedon *canon* 28). The writer and imperial adviser \*Themistius probably came from Abonuteichos.

SM

Mitchell, *Anatolia*, index s.v. Paphlagonia.

**Paphos** Important all-weather \*harbour on the south coast of \*Cyprus, with close ties to \*Egypt. Palaepaphos, a classical sanctuary of Aphrodite, was abandoned after the 4th century. Nea Paphos, proclaimed by Severan \*milestones as Sebaste Claudia Flavia Paphos, 'sacred metropolis of all the cities in Cyprus', was probably, but not certainly, the seat of the Roman \*governor of the \*province of Cyprus. It lost prestige in the 4th century when the capital moved to \*Salamis, but still supported massive \*basilicas and wealthy private \*houses.

The south-west area of the \*city has been uncovered in 50 years of Polish-led excavations. The main street drain was used continuously over at least eight centuries. The House of Theseus, one of the largest residences in the Mediterranean basin, stretched over six *insulae*, was built in the 2nd century, and enlarged in the 4th. It had a peristyle with apsidal hall, public and private wings, and lavish decoration and furnishings; it was possibly the governor's official residence. Two surviving figural \*mosaics survive. One, with later patching, shows Theseus and the Labyrinth. The 4th/5th-century Birth of Achilles, with three more scenes, is badly damaged.

The House of Orpheus, of the late 2nd/early 3rd century, has a mosaic of Orpheus and the \*Animals with a \*Greek \*inscription naming Titus or Gaius Pinius Restitus, presumably the \*patron. The House of Aion, of the mid-4th century, had five spectacular mythological mosaics.

Four Christian \*basilicas have been identified. Two date from the 4th century, the massive seven-aisled Chrysopolitissa, on the supposed site of the flogging of S. Paul, and the Toumaballos, perhaps a \*martyrium for S. Hilarion. Two are from the 5th/6th centuries, Limeniotissa and Shryvallos.

A. Papageorgiou, 'L'Architecture paléochrétienne de Chypre', *Corsi di cultura* 32 (1985), 229–324.

**Papirius of Isauria** Fortress in the Taurus Mountains at an unknown site in \*Isauria. It was the base of the bandit Indacus in 469, and was later used by \*Illus to imprison \*Verina, Flavius \*Marcianus, and \*Leontia. Following \*Leontius' seizure of power in 484, the site was besieged for four years by \*Zeno's troops, finally falling to treachery.

HE

*TTB* 5 (1990) s.n. Papirion, 374–5.

**Papnouthis, archive of** Papnouthis, son of Aphynchis and Maria (*fl.* c.330–90) left behind a group of 53 \*Greek \*papyri which were found in the \*city of \*Oxyrhynchus where he lived. The \*archive consists primarily of \*letters between Papnouthis and his brother Dorotheos. The two men acted as assistants (*boethoi*) to the Praepositus Pagi Horion, and also to Eulogios and Diogenes, other tax-collecting liturgists. It was the brothers' responsibility to collect taxes, and their letters display both \*literacy and high-level accounting skills. Papnouthis was sometimes required to travel to Alexandria as part of his duties. Their papers indicate their professional responsibilities as well as illustrating the practice of managing large \*estates through trustworthy employees.

**Pappus** (*fl.* c.320) Author of a commentary in thirteen books on \*Ptolemy's *Almagest* (Books V–VI still extant), a commentary in two books on \*Euclid's *Elements* X (extant in \*Arabic), and the *Collectio*, a miscellany in eight books, published as a whole after Pappus' death, of short monothematic writings, polemical tracts, antiquarian digressions, and lemmas filling up gaps in works belonging to well-defined *corpora*, such as the elementary astronomical treatises transmitted in the 'little astronomy' (Book VI). A lost *Chorographia* (mentioned in the \*Suda) is the acknowledged source of the \*Armenian Geography.

Pappus' *Collectio* is our unique source for 'marginal' domains of Greek \*mathematics such as special curves and foundational issues (Book IV), and for the contents and aims of the so-called 'analytical *corpus*', a set of

twelve advanced treatises by Aristaeus, \*Euclid, Eratosthenes, and Apollonius, most of them now lost (Book VII). Book I of the *Collectio* is lost. Subjects covered in other books include: Apollonius' contribution to setting up a notation for expressing large numbers (Book II, whose beginning is missing), solutions of the problem of doubling the cube, a classification of numerical means, a series of 'surprising' results about figures having arbitrarily large perimeters but containing arbitrarily small surfaces, constructions of the five regular polyhedra alternative to those in *Elements* XIII (Book III), isoperimetric and isoeiphanic results, and mechanics (Book VIII). **papyri, Pahlavi** Documents on \*papyrus in Middle \*Persian (P. Pehl.) have been found in \*Egypt, dating from the decade of \*Sasanian occupation between 619 and 628. They are principally letters and most of the personal names in them are Persian; they give evidence of titles, military ranks, and lists of food used as rations by the Persian army.

There are also \*letters on parchment and \*leather from the Iranian Plateau, dealing with economic and legal matters between the 7th and the 9th centuries AD. The script used in these letters is cursive, and provides evidence for the character of Middle Persian handwriting in Late Antiquity. TD

**papyrus and papyrology** Papyrus is a writing surface derived from the plant *Cyperus papyrus*, and papyrology the discipline which studies texts preserved on papyrus artefacts. The term 'papyrus' conventionally refers to all writing materials constituting the object of study of papyrology, including parchments, potsherds, wooden \*tablets and labels, \*leather, metal, bone, or

linen. The term papyrology is not primarily applied to \*inscriptions on stones or coin legends, which constitute the area of research of epigraphy and numismatics.

### *Papyrus, commodity and formats*

The aquatic papyrus plant, still present in several Mediterranean locations and in tropical Africa, grew abundantly in the region of the \*Nile delta and the \*Fayyum, serving a variety of uses. The plant's lower part was edible, while its root could be used as fuel in the extraction of \*iron and \*copper; papyrus fibres could be interwoven, to create baskets and plaited products, as well as rope, coverlets, and boat caulks.

The writing material itself underwent a peculiar manufacturing process (\*Pliny, *Historia Naturalis*, XIII, 74–82). According to H. Ragab's reconstruction, the triangular stem was cut along its length into five or six strips, which were subsequently laid crossways in two layers on a flat surface. The plant's own natural juices, serving as an efficient glue between the layers, guaranteed the solidity of the artefact. Sheets (Gk. κολλήματα) were glued together horizontally, forming a roll (χάρτης).

For brief texts, such as \*letters, payment receipts, \*libelli, or school exercises, a small section could be cut off the original scroll. Standard rolls normally consisted of no more than twenty sheets (*Historia Naturalis*, XIII, 77), the number of exceptions decreasing in the Late Antique period (cf. P.Cair.Masp. II 67151, from the \*archive of \*Dioscorus of \*Aphrodito). Short documents could be joined together and numbered in sequence for archival purposes (τόμος συγκολλησίμος).

The \*Latin term for 'scroll', *volumen* (from *volvere* = to roll), expresses the perspective of a reader '(un)rolling' the papyrus with his right hand while holding the left extremity with the other hand. Because the text on a scroll was written only on one side (the *recto*) the reverse side of old scrolls (the *verso*) was frequently reused for other writing. The scroll was not the only format for papyrus \*books. Papyrus was also used to make codices, books which consisted of multiple sheets folded, bound, or stitched together, like a modern book, and normally preserving a single text copied on both sides. The origins of the codex as a book form is probably not connected with the spread of Christianity, and may go back to the Roman codex of writing \*tablets, i.e. a book composed of a group of wooden panels strung together (a *pugillar*), the surface of the wood either being written on directly or coated with wax which might be written on using a stylus.

### *Papyri and ancient history*

Papyri are important not only for what they say about the individuals associated with them, but also for the reconstruction of the historical milieu of Late Roman

\*Egypt. For instance, the archive of the landholder and farm tenant Aurelius \*Isidorus (AD 267–324) not only sheds light on Isidorus' possessions, but provides evidence about the fiscal administration in Egypt after \*Diocletian's tax reform of 297 (P.Cair.Isid. 9, 95).

Papyri tell us about individuals and also about the inner workings of specific Egyptian communities. They illuminate, for instance, the extent to which women communicated in writing; their use of \*petitions and private letters drastically decreased after the end of the 3rd century. The extent of Christian \*naming practices on papyri from Aphrodito at the turn of the 8th century reflects the extent of Egyptian Christianity.

The peculiarities of individual areas of life in Egypt at particular times are often known only from papyri. The recently published P.Lond.Herm. documents the use of copper \*coinage for tax payments in the Hermopolite \*Nome in the 6th century rather than the \*gold \*solidi used to pay taxes elsewhere.

### Other languages

Papyri survive in Egypt in languages other than \*Greek. The disappearance of \*Latin from private correspondence from the 4th century onwards indicates the decline of Greek–Latin \*bilingualism in Egypt. After Diocletian, Latin survived as a juridical language used by the highest officials of the military and civil \*administrations, such as the chief financial officer Vitalis (*ChLA* IV 253 and XIX 687, of AD 317–24), and the \*Dux Aegypti Valacius (P.Abinn. 2 of AD 344), and remained in use in \*reports of proceedings of \*courts of law alongside Greek, introducing the speeches of such presiding officials as the Dux Aegypti (e.g. P.Oxy. LXIII, 4381 of AD 375) and the \*Praeses \*Arcadiae (XVI 1878–9, of AD 461 and 434).

Papyri indicate also the various uses of \*Coptic. There are \*Coptic literary texts. In addition, the \*archive of the \*Melitian \*monastery of Hathor (P.Lond. VI and P.Neph.), the archive of the anchorite Apa John (P.Ryl. Copt. 268–74, 276), and the \*Kellis private and business accounts (c. AD 355–80, P.Kellis V) all show Coptic being used in everyday documents. The archive of Dioscorus of Aphrodito (AD 506–85, P.Aphrod.Lit.) is the first to attest the use of Coptic in judicial settings (AD 569, P.Cair.Masp. III 67353; c.AD 570, P.Lond. V 1709).

From the decade of Persian rule (619–29) and the brief period following the Roman reconquest, there survives a total of 199 ostraca and 124 \*Pahlavi papyri (*CIII* III, IV–V 1).

Late Antique papyri discovered outside Egypt include the \*Petra Papyri and the \*Nessana Papyri, groups of 228 Greek documents of the 6th and 7th centuries from the province of \*Palaestina Tertia (P.Petra; *Sammelbuch* III 7011, V 8073–6; P.Ness. III 14, 16–44, 46–54, 79, 85, 89–91, 95, 97–157, 160–95). MPe

**Parenzo** See POREČ.

**Paris** (dép. Paris, France, *civitas Parisiorum*) The \*city developed during the Early Roman Empire into a bipolar settlement, on the Île de la Cité and the left bank of the Seine, and acquired the classical monumental landscape, with \*forum, \*bath complexes (those of Cluny are preserved), a theatre and an odeon, and an amphitheatre (of which traces survive). Though never the capital of a \*province, it became increasingly important in the 4th century; both \*Julian and \*Valentinian I stayed in Paris when campaigning in \*Gaul, and Julian was acclaimed as \*emperor there by his troops in 360.

The 9 ha (over 22 acres) of the Île de la Cité had been walled earlier in the century, and the cathedral came to be established in its eastern part. As the distribution of \*cemeteries shows, occupation on the left bank, still laid out in relation to a *cardo* (now the rue S. Jacques), contracted significantly, and was left undefended except for the forum at the top of what became the 'Montagne S. Geneviève'. Two other cult sites of Late Antique origin are those of S. Denis (d. c.350), to the north of the city at the future \*S. Denis, and S. Marcellus (d. c.435) in a suburb to the south-east.

The fate of the city in the 5th century is known largely from the life of the \*virgin S. \*Genovefa (d. 502), who reputedly saved Paris from the \*Huns in 451 by her \*prayers, and negotiated with the \*Frankish kings \*Childeric I and \*Clovis I. In 508, Clovis chose the city as his capital, less for its strategic situation than because of the presence of Genovefa's tomb in a cemetery near the forum, over which he and his wife \*Chlothild built the \*Basilica of the Holy Apostles, intended as a dynastic mausoleum. After Clovis' death in 511, Paris became the capital of \*Childebert I's share of the kingdom, and the church he built there in honour of S. Vincent became a preferred site for royal burials. S. \*Germanus of Paris was also buried there, and eventually the church came to be known as S.-Germain-des-Prés. In 561, a similar division among the sons of \*Chlothar I saw \*Charibert I, the eldest of them, inherit the kingdom of Paris; on his death, his three brothers swore an agreement not to enter the city without mutual consent, and \*Gregory of \*Tours (*HF* VII, 6) has \*Guntram claim that \*Sigibert I and \*Chilperic I died for breaking it. The city's primacy continued under the unified rule of \*Chlothar II and \*Dagobert I, a great patron of the Church of \*S. Denis, where he and his son \*Clovis II were buried, but its political importance diminished after the mid-7th century.

The Merovingian city retained the bipolarity of its Roman predecessor, and several churches emerged on the left bank, both in the peripheral cemeteries, and in

due course all along the *cardo*. A little further to the west, one of the most prestigious of these foundations was sponsored by Childebert I in honour of S. Vincent, and consecrated in 558; the king was the first of various \*Merovingians to be buried there. On the right bank of the Seine, meanwhile, funerary basilicas such as S. Gervais and S. Germain-l'Auxerrois began to emerge in the same period. Textual references to urban houses and jewellery shops offer further hints of the relative prosperity of the Merovingian city as a focus for the landowning aristocracy of the Paris basin. **Paris, Edict of** (AD 614) A body of legislation issued by a \*council of \*bishops and lay magnates assembled by the Frankish King \*Chlothar II in \*Paris in October 614, following his victory over the regime of \*Brunhild and her great-grandson \*Sigibert II. The Edict needs to be read in combination with the canons of the church council (Paris V) which had met a week earlier, with which it has some overlap, even if also a modest discrepancy in perspective.

The Edict has often been seen as Chlothar's concession to the nobles who put him in power. While this perspective can be exaggerated, the Edict does appear to correct abuses from previous regimes and remained an occasional touchstone in politics throughout the 7th century. It is merely accidental that the Edict is the last surviving example of legislation of the \*Merovingian kings (along with the so-called *Præceptio* of \*Chlothar II), because we know that the Merovingian kings continued to issued edicts, though none of these has survived.

**parricide** (Lat. *parricidium*) According to the *Lex Pompeia de parricidiis* (52 BC), parricide was the wrongful and deliberate killing of close relatives or \*patrons, to be punished by an aggravated form of death penalty. The culprit was put in a sack, usually with live animals (the sources mention \*dogs, cocks, vipers, and apes) and thrown into the sea or a river or, lacking these, to wild beasts (\**Digest*, 48, 9; *CTh* IX. 15, 1). Most of the time, this punishment (known as the *poena cullei*) applied only to persons who had killed their parent or grandparent, though there is a record of a Christian being subjected to it during the Great \*Persecution (\*Eusebius, *MartPal* [S] 5, 1).

The murder of other close relatives, up to cousins and the children's spouses, although called parricide and covered by the same statute, was punished by simple death. Also, a father (as \**paterfamilias*) had an ancient right to slay those who were in his legal power, like sons and daughters, but this remained theoretical and did not occur in practice. \*Infanticide and exposure of children were not identified as parricide. AAR

**Partav** (mod. Barda) Political and ecclesiastical capital of Caucasian \*Albania. The city was founded by the Albanian King Vache II (AD 460) and replaced the former capital \*Gabala. From the mid-6th century, Partav became the seat of the Catholicus of \*Albania, who was also known as the Archbishop of Partav. According to \*Movses Kaghankatvatsi, in the mid-7th

century the Prince \*Juansher made Partav his capital once more. NA

M. Bais, *Albania caucasica: ethnos, storia, territorio attraverso le fonti greche, latine e armene* (2001).

**Parthenius** (c.480/5–548) Grandson of \*Ruricius, and possibly of the \*Emperor \*Avitus. He was in \*Arles by c.506, and served as ambassador at the \*Ostrogothic \*court in \*Ravenna, where he studied with \*Arator, who praised his learning, as (posthumously) did \*Gogo. He was *vir illustrissimus* and \**patricius* in Arles prior to 542 (*VCaesarii* I, 49), and \*Magister Officiorum and *patricius* in the service of \*Theudebert I in 544 (Arator, *ep. ad Parthenium*). He may have brokered the transfer of \*Provence from Ostrogothic to Frankish rule. On Theudebert's death, he was lynched in \*Trier by \*Franks hostile to his fiscal policies, and ungenerously remembered by \*Gregory of \*Tours as a flatulent uxoricide (*HF* III, 36). STL

PLRE II, Parthenius.

PCBE IV/2, Parthenius 1.

**Paschale Campanum** (6th cent.) Modern title for an anonymous work continuing from 464 the \*Easter table of \*Victor of Aquitaine. It was probably composed in \*Campania not long after the two eruptions of the nearby Mount Vesuvius, which it records for the years 505 and 512. It was later continued in various phases as far as 613. BC

ed. Th. Mommsen, *Chron. Min.* I (MGH Auct. Ant. 9), 744–51.

R. W. Burgess, 'Paschale Campanum', in G. Dunphy, ed., *Encyclopedia of the Medieval Chronicle* (2012).

**Paschasius of Dumium, S.** (6th cent.) Monk of Dumium (\*Spain) under S. \*Martin of \*Braga who translated from \*Greek to \*Latin the \**Sayings of the Desert Fathers* (*CPL* 1079c) at the request of S. Martin, who taught him Greek. The collection was probably used in Dumium as a monastic Rule. The work introduced eastern \*asceticism to \*Gallaecia. Since Paschasius addressed Martin as *presbyter et abbas*, the date of translation is between 550 and 556, before S. Martin was \*Bishop of Braga. AF

ed. C. W. Barlow (1950), 30–51.

**pastophoria** See DIACONICON; PROTHESIS.

**pastoralism** Extensive livestock husbandry, whether or not involving the seasonal movement of herds to exploit grazing opportunities which is known as transhumance. Pastoralism became a more pronounced feature of Late Antique Mediterranean and European rural production than it had been in the earlier Roman imperial period. Late Antiquity was inaugurated by the incursions into the Roman world of one nomadic pastoral culture, the \*horse-rearing \*Huns from the \*Central Asian steppe, and was brought to a close following invasion by another, the \*camel-herding tribes of the \*Arabian Peninsula. In addition to these incursions, growing hostility between herders and agriculturalists seems to have characterized the southern edges of the post-Roman world in North \*Africa. Nevertheless, pastoralism is a form of production that can survive only in symbiosis with \*farming, and helps to spread the risks inherent in rural economies. It can thus be seen as a response to the tensions of the Late Antique political situation as well as a component of it. A renewed emphasis on pasture for \*cattle, \*sheep, and \*goats is most evident in the former western \*provinces of the Roman Empire from the 5th century, for example, after the collapse of state demands for extensive cereal cultivation, and the loss of large integrated markets for specialist producers. **pastoral scenes** Representations of typical events from village life in the countryside, including scenes of the \*vintage, the harvest, and \*hunting, continued to decorate \*houses, public buildings, and churches from the 4th to the 6th centuries.

Cycles of the Labours of the Months were a subject chosen for floor \*mosaics in many parts of the Empire,

for instance in the House of the Months (Maison des Mois) at \*Thysdrus (mod. El Djem, Tunisia), where figures perform the activities of each month. Other depictions of the Labours of the Months feature \*personifications of the months or of the seasons holding attributes related to their place in the yearly cycle, as in the \*Villa of the Falconer at \*Argos. Personifications of the Months were popular in art in other media as well, including in the \*Codex-Calendar of 354. These depictions appear to have ceased in the mid-6th century in the East, with the latest securely dated representations at Jerash (531) and \*Scythopolis (538).

The natural world might be evoked in other ways also, ranging from \*foliage in \*architectural sculpture to the standard Roman pastoral imagery apparent on the \*silver plates of the \*Perm Treasure. Some familiar images such as the \*Good Shepherd, the \*inhabited scroll, and the \*Seasons (Gk. *Horai*) continued to be used and acquired fresh meanings for Christian observers. SVL

**Pater Civitatis** See CURATOR REI PUBLICAE.

**paterfamilias** Male head of a \*household (Lat. \*familia), possessing legal power (*patria potestas*) over its members. This could include legally sanctioned power over a wife, dependants (natural and adoptive children, in addition to the wives of those sons who remained in *potestate*, under his authority, and their children), and slaves. The *paterfamilias* was responsible for protecting the *familia*, for enhancing its wealth, and

for assuring orderly transfers of property after his death. In Late Antiquity, the notion of paternal power (*patria potestas*) continued to function as a legal concept. The Late Antique *paterfamilias* still enjoyed considerable legal rights, moral authority, and social power, although there was some diminution of *patria potestas* in specific areas. A *paterfamilias* could still legally flog his wife for immoral behaviour, but with the intention of correcting her rather than punishing her. According to \*Justinian I, anyone who became a Christian \*bishop or who obtained a high-ranking post in the imperial \*administration was thereby freed from paternal power. GSN; CHu A. Arjava, 'Paternal Power in Late Antiquity', *JRS* 88 (1998), 147–65.

**Patericon, Armenian** (Arm. *Vark' haranc'*, *Lives of the Fathers*) Armenians translated the *Lives* and \**Apophthegmata Patrum* of the Egyptian desert fathers from \*Greek and \*Syriac from the 5th century onwards. In 747 Solomon of Makenots' \*Monastery composed a homiliary containing 70 items translated by Symeon the Hermit. Gagik, Abbot of H. Atomavank' added translations in the 9th–10th centuries. \*Catholicos Grigor II Vkasasr (Martyrophilos, r. 1066–1105) had many lives translated as well. A first full collection was compiled at Skewra monastery under Nersēs Lambro-nats'i (1192). A second, expanded redaction, containing new texts and retranslated ones, was compiled in the 14th century, also in \*Cilicia. N. Sarkissian's edition (1855), followed by Leloir (1974–9), gives both translations where available. *Vark' Haranc'* contains some 100 items. *Florilegia* from *Vark' Haranc'* were used in monastic schools. \*Jerusalem, Armenian Patriarchate no. 285 (1430) is a richly illuminated manuscript copy from Crimea. TMvL ed. N. Sarkissian, *Vark' srboc' Haranc' ew K'alakavarut'wvk' noc'in est krkin t'argmanut'ean nasxneac'*, 2 vols. (1855). LT (annotated): L. Leloir, *Paterica armeniaca a P.P. Mechitaristis edita (1855) nunc latine reddita*, 4 vols. (1974–9). M. van Esbroeck, 'Les Apophthegmes dans les version orientales', *AnBol* 93 (1975), 381–9. N. Stone, *The Kaffa Lives of the Desert Fathers* (1997).

**Patermouthis, archive of** Bilingual \*family \*archive centred on Flavius Patermouthis, son of Menas, consisting of 32 \*Greek and at least six \*Coptic \*papyri, together with several fragments, ranging in date from 493 to 613, and now divided between London and Munich. The archive was found at Aswan and mostly concerns the financial and legal matters of the family of Patermouthis, a boatman from \*Syene, who later also acted as a soldier in the regiment of \*Elephantine. Together these documents provide detailed glimpses of life in Late Antique Syene. JHFD <http://www.trismegistos.org/archive/37>.

J. J. Farber and B. Porten, 'The Patermouthis Archive, a Third Look', *BASP* 23 (1986), 81–98.

Dijkstra, *Philae*, 65–78.

**Patiens of Lyons** \*Bishop of \*Lyons (449/50–after 475). Admired by \*Sidonius Apollinaris as ascetic, preacher, church builder, and administrator, and in particular for sending \*grain to relieve \*famine in the \*cities of the Rhône corridor in 471/2. In 469 Patiens commissioned a poem from Sidonius for a church he had completed (probably the new cathedral), and he was also the \*patron of the \*priest of Lyons, \*Constantius, who dedicated his *Life* of S. \*Germanus of Auxerre to Patiens. JDH; STL PCBE IV/2, Patiens.

**Patras** \*City of the north-west Peloponnese, in the \*province of \*Achaia, renowned for the martyrdom of the Apostle Andrew (\*Paulinus of Nola, *Carmen*, 27, 410; cf. *Carmen*, 19, 78 and 356); the \*relics of S. Andrew taken to \*Constantinople came from Patras, and \*Gregory of \*Tours knew of his \*martyrium and \*miracles (*Gloria Martyrum*, 30). Badly damaged by an \*earthquake in 539/40 (\*Procopius, *Gothic*, IV, 25), the citizens of Patras subsequently fled from the \*Slavs to Reggio di \*Calabria (according to the \**Chronicle of Monemvasia*). PA

**Patria of Constantinople** A 10th-century compilation of texts on the history and monuments of \*Constantinople. It includes the *Patria* of \*Hesychius of \*Miletus from the 6th century, the *Diegesis* about the construction of the Church of the \*Holy Wisdom written c.900, materials also found in the *Parastaseis Syntomoi Chronikai* (itself a compilation of mostly 8th-century material), and extracts from numerous other sources no longer identifiable. The *Patria* constitutes the most detailed and comprehensive source for the topography of Constantinople, but its various components were written for widely divergent purposes, and many may be characterized as legendary. For example, the 8th–10th-century material displays a consistent tendency to backdate buildings to the city's founder, \*Constantine I. Substantial portions may have been composed with subversive intent, and the *Diegesis* has been interpreted as a veiled attack on the emperors of the later 9th century. Isolated statements must be evaluated, when possible, with reference to the agenda and reflexes of the source text. An 11th-century recension in which the entries are ordered topographically has proven invaluable for reconstructing the relative positions of lost landmarks. BWA

**patriarch** Designation for the episcopal sees of \*Alexandria, \*Jerusalem, \*Antioch, \*Constantinople, and \*Rome. Canon 6 of the Council of \*Nicaea (325) confirmed the broader jurisdiction of the \*bishops of Alexandria, Rome, and Antioch, while the First Council of \*Constantinople (381) elevated Constantinople to a patriarchate, and the Council of \*Chalcedon (451) elevated \*Jerusalem.

During the 4th and 5th centuries, the patriarchate system was informally recognized but contested: each patriarch oversaw a vast area and had the right to consecrate \*metropolitan \*bishops in it and to hear appeals from the decisions of metropolitans (generally the bishop of the principal city of each administrative \*province). There was competition for primacy, jurisdictional boundaries were violated (consciously and unconsciously), and other sees, e.g. \*Aquileia, \*Carthage, \*Milan, \*Arles, \*Thessalonica, and \*Ephesus, frequently claimed patriarchal status. The \*Emperor Justinian I formalized the 'pentarchy' (*NovJust* 131) and applied the title Œcumenical to the Patriarch of Constantinople. BKS

Jones, *LRE* 883–94.

Bingham, *Antiquities*, vol. 1 (1875), II, 17.

**patriarch, Jewish** The Jewish patriarch (Hebr. *Nasi*) was the leading Jewish communal official in the Late Roman and early Byzantine empires in both \*Palestine and the diaspora. The office, which seems to have emerged around the turn of the 3rd century under the leadership of \*Rabbi Judah I, had the support of the Severan dynasty (AD 193–235). The testimony of \*Origen, who lived in \*Caesarea c.230, reveals that the 'Jewish ethnarch' (another term for patriarch) functioned virtually as a king, enjoying, *inter alia*, the power of capital punishment (*Letter to Africanus*, 14).

Non-Jewish sources from the 4th century attest that the patriarchate enjoyed extensive prestige and recognition. The \*Theodosian Code is particularly revealing in this regard. One decree issued by the \*Emperors \*Arcadius and \*Honorius in 397 spells out the

dominance of the patriarch in a wide range of \*synagogue affairs; he stood at the head of a network of officials, including archisynagogues, presbyters, and others in charge of this institution's religious dimension—all of whom had privileges on a par with the Christian clergy. Together with other realms of patriarchal authority noted in earlier rabbinic literature, such as calendrical decisions, declaring public fast days, and issuing bans, the prominence of this office in Jewish communal and religious life had now become quite pronounced. LL

L. I. Levine, 'The Nature and Origin of the Palestinian Synagogue Reconsidered', *JBL* 115 (1996), 425–48.

L. I. Levine, 'The Emergence of the Patriarchate in the Third Century', in R. Boustani et al., eds., *Peter Schäfer Festschrift* (2013).

**Patricius** A Jewish revolt in 351–2 against the \*Caesar \*Gallus, centred on \*Sepphoris/Diocaesarea (\*Jerome, *Chron.* 238f), 'wickedly promoted Patricius to a semblance of rule' (Aurelius \*Victor XLII, 11). According to \*Socrates (II, 33) and \*Sozomen (IV, 7), Sepphoris was destroyed. While earlier scholars considered this revolt a major incident, recent scholarship views it as having been marginal in scope and consequences. LL; OPN *PLRE* I, Patricius 2.

M. Avi-Yonah, *The Jews of Palestine* (1976), 176–81.

Barnes, *Athanasius and Constantius*, 316 n. 55.

**patricius** Roman \*title of honour, used throughout Late Antiquity. In the Republic and early Empire, *patricius* was a hereditary title, held only by the oldest noble families. \*Constantine I revived the title as a personal rather than a hereditary designation. The first of these new *patricii* was Flavius Optatus (\*Consul 334). The title remained rare through the mid-5th century; even under \*Zeno a *patricius* had to be a former consul, \*Praefectus Praetorio, or \*Praefectus Urbi. Later, the title was granted more frequently and therefore lost some value. In the West, it had been a title of \*Stilicho, and during the 5th century, starting with \*Constantius III, became the normal distinction of the emperor's principal \*Magister Militum (e.g. \*Aëtius and \*Ricimer) and then a title of *de facto* independent rulers such as \*Odoacer and \*Theoderic in Italy and the \*Burgundian kings \*Gundobad and \*Sigismund. Both \*Odoacer and \*Theoderic I also gave the title, along with administrative posts, to \*senatorial aristocrats such as \*Boethius. In the East, \*Justinian I opened the honour to all \*illustres. The title *patricius* continued to be granted in the East to the highest \*governors and generals until the 10th century before disappearing entirely in the 12th century. EMB

Jones, *LRE* 106, 176–7, 245, 247, 343–4, 534.

Barnes, *Hagiography*, 275–7.

**Patricius, Flavius** As \*Magister Militum Praesentalis (500–18), he invaded \*Arzanene and enjoyed success at \*Amida, eventually killing the Persian commander. He was involved in the religious disputes at \*Constantinople in 510/11, and tried to calm the 512 riot. In 513, he was sent as an envoy to his friend, the \*usurper \*Vitalian. After \*Anastasius I's death, the \*scholares made him their candidate for the \*purple. FKH *PLRE* II, Patricius 14. Greatrex, *RPW*. Haarer, *Anastasius*. Meier, *Anastasios*.

**Patricius, Julius** Son of the powerful general \*Aspar, and brother of \*Ardabur. In order to secure Aspar's loyalty, in 470–1 Patricius was earmarked by the \*Emperor Leo I to succeed as emperor by being promoted to \*Caesar and by marrying Leo's daughter \*Leontia, though only after promising to renounce his \*Homoean ('Arian') theological convictions. He was deposed when Aspar was murdered in 471. Leontia then married Flavius \*Marcianus. ADL *PLRE* II, Patricius 15.

**Patrick, S.** (fl. 5th cent.) Missionary, patron saint of \*Ireland, and author of the *Epistola ad Coroticum* and *Confessio*. All information for Patrick comes from these writings. They do not contain exact dates and he was possibly born as early as the late 4th century and died as late as the end of the 5th.

A Romano-Briton, Patrick's father Calpornicus was a \*deacon and \*decurio, while his grandfather Potitus was a \*priest. At 16 he was captured near his township, Bannaventa Berniae (unidentified), and brought to Ireland as a slave. After six years he escaped and returned to his family. It is possibly at this stage that he received his religious education and became a deacon. He writes that following a vision he returned to Ireland (identifying an area near the Forest of Foclut on the west coast) in order to convert the non-Christian population. Patrick produced both of his writings during his mission and they provide unrivalled accounts of the 5th century in both \*Britain and Ireland. He declares himself a \*bishop in both, but the legitimacy of this claim has been questioned by some scholars.

Patrick is credited with Ireland's \*conversion and is commemorated in two important 7th-century *Lives* by the Irish clerics, Tirechán and Muirchú. His cult is associated with \*Armagh; according to tradition he died on 17 March and is buried at Downpatrick. ED *ODNB* s.v. Patrick [St Patrick, Pádraig] (Stancliffe).

**Patrimonium Si. Petri** Property owned by the Church of \*Rome, for which the main sources of information are the \**Liber Pontificalis* and the \*letters in \*Gregory the Great's *Registrum Epistularum*. The Patrimonium experienced dramatic growth under \*Constantine I. Under Pope Silverius (536–7), the Patrimonium collected rents from 160 properties. The geographic range of patrimonial properties was not limited to \*Italy, but included areas across the western Mediterranean. The redefinition of political boundaries during the 5th century had limited effect. By the end of the 6th century, the Church of Rome was the largest landowner in Italy and the Patrimonium included estates in \*Sicily, North \*Africa, \*Gaul, and \*Dalmatia. Byzantine conquests in the West during the 6th century increased some holdings, although Pope Pelagius (556–61) claimed that the \*Gothic War had crippled rent collection in Italy. Outside Italy, the papacy's cultivation of ties to local rulers and bishops probably played an important role in maintaining the Patrimonium. The regular dispatch of patrimonial administrators outside Italy renewed diplomatic ties between the papacy and regional secular and ecclesiastical powers. Properties administered by papal officials outside Italy provided nodes for communication across the West. The systematic reorganization of the patrimonial administration by Gregory the Great (sed. 590–604) represents a response to changing secular institutions in Italy and across the West. The letters of Gregory the Great reveal a complex administrative system in which *defensores* and *rectores* governed various estates with assistance from locally appointed *actionarii*. In Gaul, these appointments may have been made by the Bishop of \*Arles. In Sicily alone, *actionarii* managed 100,000 \*coloni and slaves on 400 \*estates. These resources were a substitute for the former imperial \*annona for the populace of Rome; they supported the clergy, funded \*almsgiving, and supplied papal gifts. MSB

**patrocinium** Formalized \*patronage relationship establishing dependence between large landowners or powerful office-holders (civil, military, or ecclesiastical) and peasants (hence the expression *patrocinium vicorum*). Such patrons offered protection against tax collection in return for payment or (less commonly) the

## patronage

ceding of property. \*Emperors condemned the practice (CTh XI, 24). CMK

Jones, *LRE* 775–8.

J.-U. Krause, *Spätantike Patronatsformen im Westen des Römischen Reiches* (Vestigia 38, 1987).

Wickham, *Framing the Early Middle Ages*, 527–9.

**patronage** A form of dependency normally between powerful patrons and clients who needed or wished for protection or support. Emancipated slaves (freedmen) were always subject to the patronage of their former owners.

The relationship between clients and patrons was characterized by duties and obligations on both sides. The client expected from his patron security and protection, especially against state intervention. Clients of comparable social status to that of their patron normally expected support for their careers. Many patrons helped their clients towards appointments they could not otherwise have attained. The \*letters of \*Symmachus in particular provide broad insight into the working of networks of patronage (e.g. III, 50; III, 87; VII, 107). The easiest way to reach a higher office was to be a client (see *SUFFRAGIUM*) even though in Late Antiquity the sale of public offices (*suffragium emptum*) became more common and was prosecuted (CTh VI, 22, 1). Most clients could expect smaller privileges such as defence in \*court or protection against the exertion of influence by other aristocrats or the state (Symmachus, *ep.* II, 41). Clients could also expect the presents known as \*sportulae or invitations to *convivia* (\*Ammianus, XIV, 6, 14).

The relationship between patron and client was, however, reciprocal. Patrons as well as clients expected to profit by it. First, the size of a patron's *clientela* was a sign of his importance and *potentia*. Secondly, the terms in which patronage was defined guaranteed a patron certain services. The client was expected to provide *obsequium* and *reverentia*—terms which mean respect and honourable treatment (\*Eusebius Gallicanus, *Sermon*, 41, 3 = CCSL 101A, 488). These rather vague obligations included, for example, the *salutatio*—the greeting of the patron each morning (Ammianus, XIV, 6, 12). According to \*Augustine clients mainly rendered services or favours (Sermon, 2, 14 = CCSL 39, 1244). Rich men were therefore often patrons of artists, as those with such talents could repay *beneficia* with \*music or poetry (Ammianus, XIV, 6, 18).

A free-born man could leave his patron at any time. A freedman, however, was tied to his patron for his entire life. Patronage over freedmen was constituted in the same manner as it was for the free-born, but during the course of Late Antiquity patronage over freedmen became hereditary but bound on the patron not on the children of the patron (CJust VI, 7, 4). Therefore institutions or entities which could also be patrons remained

so over generations of free-born who descended from freedmen (Council of Toledo, 4, 70 = Vives, *Concilios Visigóticos*, 215).

It was possible to be a patron not only of a person but also of \*cities and even \*provinces (e.g. Symmachus, *ep.* IX, 58). The \*euergetism of patrons helped to provide infrastructure, entertainment, and other public *beneficia*. However, \*Libanius complained that patronage of \*villages by soldiers stationed locally could lead to serious abuses (*Oration*, 47, 4).

Forms of patronage existed everywhere in Late Antiquity. The \*tribes which entered the Roman Empire adapted the Roman system of patronage. The \*Persian Empire also knew forms of dependency between different classes. JUB

**patronage, artistic** Support for artistic or architectural commissions was essential for the creation of works of \*art and monuments. Patronage allowed individuals to discharge social duties of \*euergetism; to broadcast their wealth, rank, and \*education (*paideia*); to express their religious faith; and to create dwellings and family tombs for public and private enjoyment.

The patron's involvement depended on the project. Some patrons personalized prefabricated works (such as \*sarcophagi), while others worked intimately with artists, including \*Symmachus, the \*Praefectus Urbi at \*Rome, who wrote of his desire to use a new form of \*mosaic to decorate the ceilings of his \*villa (*ep.* VIII, 42, 10–13). \*Emperors, \*empresses, and civic officials were expected to construct and decorate public buildings and churches. They included \*Justinian I, whose architectural commissions were recorded in \*Procopius' *Buildings* (*Aed.*). Other high- and middle-ranking patrons also recorded and commemorated their involvement through \*inscriptions or in \*donor portraits, as in the \*mosaics of many churches in Jordan. Patronage was not limited to the \*aristocracies, as well-off people of the middling sort also commissioned art, for example the 6th- and 7th-century \*liturgical \*silver vessels donated to churches such as \*Kaper Koraon in \*Syria. **patronage, imperial** Artistic patronage was both an important expression and an essential tool of imperial policy. As such it was celebrated by contemporary writers like \*Paul the \*Silentiary, author of a \*panegyric \*ecphrasis in \*praise of \*Justinian I's \*Church of the Holy Wisdom (563). The imperial administration furnished funds, materials, and manpower, even if it remains difficult to gauge how involved the imperial patron was in determining the form of the envisioned work.

Emperors funded building activity related to defence and the provision of public amenities in the spirit of traditional \*euergetism. As the Empire became more Christian, such patronage became increasingly informed by Christian notions of charity. Such public works were also statements of imperial power, as were triumphal \*arches (such as the Arch of \*Constantine at \*Rome), historiated columns (such as the Column of \*Arcadius at \*Constantinople), and imperial statues. Such commemorative monuments followed a well-established Roman imperial tradition, glorifying the emperor as the ever-victorious ruler of the world, while the gradual infiltration of Christian symbols and themes into their iconography resulted in qualifying the nature of imperial triumph and authority as ultimately deriving from God.

Imperial piety was above all displayed in the construction of churches, their adornment with expensive \*marble revetment and \*mosaics, and the provision of precious liturgical vessels, \*textile furnishings, and \*lighting devices, such as those listed in the \**Liber Pontificalis* (34) as being given by Constantine I to churches in Rome and elsewhere in \*Italy. Female members of the imperial family could also found churches and other charitable works, as did the \*Empress \*Eudocia (c.400–460) in \*Jerusalem.

On significant \*anniversaries emperors gave medallions (such as those in the \*Arras Hoard) and \*silver plate (such as the \*Missorium of \*Theodosius I of 388) to those serving in the \*army and civil \*administration, so promoting the patronage of \*metalwork. This practice of \**largitio* was a manifestation of imperial munificence, a means by which the emperor cultivated the loyalties of his officials, and a way of disseminating imperial iconography. Imperial artistic commissions, such as the \*gold \*reliquary \*cross of \*Justin II (r. 565–78) and \*Sophia (now in the Vatican), could also be given to other rulers or to ecclesiastical hierarchs in the service of \*diplomacy. ET (annotated) J. Martínez Pizarro, *The Story of Wamba: Julian of Toledo's Historia Wambae Regis* (2005).

**Paul, Sententiae of** A pseudonymous Roman legal compilation in \*Latin, probably put together in North \*Africa, c.300. The *Sententiae* (opinions) do not survive intact, but only as reused in later works, particularly the \**Breviarium of Alaric*. Reconstructions are generally similar to one another, the most different being that of D. Liebs (1996).

Debate has focused on whether the text was stable or updated over time, and whether it reflects late classical as opposed to 'vulgar' \*law. It comprises an edited and augmented miscellany of material from Paulus, the early 3rd-century jurist, arranged under titles in five books, providing comprehensive and concise coverage of all aspects of Roman law. Its clear summary style made it accessible and popular. Accepted as authoritative by \*Constantine I (*CTh* I, 4, 2 of AD 328), it became obsolete in the 6th century on the publication of the *Breviarium of Alaric* and \*Justinian I's \**Digest*. SJC ed. in *FIRA* II, 321–417.

**Paula** (347–404) and **Eustochium** (d. 419) Paula was a Roman noblewoman who, as a \*widow, pursued the religious life, first at \*Rome and then, after 385/6, in \*Palestine, where she established \*monasteries in \*Bethlehem. Her five children included Paulina, who was married to \*Pammachius, Blesilla, who converted to extreme \*asceticism after being widowed and died soon afterwards, causing consternation at \*Rome, and Eustochium, who adopted the ascetic life while still a child. Both women were close friends of \*Jerome, who wrote a number of \*letters to them, including the controversial *ep.* 22 on virginity, to Eustochium. They were biblical scholars and also the dedicatees of several of Jerome's commentaries on the \*Bible. After Paula's death Jerome wrote Eustochium a letter of \*consolation (*ep.* 108). Eustochium took over direction of the monasteries.

**Paulicians** Heretical sect of Christianity with a following primarily in \*Armenia. In calling themselves Paulicians, the sectarians claimed a monopoly on the pure doctrines of the Apostle S. Paul; others associated

them with the 3rd-century heretic Paul of Samosata, while others consider their name to derive from the Armenian Paul of Kallinike. In Armenian sources the name Paulician is first listed in the Oath of Union taken at the Second \*Council of \*Dvin summoned by \*Catholicus Nerses II Bagrewandats'i (548–57). This attestation comes one century before the supposed organization of the sect by Constantine-Silvanus, during the reign of the \*Emperor \*Constans II (641–68). The Catholicus Yovhannes Odznets'i, in his discourse *Against the Paulicians*, refers to them as 'the remnant of the old Messalianism *Paylakenut'ean* reprimanded by Catholicos Nerses'. According to Peter of Sicily they 'call themselves Christians and they call us Romans'. Although they were long presumed (based on the report of this same Peter) to be Manichaeans, they were not dualist but Adoptionist. Their teaching was based on a primitive \*gnosticism, rejecting \*Mani and Manichaeism and the teaching of Paul of Samosata. They rejected all the sacraments of the Christian Church, the Old Testament, and the saving grace of Christ's \*Cross.

**Paulinus of Nola** (c.352–431) Gallo-Roman aristocrat, poet, ascetic, and \*Bishop of Nola in \*Campania (c.410–31). Meropius Pontius Paulinus was born in \*Aquitaine, raised in a Christian milieu, and educated at \*Bordeaux, where Decimus Magnus \*Ausonius was among his teachers. Family connections and Ausonius' \*patronage, enhanced by the latter's imperial offices, facilitated a \*senatorial career (c.376–83) that included Paulinus' \*governorship of Campania. Renewed residence in \*Gaul and \*Spain (c.383–95) was punctuated by marriage to Therasia, a meeting with S. \*Martin of \*Tours, \*baptism, and Paulinus' declaration that he renounced the world. In 395, having been ordained to the \*priesthood at \*Barcelona, Paulinus returned to Campania to live as a *monachus* on the outskirts of Nola at the *memoria* of S. Felix. He resided there (mod. \*Cimitile) until his death on 22 June 431.

Paulinus' conversion to \*asceticism was controversial. Poems exchanged with Ausonius reveal him justifying himself before his mystified former teacher. Others, however, capitalized on the exemplary value of Paulinus' decision to offload his wealth and live simply beside the \*tomb of a revered confessor. Nevertheless, Paulinus' story resists dichotomous reduction. He renounced his secular identity at a moment when asceticism was nascent, and not all saw wealth as a spiritual liability. He transformed his pre-conversion networks into pragmatic and affective relations with such leading Christian activists as \*Sulpicius Severus, \*Ambrose, \*Jerome, \*Augustine, \*Rufinus, and the family of the ascetic doyen S. \*Melania the Elder. He used his wealth for \*almsgiving but also to rebuild S. Felix's shrine into an up-to-date \*basilica complex. He redefined classical \*friendship by elevating the literary \*letter and emphasizing the necessity of spiritual fellowship. While repudiating the Muses, Paulinus produced verse heavily indebted to \*Latin poetic tradition. Having renounced the world in his 40s, he later emerged as an influential Italian bishop.

Paulinus' corpus consists of 51 letters, one \*sermon, and 30 poems. Two groups of letters distinguish the correspondence: those sent to Sulpicius Severus, author of the *Life* of S. Martin of Tours, and those exchanged with Augustine. These expose both the social and spiritual dimensions of Christian *amicitia* and evolving modes of aristocratic self-expression and self-construction.

Paulinus' letters frequently engage with ethical issues and interpret the \*Bible, preferring associative enquiry and inviting dialogue while blending biblical and classical echoes with Paulinus' own voice. Similarly allusive gestures toward earlier poets parallel Paulinus' recasting of such traditional poetic forms as the wedding poem (*epithalamium*), the farewell poem (*propempticum*), and the birthday poem (*natalicium*). The extant *natalicia*, composed for the festival of S. Felix, both illustrate Paulinus' transformation of a classical \*genre into a vehicle of Christian \*panegyric and hagiography and, in conjunction with the remains of the basilica complex, provide insight into the development of the cult of the saints. As classicizing Christian poetry the *natalicia* are matched in interest by the poems (*carmina* 10 and 11) addressed to the incredulous Ausonius. Here readers often sense the turmoil wrought by aristocratic \*conversion at the same time that they recognize the self-consciously Ovidian and \*Vergilian matrix that mediated its expression. Indeed, this tension between literary formality and personal voice, complicated by the age's religious realignments, is a hallmark of Paulinus' writing.

**Paulinus of Pella** (376/7–after 459/60) Author of a verse autobiography, the *Eucharisticus* (*Thank-offering*), and of a brief *Oratio Paulini*. A grandson of \*Ausonius, Paulinus was born in Pella, where his father Thalassius was \*Vicarius of the \*Diocese of \*Macedonia. The date of the *Eucharisticus* is contested, either 459, 460, or 455 with introduction and conclusion added later. In it Paulinus recounts the vicissitudes of a long life, interspersed with passages giving thanks to God for His providential care of the poet. The influence of \*Augustine's *Confessions* is prominent throughout. The poet describes his childhood, education, and parental care, early sexual escapades (like Augustine he had an illegitimate son), and subsequent \*marriage. His success in reviving his wife's \*estate prompts him to an idyllic description of \*villa life, before the coincidence of

his father's death and \*barbarian invasion brings disruption. Although appointed as \*Comes Privatarum Largitionum by the \*Visigoth-backed \*usurper Priscus \*Attalus, he had to flee \*Bordeaux, losing his ancestral home, and subsequently was lucky to escape from the siege of Bazas after attempting to negotiate free passage from the \*Alan king. Finally, after suffering the loss of close members of his family, including two sons, Paulinus withdraws to \*Marseilles, where he lives in reduced circumstances, though the poem ends with the unexpected receipt of funds from the sale of a small property in \*Aquitaine. There is a certain tension in the poem between the protestations of gratitude for divine guidance and the sequence of misfortunes Paulinus suffers. Some have consequently seen the poem as an exercise in self-\*consolation, but others have also detected an impulse to self-justification. MJR

**Paulinus of York** \*Bishop of \*York, 625–33, then of Rochester, 633–44. Roman monk and missionary, sent to Kent by \*Gregory the Great in 601. In or after 619, he accompanied Æthelburh, daughter of \*Ethelbert of Kent, to Northumbria to marry King \*Edwin. He was consecrated Bishop at York in 625 (\*Bede, *HE* II, 9), and in 627 baptized Edwin, the first Christian King of

Northumbria, there (*HE* II, 14). When Edwin died in battle (633), he left Northumbria with Æthelburh, and became Bishop of Rochester until his death on 10 October 644 (*HE* II, 20). HFF

*ODNB s.n.* Paulinus (Costambeys).

C. B. Kendall in Kendall et al., eds., *Conversion*, 137–59.

**Paul of Aegina** (fl. 7th cent.) Physician active in \*Alexandria. Little is known about Paul of Aegina's life, except that he lived and probably taught \*medicine in Alexandria, and gained fame in the area of obstetrics. He wrote two works: a medical handbook (*Pragmateia*) in seven books (extant in \*Greek); and a monograph on paediatrics and childcare (only extant in Greek and \*Arabic quotations). Although he relied primarily on \*Galen, \*Oribasius, and \*Aëtius of \*Amida, he was quite innovative, especially in his treatment of \*surgery (Book VI of the *Pragmateia*). His work was translated into \*Syriac and Arabic, and had considerable influence on later medical authors writing in these languages. PEP

PLRE IIIB, Paulus 56.

*Pragmateia*, ed. J. L. Heiberg, 2 vols. (CMG IX, 1921–4).

**Paul of Nisibis** (d. 573) East Syriac theologian and \*metropolitan \*Bishop of \*Nisibis from 551, having been a pupil of the \*Catholicus Mar \*Aba. He probably took part in the Christological \*dispute between Chalcedonians and \*Nestorians in \*Constantinople arranged by the \*Emperor \*Justinian I in 561, and wrote a report which survives. He was opposed to the controversial exegete \*Henana of \*Adiabene, and participated in the deposition of the Catholicus Joseph (Yawsep) and his replacement by Ezekiel in 567. According to \*Evagrius Scholasticus (*HE* V, 9), Paul provided information to the Roman troops during their siege of Nisibis in 572. Paul wrote a biblical commentary, parts of which survive in later exegetical works. Some scholars identify him with \*Paul the Persian, Paul of \*Basra, or the Paul whose work formed the basis of the Latin *Instituta* of \*Junilius. FJ

**Paul of Tamma** (fl. 4th cent.) Egyptian author of Coptic-language treatises on monastic spiritual topics: the cell, poverty, and humility. Other works were supposedly on the desert, faith, retirement from the world, and *accidie*, as well as on the Last Judgement (now lost). Paul thought monks should know the \*Bible and its interpretation well, and should remain unordained rather than becoming too involved in worldly ecclesiastical politics. Later *Lives* portray him as visiting other ascetics and experiencing visions. LSBM

**Paul of Thebes and the Monastery of Paul of Thebes** Paul is known solely through \*Jerome's *Life of Paul*, written after \*Athanasius' *Life of Antony* and modelled upon it. Jerome's fanciful narrative, filled with miraculous beasts and events, leaves in question the very existence of its hero. It describes Paul becoming a desert \*ascetic, the first Christian hermit, during the Decian \*persecution (AD 249–51). He was 113 years old when S. \*Antony heard of him and undertook an incredible journey to meet him. The *Life* records their conversation, Paul's death and burial by Antony (aided by two lions), and Antony's inheritance of Paul's tunic.

Paul quickly assumed a place in Egyptian tradition. \*Sulpicius Severus (c. AD 404; *Dialogues*, 1, 17) and the \*Piacenza Pilgrim (c. AD 570) mention his cave on the Red

## Paul the Chain

Sea near Antony's \*monastery. While the origins of the important Monastery of Paul at this site remain obscure, it was long important in Coptic history. JEG BHL 6596–8.

**Paul the Chain** Court \*notarius under \*Constantius II, infamous for scheming and investigating \*treason; \*Ammianus says his nickname came from his skill at linking accusations against individuals (XV, 3, 4). Under \*Julian he was amongst those tried at \*Chalcedon, and was burnt to death. SFT PLRE I, Paulus 'Catena' 4.

Matthews, *Ammianus*, 92–3.

**Paul the Deacon** (c.720–c.795) Important literary figure in the \*Lombard kingdom in \*Italy. Paul the Deacon was born in \*Cividale. His main surviving writing, *The History of the Lombards* (HL), provides detail on the \*Friuli duchy, which suggests he maintained contact with his home \*city. From the 740s Paul studied in the capital, \*Pavia, and built strong relations with Lombard royalty; he became tutor to Adelperga, daughter of King Desiderius, and composed for her his *Historia Romana* (a continuation of \*Eutropius to the reign of \*Justinian I). Up to 776, he seems to have divided his time between \*Benevento and \*Monte Cassino, but subsequently formed part of Charlemagne's cultural entourage at Aachen. In the early to mid-780s he composed both his *Historia Langobardorum* and the *Gesta Episcoporum Mettensium*. The latter framed the rise of the Carolingians. The former charted his people's roots and their occupation of Italy, alongside conflicts—military and religious—with Byzantium. Interestingly the text terminates a generation before Charlemagne's conquest of Italy. In the *History's* later chapters Paul emphasizes especially those kings who were generous patrons of churches and \*monasteries (notably \*Cunincpert, \*Perctarit, and \*Liutprand). He also wrote \*sermons, \*saints' lives, poetry, and honorific texts. Paul returned to Italy probably in 787; he died in \*Monte Cassino c.795. NJC

*Paolo Diacono e il Friuli altomedievale (secc. VI–X). Atti del XIV Congresso Internazionale di Studi sull'Alto Medioevo* (2001), 13–24.

**Paul the Persian** (c.520) \*Philosopher from the \*Persian Empire who commented on the philosophy of Aristotle in \*Syriac. He dedicated his treatise on Aristotle's *Logic* to \*Khosrow I. His works contributed to the dissemination of Greek philosophy among \*Syriac authors and later to Islamic writers. \*Bar 'Ebroyo (Bar Hebraeus, *Chronicon Ecclesiasticum*, III, 97) reports that Paul was converted to \*Zoroastrianism, but this is uncertain.

Some scholars identify him with the \*Paul who had studied at \*Nisibis whose work forms the basis of \*Junilius Africanus' \*Latin compilation, the *Instituta Regularia Divinae Legis* (CPL 872). CJ

**Paul the Silentiary** A palace official (\**silentiarius*) at the court of \*Justinian I and skilled versifier, best known for his description of the Church of the \*Holy Wisdom and its decoration. His \*panegyric (\*ecphrasis) was probably commissioned by the \*Emperor Justinian and delivered in stages on 6 January 563 on the occasion of the reopening of the church following its renovation after an \*earthquake in 558 which had collapsed the \*dome and caused other damage. Paul's hexameter poem of 1,029 verses begins with a trimeter preface eulogizing the emperor. It then details the design and decoration of the church. Separately, he described the new \*ambo of the church. Paul was also part of the circle of the historian and lawyer \*Agathias who selected about 80 of Paul's \*epigrams (including some quite erotic ones) for the *Cycle*, an anthology of poems by himself, Paul, and other contemporaries. PLRE II, Paulus 20.

D. Frye, 'Aegidius, Childeric, Odovacer and Paul', *NottMedSt* 36 (1992), 1–14.

**Pavia (Roman Ticinum)** \*City 33 km (22 miles) south of \*Milan, and beside the River Ticino on a navigable route to \*Ravenna. Ticinum acquired the name Pavia only with the arrival of the Carolingians in \*Italy in 774.

In Late Roman times, Pavia was an important garrison centre, and thus often a military staging point. The Milan mint was transferred to Pavia (mint mark usually T/ST) in 275, but was closed by \*Constantine I in 326. Pavia was the scene of a rebellion which ultimately led to the downfall of \*Stilicho in 408. It later saw the defeat and death of \*Orestes by \*Odoacer in 476.

Whilst Pavia was a centre of secondary importance for the \*Ostrogoths and \*Theoderic the Great (493–526), it was significant enough for Theoderic to build a \*palatium, restore the amphitheatre and \*baths, and strengthen the \*fortifications of the city (the walls were described by both \*Ennodius and \*Procopius). \*Boethius was executed here in 525. Subsequently Pavia formed the last stronghold of the Ostrogoths prior to their final defeat by the armies of \*Justinian I.

It was not until the arrival of the \*Lombards that Pavia became of prime importance. It withstood both \*Alboin (560–72) and the Lombards for three years (569–72) but despite an early preference for \*Verona and Monza, Pavia was to become the principal royal seat from the time of \*Rothari (636–51). It attained significance in governance; Lombard kings promulgated their \*laws at Pavia and Pavia was the centre of coin production from \*Cunincpert (688–700) onwards.

In the cultural and ecclesiastical spheres Pavia reflected the high literary and orthodox culture of the Lombard kingdom of the 8th century. \*Paul the Deacon referred to a \*school attached to the palace, and ornate metrical \*inscriptions on the extant monuments to Cunincpert and his daughter Cunincperga testify to this sophisticated milieu. Pavia was notably embellished with churches founded by Lombard kings; these include S. Salvatore Maggiore, which served as the sepulchre of Lombard kings from Aripert I (626–36). \*Liutprand's foundation of S. Pietro in Ciel d'Oro marked the pre-eminence of Pavia, as the \*relics of S. \*Augustine (acquired from \*Sardinia) were enshrined in its new sanctuary.

**pay** See REMUNERATION.

**pearls** (Lat. *margaritae*) Pearls have been fished for in the Persian Gulf since the late Neolithic, and were traded westwards with the Roman world. The difficulties of pearl diving were legendary, and greatly increased the gem's value, as did myths of their creation—\*Procopius recounts a rare pearl's history (*Persian*, I, 4). Imperial Roman writers criticized the extravagance of costly pearl jewellery, a moralizing view shared by S. Paul (1 Tim. 2:9). Pearls were dedicated in \*pagan \*temples and adorned divine \*statues. References to pearls in the \*Bible (such as Matt. 7:6) led to their Christian appropriation as symbols for God's Word, Christ, and the \*Eucharist. Pearls were favoured as spiritual metaphors in \*Syriac literature, most famously in the 'Hymn of the Pearl' in the *Acts of Thomas*, and in \*Ephrem the Syrian's poetry. The \*Empress \*Theodora is famously depicted adorned with an elaborate pearl diadem and collar in S. Vitale, \*Ravenna.

**Pelagius I** \*Bishop of \*Rome 556–61. Having been archdeacon under \*Agapetus and \*Vigilius, Pelagius' reign as pope was consumed by the \*Three Chapters Controversy and the reconstruction of \*Rome, facilitated by the \*Pragmatic Sanction, after two decades of destruction during the Gothic wars following the \*Byzantine invasion. Pelagius was the candidate favoured by the Byzantine general \*Narses chosen to replace the recalcitrant Vigilius, and was seen as a traitor by the anti-Three Chapters party in Rome and northern \*Italy. As a consequence, he was not accepted by the Roman clergy or the senatorial \*aristocracy, and had trouble finding a \*bishop to ordain him. He also had trouble with bishops in \*Gaul, prompting him to send a confession of faith to the \*Frankish \*Childebert (*ep.* 7), asking him to obstruct those who were causing divisions in the Gallic Church.

In an open \*letter to 'all the people of God', he seeks to remove all suspicion about the orthodoxy of the see of \*Rome by sending his profession of faith to all the faithful in the world, even accepting as orthodox \*Theodoret of \*Cyrrhus and \*Ibas of \*Edessa (*ep.* 11). He claims to have written from \*Constantinople a refutation of Vigilius, who sought to condemn him, as well as six books in defence of the Three Chapters (*ep.* 80); the first does not survive. His life is summarized in the \**Liber Pontificalis* (62). BN

**Pelagius II** Bishop of \*Rome 579–90. Pelagius II, son of Unigild, sent his Apocrisiarius (later his successor as Pope \*Gregory I) to \*Constantinople to seek aid when the \*Lombard invasions of \*Italy reached \*Rome. He was forced to negotiate with the Lombards when no help was forthcoming from \*Emperor \*Maurice. He built the Church of \*San S. Lorenzo fuori le Mura. The flooding of the Tiber devastated Rome in his last year and he died of \*plague. His life is recorded in \**Liber Pontificalis*, 65. BN

PCBE II/2, Pelagius 4.

## Pelagius, Pelagianism, and Semi-Pelagianism

Pelagius (after 350–after 418) was an \*ascetic reformer and theologian, committed to the Church, yet reviled as a heretic. Probably from \*Britain, Pelagius arrived in \*Rome in the early 380s, where he sought to reform the moral laxity of Christians and to oppose \*Manichaeism. During his nearly three decades there he became a spiritual adviser to members of the senatorial \*aristocracy, especially women. He also began to attract like-minded ascetics, some of whom would come to be known as Pelagians.

In contrast to Manichaean determinism, Pelagius emphasized freedom of the will as the divinely given capacity to avoid sin and fulfil God's commandments. He believed that, despite Adam's sin, human freedom remains intact. God's grace has also provided the law and the teaching and example of Christ, as well as the forgiveness of sin in \*baptism with the attendant opportunity for a new start as led by the Holy Spirit in the Church.

### Pelagianism

Although the term suggests an organized movement, the reality consisted of a collection of individuals and ideas associated, sometimes inappropriately, with Pelagius and ultimately rejected by the Church. These individuals, those located in Rome and \*Sicily at least, were attracted by Pelagius' \*asceticism and his view of the human condition as fundamentally sound. Their core conviction was the freedom of the will as a divine and enduring gift, but differences arose as to the implications of that conviction. Although there is limited scholarly agreement as to which the writings should be attributed Pelagius and which to individual followers, some ideas are firmly associated with particular individuals.

In Rome three figures were influential: a certain Rufinus 'the Syrian', a Sicilian Briton, and Caelestius. Rufinus, probably from \*Syria, rejected the notion of original sin, i.e. that infants inherit the sin of Adam. Their baptism was thus not for forgiveness of sin but for admission to heaven. A second figure, sometimes designated by scholars as the Sicilian Briton, rejected the notion of original sin and held open the possibility of sinlessness. Caelestius challenged the notion of original sin with its deleterious consequences; he accepted the baptism of infants, although not for the remission of sin.

In the absence of an orthodox standard on the relationship of grace and free will, these views evoked no serious challenge in Rome. Pelagius and Caelestius in 409/10 fled to \*Carthage in anticipation of \*Alaric's attack on Rome. Rufinus probably died about this time, and the Sicilian Briton dropped from view. In Africa Pelagius and Caelestius encountered a Church convinced of the devastating consequences of original sin on the will of all people and the necessity of baptizing infants for the forgiveness of this inherited sin. The Africans believed their views to have the force of universal orthodoxy. Pelagius left for \*Palestine, but when Caelestius sought ordination as a \*priest, a synod in Carthage in 411 found him guilty of \*heresy. He went to \*Ephesus, where he was ordained.

Eastern Christians proved far more receptive. In 415 when \*Orosius, who had been sent by \*Augustine, and \*Jerome charged Pelagius with heresy, the synod of \*Jerusalem acquitted him, as did a synod at \*Diospolis. In the following year the African synods of \*Milevis and Carthage, defending what they believed to be orthodoxy, condemned Pelagius and Caelestius and sought support from Innocent I at Rome, who in 417 excommunicated them both. Although his successor Zosimus exonerated them, when in 418 the \*Emperor \*Honorius condemned both men for violent dissension arising in Rome, and the Council of Carthage rejected views attributed to them on original sin, baptism of infants, sinlessness, and grace, Zosimus reversed himself in the *Tractoria*. Pelagius dropped from view at this point.

\*Julian, \*Bishop of Eclanum, and eighteen other Italian bishops refused to sign the *Tractoria*. Zosimus condemned them, and in 419 the emperor exiled them from Italy. Julian rejected the notion of original sin as inconsistent with the goodness and justice of the Creator. He considered sin to be the wrongful exercise of the free will. Julian's challenges to Augustine led to the latter's voluminous clarification of his views. In 429 Julian, his associates, and Caelestius were exiled from \*Constantinople, and in 431 Pelagius, Caelestius, and those holding views associated with them were condemned at the \*Council of Ephesus.

### Semi-Pelagianism

The designation is misleading. The persons referred to were respected monastic leaders in southern \*Gaul, such as \*John Cassian and \*Faustus, Bishop of Riez. They rejected Pelagian teaching on grace, but over the course of a century raised sporadic challenges to Augustine's views on predestination and the sovereignty of grace. To these Gauls, Augustine's teaching called into question free will, the value of human effort, and the divine will for universal salvation. In 529 at the Second Council of Orange, led by \*Caesarius, Bishop of \*Arles, a modified Augustinianism prevailed. However, the decisions of this regional council had limited influence outside the sphere of Caesarius' authority.

**Pelayo (Pelagius)** First king (718/22–37) of the Christian kingdom of Asturias, which he founded after defeating the \*Arab rulers of al-\*Andalus at Covadonga in 718 or 722. Asturian \*chronicles identify Pelayo as \*Visigothic royalty or nobility to legitimize the new realm.

GDB

R. Collins, *The Arab Conquest of Spain, 710–797* (1994).

**Pella** (Ar. Tabaqat Fahl or Fihl, Jordan) Ancient \*city in the north of the Jordan Valley which became one of the Decapolis in the Roman provinces of Judaea and Syria in the 1st century AD. Much of the Roman city was covered by erosional deposits by the 6th century. During Late Antiquity churches (three have been discovered) were built into the urban fabric, often using \*spolia from Roman-period structures such as the Odeon. \*Epiphanius (*Panarion*, 7) traced the origins of the Jewish Christian Nazoreans near Pella back to the 1st century (cf. Eusebius, *HE* III, 5, 3). Pella was incorporated into the new Islamic state following the Battle of Fahl in 635. This had little impact upon the material record through the 7th and early 8th centuries. Pella was affected by a serious \*earthquake, generally dated to 749, which caused extensive damage, but the continued viability of the settlement in the later 8th century is demonstrated by the construction of two substantial courtyard buildings fulfilling domestic, commercial, and industrial functions. A. Walmsley, *Early Islamic Syria: An Archaeological Assessment* (2007).

**Pelusium** (mod. Tell el-Farama) The largest Late Antique \*city in the \*Nile Delta, apart from \*Alexandria. Located just east of the Pelusiatic mouth of the \*Nile, Pelusium had long guarded the eastern landward approach to \*Egypt. Pilgrims who passed through included \*Egeria (9, 6) and \*Paula (\*Jerome, *ep.* 108). Pelusium was the principal \*harbour for the eastern Delta and from 341 onwards the principal city of the \*province of \*Augustamnica Prima.

With its attached fortress, Pelusium occupied over 600 ha (c.1,500 acres). Although excavations have uncovered only a fraction of the total site, archaeological remains indicate Pelusium's economic prosperity and cultural prominence. The city possessed at least two theatres, a bouleuterion, several \*bath complexes, an \*aqueduct, a \*circus (one of only three hippodromes known from Late Roman Egypt), and workshops for producing \*glass, \*garum (fish sauce), and \*purple-dyed \*textiles.

Pelusium's church architecture shares features more common to the wider Mediterranean world than to Upper Egypt, as seen especially in a newly discovered tetraconch church similar in design to the \*Church of the Holy Apostles at \*Constantinople. A large \*basilica in the town's eastern sector had two smaller attached chapels, and an unusual circular church in the north-west sector had columns adorned with imported \*capitals of \*marble from \*Proconnesus.

Pelusium's strategic importance is reflected by its massive fortress with three gates and over 30 towers, built in the 6th century, and partly destroyed by the Persians in 619. The city features on the \*Madaba \*mosaic \*map and the *Tabula Peutingeriana* and its \*cavalry garrison in the \**Notitia Dignitatum* (or. XXVIII, 16). CJH

**penance** Christ gave to the Apostles the power to give or retain sins (John 20:22; Matthew 16:19). The Church exercised this power through \*baptism and, for serious sins committed after baptism, through the ministry of penance. Lesser sins might be corrected by fraternal exhortation (Matthew 18:15–20; James 5, 16). S. Paul laid down that those who committed serious sin after baptism should be excluded from Communion with a view to their ultimate rehabilitation (1 Corinthians 5:1–5; cf. 2 Corinthians 5:1–11;

1 Timothy 5:20). In the early 2nd century the *Shepherd of Hermas* envisaged penance as a unique opportunity for the believer who had fallen into grave sin to recover his baptismal state (*Mandate*, 4).

During the 2nd and 3rd centuries local \*councils of the Church worked on developing a canonical discipline of public penance. They were particularly concerned with the three most serious sins, namely apostasy (most obviously expressed by participating in pagan \*sacrifice), killing, and adultery and fornication. Particular problems were posed by \*persecution, and these required pastoral finesse on the part of \*bishops. The \*letters written by \*Cyprian of \*Carthage (martyred 258) during the decade of the persecutions of \*Decius and \*Valerian and the *On the Lapsed* which he composed after the Decian Persecution show the bishop steering a canny middle course between rigorists (like \*Novatianus), who wanted no more to do with those who had succumbed to the requirements of the pagan authorities, and those who hoped that the lapsed would turn from their wickedness and live. Cyprian emphasizes that forgiveness must be mediated through the Church as a whole; it could not, for instance, be granted by an individual Christian, despite the fact that those in \*prison awaiting martyrdom for their faith had taken it upon themselves to issue documents forgiving fellow Christians who had lapsed. And the purpose of penance, Cyprian asserts, is restoration.

In a similar spirit, the *Canonical Letter* of \*Peter of \*Alexandria, issued at the fourth \*Eastertide of the Great Persecution in 306, laid out a tariff of penances to be undergone by those who had to varying degrees failed to witness to the faith, penances deemed a great deal too lenient by \*Meletius of \*Lycopolis, who proceeded to set up a rigorist 'Church of the Martyrs' in competition with the see of Alexandria. \*Lactantius, also writing during the Great Persecution, thought the true Church was that which made space for repentance (*Inst.* IV, 30, 13); 'there is always much greater strength in a faith restored by penitence' (*Inst.* V, 13, 7). The Council of \*Nicaea made provision for the reconciliation of both rigorists and the lapsed (Canons 8, 11, and 14).

Practice in \*Cappadocia in the latter part of the 4th century is reflected in the \*letters of \*Basil of \*Caesarea to \*Amphilochius of Iconium *On the Canons* (ep. 188, 199, 217). An enrolled penitent was effectively returned to the catechumenate for moral remediation before being admitted again to full Communion. These penitential periods could, at least in theory, be lengthy; an adulterer did penance for fifteen years. But the aim continued to be restoration. Just as the final outcome of baptism was participation in the \*Eucharist, so the end of penance was readmission to Holy Communion in the context of the \*liturgy. \*Gregory of \*Nyssa's letter to Letoios on penance advocates an approach that is

medicinal, not punitive. The bishop might shorten the penance if he found a willing disposition in the patient-penitent. At first it was bishops who normally administered absolution and reconciliation, but by the late 4th century they were designating special \*priests to assist in this office.

The rigours and publicity of the penitential system as it was practised through the 4th century made people, especially men in public life, reluctant to undertake the obligations of baptism until they were on their deathbeds. The \*Emperor \*Theodosius I is a case in point. He was baptized when seriously ill, but recovered; when he ordered a massacre at \*Thessalonica, \*Ambrose, Bishop of \*Milan, humiliated him by repelling him from Holy Communion as a notorious evil liver. From the 5th century onwards, the old discipline began to yield to private confession made before a priest. Again, the beginnings of this process may be seen in the writings of Basil, who was already willing to permit an adulteress to make a private confession.

It is also possible to see monastic practice having an effect. Non-sacramental disclosure of thoughts (*logismoi*) and ascetical struggles to an elder was an important practice in \*monasteries, and increasingly in many parts of the Roman Empire monastic superiors were themselves priests. Monastic confession to a priest therefore became common practice, so that a convergence occurred between private ascetical confession and ecclesiastical penance. The Western practice of indulgences began in the 10th century, at a time when there was still a memory of the practice of public penance. The old canonical periods of penance were remitted for far lesser penalties, and absolution and reconciliation were granted immediately after confession.

The administration of penance therefore underwent considerable modification over the course of Late Antiquity. But it was constantly seen as a concern of the entire Church and not only of the individual, because sin injured not only the sinner, but also the body of believers at large. AMS; OPN

**perfectissimus** See TITLES OF HONOUR, ROMAN.

**Pergamum** In Late Antiquity, the prosperous Roman \*city of Pergamum (mod. Bergama in north-west Turkey) contracted to a smaller residential settlement at the foot of the old citadel. The acropolis was encircled by a late 3rd-century wall-circuit built of Roman \*spolia, perhaps reflecting fear of \*Gothic raids. In the mid-5th century, the enormous 'Red Hall' (a \*temple to the Egyptian gods) was converted into a Christian \*basilica, and a smaller basilica with atrium was constructed in the old Lower Agora. The Asclepium complex developed into a separate residential area. In the 7th century, an imposing fortification wall was built across the south flank of the upper citadel; the Great Altar of Zeus (perhaps the 'throne of Satan' in Revelation 2:13) seems to have been systematically demolished at the same time. **Perge** Little is known about Late Antique Perge, although it was the capital of \*Pamphylia and an important ecclesiastical centre. There is evidence for building activity including improvements to the fortifications and church building within the city and on the acropolis. \*Inscriptions show that the stadium and theatre continued in use, and another district east of the theatre was developed. Fragmentary verse inscriptions attest to the building activity of \*governors, indicating the continuing prosperity of the city throughout the 6th century; it declined due to Arab attacks. About 840 marble fragments from a military \*edict of \*Anastasius I have been assembled. The decree sets out solutions for various abuses, and is unique for including exact numbers of soldiers and their salaries. S. \*Matrona (c.430–510/15), who later became an abbess in \*Constantinople and opposed the \*Miaphysite \*Emperor Anastasius, was born in Perge (*Vita S. Matrona*). FKH

Duval, *Loca Sanctorum* (1982).

**Persarmenia** From a political viewpoint, Persarmenia refers to the whole Armenian territory under Persian rule (as opposed to Roman \*Armenia). It should not be confused with the later geographical term *Parskahayk'* or *Persarmenia*, a province which lay north and west of Lake Urmia and bordered on \*Adiabene and Atropatene. All of the major Armenian historians of this period (the \**Buzandaran Patmut'wnk'*, \*Elishe Vardapet, \*Lazar P'arpets'i, \*Movses Khorenats'i) cover primarily the history of Persarmenia.

Persarmenia as a province of the \*Persian Empire was governed by a \*marzban (guardian of the frontier) commander of all the local Persian garrison—assisted by a \*hazarbad (Arm. *hazarapet*), and \*mowbed (Arm. *mogpet*) chief of the Magians. This structure was supplemented by offices held by the Armenian aristocracy—chief among them the \*Sparapet from the \*Mamikonian feudal family. The capital of Persarmenia and seat of the \*Sasanian administration was \*Dvin, founded by the Armenian King Khosrov III Kotak (330–9).

In 428, taking advantage of the abolition of the Armenian monarchy, the Sasanian kings were intent on extending Iranian cultural and religious influence. Open \*persecution of Armenian Christians broke out under Persian King \*Yazdegerd II (439–57). Matters came to a head in 449, when Yazdegerd promulgated an edict in Armenia and Caucasian \*Albania requiring the immediate adoption by the entire population of official \*Zoroastrianism. At the church Council of Ashtishat Zoroastrianism was condemned, and on 2 June 451 the armies of Muskan Niusalavurt and Sparapet \*Vardan Mamikonian met in the plain of \*Avarayr. The tension between Armenia and Persia ended when \*Vahan Mamikonian became marzban in 510, and peace between Armenia and Persia was finally achieved. VN

**persecution of Christians** See CHRISTIANS, PERSECUTION OF.

**Persia, economic history of** The economy of the \*Persian Empire was based primarily on \*farming, which archaeological evidence indicates reached a peak under the \*Sasanian dynasty. This was made possible by improvements in \*irrigation, especially in the fertile agricultural provinces of \*Mesopotamia (\*Asorestan), \*Khuzestan, and \*Khorasan. In parallel with its political reforms, the Sasanian \*administration exerted ever greater control over the Empire's economic system, as is most noticeable in the \*taxation reforms of \*Khosrow I.

Like the late Parthian Empire, the Sasanian Empire was a patchwork of numerous aristocratic estates and independent \*cities. The Sasanian kings simultaneously founded cities whose populations and hinterland could be taxed by them alone, and, as at Hatra and \*Susa, took control of the last independent city states in their empire. Cities were also centres of industry and \*trade, which the Sasanian crown was eager to promote as well as to tax and control. When Sasanian kings established new cities they regularly transferred populations from conquered territory, bringing an influx of skilled workers from Mesopotamia, \*Syria, and \*Armenia, as at \*Weh-andiög-husraw.

The Sasanians extracted \*gold from the Eastern Roman Empire during various campaigns, but their monetary system was based on \*silver \*coinage (MP *drachm*). The *drachm* was produced in mints controlled by the King of Kings and, as a relatively pure and stable currency, it was in use in \*trade along the \*Silk Road. The Sasanian kings paid for \*irrigation canals and the upkeep of water projects such as those in \*Shushtar, and they raised taxes from their use.

\*Ardashir I developed ports on the Persian side of the Gulf which promoted Sasanian control of the Indian Ocean \*trade with the Far East. The Sasanians also acquired a near-monopoly on the \*silk trade which passed through \*Central Asia. Medieval terms associated with long-distance trade, such as 'bazaar' and 'caravan', originated from Middle \*Persian, and later Islamic trading customs reflect the Persian institutions.

**Persian Empire** The Persian Empire ruled by the \*Sasanian dynasty was the last Iranian-speaking empire to rule Western Asia before the coming of \*Islam. While the dynasty came from the province of \*Fars in south-western Iran, the same home province as the Achaemenid dynasty (650–333 BC), the Sasanians called their empire \*Eranshahr, 'the Empire of the Iranians', and forged a new imperial, pan-Iranian identity. The Sasanian Empire was founded by \*Ardashir I, who overthrew the Arsacid Empire. His son and successor \*Shapur I pushed eastwards, leading to the reduction and eventual fall of the Kushan Empire. The Sasanians ruled an empire whose core consisted of \*Mesopotamia and the Iranian Plateau and which eventually encompassed the Red Sea and \*Arabia, as well as northern \*India and Transoxiana. Sasanian \*merchants plied the Indian Ocean and established trading networks that extended into South-East Asia. The Sasanians contested the \*Caucasus with the Roman Empire, deeply imprinting the cultures of both \*Georgia and \*Armenia. Its height came under \*Khosrow II, who briefly extended the empire's borders so that they almost matched those of the Achaemenid Empire, occupying \*Egypt, the Levant, and \*Anatolia, as well as besieging \*Constantinople. Sasanian visual culture exerted a deep influence on late antique Eurasia. MPC

### Sasanian dynasty

\*Sasanian society was organized around the King of Kings. The Sasanians presented themselves as kings with divine qualities and as descendants and tools of the gods. Out of appreciation for the gods' favours, the Sasanian kings adopted \*Zoroastrian cult, bestowed benefits on priests, founded \*fires, and thus multiplied places of worship. As in Parthian times, 'fires' were also established as 'Fires of Kings', for the spiritual welfare and salvation of living and dead members of the royal household. Individual rulers derived their legitimacy not only from their descent but also through the 'divine grace' (MP \**xwarrah*, already known from the Achaemenids and the Parthians), and through their personal efforts in war and out \*hunting. The dynasty in general derived its legitimacy from the invocation of earlier heads of the clan and even kings of Iran whom the Sasanians themselves no longer knew by name, but whom they described as their forebears or ancestors. Later they even associated themselves with the mythical kings of Iran, and with the Iranian National History, which they themselves decisively helped shape. They thus became the Iranian rulers par excellence, alongside the East Iranian Kayanids, who, like the mythical kings,

are also not verifiable historically. They lived on in *The Book of Kings* of Ferdowsi (d. AD 1020) and the epics of Nizami (d. 1209), and in Islamic chronicles and popular literature. The Sasanians created their own legend also at the expense of the Arsacids, whose legitimate share in the Iranian success story was deliberately downgraded.

### *Society and economy*

Next to the \*aristocracy in importance were religious dignitaries, \*Zoroastrian priests (*mowbeds*, \**herbeds*) who were not only experts in matters of religion (e.g. through the upholding of the religious tradition), but also in matters of \*administration and the \*law as judges (*dādvars*). Christians, for example, knew some of them as harsh judges in times of \*persecution. A hierarchy of offices and functions, however, was only developed in the 4th century, in imitation of royal power. This hierarchy ranged from simple officials in the lower ranks to the Chief of the Mowbeds at the top. Lower state functionaries, craftsmen, city merchants, \*doctors, astronomers, scientists, and minstrels (MP *gosan*), as well as the professional servants and staff of the \*court and of the estates of the aristocracy, must be counted among the middle class of the empire. Peasants represented the great bulk of the Persian Empire's population. It was these tenants who for centuries had been the aristocracy's bondsmen, and who profited in particular from \*Khosrow I's reforms, as they advanced to become free tillers of their own plots of land. Although legally defined as objects in the Sasanian Empire, slaves were also seen as human beings, which distinguished them from other property, and, at the same time, protected them from excessively cruel treatment. This did not save them from being sold, rented, or given as gifts, and the products of a slave's labour would also always belong to his or her owner.

As elsewhere in Late Antiquity, \*farming was the fundamental economic activity in the Sasanian Empire too. In addition, many subjects of the 'King of Kings' earned their livelihoods in various crafts, in royal workshops, and in small private businesses. Many of the professionals employed by the king were men who had been deported from \*Syria and other regions and resettled in the Persian Empire during the reigns of \*Shapur I, \*Khosrow I, or their descendants. Workers recruited by the state, or prisoners of war, worked in the \*textile industry of \*Khuzestan, in building, and as ironsmiths, goldsmiths, locksmiths, and dyers. The \*bridges, dams, and \*irrigation works built by Roman prisoners of war are still impressive. Like the Parthians, the Sasanians also traded domestic and foreign products from west to east and vice versa. Also like the Parthians, they made connections with \*India by sea and to \*China by land. Both the Romans and the Sasanians tried to

find ways to further their own advantage in trade to the exclusion of the other side.

### *Warfare*

In matters concerned with \*warfare, the Sasanians also adhered to the Parthian model for a long time, especially in the use of heavily armoured \*cavalry and mounted \*archers. They also became experts in \*siege warfare following the Roman model. Persian tactics usually involved a forceful attack of the cavalry coupled with a shower of arrows from the archers. The king or general would be situated in the centre, near the imperial \*standard, and protected by a bodyguard. This line-up, alongside the Persians' alleged lack of stamina in close-contact fighting, was the reason for many Sasanian defeats. If the commander fled or fell, the soldiers would also give up the fight. And in the end during the \*Arab invasion, their heavily armoured cavalry would be overcome by the lightly armoured and more flexible horsemen of the Muslim armies.

### *Religion*

The Sasanian Empire was also characterized by the diversity of its religious groups and communities, particularly in Persian \*Mesopotamia. The established religion was \*Zoroastrianism; there were also Christians, \*Jews, \*Manichaeans, and \*Mazdakites. Scholars have long juxtaposed the religiously tolerant Arsacids with the supposedly intolerant rule of the Sasanians. Under the latter, a Zoroastrian 'state church' is alleged to have joined forces with the king, rigid in religious matters, in a so-called covenant of 'throne and altar' to the detriment of the non-Zoroastrian communities. It is now clear that Sasanian Iran was indeed 'Zoroastrianized' to a greater extent than ever before in its history, and that the kings acted as sponsors of that faith. However, it is also clear that the religious and social identity of the kings and their subjects, as well as their relationships with each other, were characterized by features similar to those existent in the Roman Empire. That is to say, the personal faith of each individual ruler was a factor, but, more importantly, so was the general internal and external situation of the empire and the political reaction of the kings to it (including their reaction in terms of religious policy). Also decisive was the conflict between the Zoroastrian priesthood, for whom being Persian and being Zoroastrian were the same thing, and the Christians and Manichaeans, who were not only theoretically directed towards universalism, but in fact followed universal faiths. It was a conflict that can be described in the field of tradition as one between the 'People of the Book' on the one hand, and the followers of Zoroaster's message on the other. Up until the 5th century, this message was only transmitted orally, in its distinctly Sasanian form. JW

**Persian Empire, Christians in** Christian communities were established in the Arsacid and then the \*Sasanian Empire from an early date. Tatian, who compiled the *Diatessaron* in the mid-2nd century, was a native of \*Adiabene. Christian communities grew from ancient Jewish communities in \*Mesopotamia and were augmented by proselytization, to some degree, by the presence of Christians among those deported from the Roman Empire, and by the conversion of \*Armenia and Caucasian \*Iberia to Christianity.

#### *Evangelization and traditions*

In the *\*Cave of Treasures*, an apocryphal text from the 5th–6th century, the Magi who came to Bethlehem are presented as the first missionaries for the area east of the Euphrates. Several \*Syriac, \*Greek, and \*Latin traditions attribute the evangelization of the Christians in Persia to disciples of Christ such as S. Thomas, who crossed the \*Silk Road regions (Parthia, Media, Bactriana) according to Greek apostolic lists which associate each disciple with an area of the *Oikoumene*. In the Syriac sources, he went to \*India, as is related in the Acts of \*Thomas from 3rd-century \*Edessa, and also to Persia and Sind. In other traditions, mainly Latin, the apostles Ss. Simon and Jude had a common mission, and sometimes were said to have been put to death in Persia. Mar \*Mari, considered to be one of the 70 disciples of Christ, is presented as the missionary of the Tigris Valley, from \*Nisibis to the Persian Gulf. The 7th-century *Acts of Mar Mari* present him as the founder of the East Syrian Church.

Missions in these areas were pluralistic and originated from the principal Aramaic cities such as Edessa (\*Sozomen, II, 8, 1, 2) and also from \*Antioch and \*Jerusalem, from the Jewish-Christian movement, and from heterodox trends such as Marcionism, baptizing groups such as the Elchaisites, and \*Manichaeism. Earlier historical information about Christian communities in Persia is to be found in the *Book of the Laws of the Countries* attributed to the Edessan \*philosopher \*Bardaisan (of 196). This work highlights the influence of Christianity on pagan populations: Parthians, inhabitants of \*Gilan and \*Mesopotamia, Kushans, Medians,

and Persians. During the same period, a Christian presence in Nisibis can be deduced from the epitaph of Abercius, \*Bishop of \*Hierapolis of \*Phrygia. In Beth Garmai (around \*Kirkuk) and \*Adiabene (around \*Arbela), the presence of a bishop during the 2nd century is mentioned in the Syriac *History of \*Karka d-Bet-Slokh* and the unreliable *\*Chronicle of Arbela*. \*Arbela, became a \*metropolitan see under Bishop \*Papa (310–17).

#### *Settlements*

Wars between the Roman and \*Persian Empires deeply influenced the development of Christianity in Persian territory. A policy of mass deportations by the Persian \*armies contributed to the establishment of \*Greek- and \*Syriac-speaking populations, sometimes Christianized, in several places in the \*Persian Empire, especially after the military campaigns of \*Shapur I in 252/3, 256, and 259/60. These exiled people came from Syrian lands where Christianity had been introduced much earlier. In 253, Demetrianus, the \*Patriarch of \*Antioch, was transferred to Susiana with all his clergy. Christianity was spread as early as the 4th century in Margiana (Central Asia), particularly in \*Merv, which was important for \*trade thanks to the semi-legendary evangelizer Bar Shaba (whose name means 'the deportee' in Syriac), who is said to have been the first bishop of the city. The acts of the \*councils of the \*Church of the East mention some 'captivities' (Syr. *shebite*) in Media and in \*Gorgan, south of the Caspian Sea. There, ecclesiastical administration of natives and exiles was separated, as in 424 in the separate bishoprics of Belashphar and of the 'captivity' of Belashphar. Christian communities flourished at this time in such eastern areas as Abarshahr (modern \*Nishapur), Tus, \*Herat, and \*Sagastan; the tribes of White \*Huns were partially converted in 498. Deportees from the East Roman area were numerous in the cities around \*Susa, particularly near the royal domains in which they were employed.

According to \*Procopius and \*Joshua the Stylite, many Roman captives from \*Amida, Edessa, and \*Martyropolis were settled on the boundaries of \*Fars at the beginning of the 6th century. Between 540 and 573, according to \*John of Ephesus, \*Khosrow I refounded a city near \*Ctesiphon he named \*Weh-andiog-husraw, so as to transfer 30,000 people captured in Roman \*Mesopotamia. This fortified camp (also called Ruman—the name derives from *'rum'*, 'Roman') was built on a Hellenistic model; there were several churches, some of them consecrated by the Patriarch Anastasius I of Antioch, in 590/1. Queens gave Christians their support: they included Shiraran, the sister-wife of \*Shapur II, and the Emperor \*Maurice's daughter who was married to \*Khosrow II, as well as \*Shirin, Khosrow II's

favourite wife who strongly protected the \*Syriac Orthodox (\*Miaphysite) communities. The \*Catholicus of the \*Church of the East, whose appointment was approved by the King of Kings who indeed often selected the successful candidate, became integrated into the Sasanian \*court and \*administration. By the late Empire, bishops regularly served as envoys for the Persian Kings of Kings. Christian nobles, especially those from Armenia and Iberia, could achieve high military command and royal favour, such as the Armenian Smbat \*Bagratuni, who was honoured with the title '*Husrav-šād*' ('Joy of Khosrow') and led Persian forces to victory over the \*Hephthalites.

### *The challenge of integration*

A mixed culture characterized Christian communities in Persia: \*Arabs on the \*frontiers, Aramaeans in \*Beth-Aramaye (the southern part of Persian Mesopotamia), and the descendants of Greek deportees from the East Roman Empire, Persians, Huzites in Susiana, and others. This mixed culture is made apparent by linguistic pluralism (Syriac, Greek, Middle \*Persian), as shown by diglossia and \*bilingualism. Sasanian \*seals considered to be Christian, bearing \*inscriptions in Syriac and/or Pahlavi, and a large number of mixed Middle Persian/Syriac family names in Syriac documents both illustrate the effective integration of Christians into official Iranian life. Some cases of mixed \*marriage highlight Iranization: in the 4th century, for example, Pusi, son of a deportee, married a Persian woman; he bore an Iranian name. Multilingualism had an impact on \*liturgy and liturgical organization, as Syriac and Arabic sources underline: the \**Chronicle of Seert* mentions a mixed community with Greeks and natives in \*Fars, and in the 7th century, John of Dailam (d. 738) founded a double \*monastery in Fars where two communities lived, one Syriac and the other Persian. Many fragments of bilingual manuscripts, Syriac/\*Sogdian and Syriac/\*Uighur \*Nestorian liturgical texts, have been discovered in \*Turfan and \*Dunhuang in Central Asia. These undertakings illustrate the missionaries' flexibility in adapting to the religious landscape and dealing with the diverse regional ethnic and linguistic traditions they encountered. At the end of the 5th century, many texts were translated from Syriac into Middle Persian. Archaeological material also shows appropriations of Persian cultural motifs by the Christians: some seals or numismatic objects combine Mazdaean-style images, inscriptions, or titles with Christian symbols, such as a \*cross above a \*fire altar, or classical \*Zoroastrian legends adapted to Christian faith. The large (possibly cathedral) church of Qasr Bint al-Qadi excavated by O. Reuther in the 20th century in Weh-Ardashir (\*Kokhe) across from \*Ctesiphon adapts aspects of Persian palace architecture.

### *Loyalties, political and religious*

Syriac sources and Mazdaean epigraphy have transmitted two names for the Christians: *Kristyone*, which is an equivalent of the name *Mshiboyo* (from *Mshiho*, 'Messiah'), and *Nasraye*, 'Nazaraeans'. *Nasraye* is usually used by Mazdaean detractors, and also refers to native Aramaic Christians.

After the Roman \*Emperor \*Constantine I's espousal of Christianity in the early 4th century, Christians in Sasanian territories might be suspected of complicity with the Roman \*Emperor. Relationships between Christians and Mazdaeans were affected by the political and cultural distinction between Iran and Aniran (the non-Iranian world). \*Conversions of Mazdaeans to Christianity raised questions of loyalty because the new converts, subjects of the Persian King, had become non-Iranian because they had embraced a foreign faith and were consequently considered as disloyal.

After Shapur II's edict of \*persecution, which was never repealed, Christians endured sporadic persecution. They had to prove their loyalty and guarantee their survival; this quest for cultural integration ultimately led, in 484, to a temporary abolition of celibacy for the clergy, as Mazdaeans condemned celibacy; these canons concerning celibacy were abolished half a century later. Christians were also called Tarsaqan, a Sogdian loanword which means '[God-]fearers'.

### *Christological diversity of the communities*

East Syrian communities in Persia, separated from the Roman world, gradually became autonomous as the Church of the East, with a \*Catholicus in \*Seleucia-\*Ctesiphon independent from the sees of the other patriarchs in the Roman Empire. This process was encouraged by the Sasanian court, which incrementally co-opted the Christian hierarchy, and was particularly reinforced by the \*Councils of the Church in the 480s.

At the instigation of \*Barsauma of Nisibis, the Church of the East officially adopted Dyophysite Christology, which emphasized the separation of the divine and human natures in the Person of Christ. In addition, as concessions to Zoroastrian sensibilities, clergy and hierarchy were encouraged to marry and burial of the \*dead discouraged. The works of \*Diodore of \*Tarsus, \*Theodore of \*Mopsuestia, and \*Nestorius were at the heart of the training given in \*monasteries and schools of higher education in the Church of the East.

The Christological controversies of the 5th century redrew the pattern of Christianity in the Persian Empire. The \*Miaphysite Syriac Orthodox (also called Jacobites after \*Jacob Burd'oyo) were located on both sides of the international \*frontier according to circumstances, and subject to the changes and chances of

Roman legislation. When they were persecuted, they fled to \*Egypt and the Persian Empire where they spread Miaphysitism widely. Syriac histories, including \*John of \*Ephesus in the 6th century, and \*Michael the Elder (Michael the Syrian) and Barhebraeus (\*Bar 'Ebroyo) in the 12th and 13th centuries, describe several west Syrian (Jacobite) Christian areas: \*Singara, \*Tur 'Abdin (in Roman territory), and the region around \*Nineveh and Mosul, where the convent of \*Mar Mattai was a bridgehead for Syrian Orthodox (Jacobite) missions to the Persian Empire, \*Adiabene, \*Khorasan, and especially \*Takrit, which became the see of the principal Syriac Orthodox bishop in Persian territory, later termed the \*Maphrian. Thanks to \*Simeon, Bishop of Beth-Arsham (510–46/7), who wrote a letter on the dissemination of Miaphysitism in Persia, and later with the support of \*Gabriel of Singara, doctor to Shirin, queen of Khosrow II, the Jacobites definitively settled in south Mesopotamia and Babylonia from the mid-6th century onwards.

Other Christian communities also came to establish themselves in the Sasanian Empire, particularly after the 6th-century Persian raids in \*Syria and Roman Mesopotamia. The \*Melkites in Rumagan, from the Greek-speaking Church which accepted the Christological formula of the \*Council of \*Chalcedon, created in 762 a see for their Catholicus at Romaguris in the country of \*Chach (Tashkent). As archaeological remains of ecclesiastical and monastic structures testify, the \*Arab conquest did not put an end to the dynamism of the Churches which reached in the 7th to the 9th century into \*Transoxiana, the territories of the Turkish tribes, and Tibet.

**Persian Empire, Jews in** Following the Babylonian conquest of \*Jerusalem in 597 BC and the subsequent destruction of the First Jewish Temple in 586 BC, captives from the kingdom of Judah established a significant Jewish presence east of the Euphrates River. However, an extreme paucity of information, both literary as well as material, precludes any attempt at a detailed history of the Jews of the \*Persian Empire prior to the emergence of the \*Sasanian dynasty (c. AD 226).

The rise of the Sasanians dovetails almost to the year with the emergence of the rabbinic Jewish community in Persian \*Mesopotamia (Babylonia), often identified with the return to that land of the Babylonian sage \*Rava, following years of learning in \*Palestine (AD 219), and the gradual emergence of circles of disciples centred on \*rabbis in Babylonia that ultimately evolve into the noted rabbinic academies (*yeshivot*). Two major concentrations of \*Jews existed in the early Sasanian period. One of these, the more ancient, was situated in northern \*Mesopotamia, with its principal centre at \*Nisibis (mod. Nusaybin, Turkey), and additional Jewish settlements east of the Tigris River, in the areas of \*Adiabene, \*Beth 'Arabaye, Media, and Elymais (\*Khu-zestan). The other principal concentration where important communities and rabbinic centres flourished for centuries was situated along the Euphrates River, and to a lesser extent along the Tigris, just north and south of the convergence of the two rivers, near the Sasanian capital \*Ctesiphon.

Our knowledge regarding this concentration of Jews derives primarily from the monumental literary corpus produced by the Jewish sages of Mesopotamia, namely the Babylonian \*Talmud. Although finally redacted no earlier than the 7th century, the Talmud preserves traditions transmitted orally from at least as far back as the 3rd century. Added to this primary literary source are infrequent references to Jews in Iranian sources, literary and epigraphic, as well as in a few Christian works, such as the *Demonstrations* of the 4th-century 'Persian Sage' \*Aphrahat (Aphraates) and Christian \*martyr passions. In addition to literary sources, we possess some limited material evidence, such as \*incantation bowls frequently produced by Jews for their Persian neighbours, as well as Jewish \*seals.

Some rabbis believed the Sasanian dynasty to be more assertive than the previous, more pliant Parthian regime. This perception, coupled with the re-emergence of the \*Zoroastrian 'Church' to an enhanced position under the new monarchy, found expression in Talmudic literature, and probably reflected the apprehension felt by Jews with the establishment of

Sasanian rule. One Talmudic anecdote attests to the fear that whatever legal autonomy existed under Parthian rule would now be compromised: this fear was accompanied by allusion to the possibility that the Zoroastrian priesthood would exert religious pressure on Jews.

For the most part, however, these fears did not materialize under most of the Sasanian rulers. While the aggressive military stance of the Sasanians vis-à-vis the Roman Empire at times had a negative effect on some Jewish communities, Jews and Persians frequently shared an animosity towards third parties such as the Roman Empire or the Empire of \*Palmyra: the Palmyrene invasion of Babylonia (in c.259) caused the destruction of the Jewish centre at \*Nehardea. The Talmud appears to reflect an amicable relationship between Jewish leaders and \*Shapur I (AD 239–70). This relationship was maintained and possibly even enhanced under the rule of \*Shapur II (AD 309–79). Shapur II's military confrontation with the Roman Empire, especially after Christianity had become its imperial religion, probably enhanced the Sasanian perception of Jews as loyal subjects, in contrast to the suspicion levelled at certain Christian groups who were seen as a potential fifth column. Similarly, there is no real evidence of outright persecution of Jews by the Zoroastrian clergy, although during the reign of \*Bahram II (276–93) the Zoroastrian priest \*Kerdir claimed in a number of monumental \*inscriptions to have smitten almost all the minority religions of the realm, including Jews. Rabbinic literature, however, never suggests that any forced conversion or blanket persecution occurred under the Sasanians, but at the most implies that Zoroastrian clergy would take offence if certain Jewish practices, such as the lighting of candles (e.g. on Hannukah), burial of the \*dead in the ground, or the use of water for ritual purification, were perceived as contravening basic Zoroastrian tenets. Such difficulties notwithstanding, rabbinic literature seemed comfortable with the principle that 'the law of the Kingdom is law', thereby recognizing the legitimacy of the Persian rulers and the concomitant requirement to comply with laws that gave expression to this sovereignty, such as those pertaining to \*taxation and ownership of land.

By the 5th century, however, internal political tensions, as well as polemics concerned with the religious beliefs of both Christians and Zoroastrians, coupled with pressure from invading \*Hephthalites, all contributed to a deterioration of Sasanian tolerance towards Jews as well as other minorities and perceived heresies. According to medieval Jewish and Arab chronicles, King \*Yazdegerd II (439–57) and his son \*Peroz (459–84) supported some degree of persecution, during which Jewish leaders were incarcerated and in certain cases executed. One 10th-century chronicle claims that

Peroz had half the Jewish population of \*Isfahan executed as punishment for the flaying of two Mazdaean priests, with their children forcibly placed in \*fire temples. This report, however, has been met with some scholarly scepticism.

Under both the Sasanians and the \*Arabs, the political and spiritual lives of Persian Jewry were heavily influenced by two distinct institutions. The recognized political leader of the community was the \*Exilarch, who claimed a Davidic pedigree and probably enjoyed some degree of support and recognition from the Sasanian authorities. The Exilarch maintained some sort of judicial body at his \*court, and was also influential in the recognition of Jewish judges as well as the appointment of certain economic officials. During Sasanian rule, however, there is no evidence of the Exilarch interfering within the other institution which exercised leadership in the Jewish community, that of the rabbis and their emerging circles of disciples. However, this division of Jewish authority between Exilarch and rabbis would become blurred under Muslim rule in Iraq.

The degree of rabbinic influence among the greater Jewish population is not clear, given that the rabbinic corpus is the main source of information. What is evident is that most Jews were involved in agriculture, whether \*farming or trading in agricultural produce and its derivatives. While rabbinic Judaism appears to have gradually determined significant aspects of Jewish daily life, recent scholarship has pointed to significant influence from Iranian popular beliefs and at times even legal and religious norms on the sages of the Talmud and by extension upon wider segments of the Jewish population.

**Persian invasion of Asia Minor** Shortly after \*Heraclius' seizure of power in October 610, Persian armies broke through the Roman inner line of defence on the Euphrates \*frontier and thereafter invaded the interior of \*Anatolia at will. \*Caesarea in \*Cappadocia was captured and occupied in 611–12 (\*Sebeos, 113). In 615, an army under \*Shahin crossed the peninsula and reached \*Chalcedon (*Chronicon Paschale*, AD 615; Sebeos, 122–3), and \*Pisidia was targeted by two raiding armies in c.617. \*Ankara was destroyed in 622/3 (\*Theophanes, AM 6111), and a final incursion under

## Persian invasion of Egypt

\*Shahrwaraz in 626–7 seems once again to have reached the \*Bosporus (*Chronicon Paschale*, AD 626).

The raids are vivid evidence for the weakness of the Roman \*army in the first part of Heraclius' reign, but the short- and long-term impact of the Persian invasions remains controversial. At \*Ankara, it is certain that the Persian sack of 622 led to the abandonment of much of the ancient \*city, and the contraction of the settlement to a small fortified *kastron*, but the archaeological evidence is less clear elsewhere. Foss has argued that Persian raids were responsible both for widespread destruction at \*Ephesus (on the Embolos and in the Upper Agora) in c.614, and for the destruction and abandonment of parts of \*Sardis in c.616. However, the historical tradition records no Persian incursions into western Asia Minor, and the damage may have been caused by \*earthquakes. Recent scholarship has tended to downplay the impact of the Persian invasions on urban culture in Asia Minor, instead emphasizing a longer process of de-urbanization extending across the 6th and 7th centuries. **Persian invasion of Egypt** The Persian Shahan-shah \*Khosrow II occupied \*Egypt c.618 after defeating the forces of the \*Emperor \*Phocas at \*Pelusium. There is literary and documentary evidence in \*Coptic, \*Greek, \*Pahlavi, and \*Arabic that the Persians controlled Upper Egypt by the mid-620s. They were expelled c.628 by armies loyal to the Emperor \*Heraclius.

The *Life* of Abba \*Pisentius the \*Bishop of \*Coptos in Upper Egypt records that he fled from the Persians to the hills on the west bank of the \*Nile. One of the Coptic \*letters to him indicates that the Persians took some but not all of the livestock of a widow. The period is not considered in the *Chronicle* of \*John of \*Nikiu, because there is a chronological lacuna in the surviving narrative at chapters 109–10.

The Greek texts from places such as \*Oxyrhynchus mention a high-ranking official called Saralaneoan/Shahr-Alānyōzan (probably a personal name) responsible for transfer of taxes to the Persian king. Pahlavi texts provide information about Persian military stations and the issuing of 'passports' by Shahr-Alānyōzan. Pahlavi \*papyri also provide evidence for the provisioning of the Persian \*army.

The *History of the Patriarchs of the Coptic Church of Alexandria* mentions the destruction caused by the Persians near \*Alexandria and the *Synaxarium* implies that

the Persians interfered in church matters by preventing the consecration of a new \*bishop at \*Esna. The Coptic Story of Cambyses may be a reference to this Persian interlude. AA1

## Persian invasion of Mesopotamia, Syria, and Palestine

The revival of warfare between the Eastern Roman Empire and \*Sasanian \*Persian Empires in the early 6th century brought the two superpowers into conflict across an arc of territory ranging from the principalities of the Caucasus to the north to the \*Yemen to the south. Only in \*Mesopotamia, however, did the two empires face each other directly, with the frontier between Roman \*Syria and Persian Mesopotamia bisecting a region which formed a social, economic, and cultural whole. On this Mesopotamian frontier, neither empire possessed realistic aims of territorial expansion, which tended to be focused instead on Greater \*Armenia and its neighbours.

This situation was destabilized, however, by the civil war into which the Eastern Roman Empire descended upon the overthrow and execution of the \*Emperor \*Maurice by \*Phocas in 603. The Persian Shah \*Khosrow II initially took advantage of this to claw back territory in Armenia and the Caucasus which he had ceded in 591. Faced with Roman infighting, however, between 603 and 610 he also began to target his forces on breaking down the dense networks of fortifications in Upper Mesopotamia in which \*Anastasius, \*Justin I, and \*Justinian I had invested. \*Heraclius' coup against Phocas in 610 led to a further deterioration in the Roman position, and Persian forces were able to strike across the Euphrates in a series of opportunistic land-grabs. In 611 the Persians struck into \*Syria, seizing \*Apamea and \*Antioch. \*Damascus soon fell, and the Persians were ready to initiate the conquest of \*Palestine, which was facilitated by conflict between Christian and Jewish communities. Advancing through \*Galilee, the Persians struck first at maritime \*Caesarea, and in 614 the Persians negotiated the capitulation of \*Jerusalem, as narrated by \*Antiochus Strategos. The Persian occupation of the city further soured relations there between Jewish and Christian partisans, and after an outbreak of rioting the Persians sacked the city and seized the \*Relic of the True \*Cross, which was sent to Persia, an event that reverberated throughout the Christian world. It was restored when \*Heraclius in turn overcame Khosrow II. PS

**Persian languages** More properly termed Iranian languages, of which Persian is one. The Iranian languages form a subgroup of Indo-Iranian, which in turn is a subgroup of the Indo-European family of languages. The present article deals with the two Western Middle Iranian languages Middle Persian and Parthian, with emphasis on Middle Persian, to the exclusion of eastern languages such as \*Sogdian, \*Bactrian, and \*Khotanese.

#### *Old Persian, Avestan, Parthian, and Middle Persian*

The oldest attested Iranian languages are Old Persian, the language of the south-west region of Pārsa (\*Fars, Gk. Persis) and of the Achaemenid court, and Avestan, the language of Zoroaster and of the oldest \*Zoroastrian texts. Avestan belongs to the eastern group of Iranian languages, but cannot be located geographically with certainty. While Avestan has no clear successor among the Middle Iranian languages, Old Persian evolved into Middle Persian, the principal language of the \*Sasanian \*inscriptions, the \*Manichaean scripture, and the writings preserved by Zoroastrians identified more precisely as Book Pahlavi. There is also a fragment of a Pahlavi Psalter translated from the \*Syriac. Parthian is a north-western language, probably descended from Median, a language of which only a few words are preserved in the Achaemenid inscriptions. The main sources for Parthian are the Sasanian bilingual inscriptions and the \*Manichaean texts. It should be noted that there is a possible cause for confusion over nomenclature: in reference to the inscriptions the Middle Persian is called *pārsīg* 'Persian'; the Parthian is called *pahlawīg* 'Parthian'. This is not to be confused with the Middle Persian dialect Pahlavi.

Apart from the inscriptions, which are securely dated, it is difficult to assign precise dates for the two languages and their dialects owing to the general fact that languages evolve over time. It seems that by the late Achaemenid period, popular speech was well into a transition from the old inflectional language to that of the Sasanian inscriptions. It is assumed that the Parthians, the *Parnoi* of the Greek geographers, originally spoke a \*Scythian (Saka) dialect, but once they had established themselves in the old Median heartland adopted the language of the region descended from Median. The earliest written documents in Parthian are from 88 BC. Although the Manichaean texts obviously post-date \*Mani (d. c. AD 274), they cannot be dated with certainty. Most of the texts containing Book Pahlavi, as they have come down to us in the Zoroastrian manuscript tradition, date from the 9th century AD; this literature, however, preserves much older sources, and works like the \**Bundahishn* and the \**Denkard* are editions and redactions of these sources.

#### *Orthography and Aramaic ideograms*

In order to gain a knowledge of Middle Persian and Parthian it is first necessary to understand the origins of writing and literacy in Iran. Although Old Persian is attested in the monumental inscriptions of the early Achaemenid kings, principally Darius and Xerxes, the Achaemenids themselves were non-literate, as were all Iranians regardless of dialect. For the business of their Empire, the Persian Kings of Kings relied on scribes who wrote in Aramaic, a language of the Semitic language group. Edicts and other governmental business were transmitted to the provinces of their far-flung empire in Aramaic, to be translated into local languages. Throughout the Iranian extent of the Empire, Aramaic had a near monopoly on literacy.

After the fall of the Empire signs began to appear that Aramaic had been used in a peculiar way; for common words and expressions scribes had clearly been writing down Aramaic words, using them to represent, as ideograms, Middle Persian words. For example, a coin legend might read *MLK'n MLK* to denote King of Kings. The letters MLK are the Aramaic word for 'king', but the presence of the ending *-ān* (the Middle Persian plural) betrays the fact that the Aramaic was actually being pronounced using the Persian words *šāhān šāh* (Shahanshah; King of Kings). In the bilingual and trilingual inscriptions of \*Shapur I the text is a mixture of Aramaic words (called ideograms and rendered in upper case letters in modern transliterated texts) and Persian/Parthian vocabulary, but the grammar is thoroughly Iranian. For example, the opening of the \**Res Gestae Divi Saporis* inscribed on the Ka'ba-ye Zardušt at \*Naqsh-e Rostam reads in Parthian with Aramaic ideograms: '*NH mzd̄yzn 'LH3' šh3pwh3r MLKyn MLK*' which stands for Parthian *az mazdēzn bay šābuhr šāhīn šāh*—and in English translation is 'I Shapur, Mazdaean lord, King of Kings'. Later in that inscription Shapur says, in Persian: *Pm wly'lnwsy kysly BNPSH PWN NPŠH [YDH] dstg/woby krty = u-m Walēryanos kēsar xwād pad xwēš dast dast-graw kard*, 'And I myself made \*Valerian Caesar captive with my own hand.'

These samples highlight the fact that in both Middle Persian and Parthian spellings of words are, for the most part, historical, and do not necessarily reflect the actual pronunciation in use at the time the texts were composed, a situation analogous to the spelling of modern English. The practice of writing in a mixture of ideograms and quasi-phonetic spelling was shunned by the Manichaeans, in whose texts ideograms do not appear and spellings adhere to contemporary pronunciation. Thus, Manichaean texts are often crucial in establishing the pronunciation of non-Manichaean spellings. Further, owing to the fact that Middle

Persian and Parthian scripts were derived from Aramaic, they follow the practice common to Semitic languages such as Aramaic of writing only the consonants of a word, with palatal and labial vowels possibly being indicated through the use of *yod* and *waw*. While short-*a* is normally not written, *alef* is sometimes used to avoid confusion; *alef* is always used for long-*ā* and word initial *a*.

The Parthian Inscriptions employ the full 22-consonant alphabet of Aramaic, while the Persian Inscriptions dropped the *qof*, and the Pahlavi Psalter dropped both *tet* and *qof*. Book Pahlavi, the script of the 9th-century Zoroastrian books, is an orthographic nightmare. Many letters have fallen together, so that there are only fourteen truly distinct signs, of which *he* and one form of *lamed* occur only in ideograms. Thus, *gimmel*, *dalet*, and *yod* are indistinguishable and by conjoining two of them one can form *samek* or any other combination. Conjoining three or more merely multiplies the confusion. *Alef* and *chet* share the same sign, as do *waw*, *nun*, *'ayin*, and *reš*. *Lamed* usually represents *r* and occasionally *l*.

### Grammar

In general, Middle Persian and Parthian show a great simplification of the inflectional systems of Old Iranian. The dual has disappeared, as has gender, leaving only singulars and plurals without distinction as to case or gender. The middle voice has also disappeared. The plural in *-ān* (*-īn* Parthian) derives from the old genitive plural in *-ānām* (*-īnām*). Similarly, the personal pronouns derive from old genitives, except that in the first person singular *az* (< *azam* nom.) is the older *casus rectus* beside *man* ('I, me'). In the inscriptions, Parthian also preserves the distinction reflected in the ideograms 'NT *tō* (*casus rectus*) and LK *tō*' (*casus obliquus*).

The Old Iranian verbal system had been quite complex, with many tenses and moods. The present stem was formed in accordance with a number of classes or conjugations and was the stem for the present and imperfect tenses, and for the optative, subjunctive, and imperative moods. In Middle Persian and Parthian, the old present stem was retained for the present, optative, subjunctive, and imperative. However, an old strategy in common speech was to simplify the class system by simply forming a secondary stem in *-aya-* on any present stem. This became the common paradigm for the endings of the present: *-ēm* (Parthian *-ām*), *-ēh*, *-ēd*; *-ēm*, *-ēd*, *-ēnd*, the long-*ē* < *-aya-*. Outside the present system, both languages lost the stems of the perfect, pluperfect, and aorist. The future is expressed contextually, but the present and all past tenses were replaced by the past participle in *-ta-*. Accordingly, Old Persian

*kunu-* 'does', *karta-* 'done' > Middle Persian *kun-*, *kard*; Old Persian *barwa-* 'becomes, is', *\*būta-* 'was' > Middle Persian *barw-*, *būd*; Old Persian *gauba-* 'says', *\*gupta-* 'said' > Middle Persian *gōw-*, *guft*. Since the preterite in *-t(d)* derived from the adjectival participle, which had to agree in case, gender, and number with a noun or pronoun, the usage was continued. With intransitive verbs, the subject/verb construction follows the pattern [noun/pronoun] + preterite + auxiliary form of *h-* 'to be' (dropped in the third person singular). Thus, 'I came' (*man*) *āmad hēm*, 'he/she came' (*ōy*) *āmad*. However, with transitive verbs, a passive construction is required. Thus, in the example given above, 'I (Shapur) made Valerian captive,' must be expressed 'by me Valerian was made captive'. Conditional, perfect, pluperfect, and future perfect tenses could be formed using auxiliary verbs.

### Syntax

The normal sentence word order is subject–predicate–verb. In the absence of nominal inflectional endings, word order and the use of prepositions became essential. One particular feature of Middle Persian which has carried over into New Persian is the widespread use of the *izafe* (*ī* derived from the old relative pronoun *ya-*) to mark genitive case relationship between nouns and to join adjectives to nouns, as in 'Naqsh-e Rostam'.

After the \*Arab conquest, Pahlavi, which had been the language of the \*Persian Empire under the Sasanians, fell into disuse among the general populace. It did continue to be used by the ever-dwindling Zoroastrian population, though even there it was mainly priest-scholars who kept it alive. WWM

C. J. Brunner, *A Syntax of Western Middle Iranian* (PSS 3, 1977).

W. B. Henning, 'Mitteliranisch', in B. Spuler, *Handbuch der Orientalistik*, 4/1 (1958), 20–130.

**Persian literature** Surviving literary texts in Middle \*Persian are mainly the product of \*Zoroastrian priests and so they are coloured by a religious outlook. Secular notions rarely appear, although some texts are less theological than others. There was certainly a larger amount of Middle Persian literature in various genres, but because of the disadvantages suffered by the Zoroastrian community in subsequent ages, only those books that were of importance for the religion and for communal solidarity were copied by the priests and the rest were lost. Personal choice and taste were also to preserve some of the rarer texts that do survive. The surviving texts are, however, diverse enough to give us an understanding of Persian mentalities, views of the Persian view of life, religion, and the cosmos according to

men. One can divide the Middle Persian corpus into eight categories.

### *Commentary on the Avesta*

By far the largest group of corpus is commentaries and elaborations on the Zoroastrian holy text which were finally written down in the 6th century AD, probably during the reign of \*Khosrow I and his high priest Weh-shabuhr. The \*Avesta is said to have had 21 chapters (*nask*), of which most are now lost, but the \*Zand or Middle Persian commentaries give us information on the lost portion of the Avesta.

The text which is most important for the understanding of the Zoroastrian world-view is the \**Bundahishn* (*The Book of Primal Creation*). In the preface of the text the scribe mentions that he is redacting Zoroastrian learning in a time of hardship, when the number of adherents to the Good Religion is dwindling because of increasing \*conversion to \*Islam. This text conveys a sense of urgency on the part of the priest to hand down what he thought was most important for the preservation of the Good Religion. The text indeed covers a medley of topics, including \*cosmology and cosmogony, a good deal of information on deities and \*demons, and an encyclopedia of botany, zoology, ethnography, geography, and \*history.

The other encyclopedic work is the \**Denkard* (Acts of Religion). The *Denkard* was originally composed in nine books, but Books 1 and 2 have been lost. Book 3 concerns itself with a host of issues, from the composition of the human body to opinions in regard to Church and state in the \*Sasanian period. Book 4 has been called the Book of Manners or Customs (*erwen-namag*) and is perhaps the most difficult book, since it deals not only with the history of the sacred texts, but also with \*Greek and Indic science. Book 5 begins with a series of questions put forth by a non-believer to a Zoroastrian sage, and it covers a variety of issues, especially the idea of *xwedodah* or consanguineous \*marriages. Book 6 may be called a Book of Counsel (\**Andarz-namag*), while Book 7 particularly deals with the story of Zoroaster, from his birth to his death. Book 8 is important because it is a description of the contents of the sections (*nasks*) of the Avesta. Each section (*nask*) is named and its contents briefly mentioned. Book 9 concentrates on three interpretations or *nasks* on the Avesta.

Other encyclopedic works also survive, such as the *Wizidagiha i Zadsparam* (*The Selections of Zadsparam*), and \**Menog-i Xrad* (*Spirit of Wisdom*). The *Pahlavi Rivayats* are concerned with legal precepts and also with history, mythical creatures, and customs. These legal texts give us some understanding of Zoroastrian life in Late Antiquity, drawn from the Avesta, which

can in turn be compared with Christian and Jewish legal texts such as that of the Syriac *Law Book of Yishoboxt* and the Babylonian \**Talmud*.

### *Philosophical and debate texts*

These include several texts in Middle Persian which are mainly the product of the 8th–9th centuries AD and represent the end stage of the era of Middle Persian literature. The *Draxt-e Asurig* (*The Babylonian Tree*) is, however, an outstanding piece of \*poetry, in both its content and its antiquity. The vocabulary of the text suggests its Parthian antecedents; its content its Mesopotamian ambience. This text presents a debate between a date tree and a goat, typical of the ancient Mesopotamian debate poetry recited during banquets. The debate is about which of these two (the date or the goat) is more useful, and their products are enumerated.

Other texts are from the early Islamic period, such as the important *Sbkand i Gumanig Wizar* (*Doubt Dispelling Explanation*), that recount the supremacy of Zoroastrian theology and the deficiency of such religions as those of the Fatalists (*Dabris*), \*Manichaeans, Christians, Jews, and Muslims. The author systematically tackles the tenets of these religions and sometimes quotes verbatim from their holy texts. The method of argumentation is also noteworthy as it resembles the analytical method of debate employed in Islamic theology (*Ilm al-Kalam*) and may have been influenced by that tradition of Islamic thought and literature, most probably as a result of contact with the Mu'tazila.

*Gizistag Abalish* (*The Accursed Abalish*) is a short text about the debate between Abalish, who appears to be a heretic or atheist, and the Zoroastrian high priest and the leader of the Jewish, Christian, and Muslim theologians at the court of the \*Caliph Ma'mun in the 9th century AD. It has survived in Pazand form (i.e. Middle Persian written in the Avestan script). The text known as *Pus i Danesh Kamag* (*The Youth in Desire of Knowledge*) is written in the same vein as the *Sbkand i Gumanig Wizar*, but there is little reference to the Islamic period and it is concerned with Zoroastrian matters such as the reason for the wearing of the sacred belt, the *kustig*.

### *Apocalyptic and visionary texts*

This genre of Middle Persian literature is the most imaginative and interesting of the corpus. These texts predict the ways in which the world will come to an end and the fate of the people and that of \*Eranshahr, the empire of the Sasanians. The \**Arda Wiraz Namag* (*The Book of Righteous Wiraz*) is about the journey of a righteous man, Wiraz, to heaven and hell and may be compared with Dante's *Divina Commedia*. Not only is the journey itself interesting but so is the preparation for

the journey into paradise and hell which Wiraz is undertaking for the sake of the community. He is properly cleansed and laid on a bed, when he is given a concoction of hemp called *mang i wishtasp* 'hemp of Wishtasp', which enables him to make the journey. This practice of taking hallucinogens to travel to the netherworld betrays the ancient shamanistic tradition in the Iranian world which goes back to the Indo-Iranian period. By taking on these hallucinogenic drinks, be it the sacred Haoma/Soma, *mang*, or *bang*, the Indo-Iranian priests were able to have visions and compose hymns to various deities. We see that this tradition was alive and well in the Sasanian period and various means of achieving this travel are mentioned in several apocalyptic texts.

In the apocalyptic text of *Zand i Wahman Yasn* (*The Commentary on the Wahman Yasn*) Zoroaster is given the Wisdom of complete knowledge by means of \*Ohrmazd pouring it in the form of water onto his hand to drink, which induces seven days and nights of \*dreams, as in the cases of Wiraz. Then Zoroaster is able to see the future in a mysterious form (a tree with seven trunks) which is explained to him to be seven eras (in another part there are four eras which sound very much like Hesiod's division of ages in his *Theogony*). These eras start from the beginning of Zoroastrianism to the time of the Turkic conquest of Persia. The texts predict the fate of the Zoroastrians, who will eventually face hardships and will only achieve supremacy at the end of the world when sinners will be punished and those Zoroastrians who have endured hardship will go to heaven, the heaven which Wiraz had seen and which he had described to believers.

The *Jamasp Namag* is another one of these apocalyptic texts which was especially popular among the Parsis in the past century. Again, Jamasp is endowed with a vision of what is to come along with all of its calamities. This text along with that of the *Zand i Wahman Yasn* describes the natural and political disasters which precede the time when the saviours will appear, and men and women will arise from the dead and be judged. Finally, evil is destroyed and molten metal will extirpate all that is evil and send it into the womb of the earth. Those who have been good will walk in this molten metal as if walking through warm milk. Then the earth becomes flat, and everything returns to the way it was in the beginning.

#### Didactic texts

*Andarz* texts or wisdom literature are abundant and are usually attributed to sages or people of authority according to the Zoroastrian religion. There are, however, also anonymous *andarz* texts which are found in the sixth book of the *Denkard*. These texts give didactic ordinances about religion, social order, good and bad conduct, and proper rules. Priests, kings, important people,

and wise men all are given credit for these *andarz* (wise sayings).

The importance of this genre of Middle Persian literature is that it was liberally used and translated into \*Arabic and New Persian. Thus a major corpus of Arabic *andarz* texts is formed of translations of these works from the Sasanian period. The best example is the *Jawādan Kherad* (*The Eternity of Wisdom*) of Ibn Miskawayh; the title of the book suggests its Middle Persian origin. The author ascribes the origin of the text and its translation to another famous Muslim author al-Jahiz, who had found the original Middle Persian text in the possession of some Zoroastrian priests in the province of Persis/\*Fars. Other Arabic texts relate the *andarz* of Sasanian kings such as \*Ardashir I, \*Qobad, \*Khosrow I, and \*Khosrow II. These texts discuss the effective means of ruling and how to keep the Empire in order. This was the reason that this genre found favour with the \*caliphs at Baghdad in the \*Abbasid period, as they drew on the example of the ancients to keep their caliphate in order and prosperity. The *andarz* genre therefore had a lasting importance in the Persian, Arab, and Turkish world.

#### Geographical and epic texts

Few complete texts survive which describe the geography of a region. However, chapters in the *Bundahishn* provide a detailed description of the Persian universe. These include an enumeration of the \*climes of the earth, the people, lands, mountains, and rivers of Asia and the eastern Mediterranean. This would partly be in the tradition of the Avesta where the first chapter in the *Widewdad* gives us information on the different regions and people who inhabited them. After all, we must remember these Middle Persian texts were intended to be commentaries on the Avesta, but they took into account also the realities of Late Antiquity.

The *Bundahishn* takes notice of the geopolitical realities of the Sasanian period and for this reason it is worthy of study. A short text known as *Abdih ud Saba-giba i Sistan* is concerned with the province of Sistan (\*Sagastan), which had special importance for Zoroastrianism in the Sasanian period as at that time it was thought to be the location of Zoroaster's activity and the homeland of the Kayanid king, Wishtasp. The text may be seen as a progenitor of later Islamic geographical texts and local histories such as the *Tarikh-e Sistan* (*History of Sistan*), which is related to this text, and other local histories and geographical texts.

The *Shahrestanba i Eranshahr* (*The Provincial Capitals of Iranshahr*) discusses the different capital cities in the different regions. All the cities are mentioned as part of the Sasanian Empire, and include \*Mecca, Yathrib (later \*Medina), and parts of Africa. The author mentions the builder and rebuilder of each city and the

important events which took place there. The text is not an exact geographical-administrative history but it enshrines the imperial outlook on \*Eranshahr which was promulgated by Zoroastrianism.

There are two texts which may be considered as epic texts. The older one is a Parthian epic entitled the *\*Ayadgar i Zareran (Memoir of Zarer)* which focuses on the court of King Wishtasp, the patron of Zoroaster, and the bloody war with their enemies, the Turanians. The epic is certainly tragic and victory comes to the Zoroastrians only after many heroes and princes have fallen. The epic is made more tragic because the minister of Wištasp, Jamasp, who is endowed with the knowledge of the future, again in the Indo-Iranian shamanistic style, tells the king what will happen. This story survived the Sasanian assumption of power in the 3rd century, was written in Middle Persian, and then translated into New Persian and incorporated into the medieval Persian epic, the *Shahnameh* of Ferdowsi (Firdausi).

The other text which is pseudo-historical concerns the career of the founder of the Sasanian dynasty, \*Ardashir 1 Pabagan. The *\*Karnamag i Ardaxšīr i Pabagan (The Book of the Deeds of Ardashir, the Son of Pabag)* is a 6th-century epic which describes Ardashir's origins, as a descendant of King Dara, that is to say the Achaemenid King Darius. His father's noble origin is discovered by Pabag and so begin Ardashir's turbulent adventures as a man who is good at all that he does, from \*polo to board games to the challenging of the last Parthian king, Ardawan (Artabanus). This story has also found its way into the *Shahnameh* and so we may assume that most of the stories about the ancients in the medieval Persian epic derived from \*translations from the Middle Persian.

### Legal texts

The *Widewdad* part of the Avesta is mainly concerned with the laws of purity and pollution, and the Middle Persian translation of this text also adds commentaries as glosses in the text. There is an even more copious *Zand* of the *Widewdad* which has not been translated. If the contents of *Denkard* (Book 8) do indeed cover the topics of the lost portions of the Avesta, it follows that much of this text was concerned with legal matters as well.

The Middle Persian texts also include a prodigious output of legal commentaries. The most important legal text of the Sasanian period is the *\*Madiyan i Hazar Dadestan (The Exposition of One Thousand Judgements)*, also known as the *Sasanian Law Book*; this was written during the late Sasanian period and deals with legal cases brought to the court.

The *\*Sheyist ne Sheyist (Licit and Illicit)* is another important text dealing with judgements of Zoroastrian judges and theologians, who sometimes disagree with one another over legal decisions. Other legal texts are

mainly the product of the early Islamic period where the Zoroastrian community was shrinking in numbers and there were particular needs to inform and protect its members. These texts still provide insights into the legal mentality of the Zoroastrian priests and their concern with purity and pollution, and the rights of men, women, and children.

### Cultural texts

The texts which tell us most about the cultural life and social norms of the Sasanian period are mainly short. They include a variety of subjects such as different types of food, games, ideas of beauty, the way to give speeches, table manners, and how to write properly. The most interesting of these manuals is *Khusrow ud Redag (King Khosrow and the Page)*, which describes fine food and wine and other courtly ideals of good living. The page recounts his religious formation, morality, and athletic prowess; his training not only as a chef, but also as a calligrapher, as a master \*polo player and horseman, a series of accomplishments which suggests the ideal Zoroastrian man in Late Antiquity.

The *Khusrow ud Redag* also mentions Indian and other board games such as \*chess, which is the subject of another small work in Middle Persian known as *\*Wizarishn Chatrang ud ew-ardaxšīr (Explanation of the Game of Chess and Backgammon)*. This gives the reason for the invention of these games and their rules, which are put into a Zoroastrian perspective and cosmological setting.

*Sur i Suxwan* (Banquet Speech) is another manual of correct behaviour. It sets out to describe the old Near Eastern banquet etiquette and the list of people who sit at the royal table, from the King of Kings (*shaban shah*), to the Grand Vizier (*wuzurg-framadār*), and lower ranks. There is also a manual outlining how to write properly, *Abar Ewenag i Namag-Nibesišnīh (On the Manner of Book/Letter Writing)*. These works suggest the sophistication of Persian culture and society, and the elaborate standards appropriate to noble behaviour which were established and maintained.

### Frahang or dictionaries

There are two dictionaries that have survived which have different functions. The *Frahang 1 Pahlawīg* is mainly concerned with the understanding of the difficult words in Middle Persian which were represented in writing by Aramaic ideograms. The authors took pains to show each Middle Persian word they were discussing in the Aramaic ideogram which commonly denoted it and the simple representation of it in Middle Persian script. The glossary also follows ancient Near Eastern tradition in the way the subjects are grouped together under such headings as \*cosmology, waters, fruits, metals, etc. A more recent recension of this glossary orders

the words alphabetically. The other major dictionary or glossary is the *Frahang i Oim-ewag*, which is a dictionary of Avestan words. In the preface, the author states that the work is intended to aid understanding of the \*Zand (Middle Persian translation of the *Avesta*).

### Christian and Manichaean texts

The Psalms were translated from \*Syriac into Middle Persian in the late 4th/early 5th century. The prophet \*Mani wrote one of his works in Middle Persian and other Manichaean texts survive dating from the 3rd century onwards.

**Persian–Roman Wars** While warfare between the Roman and \*Persian Empires was not unremitting throughout Late Antiquity, \*Sasanian Persia nonetheless represented the Empire's most consistent military challenge. The Persians had particular strengths in \*cavalry and \*archery, and, unusually among the Empire's neighbours, \*siege warfare. In the earlier phases, conflict focused on northern \*Mesopotamia and \*Armenia, but in the 6th century fighting expanded into the \*Caucasus, together with increasing involvement by \*Arab allies in the Syrian Desert. The most direct invasion route for both states was along the middle Euphrates which, for the Romans, took them to \*Ctesiphon, and for the Persians, towards the cities of \*Syria, above all \*Antioch. However, Persian forces also sometimes advanced northwards to the east of the Tigris before turning westwards across the north Mesopotamian plain, where the Romans fortified settlements to impede enemy progress.

### The 3rd century

The earlier part of this period saw significant Persian successes against a background of increasing military, political, and economic problems in the Roman Empire, but by the end of the century the Romans had more than redressed the balance. Detailed understanding of this period is handicapped by the lack of a reliable narrative history for much of it.

Although the speed with which the new Sasanian regime went onto the offensive against the Roman Empire is striking, it is also understandable given the way in which Roman forces had repeatedly advanced to Ctesiphon against the Parthian Arsacids during the 2nd century. Following \*Ardashir I's incursion into northern Mesopotamia and Syria in 230, Alexander Severus launched a three-pronged invasion of Persia in 232 which met with only limited success. Ardashir captured \*Nisibis and Carrhae (\*Harran) in 238, and Hatra in 240. Gordian III sought to counter these gains by a major campaign in 243, and although Nisibis and Carrhae were recovered, the Roman army was defeated in early 244 by Ardashir's son \*Shapur I at Misiche, which he renamed \*Peroz-Shapur ('Victory of Shapur'). During the withdrawal, Gordian was murdered by his troops, with his successor Philip having to buy peace. In 252 Shapur invaded the Empire, defeating a Roman army at Barbalissos on the Euphrates and sacking many cities in \*Cappadocia and Syria, including Antioch. Shapur invaded again in 260, defeating another Roman army between Carrhae and \*Edessa, capturing the Emperor \*Valerian, and once again plundering the cities of Syria and Cappadocia. Shapur had a keen appreciation of the significance of his successes, which he advertised in a famous trilingual account, the *\*Res Gestae Divi Saporis* (*ŠKZ*) carved at \*Naqsh-e Rostam near Persepolis, together with pictorial \*rock reliefs in a number of locations.

His death in 279 and increased stability in the Roman Empire allowed the balance to be redressed, first by \*Carus who advanced down the Euphrates and may have captured Ctesiphon in 283, and then by \*Galerius who, despite a defeat at Carrhae in 296, overcame \*Narseh in two battles in 298 and captured his womenfolk. The peace imposed the following year extended Roman hegemony into five provinces to the east of the Tigris, the \*Transtigritanae regiones, consolidating Roman control of northern Mesopotamia and creating a salient in the Roman eastern \*frontier which left Ctesiphon even more vulnerable.

### The 4th century

The main theme of this period, parts of which are illuminated in detail by the surviving portion of \*Amianus Marcellinus' history (covering 354–78), was Persian attempts to undo the settlement of 299, which they eventually succeeded in doing. Concerted efforts to this end began only after the death of \*Constantine I in 337. Prior to that, the tetrarch \*Maximinus Daza appears to have undertaken a campaign against the Persians in \*Armenia in 312, and Constantine was evidently preparing for an invasion of Persia in 337, ostensibly in defence of the substantial Christian communities in Persian territory. His death was the signal for renewed Persian

aggression, with \*Shapur II besieging the important fortified city of Nisibis for two months in 337 or 338. \*Ephrem the Syrian was among the besieged population. This was the first of three unsuccessful attempts by Shapur to capture Nisibis (the others were in 346 and 350), highlighting the strategic significance of its location in the north Mesopotamian plain, as well as the importance of Roman investment in fortifications in countering Persian invasions. Although \*Constantius II encountered Persian forces in one inconclusive battle near \*Singara in 344, his broad strategy was one of cautious defence. His approach attracted criticism from contemporary commentators, and did result in Persian capture of the fortresses of \*Amida and \*Singara in 359, but its overall success was vindicated by Shapur's failure to replicate the successes of his namesake in the mid-3rd century and by the unfavourable outcome of his successor \*Julian's more aggressive approach.

In March 363 Julian launched a large-scale invasion of Persia with an army of at least 65,000 men. His objectives remain a matter for debate, but rather than conquering Persia, he probably envisaged installing the exiled Persian prince Hormisd (Hormisdas) on the throne (\*Libanius, *ep.* 1402). Julian divided his forces in two, with one army advancing east towards the Tigris and, it seems, drawing Shapur and his main army in this direction. Meanwhile, Julian led the main thrust down the Euphrates with the second and larger army, supported by a flotilla. Despite delays arising from resistance by forts along the river and from Persian destruction of \*irrigation dykes to flood the land, Julian reached Ctesiphon where he defeated an enemy force before the walls, but decided against besieging the city, not least because of news that Shapur was returning with his army. Julian had evidently expected his first army to rejoin him (its whereabouts remain a mystery), and in its absence he began withdrawing northwards to the east of the Tigris, harried by Shapur's forces. Julian was mortally wounded during a skirmish on 26 June, and his hastily chosen successor, \*Jovian, soon agreed to Shapur's terms in exchange for safe passage for imperial troops back to Roman territory. Those terms included the return of much of the Transtigritane territory yielded in 299, together with the surrender of the eastern half of northern Mesopotamia, including Nisibis, whose loss provoked dismay among contemporaries, not least Ephrem the Syrian, who was obliged to leave the city, along with all its other citizens.

During the reign of Jovian's successor \*Valens, the focus of conflict shifted to Armenia, where Shapur intervened during the later 360s to remove the Roman \*client King \*Arshak. Although the 363 agreement had stipulated that the Romans would not aid Arshak, Valens responded with military force to reinstate Arshak's son \*Pap in 370, in turn prompting a

campaign by Shapur in 371 which ended in his defeat at \*Bagavan. The following years saw protracted negotiations over Armenia, resulting in agreement between Valens' successor \*Theodosius I and Shapur's son \*Shapur III to partition the region between the two states, probably in 387, with the Persians controlling four-fifths and the Romans the remaining, western fifth.

### *The 5th century*

Serious conflict between the two states was very limited during the 5th century, not least because both had to prioritize dealing with more pressing problems elsewhere. In the early decades relations were sufficiently amicable for Arcadius apparently to have explored the possibility of \*Yazdegerd I acting as guardian for his infant son \*Theodosius II. Yazdegerd is also reported to have been tolerant towards Christians in the \*Persian Empire but his death in 420 triggered persecution of \*Christians, which in turn prompted Roman intervention in 421, first through Armenia and then in Mesopotamia. Although Roman sources report military successes, the outcome seems to have been a stalemate, with the peace terms in 422 uncertain, beyond both sides agreeing not to construct new fortifications adjacent to the frontier. In 440 Yazdegerd II launched an incursion into Roman territory, apparently trying to exploit Roman preoccupation with the \*Huns in the \*Balkans; the Empire may have resorted to buying the Persians off on this occasion. In the second half of the century, the Persians regularly requested financial aid from the Romans, to help with defence of the \*Caucasus passes which, they argued, was a mutual concern; while \*Leo I rejected such requests, \*Zeno proved more amenable, but \*Anastasius I was not.

### *The 6th century to the death of Justinian I (565)*

After the relative quiet of the 5th century, the 6th saw a resumption of regular warfare between the two states. A succession of Roman historians writing in \*Greek gave detailed attention to these conflicts, starting with \*Procopius of \*Caesarea (to 552), then \*Agathias (552–8), \*Menander \*Protector (558–82), and finally \*Theophylact Simocatta (582–602). Also important for events at the start of the century is the contemporary \*Syriac chronicle attributed to \*Joshua the \*Stylite.

Anastasius I's refusal to contribute money for Caucasian defences was the *casus belli* in 502, but as important may have been \*Qobad I's need to strengthen his domestic credibility through military success after his recent temporary ejection from the throne (496–8). He invaded Roman territory through Armenia, capturing \*Theodosiopolis (Erzerum) before besieging Amida on the upper Tigris; after a three-month siege the city was captured in early 503. In spring 503 Anastasius sent an army of 52,000 men to northern Mesopotamia, with

part of this force directing its efforts towards capturing Nisibis, while the other laid siege to the Persian troops now occupying Amida, but lack of coordination between the two forces allowed Qobad to drive the first back. After further inconclusive exchanges in 504, Roman raids into Persian territory together with problems on Qobad's northern frontier induced him to agree a truce in 505, one of whose conditions was the return of Amida to the Romans. When his generals complained that their effectiveness had been handicapped by the lack of a fortified base near the frontier comparable to Nisibis, Anastasius provided funding for the construction of a new fortress at \*Dara; the Persians protested vehemently, but to no avail.

Although Qobad continued to send intermittent requests for money to assist with the Caucasian defences, there was no open conflict for the next two decades. Roman attempts to improve frontier fortifications in the late 520s were thwarted by Persian forces and then in June 530 a major Persian army advanced to capture Dara. Its defence was undertaken by \*Justinian I's general \*Belisarius who confronted the enemy before the walls of the fortress, rather than undergoing a siege, and successfully turned the Persians back, despite their superior numbers. This success, and a similar Roman victory at \*Satala on the upper Euphrates at about the same time, was offset the following summer when Roman forces under Belisarius' command were defeated at \*Callinicum by a Persian army withdrawing down the Euphrates.

The death of Qobad in late 531 brought to the throne \*Khosrow I who, keen to consolidate his position domestically, was willing to end conflict. In summer 532 the \*Everlasting Peace was concluded, so called because it did not specify a time limit. Justinian agreed to pay a sum of 11,000 lb of \*gold, officially as the Roman contribution to the Caucasian defences—a concession he was willing to make in order to focus on his expedition against the \*Vandals in \*Africa. However, the success of that venture and of the initial phase of Justinian's campaigning against the Goths in \*Italy prompted Khosrow to reconsider his commitment to peace, and in summer 540 Khosrow invaded northern Mesopotamia and Syria, plundering some cities, including Antioch, and extorting money from others, with minimal Roman response because of commitments in the West. Although Roman forces in the East were reinforced by 541, Khosrow shifted his focus and invaded \*Lazica at the eastern end of the Black Sea. His plans for further aggression in northern Mesopotamia in 542 were stymied by the impact of the \*plague, while his attempt to capture \*Edessa in 543 was unsuccessful. A truce for warfare in northern Mesopotamia was agreed in 545 and renewed in 551, but (inconclusive) fighting continued in Lazica until a

general truce in 557. A \*Fifty Years Peace was formalized in 562, with the Romans agreeing to annual payments of 30,000 \*solidi (detailed account of provisions in Menander Protector fr. VI, 1).

### *The later 6th century*

Justinian's successor \*Justin II appears to have been intent on making financial savings and, as a non-military man, may also have wanted to enhance his reputation through military success. Following an Armenian revolt against Persian rule in 571, Justin sent an army into northern Mesopotamia in 572, in contravention of the Fifty Years Peace. It only began besieging Nisibis in spring 573, by which time Khosrow had prepared a strong response. Persian forces drove the Roman army from Nisibis, then laid siege to Dara, which they captured in autumn 573. News of this disaster is said to have driven Justin mad.

Khosrow agreed to truces in northern Mesopotamia in the following years, but proved unable to make further decisive gains in Armenia where inconclusive fighting continued for the remainder of the decade. Justin's successor \*Tiberius II stabilized affairs, particularly after Khosrow died in 579, and his general \*Maurice went onto the offensive in the early 580s. Maurice then succeeded Tiberius as emperor, and his general \*Philippicus turned back a Persian invasion of northern Mesopotamia with a victory at Solachon in 586. However, a mutiny by the Roman army in this sector over a substantial pay cut lasted twelve months from Easter 588 and left the frontier vulnerable, although in the event the Persians did not exploit this opportunity.

Events in Persia then took an unexpected turn when Khosrow's successor \*Hormizd IV was overthrown in February 590 following a revolt by one of his generals \*Bahram Chobin. Hormizd's son \*Khosrow II fled to Roman territory, where he sought military aid from Maurice to restore him to the Persian throne, to which Maurice eventually agreed. In 591 a three-pronged invasion of Persia was launched and achieved rapid success. In recompense, Khosrow surrendered Dara and \*Martyropolis to the Romans, together with territory in Armenia and the Caucasus, and there was no further conflict for the remainder of the decade.

### *The 7th century*

This period of peaceful coexistence proved short-lived as the overthrow of Maurice in a military mutiny in 602 resulted in an intensive quarter-century of conflict between the two states. The sources for this period are much less satisfactory than for the 6th century, with considerable uncertainty about the precise chronology of many events.

Maurice's downfall gave Khosrow II an excuse to renew warfare against the Romans since he could

claim to be seeking revenge on behalf of his erstwhile ally. More importantly, it gave him an ideal opportunity to demonstrate to his subjects that he was not a Roman client. Since \*Phocas, the emperor who had successfully overthrown Maurice, faced opposition from a number of quarters within the Empire, he was handicapped in his ability to respond to external threats, and Persian forces captured Dara in summer 604. Over the next few years, they proceeded to take every other city east of the Euphrates, while another army advanced through Armenia towards the upper Euphrates. With the Persians imposing \*tribute on captured cities, it was already evident that, unlike his forebears, \*Khosrow was intent on permanent annexation.

\*Heraclius' rebellion and overthrow of Phocas in 610 gave opportunity for further Persian advances. Antioch and Cappadocian \*Caesarea were captured in 611, \*Jerusalem in 614, and by early 615 Persian forces had, alarmingly, advanced through \*Anatolia to \*Chalcedon on the \*Bosporus, threatening \*Constantinople itself. They did not control all of Anatolia, but in 619 they captured \*Alexandria, key to \*Egypt's wealth.

Despite the loss of so much territory, and significant pressure from the \*Avars on the Danube \*frontier, Heraclius' eventual response was the high-risk but ultimately successful strategy of leaving Constantinople largely to fend for itself, concentrating his forces in eastern Anatolia and then the Caucasus, before invading Persia from this unexpected and vulnerable direction. In 622, he slowed Persian momentum by defeating an army in Armenia, and then in 624 advanced through Armenia into the Caucasus, winning support there and defeating three Persian armies in 625. Hoping to end the war decisively, Persian forces acting in concert with the Avars launched an unsuccessful assault on Constantinople in 626. Meanwhile, with Persian forces stretched across many fronts, Heraclius and his \*Türk allies advanced south from the Caucasus towards the Persian heartlands. In December 627 he won a decisive victory at \*Nineveh on the Tigris and captured the \*palace at \*Dastgerd. The overthrow and death of Khosrow soon followed, and after prolonged peace negotiations against a background of coups and counter-coups in Ctesiphon (628–30), the \*frontier was restored to its 591 disposition. The prospect of a new period of peace between the two states was, however, soon overtaken by the unexpected and devastating impact of the \*Arab conquests effected by armies from the south, energized by \*Islam. **Personalium** Digest of legal cases (perhaps ordered by litigants' names) heard before the \*Praefectus Praetorio. It was the responsibility of a senior official (\*Adiutor) seconded to the \*Scriinium of the \*Ab Actis. In 6th-century \*Constantinople, these abstracts were drafted in \*Latin by \*John Lydus early in his career (*Mag.* III, 20, 27). CMK

**personifications** (Lat. *conformatio*, Gk. προσωποποιία) The representation of civic virtues, natural features, geographic locations, institutions, ideals, or abstract concepts. Such representations as Fortuna and \*Roma, often anthropomorphized, had roots in Hellenistic and Roman civic traditions and cult during Antiquity. In the Later Empire institutions such as Ecclesia or Synagogue were conceptualized, as were moral qualities such as Megalopsychia in a grand \*Antioch \*mosaic. Numerous media transmitted personifications, including wall paintings in the catacombs of \*Rome and elsewhere, \*sarcophagi, \*coinage, \*inscriptions, \*lamps, glassware, \*sculpture, \*maps such as the Peutinger Map, poetry, prose, and even bureaucratic documents such as the \**Notitia Dignitatum*. Personifications changed in meaning over time. They were often employed as part of a programme of \*allegory in Late Antique literature and \*philosophy, as in \*Prudentius' *Psychomachia* (*Battle for the Soul*) and \*Boethius' *Consolation of Philosophy*. Although textual \*literacy rates may have been relatively low in Antiquity, a visual

literacy was an important part of day-to-day life as well as a civic or religious consciousness—though the 'epigraphic habit' and labels on mosaics indicate audiences still had to be reminded. SEB

**personifications of cities** \*Cities continued to be represented in Late Antiquity as beautiful women. In addition to \*Rome, personifications of \*Constantinople, \*Antioch, \*Alexandria, and other cities became common (as on the 6th-century \*gold goblet from the \*Avar Treasure). Characteristic were images of the goddess Tyche, or Fortuna, as the tutelary deity of a city, and images of the \*Genius of \*cities. Representations were produced in several media—notably as \*mosaics, as statuettes, and on \*silver.

Christians might disapprove of such personifications, particularly if they were associated with pagan cult. Under \*Julian, the Christian \*Eupychius destroyed the \*Temple of the Fortune of the City, the last surviving temple at Caesarea of \*Cappadocia in 362. Early in his ministry as a \*bishop \*Augustine had not expressed much concern about such matters, but in 399 at \*Carthage he preached a \*sermon reproving Christians who had attended a banquet and festival in honour of the tutelary genius of Carthage (consoling themselves with the thought that 'if it were Mars or Mercury, it would be a god'), reproving too other Christians who had caused public \*disorder to express their disapproval (*Sermon*, 62, 10). However, although self-evidently pagan in origin, city personifications remained ubiquitous long after the rise to dominance of Christianity, still, for instance, being common at Constantinople in the 9th century. **perspective, systems of** No single system of perspective existed in Late Antiquity. Various systems were employed to regulate the visual effects created by the space between seer and seen. These were intended to prevent the appearance of distortion, since the

surface on which an image was painted was conceived of not in two dimensions but as a space having an opening beyond itself.

Representations in perspective were produced under the influence of \*Euclid's *Optics*, which was included by \*Pappus of \*Alexandria in his *Little Astronomy* and remained current through a late 4th-century recension by \*Theon of Alexandria, and also of the *Catoptrica* attributed to Euclid but almost certainly a compilation of c. AD 400. Thought about perspective formed a part of the science of scenography (Gk. *skēnographia*) which was formulated by Geminus of Rhodes in the 1st century BC and which, according to Proclus *In Euclidem I*, formed the third branch of the science of optics.

A variety of systems may be identified. 'Reverse perspective' or 'inverted perspective', terms coined by Oscar Wulff in 1907, conveyed the appearance of depth in a picture painted on a two-dimensional surface; the viewpoint was conceived of as lying behind the picture so that figures and elements in the picture were shown as being smaller in proportion to their distance from the viewpoint, the smallest elements being those closest to the actual viewer of the picture. In 'diminishing perspective' the viewpoint could be higher up and the forms and shapes depicted were represented as if they were being seen from above. Both 'reverse perspective' and 'diminishing perspective' could coexist in a single image, as they do in the \*mosaics in the Rotunda of S. George in \*Thessalonica. In 'axial perspective' or 'perspective with a vanishing axis' the diminishing lines in the image meet at multiple vanishing points; this contrasts with Graeco-Roman linear perspective, where parallel lines usually converge at a single vanishing point. In 'aerial perspective' colours could be used to give the illusion of space, or of separate coexistent spaces in a single picture.

Multiple perspectives might coexist in a single composition. The implication of this fact is that the object portrayed by the image in some way transcends the image that is actually and immediately seen. Such a way of looking at reality could be consonant with \*Neoplatonist \*philosophy and with its interest in \*allegory. In addition, it encourages the eye of the person seeing the image not to run simply along a single line of perception but to be constantly on the move. DK

**Pervigilium Veneris** ('Vigil of Venus'), a \*Latin poem of much-disputed date and authorship. The poem, written in trochaic septenarii, celebrates the rejuvenating powers of Venus in spring. Then, in the startling and moving final lines, the speaker bewails his own silence and asks when his own spring would arrive. It has long been treasured for its ecstatic vision of the natural world and for the pathos of its close (modern admirers have included Walter Pater, Ezra Pound, and T. S. Eliot). But editors have differed widely in their reconstruction of the corrupt text, particularly in the arrangement and frequency of the poem's repeated refrain. Moreover, although an allusion in \*Fulgentius (*Mitologiae*, I metrum 1, 11–14) provides a *terminus ante quem*, dates in the 2nd, 3rd, and 4th centuries have been variously proposed. The arguments of E. Baehrens and (more fully) Alan Cameron that the poem is by Tiberianus have gained substantial but not universal support. JFU

**Peshitta** An early medieval \*Syriac term meaning 'straightforward', or 'widespread' referring to the translations of the Syriac Old and New Testaments. The term distinguishes these versions from other known translations and revisions. The Old Testament Peshitta was translated from the Hebrew in the 2nd century AD. The New Testament Peshitta is an early 5th-century revision of an Old Syriac version. KSH

GEDSH s.v. Peshitta, 326–31 (ter Haar Romeny and Morrison).

Editions:

B. Aland and A. Juckel, *Das Neue Testament in syrischer Überlieferung* (1986–).

**Pesikta de Rav Kahana** This \*Midrash collection consists of more than 30 homilies relating to \*festival days and special Sabbaths. It was known only on the basis of citations in medieval commentaries but is now available in two distinct editions by S. Buber (1868) and B. Mandelbaum (1962). Scholars differ over the time of its redaction, which depends on its relationship to other Midrashim. Individual traditions may be amoraic (3rd to 5th cent.), but the entire collection would not have been edited before the 6th to 8th centuries. The text constitutes a later development of Midrash in comparison with the earlier amoraic collections (\*Genesis Rabba, \*Leviticus Rabba). It is possible that various versions circulated throughout the Middle Ages and that the text was not fixed until its first printing in the 19th century. CH

**Petasisus** Tiberius Petasisus, usurper against \*Leo III after 727. He was opposed by Pope \*Gregory II and killed by \*Eutychius, \*Exarch of Ravenna. RCW *PBE*, Tiberios 10.

*PmbZ* 8492.

Brubaker and Haldon, *Iconoclast: History*, 83.

**Peter** Roman general. Born in Persian \*Arzanene, Peter was captured in 504 and made secretary to the future \*Justin I. In 526/8 he served in \*Lazica. The Persians defeated him in 541 near \*Nisibis and again in 543 at the Battle of \*Anglon. OPN *PLRE* II Petrus 27.

Greatrex, *RPW* 140–2, 144–6.

**Peter** \*Senator of \*Constantinople, kinsman of both the Emperor \*Anastasius I and \*Peter the Patrician. His \*Miaphysite loyalties kept him from office during the persecution of \*Justin II, but in 576 he went on an embassy to Persia. OPN *PLRE* III, Petrus 17.

**Peter** Brother and \*Curopalates of the Emperor \*Maurice. Under \*Tiberius they visited \*Theodore of \*Sykeon together (*VTheodSyk* 54). His effectiveness as \*Magister Militum in \*Thrace in 594 is underestimated by \*Theophylact Simocatta. In 602 a \*dream warned him about the mutiny against Maurice of the army in Thrace. \*Phocas executed him. OPN *PLRE* III, Petrus 55.  
Whitby, *Maurice*.

**Peter I** (d. 311) Patriarch of \*Alexandria, traditionally reckoned seventeenth \*bishop of the see. Because of his death towards the end of the Great \*Persecution, he is commonly called 'the last of the \*martyrs'. At Easter 306, Peter issued a *Canonical Letter*, fourteen canons on \*penance, which expound neither a theology of martyrdom nor an eschatological exalting of it, but offer lenient regulations for the reconciliation to the Church of *lapsi*, those who had given way to official requirements during the Great Persecution of the \*Christians. Peter himself, like \*Dionysius before him, had gone into hiding during the persecution. The rigorist \*Bishop \*Meletius of \*Lycopolis started a schism, ordaining clergy outside his own \*diocese and adopting a hard line towards *lapsi*.

Church tradition considers Peter an anti-\*Origenist but anti-Origenist passages attributed to him are most

likely later interpolations. A *Martyrdom of Saint Peter*, largely hagiographical, may contain at least reminiscences of fact; there is also an *Encomium* about Peter attributed to Alexander I, his successor as \*Patriarch of Alexandria. Writings attributed to Peter are extant in \*Greek, \*Latin, \*Syriac, \*Coptic, and \*Armenian, including the *Canonical Letter*. Two didactic-homiletic discourses are attributed to Peter: *Discourse on Riches*, which is a composite work joined with an *Encomium on the Archangel Michael*, and *On the Epiphany*. The discourse *Address to the Rich* within the *Discourse on Riches* is the one most likely to be authentically Peter's. TV *CoptEnc* (1991) s.n. Peter I, 1943–7 (D. B. Spanel, T. Vivian).

**WORKS:** *CPG* 1635–53:

**Peter Barsymes** \*Syrian holder of important public offices 542–62, possibly also earlier and probably beyond. He was \*consularis and \*patricius (542); twice \*Comes Sacrarum Largitionum (542, 547/8), and still holding office when \*Procopius was writing the *Anecdota*; twice \*Praefectus Praetorio in \*Oriens (543–6, 555–62), and honoured with a golden statue inscribed with a poem detailing his career (*AnthGr* XVI, 37). Procopius (*Anecd.* 22–3, 25) accuses him of corruption as an *argyromoiros* (\*banker/money changer). His financial skill resulted in \*Theodora promoting him and his promotion enabled him to defraud military pay, sell offices, exploit control of the \*Constantinople \*food supply, embezzle \*taxes, reduce pensions, depreciate \*gold \*coins, and profit from his establishment of a state \*silk monopoly (as well as being involved with sorcerers, \*demons, and \*Manichaeans). After his dismissal by \*Justinian I, Theodora arranged his almost immediate reappointment. His palatial house was burned by \*Blues in 562 but later given by the \*Emperor \*Maurice to Maurice's sister. RDS *PLRE* III, Petrus 9.

**Peter Chrysologus** (c.400–450) \*Bishop, in the second quarter of the 5th century, of Ravenna, then residence of the Western \*emperors and of the \*Empress \*Galla Placidia, who supported Peter's building projects. His numerous surviving \*sermons indicate the

pattern and theology of Christian \*feasts and seasons and of the liturgical \*Bible lectionary. In 448 the Archimandrite \*Eutyches wrote to influential bishops seeking support after a synod at \*Constantinople condemned his Christology; Peter Chrysologus' reply survives (as *ep.* 25 among the \*letters of \*Leo the Great). **Peter of Callinicum** (d. 591) \*Syriac Orthodox (\*Miaphysite) \*Patriarch of \*Antioch from 577/8 or 581 to 591, elected at a synod at the \*monastery of Mar Hanania (\*Deir Zafaran) while his controversial predecessor, Paul of Bet Ukkame, was still alive in \*Constantinople.

Paul's patriarchate had been contentious; \*Jacob Burd'oyo had twice tried to replace Paul with Peter, but Peter had refused. Peter's own patriarchate was also stormy. On a visit to \*Alexandria two of his learned companions defected to the Chalcedonians (\*Melkites). Peter's conflict with Damian, Miaphysite Patriarch of \*Alexandria (r. 576–605), over Trinitarian theology, starting c.585, caused a schism lasting until 616.

Peter apparently wrote works in both \*Greek and \*Syriac; but extant writings attributed to him are preserved only in Syriac. They include a \*sermon on the Crucifixion, a series of works written against Tritheists, the (partial) text of his refutation of Damian, a \*letter to the \*bishops of \*Mesopotamia, fragments of a work written against John Barbur, and an anaphora. JT *GEDSH s.v.* Peter of Kallinikos, 332 (Wickham).

**Peter the Fuller** (d. 489) \*Miaphysite \*Patriarch of \*Antioch (469, 470/1, 475–7, 485–9) who opposed the Christological doctrine of the \*Council of \*Chalcedon. General coverage of his career is provided by \*Theodore Lector (390–445). Peter was formerly among the \*Acoemeti, the Sleepless Monks, a Chalcedonian community in \*Constantinople, until personal and doctrinal disagreements prompted his embrace of Miaphysitism. In 469, he ousted Martyrius as Patriarch of Antioch and secured his own election by raising suspicions of \*Nestorianism (Theodore Lector, 390). To promote Miaphysitism, he inserted the phrase, 'Who was crucified for us', after the opening of the \*prayer called the \*Trisagion, 'Holy God, Holy Mighty, Holy Immortal, have mercy on us' (Theodore Lector, 427; \*Evagrius, *HE* III, 44; *Life of \*John the Almsgiver*, 5). Chalcedonians rejected the phrase as implying that God had suffered on the Cross. The \*Emperor \*Leo II restored Martyrius and deposed Peter, exiling him to \*Egypt. Peter sought refuge with the Acoemeti in Constantinople until \*Basiliscus restored him as Patriarch of Antioch in 475. He appointed anti-Chalcedonian bishops throughout \*Syria until shortly after Basiliscus fell from power in 476. The Emperor \*Zeno restored Peter as Patriarch of Antioch after he signed the \**Henoticon* in 485 (Evagrius, *HE* III, 16; \*Zacharias Rhetor, V, 9c). Despite condemnation and anathema by a Roman synod (485), he held the see until his death (489). SW

**Peter the Iberian** (c.417–491, \*Bishop of \*Maiuma from 451/2) A leading figure in monastic circles in \*Palestine, a prominent anti-Chalcedonian, and the hero of a colourful and circumstantial *Life* by \*John Rufus (*VPetrIber*; *BHO* 955). He was born, as Nabarnugius, probably in 417 (though possibly 412, and earlier thought to be 409) into a royal family in Caucasian \*Iberia and sent as a hostage to \*Constantinople at the age of 12, where he grew up in \*court circles close to the family of \*Theodosius II. He came to feel the pull of \*asceticism, fled the court when he was about 20, and made his way to \*Jerusalem, which he reached in 437 or 438, whereupon he took the monastic habit and was given the name Peter.

Peter is best known for the leading role he took in the opposition to the \*Council of \*Chalcedon. When \*Juvenal, \*Patriarch of Jerusalem, tried to return to Palestine after the end of the council, he faced widespread fury from the Palestinian monks. Peter was one of the monastic leaders who met him to voice their protests (John Rufus, *Plerophoriae*, 10 and 56). It appears that Peter was able to wield his authority as a former associate of the imperial family to protect the monk \*Theodosius of Jerusalem, who was the effective leader

of the rebellion. Theodosius, installed as Patriarch by the rebellious monks in Jerusalem, consecrated Peter as Bishop of Maiuma. When the rebellion was crushed after twenty months (\*Theophanes, AM 5945), he fled to \*Egypt. After news of the death of the Emperor \*Marcian reached Egypt, Peter became one of the two bishops who consecrated \*Timothy II Aelurus as Patriarch of \*Alexandria. He spent the latter years of his life in secure but discreet monastic retirement back in Palestine, where he died 'around 80 years of age' at the end of 491 (John Rufus, *VPetrIber*, 145 Raabe). PMP PLRE I, Petrus 13.

**Peter the Patrician** \*Magister Officiorum 539–65, diplomat and historian. Born at \*Thessalonica, Peter became an advocate before serving as an ambassador to the \*Ostrogothic court in \*Italy, where he was held hostage from 536 to 539. Upon his return to \*Constantinople he was made Magister Officiorum, a post he held until his death in 565. He was active in \*diplomacy with the \*Persian Empire that continued through the 550s and bore fruit finally in the \*Fifty Years Peace of 561–2; in the course of these talks he travelled several times to Persia. He is accused by \*Procopius (*Anecd.* 24, 22–3) of venality, but \*John Lydus (*Mag.* 3, 26) is more positive; both agree on his mildness.

Peter composed three works, of which fragments survive. One was an account of the negotiations with Persia that led to the peace of 561–2, which were in turn used by \*Menander Protector for his *History* (fr. 6, 2). Another concerned administrative matters, including the bureau of the Magister Officiorum; it recounted the protocol of imperial \*ceremony and was later cited extensively in the *De Caeremoniis* of \*Constantine VII Porphyrogenitus (I, 84–95). The third was a Roman history that drew heavily on earlier sources, such as Dio Cassius, \*Dexippus, and \*Eunapius; only fragments remain. GGB

Barnes, *Ammianus Marcellinus*, 12–16.

**petitions** (Lat. *libelli*) Formal declarations, statements of intent or requests for help, usually on a legal matter, from a private individual or group or a civic, tribal, or community entity to a local, provincial, or ecclesiastical official or an \*emperor, and occasionally from soldiers to a superior officer. Officials, embassies, or \*cities sent *epistulae*, and the legislative proposals sent by officials to emperors were termed \**suggestiones*. Extant petitions, preserved in \*inscriptions and \*papyri, often display considerable rhetorical skill and legal knowledge, suggesting professional composition, probably by \*notaries. Officials and emperors received petitioners (or their representatives) both at \*court and on the move; willingness to welcome them gave emperors a positive reputation. \*Fees or connections (\**gratia*) eased the processing of petitions, as did gifts (\**sportulae*). Petitions were answered by \*rescripts. Those from the imperial court, which were composed by emperors themselves or their \*Magister Libellorum, were partially collected at least twice, in the \*Gregorian and \*Hermogenianic Codes, though the petitions which prompted them were omitted. **Petra** An important strategic town and fort located on the eastern Black Sea coast, usually identified with the modern Tsikhisdziri 29 km (18 miles) north of Batumi; others believe it lay elsewhere. Petra was an important fort in the kingdom of \*Lazica, but from the time of \*Justinian I it was under Roman, and then Persian control. Combined Roman and Lazican forces won a series of victories against a large Persian \*army and in 551 finally demolished its fortifications. The importance of Petra in these wars is made plain by \*Procopius (*Persian*, II, 15, 9–13; II, 17, 13–28 and II, 29–30) and \*Agathias (III, 2, 6–7). Later fortifications at Tsikhisdziri belong to the period of \*Justinian II, and a \*brickstamp bearing the fragmentary \*inscription *Vexillatio Fasiana* was probably made at \*Phasis.

Excavations at Tsikhisdziri have also produced a large cistern, a gate with a relief \*cross, a small church and a \*basilica with \*mosaic floors, two Roman \*baths, and more than 300 graves of the Hellenistic and Roman periods. Most coins from Tsikhisdziri belong to the Late Roman period. The so-called Tsikhisdziri Hoard of the late 3rd century, now in the Hermitage, consists of \*silver and \*jewellery, including an intaglio portrait of Lucius Verus. MO

Braund, *Georgia*, 187–9, 290–1, 293–9.

**Petra of Arabia** An important ancient \*city in southern Jordan, formerly capital of the Nabataean kingdom, incorporated into the province of \*Arabia in AD 106, and later into Syria Palaestina and \*Palaestina Tertia. The first attested\* bishop is from the late 4th century, and Petra became a \*metropolitan see sometime after 451.

More than 150 carbonized \*papyrus scrolls, the \*Petra papyri, have been recovered from a storeroom adjoining a 6th-century church. They preserve much information relating to private affairs, disputes within the Church in the 5th century, and tensions between Christians and pagans. The scrolls and archaeological excavations both reveal a gradual decline starting in the mid-4th century, which can be attributed to a number of \*earthquakes that struck the region down to the mid-8th century. However, Petra did continue to function as a provincial capital into the 6th century, retaining its own functioning municipal magistrates, and a post-curial government dominated by local notables, clergy, and landlords. There is similarly no evidence of disruption during the periods of the \*Persian invasion of the early 7th century or of the \*Arab invaion, but in the mid-7th century Petra lost its standing as a regional capital and its rank as a metropolitan see, and the city is not named in the \*Umayyad sources. Z. T. Fiema, 'Late-Antique Petra and its Hinterland: Recent Research and New Interpretations', in J. H. Humphrey, ed., *The Roman and Byzantine Near East*, vol. 2 (JRA Supplementary Series vol. 49, 2002), 191–252.

**Petra Papyri** A dossier of carbonized papyri (P. Petra) discovered in the ruins of a church in Petra (Jordan) in 1993. The documents published so far date from 537 to 593 and mainly relate to the family of a local clergyman, Theodoros, son of Obodianos. RM

A further volume is in the press.

**Petronii** Family of the senatorial \*aristocracy. Its late antique origins date back to Petronius Annianus, \*consul in 314. \*Marriage alliances and the occupation of high office raised the family's standing, exemplified by the career of Sextus \*Petronius Probus. The family achieved important secular honours in the late 4th/early 5th centuries, and women like \*Demetrias were influential in Christian circles.

Petronii were also famous for their literary skills, most notably \*Proba, her father, and her brother. The name of Valerius Faltonius Adelfius, \*consul in 451, suggests a family link; the same is true of Anicius \*Olybrius, proclaimed \*emperor in \*Rome in 472. The family remained influential in the \*Ostrogothic period, reaching the consulship in 481 (Placidus) and 489 (Probinus). CARM

*PLRE I* (1971), 690–1; *PLRE II* (1980), 862–4.

S. Orlandi, *Epigrafia anfiteatrale dell'Occidente Romano, VI. Roma* (2004).

**Petronius Maximus** (c.393–455) Western \*emperor 455. A leading senatorial \*aristocrat, he held various senior administrative posts, including \*Praefectus Urbi at \*Rome and \*Praefectus Praetorio, and was \*consul in 433 and 443. He helped orchestrate the assassination of \*Aëtius (454) and then that of \*Valentinian III (16 March 455), after which he declared himself emperor. He died on 31 May while fleeing Rome during the \*Vandal attack on the city, when a mob seized and dismembered him. ADL

*PLRE II*, Maximus 22.

**Petronius Probus, Sextus** (c.328–388) Roman \*senator, \*consul (371), and four times \*Praefectus Praetorio of \*Italy and \*Illyricum (364, 368–75). During his prefecture, the future \*Bishop \*Ambrose of \*Milan was one of his staff of advisers; when Probus made Ambrose a provincial \*governor he said, 'Go, rule like a bishop, not a governor' (*VAmbrosii* 5 and 8). Although a member of the \*family of the \*Petronii, Probus was also considered one of the \*Anicii after he married Anicia Faltonia Proba (*CIL VI*, 1753). The couple had four children, three of whom became consuls. Unlike most contemporary senatorial \*aristocrats, Probus held numerous offices in the imperial service and became one of the most powerful senators of his time, attracting the animosity of \*Ammianus (XXVII, 22), \*Jerome, and \*Symmachus, who had earlier been his correspondent (*epp.* I, 56–61). Probus was also a literary \*patron, being praised by \*Ausonius and \*Avienus, who dedicated to him his *Ora Maritima*. He was a zealous Christian, and the virgin \*Demetrias was his granddaughter. According to Maffeo Vegio, who,

c.1455–7, transcribed his lost \*epitaph, he was buried at the Vatican (*CIL* VI, 1756b; *ILCV* 63). DN

**Phaeno** \*Copper mines in the Wadi Faynan, between the southern end of the Dead Sea and the \*city of \*Petra. \*Eusebius mentions Christians being condemned to labour there during the Great \*Persecution in the early 4th century (*MartPal* 7, 8, 13); 40 of them were beheaded and two Egyptian \*bishops burnt to death (*HE* VIII, 13, 5). \*Valens exiled there Christians whose Nicene loyalties offended him (\*Theodoret, *HE* IV, 22). Recent archaeological exploration has revealed evidence of extensive \*mining and ore processing. Analysis of the human remains suggests that many of the labourers were local people. KETB

M. A. Perry et al., 'An Isotopic Perspective on the Transport of Byzantine Mining Camp Laborers into Southwestern Jordan', *AJPhysAnth* 140 (2009), 429–41.

**Pharan (Faran)** Name for a wilderness in the \*Sinai Peninsula, with anchorites at the beginning of the 5th century, and an oasis \*city, with a \*bishop by the late 4th/early 5th century, visited by \*Egeria (5–6), described by \*Theodosius (27), and the \*Piacenza Pilgrim (40). It should not be confused with the lavra of Pharan founded by S. Chariton in the \*Judaean Wilderness c. AD 330. TV

**pharmacy** By the end of Antiquity, ancient pharmacy had become an extremely rich area of therapeutics. New remedies kept flowing in from the East, a movement that started in the Hellenistic period with Alexander's conquests. In \*Gaul and further north locally sourced remedies were added to the common pharmacy, to substitute for expensive, rare ingredients from the Mediterranean basin. Late Antique pharmacy was thus rich and diverse, but also deeply rooted in local resources and customs.

The pharmacy of the Mediterranean world included several hundred 'simple' herbal, mineral, and animal remedies (a distinction followed by \*Galen, among others). These could be combined, and therefore offered endless possibilities for mixtures ('compound' drugs). The knowledge and use of those remedies was essentially based on empirical experience, but was also supported by a long intellectual tradition.

The practical function of simple and compound remedies prevailed: and Late Antiquity saw the compilation

of herbals (sometimes illustrated) and collections of *euporista* (easy-to-find remedies). At the same time, classics of ancient pharmacology were duly copied and translated, as demonstrated by the manuscript history of \*Dioscorides' *De Materia Medica* (and of the other works attributed to him). Galen's works *On Simple Drugs*, *On Compound Drugs (According to Kinds)*, and *According to Places*, *On Antidotes*, and *On Theriac* never formed part of the 'Alexandrian Canon' but were partly translated into \*Syriac in Late Antiquity. Galen's pharmacological works were widely used in the great medical compilations of \*Oribasius, \*Aëtius of \*Amida, and \*Paul of Aegina.

There is no conclusive evidence for a late antique transmission of Galen's pharmacological works in \*Latin. Pharmacy was, however, widely available in the Latin language through translations from the \*Greek, as well as through works by Cassius \*Felix, \*Marcellus, Caelius \*Aurelianus, and many others.

Pharmacy was not a strictly medical field. Traditional herbal remedies were sometimes suspected of being the work of \*demons. However, sources suggest a widespread knowledge of many of the most common simple medicines. Among the pharmaceutical authorities cited, including in Christian literature, were Hippocrates, Dioscorides, and Galen, and also Democritus (also known as Bolos of Mendes), who combined pharmacy with \*astrology and offered plant remedies on the basis of their alleged connections with planets and horoscopes (cf. e.g. \*Sophronius, *Miracles of Ss. Cyrus and John*, 13, 2; 30, 4; 30, 12; 43, 3). Indeed, pharmacy was sometimes considered more effective when combined with rituals and incantations, or with divine prescription in healing shrines, both Christian and non-Christian. CP

**Philadelphia of Arabia** See AMMAN.

**Philae** Situated on an island 4 km (2.5 miles) to the south of Aswan in the First \*Nile Cataract, on the border between Ancient \*Egypt and \*Nubia, Philae possessed one of the most famous \*temples of \*Isis, which is also known as the last fully functioning major temple of Egypt. After the withdrawal of the southern Egyptian frontier to the Cataract in AD 298 (\*Procopius, *Persian* I, 19, 27–37), a legion was garrisoned on the east bank of the Nile opposite Philae, the Legio I Maximiana (*Not. Dig.* [or.] 31, 37), which formed the largest military unit in the region. The 4th- and 5th-century \*inscriptions from the island attest the continuity of the ancient Egyptian cults, supported by the \*Blemmyes and \*Nobades, until c.456/7.

Meanwhile Philae received its own episcopal see, probably in c.330 as at \*Syene, and had churches by 425–50 (P.Leid. Z 10–11). The first \*bishop, Macedonius, who is attested in 343 (\*Athanasius, *Apologia Secunda*, 49, 3), also figures, together with his three successors, in the 6th-century \*Coptic *Life of Aaron*, which tells legendary stories about the formative period of Christian Philae. Procopius (*Persian*, I, 19, 36–7)

states that \*Justinian I ordered the destruction of the temples of Philae in 535–7, but this cannot have been more than a symbolic closure. Slightly later, the temple of Isis was turned into a church of S. Stephen under Bishop Theodore (*Inscr. Philae*, II 200–4), who also played an important part in the first mission to Nubia in 536–48 (\*John of \*Ephesus, *HE* III, 4, 6–7). Philae became a Christian \*pilgrimage site c.600. JHFD

Dijkstra, *Philae*.

**Philagrius** Senior administrator under \*Constantine I and \*Constantius II. He came from \*Cappadocia, studied at \*Athens, and was \*Praefectus of \*Egypt 334–6, and again in 338–40 when, \*Athanasius averred, he was responsible for Athanasius' second exile. In 343 he was among the imperial officials whose presence affected deliberations at the \*Council of \*Serdica, and he was \*Vicarius of \*Pontica when Paul of \*Constantinople, an exiled supporter of Athanasius, was strangled in \*Cappadocia in 350/1. **Philaster of Brescia** (355/74–after 387) \*Bishop of \*Brescia (from before 381) and heresiologist. An active opponent of \*Homoean \*Arianism, Philaster composed his *Diversarum Haereseon Liber* between 380 and 390. Dependent on Irenaeus and \*Epiphanius, Philaster's handbook of \*heresies was used by later authors, including \*Augustine and \*Gregory the Great. Augustine (*ep.* 222, 2), however, regarded Philaster as far less learned than Epiphanius. Philaster's handbook listed 156 'heresies' (28 from pre-Christian times and 128 from the Christian era); many, as Augustine noted, were not 'heresies' at all (*Haer.* 80). His life is known mostly through the *Sermo de Vita et Obitu Beati Filastrii* of \*Gaudentius of Brescia (*Sermon*, 21). DGH

**Philippi** \*City of \*Macedonia Prima with a strong Roman tradition, where the memory of the Apostle Paul remained alive. The city preserved the \*street grid of its Hippodamian town plan and its initial size and shape. The cardo maximus (\*Via Egnatia) divided the city into an upper hilly and a lower plain section.

North of the Via Egnatia, the three-aisled \*Basilica A with transept (5th cent.) and atrium with a splendid phiale incorporated a \*cistern known from the 19th century as the 'Prison of St. Paul'. To the west lies the three-aisled Basilica C (5th cent.).

South of the Via Egnatia the Agora (2nd cent. AD.) continued to function with important 6th-century alterations. South of the Agora were the cardo 'Commercial Road' with shops and workshops on both sides, and a domed three-aisle basilica (6th cent.) on the site of the Gymnasium.

East of the Agora, a Christian assembly hall dedicated to S. Paul was built after 313 within the enclosure of a Hellenistic temple-shaped herōon which overlay an underground Macedonian tomb. Both sanctuaries were operating in the 4th century. At the site of the Christian assembly hall, an octagonal church with a \*baptistry was built c.400 with a \*hostel for pilgrims and a \*bath-house. The Macedonian tomb was preserved at the centre of the annexes to the Octagon as a funerary cult site associated with S. Paul. Holy water welled up from a \*marble \*sarcophagus. East of the Octagon was the \*bishop's residence. Further east a part of the city with houses and workshops has been excavated. The theatre (4th cent. BC) was in use until the 4th century AD. Christian \*inscriptions have been found in sanctuaries of various deities in old quarry pits.

The large eastern necropolis with its cemetery basilicas was employed for Christian burials. In the western necropolis, where there was a \*synagogue, only \*pagan burial monuments have been excavated. In the 6th century AD, the \*letters of the \*Abgar legend were inscribed at the eastern gate of the city, together with an invocation to Christ to protect the city. Philippi was destroyed by \*earthquakes in the early 7th century, and confined to a small fortified settlement in the western part of the lower city and the acropolis. ChB

**Philippicus Bardanes** (d. 20 January 714/15) \*Emperor 711–13. Son of an \*Armenian \*patri-cius, his rise to the throne was apparently foretold by a

monk, who claimed that if Bardanes overturned the Third \*Council of \*Constantinople (the Sixth Œcumenical Council) and returned to \*Monotheletism his reign would be long and prosperous. He was exiled to Cephalonia in 702, recalled, and in 710 dispatched to \*Cherson alongside the punitive expedition sent by \*Justinian II. There in 711 he was proclaimed emperor, and, supported by rebellious troops and the \*Khazars, in November seized \*Constantinople. After deposing Cyrus, \*Patriarch of Constantinople, he convened a council that endorsed Monotheletism. However, the \*Bulgars were harassing \*Thrace, while the \*Arabs had captured \*Antioch of \*Pisidia in 713. These reverses probably precipitated the coup on 3 June 713, when Philippicus was deposed and \*exiled. MTGH PBE, Philippikos 1.

**philosophers and philosophy** Philosophy remained a vital element of educational and cultural life for the whole of Late Antiquity, but the use of the term and the social roles played by philosophers evolved significantly over the period. Many well-established philosophical traditions and social functions available to philosophers in the Roman world at the beginning of Late Antiquity had disappeared by the 6th century. Late Antiquity also saw the expansion of the philosophical curriculum to include a wide range of new materials and interpretations.

#### Nature of teaching

While Cynics, Stoics, and Peripatetics are still mentioned as late as the 6th century, the dominant form of Late Antique philosophical teaching was Platonism, which came to incorporate Aristotelian and Stoic elements as well as more esoteric traditions such as those represented by the \*Chaldean Oracles. Philosophical \*schools took two forms. In major cities like \*Constantinople and \*Alexandria, philosophers continued to hold public professorial teaching \*chairs into the 6th century. In exchange for this public support, philosophers were expected to teach publicly and they agreed

to a level of supervision of their activities which restricted their ability to give private instruction. These restrictions could potentially extend to curricular matters. In the later 5th century, public teachers in Alexandria seem to have agreed to limit some elements of their teaching in response to public pressure. Other places (such as \*Apamea in the 4th century and \*Athens in the 5th and early 6th centuries) saw private philosophical circles thrive amidst a climate that invited less scrutiny and more curricular freedom.

### *Philosophy in practice*

Members of Late Antique philosophical circles shared common religious concerns and doctrinal ties, but they also belonged to intellectual communities bound together by personal relationships. From the time of the Old Academy, Platonists had represented relationships between teachers and their students as resembling those within a \*family. Teachers were their pupils' intellectual fathers. The best students were given standing invitations to dinner at their teacher's house and, on occasion, even asked to marry their teacher's daughter. \*Proclus and his teacher \*Syrianus even shared a tomb. These intense personal ties encouraged students to devote themselves to the school, learn its doctrines, and live according to its principles. Philosophers were expected to exemplify philosophical ideas in their actions and, if they did not, they could expect criticism from their teachers or fellow students. The word *philosophia* indicated a way of life (sometimes even the monastic way of life) as well as a body of learning.

### *Social roles*

The unique combination of wisdom and principled action often thought characteristic of philosophers permitted them to claim a distinctive form of free speech (\**parrhesia*). Such 4th-century philosophers as \*Sopater and \*Maximus of Ephesus translated this privilege into advisory roles at the courts of \*Constantine I and \*Julian respectively. The series of imperial \*panegyrics of \*emperors composed by \*Themistius were predicated on the notion that their sincerity could not be questioned because the author's philosophical training ensured that he only spoke the truth. Philosophers continued to play advisory roles under 5th-century Roman political leaders as with Marcellinus of \*Dalmatia and the Emperor \*Anthemius, but their influence diminished over time. By the 6th century, \*Simplicius suggested that philosophers should continue to advise those in power, but they ought to flee if the actions of tyrants imperilled their ability to live philosophically, a principle that he and six colleagues put into practice when they left the Roman Empire for the \*court of the Persian Shah \*Khosrow I (though they soon came

back). Few other philosophers went to such extremes, but 5th- and 6th-century Platonists did have a tendency to withdraw from public activities in ways that troubled some contemporaries (e.g. \*Damascius, *VI* *Isidori*, 124).

### *Philosophy and Christianity*

Christianity played a significant role in the social marginalization of pagan philosophers, but interest in philosophy itself did not diminish. Even as pagan teachers became less involved in public life, Christian students continued to study under them in large numbers. This posed no significant problem most of the time, but some Christians did object to certain philosophical doctrines and what they perceived as an uncongenial religious atmosphere. This is most apparent in authors from Alexandria and \*Gaza from the late 5th and early 6th century such as \*Zacharias Rhetor and \*Aeneas of Gaza, whose dialogues the *Ammonius* and the *Theophrastus* both offer refutations of points commonly argued by 5th-century Platonists. Christian thinkers frequently developed philosophical teaching in a Christian direction. \*Basil of \*Caesarea and \*John Philoponus merged Christian and philosophical \*cosmology, while in the works of \*Evagrius Ponticus and \*Dionysius the Pseudo-Areopagite philosophical psychology and metaphysics colaesced with Christian spiritual wisdom. Even more exotic blending could be found in \*saints' lives, like the *Life of \*Antony the Great* and \*Theodoret's *Religious History*, two works that term Christian ascetics 'philosophers' and describe monks performing some of the social and political functions formerly associated with philosophers. It is not clear how much hagiography reflects wider contemporary ideas about the nature of philosophy. What it does indicate is less a decline in academic philosophy and more that the category of philosopher had come to include new types of people. EW

**Philostorgius** (fl. c.430) Author of a *Church History* in twelve books that covered the period 315–425 and was published shortly after the last events it recorded. The text is extant only in fragments (some of them substantial) and in a summary by \*Photius (40). Byzantine historians and hagiographers used Philostorgius regularly, so we have a relatively good idea of the content of the *History*.

Philostorgius was originally from \*Cappadocia but lived in \*Constantinople. He was a follower of \*Eunomius and presents history from this perspective. By the time Philostorgius wrote, imperial legislation and the sect's own theological strictness had reduced the Eunomians, who never had much popular backing, to a steadily diminishing hard core. As a consequence, Philostorgius' *History* is a story of the progressive isolation of the pure in an ocean of wickedness. It suggests that \*Constantine I held the same views as the Eunomians and claims the entire early \*Arian movement for Eunomianism. Moral and theological ineptitude among other people is highlighted as the cause for the progressive shrinking of the Eunomians, fully consumed by the reign of \*Theodosius I. Eunomius himself and the \*Anomoean Aetius of \*Antioch are the obvious heroes of the narrative, but the activities of Theophilus

the Indian, especially his missionary work in southern \*Arabia, are also emphasized. The last three books strike a clearly apocalyptic note and implicitly identify the Eunomians with the diminishing group of the pure who still adhere to God's law, and whose ultimate salvation is depicted in the book of Daniel and the books of the Maccabees.

Philostorgius often gives unique versions of events, contrasting with those in the *Church Histories* of \*Socrates, \*Sozomen, and \*Theodoret. His accounts should be considered with caution, but he did have access to numerous now lost sources, narrative, and documentary, especially those from a Eunomian background. Like the other church historians, he also used secular works of history: he is particularly important as a source for the *History* of \*Olympiodorus of \*Thebes, and he probably also used \*Eunapius. Like historians in the classical tradition, Philostorgius displays, in various digressions, a remarkable interest in \*medicine, \*astronomy, and natural history. Although opposed to the Christology adopted under Theodosius I, Philostorgius did not develop a view of the relationship between Church and state different from those of the historians who supported it; he approved of imperial intervention in church affairs so long as it served Eunomian theology. **Philostrati** Family of Greek \*sophists active in the late 2nd and early 3rd centuries. Several works are attributed to an author named Philostratus: the *Life* of the \*miracle-working \*philosopher \*Apollonius of \*Tyana, the *Lives of the Sophists*, two sets of descriptions of paintings entitled *Eikones*, a set of \*letters, a treatise on gymnastics, a \*dialogue on Nero, and a fictional dialogue, the *Heroikos*, purporting to give the true story of the Trojan War. It is possible that all these works, apart from the second set of *Eikones*, are attributable to the same man. In the *Lives of the Sophists* Philostratus coined the term \*Second Sophistic, and left sketches of the most prominent sophists for later

generations. The *Life of Apollonius* became an important source for anti-Christian polemicists such as \*Porphyry in *Against the Christians*, and \*Hierocles, who was in turn attacked by \*Lactantius and in Eusebius *Adversus Hieroclem*. RW

**philotimia** Literally, 'love of honour' (Gk. *time*), *philotimia* encompasses the political and social competition that drove the culture of Graeco-Roman \*cities in Late Antiquity. Traditional forms of civic competition and \*euergetism in \*cities persisted—\*Augustine saw 'love of being praised' as the principal characteristic of the 'city of this world'. Enthusiasm for civic office, however, declined in Late Antiquity as burdens on \*city councillors rose and greater power emanated from private members of the senatorial \*aristocracy, retired imperial officials (\**honorati*), and high functionaries in the imperial \*administration. The interpenetration of the senatorial and civic \*aristocracies meant that there were more men whose privileges included exemption from duties and liturgies in local cities. \*Patronage and power could be exercised by great men (*potentiores*) independently of civic institutions, and competition among the civic aristocracy at the highest level aimed at offices and honours beyond the city, whether in the imperial administration or in the Christian Church. Churches and private palaces succeeded civic amenities as the favoured objects of ostentatious building. JND

**Philoxenus of Mabbug** (c.445–523) \*Miaphysite \*bishop, theologian, and spiritual writer. Born Joseph to Christian parents in Beth Garmai, he was educated at the School of \*Edessa. He spent time in \*Antioch and visited \*Constantinople in 484. At ordination he took the \*Syriac name of Aksenaya ('the stranger'), and then the \*Greek name Philoxenus ('lover of strangers', 'hospitable one') upon consecration as Bishop of Mabbug (\*Hierapolis, north-east of \*Antioch) in 485. Philoxenus became a leader of the anti-Chalcedonian movement which flourished under the protection of the \*Emperor \*Anastasius I, and he collaborated with

\*Severus, \*Patriarch of Antioch (r. 512–19). When \*Justin I became emperor (518), Miaphysites lost imperial favour; Philoxenus was evicted from his see in 519 and died in \*exile in 523.

Philoxenus wrote dogmatic and polemical treatises, commentaries on the Gospels, and numerous \*letters. The ten *Memre against Habib* date from before his episcopate. He often addressed monastic audiences on aspects of the Christological controversies. In his last \*letter, *To the Monks at Senun*, he gives the most comprehensive exposition of his anti-Chalcedonian position, which was influenced by the theology of \*Cyril of \*Alexandria. Philoxenus commissioned a new \*translation of the New Testament into Syriac from Greek, from \*chorepiscopus Polycarpus (507/8). This 'Philoxenian' version is now lost. His most widely read works were \*sermons and treatises on the spiritual and monastic life. The *Discourses*, a large collection of thirteen \**memre*, instruct novice monks on the fundamentals of the monastic and ascetical life, using an Evagrian perspective. The *Letter to Patricius of Edessa* further demonstrates his understanding and interpretation of the monastic theology of \*Evagrius Ponticus.

Philoxenus was commemorated in the \*Syrian Orthodox \*monasteries of \*Tur 'Abdin, especially at the Monastery of Mar \*Gabriel at Qartmin, where in the 13th century the monk Eli wrote a verse \*panegyric of Philoxenus.

**Phocaea** (mod. Foça, Turkey) \*City in the \*province of \*Asia, on the coast north of \*Smyrna, with a \*bishop suffragan to \*Ephesus from at least the mid-4th century. From the 4th to the late 7th century, the city was the chief production site of \*Phocean Red Slip Ware; a large workshop area (20–30 ha, c.50–75 acres) has been identified to the north-east of the urban centre.

Kelly, *Ruling the Later Roman Empire*, 53–62.

**Phocas** (c.547–610) \*Emperor 602–10. Phocas was a soldier serving in \*Thrace during \*Maurice's campaigns against the \*Avars. When in 602 Maurice ordered the troops to winter north of the Danube, they mutinied, proclaimed Phocas their leader, and marched on \*Constantinople. Maurice fled, and on 23 November Phocas was crowned \*emperor. What exactly happened next is hard to ascertain given that our sources were written after Phocas' eventual defeat and are highly critical. It is certain that Maurice and most of his sons were quickly seized and executed, along with several high-ranking bureaucrats and generals. However, this bloodletting

did not dampen opposition. In 603 the general \*Narses revolted, establishing himself at \*Edessa. More dangerously, a putative son of Maurice, \*Theodosius, appeared at the court of \*Khosrow II of Persia asking for his aid. Whatever the truth, Khosrow speedily took the opportunity to invade the divided Empire in 603, and by the time of Phocas' death had overrun Rome's eastern defences.

Phocas, however, was not without allies. He enjoyed significant support from elements in the \*army, the \*circus factions, in particular the \*Blues, and the population of Constantinople. There was staunch support in \*Rome, where he granted the Church permission to convert the \*Pantheon into a church, and a column in the \*Forum was rededicated to Phocas. Phocas' chief foes were in the \*Senate. Successive plots were formulated, but were successfully crushed with accompanying purges, until eventually an alliance between the Senate and the Roman \*exarch in \*Africa, \*Heraclius the Elder, overthrew the regime. Openly rebelling in 608, by 609–10 the rebels had seized \*Egypt and cut Constantinople's supply lines. Then in 610 a \*fleet commanded by \*Heraclius the Younger sailed to the capital, landing on 3 October. Besieged, on 5 October Phocas was seized and delivered to Heraclius. He was immediately executed, his head was placed on a spike and paraded through the city, and Heraclius was proclaimed emperor.

**Phocean Red Slip Ware (Late Roman C)** Late Roman tableware. First classified as 'Late Roman C' at \*Antioch in 1948, J. W. Hayes's *Late Roman Pottery* later offered a typology and the name 'Phocean Red Slip Ware' (PRS), due to the identification of the principal production site at \*Phocaea (Foça, W. Turkey). Gryneon and probably \*Çandarlı were also producers. It was the direct successor to Çandarlı Ware (cf. Çandarlı form 4/PRS form 1).

Within its small repertoire of bowls and dishes (ten forms), the most common forms PRS 3 and 10 represent the gradual evolution of a single shape through the mid-5th to 7th centuries and are particularly useful as chronological indicators. Dish PRS 2 (late 4th to mid-5th cent.) bears stamps on its floor recalling those of \*African Red Slip Ware (palmettes, geometric motifs). Dish PRS 3 (mid-5th–mid-6th cent.) was initially stamped with similar designs, combined with rouletting on the rim and floor, but these gave way to simpler patterns, then single stamps in a characteristic rendition of \*animal and human figures, as well as \*crosses.

One of the most common tablewares in the Roman East, it is also a regular but scarcer find in the West, especially on coastal sites. Exceptional quantities in Alicante and Vigo in \*Spain mark stages of an Atlantic supply route that reached south-west \*Britain, where it is notably common in the 'Arthurian', post-Roman sites of \*Tintagel and \*South Cadbury. ### Phoenice, Phoenice Libani, and Augusta Libanensis

\*Provinces in the \*Dioecesis of \*Oriens, formed from the former Syria Phoenice. The \*Verona List names two provinces, Phoenice and Augusta Libanensis. The lists of \*bishops at the \*Council of \*Nicaea and \*Ammianus (XIV, 8, 9–10) have a single province called Phoenice, suggesting perhaps that the separate Augusta Libanensis was short-lived, or that its inclusion in the sole manuscript of the *Verona List* is an error. The \**Notitia Dignitatum* lists Phoenice governed by a \*Consularis (or. 1, 60 and 2, 10) and Phoenice Libani under a \*Praeses (or. 1, 89 and 2, 18). Phoenice Prima, also called Phoenice Paralia and Phoenice Maritima, extended along the Phoenician coast and had its metropolis at \*Tyre, with \*Beirut as joint metropolis from 448/50 (*CJust* XI, 22, 1). Phoenice Libani, also called Phoenice Secunda, was administered from \*Damascus. PWMF

J. Sipilä, *The Reorganisation of Provincial Territories in Light of the Imperial Decision-Making Process: Late Roman Arabia and Tres Palaestinae as Case Studies* (2009).

**Phoenix** Title of a poem in 85 elegiac distichs recounting the death and resurrection of the fabulous bird of the same name. \*Gregory of \*Tours already names its author as \*Lactantius and, although occasionally questioned, the attribution has usually been accepted as correct. The poem contains a large descriptive element—of the home of the Phoenix in the grove of the \*Sun, the construction of its funeral pyre, and the brilliant appearance of the bird itself—and the author lingers particularly over the paradoxical emergence of life from death. Although the poem can be read in innocence of further levels of meaning, the language repeatedly suggests a Christian subtext. Most obviously the phoenix can represent the resurrected Christ or the salvation of redeemed humanity. MJR

ed. S. Brandt (CSEL 27, 1893), 135–47.

### Phoibammon, monasteries of

Two \*monasteries dedicated to one of the four saints called Phoibammon are known to have existed in the area of \*Thebes in Upper \*Egypt. The older one was established in a valley of the mountain, between \*Jeme (Medinet Habu) and \*Hermonthis (Armant). The second one was founded in the ruins of the Hatshepsut \*Temple (Deir el-Bahri) by \*Abraham, \*Bishop of Hermonthis, in the late 6th/early 7th century. Abraham could have been *æconomus* (steward) of the first monastery before he founded the second one. The documents of the Deir el-Bahri monastery (\*contracts, testaments, and donations, including child-donations) witness the many activities of the monastery in the 7th and 8th centuries. AFVD

**Photius** Talented but sickly son of \*Antonina, wife of \*Belisarius. From 535 he accompanied Belisarius in \*Italy and from 541 in \*Mesopotamia. He disentangled himself from his mother and \*Theodora by becoming a monk at \*Jerusalem, but under \*Justin II cruelly suppressed a

\*Samaritan and Jewish revolt. He probably died in 587/8.  
 \*Procopius thought him spiteful (*Anecd.* 1). OPN  
 PLRE III, Photius 2.

**Photius** \*Patriarch of \*Constantinople twice (858–67 and 877–86). Author of \*letters, \*sermons, commentaries, and theological treatises. He enjoyed the best possible education and had been the leading imperial secretary (Protoasekretis) and guard captain (Protospatharios). As patriarch he was a major figure in ecclesiastical and imperial life. For Late Antiquity, his most significant work (850s) is the *Bibliotheca* (or Myrobiblion) written in the 850s. This consists of 280 notices of varying length on individual authors he had read, especially historians. Some contain extensive extracts from an otherwise lost original (e.g. \*Olympiodorus). Most involve a summary account of an author taken from the biographical dictionary of \*Hesychius of \*Miletus, and comment on the scope and nature of the work and on the author's literary style and value. His *Lexicon* is also a valuable repository of information and texts.

**Phrygia** The ancient \*Anatolian region of Phrygia formed part of several \*provinces in Late Antiquity: Phrygia and Caria in the south, which was dissolved by the end of the 3rd century, Phrygia Prima, later known as Phrygia Salutaris, with its capital at \*Hierapolis, and Phrygia Secunda, later Phrygia Pacatiana, with its capital at Synnada. The two provinces are attested in the \*Verona List of 314. In the 4th century each province was governed by a \*Praeses, but the rank was later raised to that of a \*Consularis. In 535 \*Justinian I abolished the post of \*Vicarius of \*Dioecesis \*Asiana and combined it with that of a \*Comes in Phrygia Pacatiana (*NovJust* 8, 2).

Although they contained many small \*cities and bishoprics, the two Phrygias were characterized by agricultural and rural settlements. Christianity spread rapidly in the 2nd and 3rd centuries, and many towns and regions, including the \*imperial estates of the Upper \*Tembris Valley, may have had a majority of Christian

inhabitants before \*Constantine I. Many Phrygian Christians had beliefs and practices similar to those of \*Jews. They included Montanists (followers of the so-called Phrygian heresy), whose centre was at Pepuza, their 'new Jerusalem', in remote western Phrygia, \*Novatianists, and Quartodecimans, who celebrated \*Easter on 14 Nisan, the day of the Passover. Phrygia was rich in \*cattle, \*horses, and \*farming products, but disadvantaged by its landlocked location. \*Docimium in Phrygia Pacatiana had famous \*marble \*quarries, which were administered from Synnada.

**phylarch** (Gk. 'tribal ruler') Term which by the 4th century AD had become a title in East Roman administrative terminology given to Arabian chieftains (notably of the \*Kinda and \*Ghassanids) responsible for security and representing imperial interests in inner \*Arabia.

PAW

R. Hoyland, 'Arab Kings, Arab Tribes', in H. Cotton et al., ed., *From Hellenism to Islam: Cultural and Linguistic Change in the Roman Near East* (2009), 374–400.

Shahid, *BAFIC*.

**physiognomy and gait** Late Antiquity inherited from the Roman past, and particularly from the \*Second Sophistic, a sense that character could be discerned from a person's physical appearance, voice, and movements. \*Plotinus could spot a thief simply from the man's appearance (\*Porphyry, *VPlot* 11). \*Gregory of \*Nazianzus claimed a similar perspicacity; when he and the future \*Emperor Julian were fellow students at \*Athens, he already (so he claims) considered the young prince untrustworthy because he had shifty \*eyes, fidgeted constantly, laughed immoderately, and wheezed and snuffled as he spoke (*Oration* V, 23).

Such judgements were not mere abuse, but were rooted in a specific set of ideas about physiognomy initiated by Aristotle, sustained by a treatise of the 2nd-century \*Greek sophist Polemo (which survives, transmitted through \*Syriac, only in a 14th-century \*Arabic translation), and developed in the 3rd and 4th centuries in an epitome of Polemo by an otherwise unknown Adamantius the Sophist and an anonymous \*Latin *Physiognomica*. Both Adamantius and the Latin *Physiognomica* are much concerned with eyes; they would concur, for instance, with Gregory that 'eyes which move quickly show a troubled, suspicious, faithless man' (Adamantius A 7; Latin, *Physiognomica*, 23).

Physiognomy could be integrated with the study of \*medicine, and was integral to the practice of \*rhetoric—voice training was a normal part of rhetorical education.

## Piacenza Pilgrim

Further, physiognomical notions may be detected lying behind literary descriptions of individuals, especially of \*emperors. \*Constantius II entering \*Rome in 357 was, according to \*Ammianus Marcellinus, stiff and unbending 'keeping the gaze (*aciem*) of his eyes straight ahead ... he did not spit, or wipe or rub his mouth or nose' (XVI, 10, 9–10). \*Honorius, by contrast, is praised by \*Claudian for his affable appearance when making his consular \*adventus to Rome in 404: 'the young women ... wonder without ceasing at his blooming cheeks, his diademed hair, his limbs verdant with the jewelled covering of the consular robe, the strong shoulders ...' (*On the Sixth Consulship of Honorius*, 560–4).

OPN  
S. Swain, ed., *Seeing the Face, Seeing the Soul: Polemon's Physiognomy from Classical Antiquity to Medieval Islam* (2007), including edn. with ET and introd. of Adamantius and the *Physiognomica Latina* by I. Redpath.

**Piacenza Pilgrim** (fl. c. 570) Anonymous Latin traveller from Piacenza, \*Italy, to the \*Holy Land by way of \*Cyprus and \*Syria. The descriptions of holy places he visited in \*Palestine and \*Egypt (following the footsteps of one 'Antoninus martyr') include healing springs, hospitable \*monasteries, holy women enclosed in caves, exotic fruit, and other sacred souvenirs (*eulogiae*, lit. 'blessings'). He describes drinking from the skull of a \*martyr to gain a blessing, reclining upon \*couches used by Jesus, handling and \*kissing wood from Christ's cross, where small \*flasks of oil bubble over when they come in contact with the wood. Holy objects abound: from implements used in Christ's torture, \*miracle-producing pieces of string once used to measure finger and palm impressions Christ left in the stone column of his scourging, footprints Christ left on a stone, and a portrait of Christ displayed nearby. This pilgrim is an important witness to the proliferation and portability of \*relics from the Holy Land and the multisensory devotions they inspired.

**Piazza Armerina** \*Villa in central \*Sicily. The peristyle is the centre of the plan, composed of four main areas: (1) a triple-arched entrance with a court beyond; (2) the living quarters arranged around the peristyle and to the east, on a higher level, a large \*apsidal reception hall with an \*opus sectile floor opening off the so-called

Great Hunt corridor; (3) a large \*bath complex; (4) a triapsidal hall and a courtyard of elliptical shape.

There are great halls and several reception rooms, the architectural plan is exceptionally complex, and the rich decoration comprises \*marbles, wall paintings, columns, and above all 3,500 sq. m (37,660 sq. feet) of floors with polychrome \*mosaics, depicting hunting, dancing girls, and many other scenes. All this has led many scholars to suggest that the Piazza Armerina Villa was imperial property. The discovery of two further peristyle villas in Sicily (\*Tellaro and \*Patti Marina), and recent research carried out on villas of similar magnificence throughout the Empire, substantiate the increasingly convincing hypothesis that the owner of Piazza Armerina villa was a member of the senatorial \*aristocracy.

The villa was built, probably in the first half of the 4th century AD, over a previous building (the so-called Villa Rustica of the 1st–3rd century AD). Recent research suggests that the construction of the triapsidal hall and entrance archway, together with changes in the decoration of walls and floors and the building of buttresses, were carried out in the 4th century, perhaps in the Theodosian age. In Byzantine times it was perhaps turned into a fortified \*villa with burial grounds. From the 8th century onwards, there is evidence of a progressive abandonment up to the Arab and Norman periods when settlement expanded north and south of the ancient villa. Recent excavations have revealed a Late Antique bath complex connected to the structures partially excavated in the 1980s in the south area of the courtyard entrance and now interpreted as stores for agricultural products.

**Picenum Suburbicarium** \*Province in the \*Dioecesis Italiae divided from the larger province of \*Flaminia et Picenum in the latter half of the 4th century. It is named in the \**Notitia Dignitatum* (occ. XIX, 5; cf. I, 58; II, 16) as being under the authority of the \*Vicarius Urbis Romae, so formed part of \*Italia Suburbicaria. Comprising the area along the Adriatic coast between the Esino and Pescara Rivers and east of the province of Valeria, it was governed by a \*Consularis, perhaps from Asculum.

**Picts** The barbarian peoples of northern \*Britain. The emergence of the Latin ethnonym *Picti*, first attested in a \*panegyric of 297/8 and apparently linked to \*tattooing, probably reflects a need among Latin writers to begin distinguishing these barbarians from the Romano-British. Aggressive Pictish forces troubled 4th-century Roman Britain, but an apparent slackening of their reach and effectiveness from the 5th century hints at some level of military dependency on the Roman presence in Britain. The 5th and 6th centuries saw Christianity widely established among the Pictish peoples, who apparently comprised two major groupings by the 8th century, northern and southern, under the notional dominion of a single overlord, the *Rex Pictorum*. The Verturiones, a northern people, became dominant during the 7th century, and their kingdom ('Fortriu') appears to have been instrumental in the formation of this Pictish realm. Written records are sparse (e.g. \*Bede, *HE* I, 1; III, 4) and so, as yet, is archaeological evidence, so Pictish history remains poorly understood. The distinctive, numerous, and as yet unintelligible 'symbols' attributed to them, found in caves, on sculpture, and on portable objects, give Pictishness an air of mysterious exoticism which can be unhelpful, complemented by the fact that their realm was so comprehensively reformed in the 9th and 10th centuries that hindsight could imagine its having been 'destroyed'.

**Pietroasa Treasure** Discovered in 1837/8 near Pietroasa (mod. Pietroasele, Județul Buzău, Romania), this 4th-century \*Gothic treasure (National Museum of Romanian History, Bucharest) originally consisted of 22 \*gold and gem-encrusted objects, of which only twelve survive. It includes several massive and unusual brooches that mix imperial and barbarian elements as well as a gold platter, ewer, and patera. A theft in 1875 caused damage, including cutting of the \*runic \*inscription on one neck-ring, which has fuelled continuing

debate over its meaning. The treasure has been associated with the \*Ostrogoth royal house or, recently, with \*Gainas, a Roman general of Gothic descent.

**pilgrimage** Travel to sacred places was common in Mediterranean religions. The \*Jewish pilgrimage festivals of Passover, Pentecost, and Tabernacles drew large crowds to \*Jerusalem until the Temple's destruction in AD 70. (Josephus, *Antiquities*, XVII, 149–67, 213–18; Acts 2:5–11). \*Oracles and healing centres drew those seeking healing and other interventions by the pagan gods.

S. Coleman and J. Elsner, eds., *Pilgrimage: Past and Present in the World Religions* (1995), chs. 1 and 2.

**pilgrimage, Christian** Early Christians maintained many practices familiar from earlier religion, applying them to Christian purposes, seeking blessings as various as healing and holiness.

In the 2nd and 3rd centuries, Christian \*bishops sought out biblical places in \*Palestine (Melito of \*Sardis: \*Eusebius, *HE* IV, 26, 14; Alexander of \*Cappadocia: *HE* VI, 11, 2). The reign of \*Constantine I saw the emergence of a Christian \*Holy Land. The \*emperor's large-scale building programmes in Palestine resulted in \*martyria and \*basilicas at the sites of Jesus' Birth, Death, Resurrection, and Ascension. Soon a network of \*hostels, churches, and \*monasteries developed to serve pilgrims. Monastics played an important role in guiding pilgrims, promoting the cult of \*relics, and linking biblical and local legends to specific holy places and objects.

Despite critics of pilgrimage (e.g. \*Gregory of \*Nyssa, *ep.* 2), a variety of literary and material traces testify to the widespread practice. Writings by and for pilgrims ranged from devotional guidebooks to first-hand travel accounts. The \*Bordeaux Pilgrim of 333 presents a schematic record of distances between staging posts and the biblical holy places. The journal of a pilgrim known as \*Egeria gives a more elaborate and

personal description of holy places and holy people she visited in the Holy Land, \*Syria, and \*Egypt between 381 and 384, and also of various \*liturgies she witnessed. \*Jerome's \*letters recount his journeys to holy places in Palestine with the Roman ladies \*Paula and Eustochium (*epp.* 46 and 108). The \*Piacenza Pilgrim visited the Holy Land in 570. Others are second-hand, such as \*Adomnán's *De Locis Sanctis*, written on \*Iona from information given by a shipwrecked Gallic bishop and indicating that Christian pilgrimage survived the \*Arab conquest of \*Jerusalem (638) and \*Egypt (639–42). Yet others, such as the accounts of \*Theodosius and \*Bede's *De Locis Sanctis*, are more in the nature of guidebooks.

Egypt also drew large numbers of Christian pilgrims seeking to follow the Exodus of Moses and the Israelites through \*Sinai and wishing to visit healing shrines and monastic cells associated with Egypt's renowned \*martyrs and monks. They included Egeria, \*Poemenia, and the author of the *\*Historia Monachorum in Aegypto*. Both \*Abu Mina and \*Aboukir (Menouthis, once an Isis \*temple) became important healing centres associated with wonder-working \*relics of their local martyrs, S. \*Menas and Ss. \*Cyrus and John, respectively. Pilgrims brought back \*pilgrimage flasks full of holy oil from Abu Mina, just as they did from the Holy Land. Monastic cells in \*Nitria, \*Kellis, and \*Scetis (Wadi Natrun) also attracted large numbers of Egyptian and foreign pilgrims, many of whom were inspired by what they had heard of the \*Desert Fathers.

It was not only the Holy Land and Egypt which attracted Christian pilgrims from the 4th century onwards. Other long-distance destinations included \*Rome and \*Ephesus, where Egeria visited a shrine of S. John the Evangelist (23, 10) and \*Justinian I built a more elaborate one. In the West folk came miles to the shrine of S. \*Martin at \*Tours. S. \*Thecla in \*Cilicia was visited by \*Gregory of \*Nazianzus, by Egeria (23), and by the \*Emperor \*Zeno, who built her a considerable sanctuary.

Local holy places associated with local martyrs were also swift to emerge. Basil's \*Caesarea was ringed with \*martyria. There was a martyrium for the \*Forty Martyrs at \*Sebasteia already in the second half of the 4th century, and another in the \*monastery built by the family of S. Basil on their family \*estate. At about the same time Egeria visited the famous martyrium of S. Euphemia at \*Chalcedon (23, 7). In \*Campania \*Paulinus of Nola encouraged visitors to the shrine of the martyr S. Felix. The uncle of \*Gregory of Tours organized an annual pilgrimage to the church of the martyr S. \*Julian at Brioude. The shrines of the martyrs S. \*Theodore Tiro at \*Euchaïta in \*Anatolia and S. Sergius at \*Sergiopolis-Rusafa in the Syrian Desert attracted contrasting sets of pilgrims.

\*Holy men who had attracted visitors in their lifetime continued to draw them to their shrines even after their deaths. \*Qalat Seman, the hilltop on the \*Limestone Plateau of \*Syria where S. \*Symeon the \*Stylite had drawn crowds to his pillar, expanded its pilgrim sanctuary with basilicas, a martyrium, a \*baptistry, hostels, and a monastery, after his death in 459. An admirer of S. Symeon, keen to emulate the \*holy man, was told to go not to the \*Holy Land but to \*Constantinople 'a second Jerusalem' where he could 'enjoy the martyrs' shrines and the great houses of prayer' (*VDanStyl* 10); in due course he too was visited by pilgrims coming to seek his counsel.

From the 4th century onwards there were holy places, and places associated with biblical events and holy men alive and dead throughout the Christian world. Though Christians continued to undertake long-distance pilgrimages, they could also find holy places closer to home; pilgrimage could be quite a local enterprise, it did not need to be a liminal experience.

**pilgrimage, Islamic** In addition to the Hajj, or annual pilgrimage to \*Mecca, other visits to shrines or graves of Muslim saints and holy figures were known as *ziyara*.

The Hajj became one of the 'five pillars', or fundamental tenets, of \*Islam, incumbent on Muslims who are physically and financially able to perform it. Taking place in the month of Dhu'l-Hijja in the Islamic calendar, it is centred on the sanctuary in Mecca, which was also significant in the pre-Islamic period. A number of the rituals included in the Hajj pre-date \*Islam, such as the ritual circumambulation of the \*Ka'ba—the small building at the centre of the sanctuary. Other rituals commemorate biblical stories and events, such as the casting out of Hagar and Ishmael and the Sacrifice of Abraham. The Ka'ba itself has been rebuilt several times in its history, and houses an ancient Black Stone embedded in a corner of the building, which some pilgrims venerate by touching or rubbing it. While not a formal part of the prescribed Hajj, a trip to \*Medina to visit the grave of \*Muhammad often takes place at the conclusion of the formal pilgrimage. Shi'ism has long placed emphasis on pilgrimage to the tombs of its Imams, especially the tomb of \*Husayn, in Qom.

Other locales were central to *ziyara* in the early Islamic period, including the \*Dome of the Rock in \*Jerusalem and the Great Mosque of \*Damascus. Graves and shrines to mystics, prophets, and holy men and women could also be objects of *ziyara*. Relics formed an important function in medieval Islamic pilgrimage. As well as the Black Stone, the sanctuary in Mecca contained a small shrine dedicated to the Stepping Stone of Abraham, a contact relic. The Great Mosque of Damascus housed remains of S. John the Baptist, which had previously been preserved in the Christian cathedral that had stood on the site. Though occasionally controversial, pilgrimage was a constant in medieval Muslim praxis. **pilgrimage, Zoroastrian** In the Sasanian era, among the primary \*Zoroastrian pilgrim destinations could be counted the three Great \*Fires of Iran (\*Ādur Gušnasp, Ādur Farnbāg, and Ādur Burzēn Mihr) and \*Kuh-e Khwaja.

Of the Great Fires, only the site of \*Takht-e Solayman (Ādur Gušnasp) has been located and excavated and provides our only clear archaeological evidence of

pilgrimage facilities at such sites. A royal complex occupied the south of the sanctuary, but the north of the sanctuary provided for pilgrims. Pilgrims entered the walls through an entrance different from that used by the king and then proceeded through a second gate into a courtyard. This led to an arcaded atrium, which gave access to the sanctuary proper through an \**ayvan*. The west side of the courtyard preserved traces of mud-brick facilities for pilgrims including hostels and lavatories (Naumann, Huff, and Schnyder, 110–18). Excavation of this area produced \*amulets and \*gold, \*silver, and \*bronze *ex voto* votive plaques of the sort which are mentioned in Pahlavi sources and are paralleled by evidence of earlier Achaemenid-era offerings thought to be associated with a sanctuary dedicated to the \*Oxus River in \*Bactria. Zoroastrian pilgrimage to the \*fire temple continued into the early Middle Ages. Medieval sources suggest that the \*Sasanian sovereigns performed pilgrimages to the site upon their coronation and gave lavish gifts after victories. MPC

**pilgrimage flasks** Small lead or terracotta flasks contained holy oil or water from sacred sites such as saints' shrines or places that commemorate Christ's life. The flasks are stamped on both obverse and reverse with narrative scenes, portraits, symbols, and \*inscriptions. The narrative scenes often correlate with \**loca sancta* such as the Crucifixion or the Maries at the Tomb with the Church of the Holy Sepulchre at \*Jerusalem, or the Three Magi with the Church of the Nativity, \*Bethlehem. \*Icon portraits of Christ and saints were also popular, as were symbols such as the \*Cross, ornamental \*foliage, \*animals, or \*birds. Inscriptions often mention both the contents of the pilgrimage flask and the saint or Christ, typically requesting blessings for the pilgrim. Christians went on \*pilgrimage to shrines of saints and to *loca sancta* out of piety or seeking healing through \*miracles. Pilgrims brought the flasks back home, thereby disseminating the \*iconography stamped on the flasks. Pilgrimage flasks might be regarded as \*relics, used as \*votive offerings or buried in tombs. Some have been discovered through archaeology; others survive in church treasuries (e.g. at Monza and \*Bobbio). DHV

**Pilgrims' Road** The principal land route from \*Constantinople to the Levant, across the peninsula of \*Anatolia, passing through \*Nicomedia, \*Nicaea, \*Ankara, \*Tyana, the \*Cilician Gates, \*Tarsus, and \*Antioch. The modern name 'Pilgrims' Road' derives from the detailed list of the places passed through by the \*Bordeaux Pilgrim (333). Although the \*road was primarily for the use of the \*Cursus Publicus, already in 362 the \*Emperor \*Julian remarked on the organized hospitality shown to Christian travellers (*ep.* 84, 430b), and S. \*Melania the Younger lodged in a series of Christian \*hostels on the road (*VMel* 56). The *Life* of S. \*Theodore of \*Sykeon (whose mother ran a roadside inn) gives a vivid account of life on 'the public highway of the imperial post' at the turn of the 7th century. PJT

French, *Pilgrims' Road*.

E. D. Hunt, *Holy Land Pilgrimage in the Later Roman Empire* (1982), 50–82.

**Pionius of Smyrna, S.** Christian \*priest, and \*martyr under \*Decius, arrested with four companions on 23 February (the Terminalia) and executed on 12 March 250. \*Eusebius mentions him (*HE* IV, 15, 47; \*Jerome, *Chron.* 205c Helm), but mistakes the date. The elaborate \*martyr passion (*BHG* 1546) incorporates considerable circumstantial detail which coincides with known conditions at \*Smyrna. Pionius' speech explaining his refusal to \*sacrifice mentions a visit he had made to \*Palestine. His formal interrogation by the \*temple warden is recorded, as is his speech of encouragement to fellow Christians visiting him in \*prison. Pionius and his fellow prisoners were told that their \*Bishop Euctemon had sacrificed, so they were dragged to an \*altar to make them do likewise. Eventually the \*Proconsul of \*Asia arrived, interrogated Pionius under \*torture, and sentenced him to be burnt alive in the \*city stadium, alongside a \*Marcionite priest. Signs of liturgical commemoration are limited to listings in the \**Martyrologium Hieronymianum* and the Greek \**synaxaria* (Delehay, *Origines*, 145). OPN

Barnes, *Hagiography*, 74–6, 376–8.

**Pippin I** (d. 640) A leading member of the \*Austrian \*aristocracy and the first of the Pippinids. Pippin married \*Itta, and was the father of \*Grimoald, Begga,

and S. \*Gertrude. With \*Arnulf of \*Metz he was instrumental in inviting \*Chlothar II of \*Neustria to reunite the Frankish kingdom in 613. When Chlothar established \*Dagobert I as King of Austrasia, he became his \*Mayor of the Palace, and was famed for his justice and piety, but faced some hostility from his own people when his influence over Dagobert waned in the 630s. After Dagobert's death he allied with Kunibert, \*Bishop of \*Cologne, to arrange a division of Dagobert's treasure between \*Sigibert III and \*Clovis II. JTP

*PLRE* IIIA, Pippinus.

*LexMA* 6, 2167 'Pippin I' (U. Nonn).

**Pippin II** \*Mayor of the Palace in \*Austrasia, 680–714. A grandson of \*Pippin I and \*Arnulf of \*Metz, Pippin dominated Austrasia after the breakdown of \*Dagobert II's regime in 679, and \*Neustria after his defeat of \*Theuderic III and \*Berchar at \*Tertry in 687. His military victories also included the conquest of \*Frisia. He supported the missionary activities of S. \*Willibrord, whose \*Monastery of \*Echternach he took under his protection. Drogo, \*Dux of \*Champagne, his son by \*Plectrude, predeceased him in 708, leaving \*Charles Martel, his illegitimate son, to fight to succeed him. JTP

*LexMA* 6, 2167–8 'Pippin II' (U. Nonn).

R. Gerberding, *The Rise of the Carolingians and the Liber Historiae Francorum* (1989).

**Pippin III** (d. 768) \*Mayor of the Palace (741–51), King of the \*Franks (751–68). Pippin was the first Carolingian King and the father of Charlemagne. He became Mayor on the death of his father \*Charles Martel, initially alongside his brother \*Carloman, although their half-brother Grifo fought them for power. He led military campaigns in \*Aquitaine, Saxony, and \*Bavaria, and oversaw some of the first church \*councils in a generation in collaboration with S. \*Boniface. Little changed with Carloman's retirement in 745, until in 749 Pippin obtained Pope \*Zacharias' support to depose King \*Childeric III and rule in his stead, which he did from 751. In 754 he received Pope Stephen II on the first papal visit north of the Alps. This led to closer Franco-papal ties, the conferment of the title \**patricius*, and an invasion of \*Lombard territory. Thereafter, Pippin's reign was dominated by protracted struggles with Waifer, \*Dux of \*Aquitaine, and \*Tassilo, Dux of Bavaria. He died of oedema at \*S. Denis after defeating Waifer. JTP

*LexMA* 6, 2168–70 'Pippin III' (J. Fleckenstein).

**pirates and piracy** Seaborne plundering by armed groups acting separately from state initiative and naval forces underwent a significant change in Late Antiquity. Having been essentially a domestic activity, within the 'Roman sea' of the Mediterranean it came to cut across state boundaries and lines of interest, while piratical tactics also became part of military conflict between states.

The 3rd century is probably the period when pirates were most prevalent. Piracy sometimes originated outside the Empire and penetrated the Mediterranean, such as the barbarian raids which \*Zosimus describes, in a somewhat confused narrative, as having occurred under \*Valerian (I, 35) and \*Gallienus (I, 43). The \*Saxon Shore system was intended to prevent raiders from across the North Sea attacking \*Britain and northern \*Gaul; \*Carausius was sent to Britain by \*Diocletian and \*Maximian to stave off such attacks, but according to the surviving accounts kept their booty for himself (\*Eutropius, IX, 21; Aurelius \*Victor, 39, 15); the forces which \*Allectus, his successor as \*usurper, took over from him were defeated only with difficulty because they were able to use the defences designed to save the coasts from pirate attack to protect themselves against the imperial navy. In the Red Sea, \*Nubian and \*Arabian pirates attacked the \*India \*trade.

In the Mediterranean itself, piratical tactics came to be used as an element of \*naval warfare. In the 5th century the \*Vandals from their bases in North \*Africa and \*Sardinia were able to mount raids on coastal cities, such as that on \*Nicomedia of \*Epirus in 474, and the Eastern Roman Empire also sent probing raids, both to ascertain whether an overseas invasion would be feasible, and possibly to garner resources from the enemy.

While pirates would use whatever \*ships came to hand, the essential features of a pirate ship were sufficient space for cargo, a shallow enough draught to sail close to shore (or up rivers), and nimbleness to avoid pursuit. As such, they probably tended to resemble something between warships and merchant ships. The best pirate galleys, like the \**lemboi* and \**liburnae*, were models for the Roman navy. Pirates (and naval ships hunting pirates) would paint their hulls and sails blue as camouflage (cf. \*Vegetius, 37); those called *kamarai* had the added advantage of being difficult to see.

While details of piratical raids may be difficult to find in Late Antique historical sources, piracy featured heavily in literature of the period. Pirates were staple antagonists in Greek novels, and various \*saints' lives, including that of S. \*Patrick, feature kidnapping by pirates. It is unclear whether such literary tropes derive from an increase in real piracy in Late Antiquity, from increased awareness of it by the literate, or from changes in literary preoccupations. The fact that S. Albinus, Bishop of Angers (d. 550), was often invoked to

guard against pirates, suggests that such protection continued to be necessary. ALB

**Pirenne Thesis** Theory first proposed in 1916 by the Belgian historian Henri Pirenne (1862-1935) that it was the rise of \*Islam in the 7th century which caused the disjuncture between Antiquity and the Middle Ages. Though developed throughout Pirenne's career, the core text for the Pirenne Thesis is the posthumously published *Mohammed and Charlemagne* (1937, in English translation 1938). The Pirenne Thesis posits a concept of Antiquity centred on long-distance \*trade, urbanism, and Mediterranean unity. When the rise of Islam divided the Mediterranean, Western Europe turned increasingly to the cultural resources of the north and, without revenue from trade, to land grants given to underpin elite networks of \*patronage. Consequently, Pirenne argued, Charlemagne and Western medieval \*land tenure systems resulted directly from \*Muhammad. Pirenne's work pre-dated the expansion of medieval archaeology, which has formed the basis for significant challenges to his thesis. As a focal point of critique and modification, the 'Pirenne Thesis' has become central to debates about the chronology and causation of economic change in Late Antiquity.

**Pisa** Roman *colonia* planted in the late Republic to exploit river and coastal \*trade. Excavated \*ship remains from the 2nd century BC to the 5th century AD at S. Rossore give information on traders, and \*landscape studies have charted the evolving coastal morphology. \*Inscriptions are the principal source of information about Roman investment in the \*city itself, still little traced through detailed archaeology.

There was a \*bishop by AD 313. The \*senator \*Rutilius Namatianus' poetic account of his journey up the west coast of \*Italy in the autumn of 417 remarks on Pisa's congested \*harbour; he observed also \*statues of city benefactors in the forum (lines 530–40). Pisa was probably an important port under the Byzantines. From c. 600 to 625 a Lombard elite presence is apparent from weapon tombs recorded from the Piazza del Duomo.

**Pisentius of Coptos** (568–632) Monk who in 598 became \*Bishop of \*Coptos, an important town in Upper \*Egypt, about 30 km (c.18 miles) north of \*Thebes (mod. Luxor) at the end of the road from the Red Sea into the \*Nile Valley. During the \*Persian invasion of 619 he fled before the Persians captured Coptos to the hills above \*Jeme (a town of some importance that had grown up on the site of the 20th-dynasty mortuary temple of Ramesses III). Pisentius arranged for water to be carried there in large pots, which were subsequently replenished miraculously.

There is a biographical text of an encomiastic character, composed by a companion called John the Elder, in \*Coptic (two texts) and \*Arabic (three texts, one with a total of 56 \*miracles) and \*letters in Coptic. Pisentius is described in his *Life* as the 'thirteenth apostle' and as a 'spiritual merchant' and it is clear from the *Life* and letters that he took an active pastoral role in his local community, helping individuals in distress, dealing with local suppliers, and even brokering matrimonial harmony in the community. Feast day 13 Epip.

**Pisidia** Mountainous region of south \*Anatolia north of \*Pamphylia, west of \*Isauria, east of \*Lycia, and south of \*Phrygia and \*Galatia. Until the late 3rd century, the southern part was administered as part of \*Lycia et Pamphylia, the northern part by \*Galatia. The \*Verona List (255 verso, 7) includes Pisidia in the \*Dioecesis \*Asiana, as does the *\*Notitia Dignitatum*, which gives the \*governor's title as \*Praeses (or. I, 96; II, 34; XXIV, 17). Although \*Hierocles in the 6th century records 26 \*cities, most were small mountain communities. The most important were \*Antioch of Pisidia (the provincial metropolis and a Roman *colonia*), Selge, Termessus, \*Sagalassos, and \*Cremna. Despite their reputation for banditry, the valleys of Pisidia, watered by run-off from the Taurus, were fertile and by Late Antiquity the cities were thoroughly Hellenized.

The \*Emperor \*Probus laid siege to Cremna in AD 278, in a campaign against the \*brigand Lydius. The provincial \*governor Valerius Diogenes (308/11–311/13) improved the city of \*Antioch of Pisidia, as well as persecuting the Christians of the province, whose presence is confirmed by the \*inscription found at Colbasa recording the persecuting \*rescript of Maximinus Daza of 312.

The reputation for banditry persisted, and by the time of \*Leo I special military commands had been created in Pisidia, and also in \*Pamphylia and \*Lycaonia, presumably to contain it (*CJust* XII, 59, 10, 5 of 471/2). Under \*Justinian I the post of the officer commanding these forces was combined with that of the civil \*governor (*NovJust* 24 of AD 535). In 553 the people of Pisidia complained again about brigands, and Justinian reformed the system for their protection (*NovJust* 145).

The poet \*George of Pisidia wrote sophisticated \*panegyrics of the victories of \*Heraclius. From the

mid-7th century onwards, Pisidia was persistently threatened by \*Arab forces, from which it was protected by the \*Anatolic and \*Cibyrhaeotic \*Themes, who were, however, unable to prevent Al-Abbas b. al-Walid sacking Antioch of Pisidia comprehensively in 713. **Pistis Sophia** (Gk. Faith-Wisdom) Conventional title of a Gnostic text, also called *The Book of the Saviour*, surviving in \*Coptic in a single parchment manuscript, the Codex Askewianus (London, BL Add. 5114), one of the few such documents known to scholars before the \*Nag Hammadi discoveries. The manuscript and the text probably date from the 4th century. Its four books consist principally of a \*dialogue, conducted on the Mount of Olives eleven years after the Resurrection, between Jesus and his disciples, who by this time are prepared to learn the higher mysteries. These involve the fall, repentance, and restoration of the spiritual figure of Pistis Sophia, all of which is presented in terms of an arcane \*cosmology substantially based on earlier \*Gnostic conceptions, while also adducing the Psalms and the \*Odes of Solomon. OPN

**Pitiakhsh (Pahl. Bitaxsh, Gk. Pitiaxes)** Title of the Marcher-Lords of Late Antique \*Armenia and \*Iberia. In Iberia, the Pitiakhsh (Pitiaxsh) was the ruler of Gugareti. This office is also attested in \*Mtskheta, where it must have stood for 'general in chief'. NA N. G. Garsoïan, *The Epic Histories Attributed to P'arwost Buzand (Buzandaran Patmut'wnk)* (1989).

**Pityus** Northern town of \*Lazica (medieval Bichvinta, mod. Pitsunda). It was attacked by the Scythian \*Borani in AD 250 (\*Zosimus, I, 31), but remained integral to Roman dispositions on the \*Black Sea. By the time of \*Justinian I, Pityus was more a fort than a \*city (*NovJust* 28, cf. \*Procopius, *Gothic*, VIII, 4, 4). Three superimposed churches have been excavated, dating from the 4th to the early 6th century. The second church had \*mosaic floors with a Christogram, and other Christian symbols. Some civic buildings of the 3rd–5th centuries also had mosaic floors depicting tritons, an \*elephant, and geometric patterns. Stratonophilus, \*Bishop of Pityus, attended the \*Council of \*Nicaea in AD 325. \*John Chrysostom died on his way to \*exile in Pityus (\*Theodoret, *HE* V, 34). MO

**piyyut** See HYMNS, JEWISH.

**place names, British and English** Historians have long appreciated the potential of place names for \*landscape and social history, since in their earliest forms they encompass aspects of past social life and individual action. The pioneering work of Margaret Gelling showed how early medieval perceptions of landscape were captured in names associated with topographical features. In the British Isles many place names have origins in the early Middle Ages, for example in \*Germanic languages like Old English and Old Norse, or Celtic languages such as Gaelic, \*Welsh, and Cornish. Although landscape historians have used place names keenly to illustrate historical conditions, there are potential pitfalls. For example, some place names relate to tenorial or legal status at particular times, but it is easy to create anachronistic interpretations because the chronological definition of names is generally poor. Similar difficulties can apply when place names are

## Placidia

used to map changing \*settlement patterns: for example, scholars once accepted simple correlations between place names in a given language and the settlement of invaders speaking it, though now they realize that the adoption of new place names is governed by complex cultural interactions. SCT

M. Gelling, *Place-Names in the Landscape* (1984).

*Journal of the English Place-Name Society* (1969–)

**Placidia** Daughter of \*Valentinian III and \*Eudoxia, born 439/40 and named after Galla \*Placidia, her father's mother. She married the \*senator \*Olybrius (\*Augustus briefly in 472), probably in 454/5. After her father was murdered in 455, the \*Vandals carried her off, with her mother Eudoxia and sister \*Eudocia, to \*Africa; her release (foretold to her husband by S. \*Daniel the Stylite) took her c.461 to \*Constantinople, where her daughter, \*Anicia Juliana, was born. She was still there in 478. OPN

PLRE II, Placidia 1.

**Placidia, Galla** See GALLA PLACIDIA, AELIA.

**placitum (plur. placita)** Term for a meeting or formal \*court hearing held to settle disputes in \*Francia and \*Italy, and for the records of the outcome of such hearings. Extant *placita* documents, some of them originals, from the mid-7th century onwards show the importance of correct procedure in court hearings, typically held before judicial tribunals rather than before judges. *Placita* could take place at local level or in the \*palace. PJF

P. Fouracre, "Placita" and the Settlement of Disputes in Later Merovingian Francia', in W. Davies and P. Fouracre, eds., *The Settlement of Disputes in the Early Middle Ages* (1986), 23–43.

**Pla de Nadal (Riba-roja del Túria)** Residential \*villa situated in the rural *territorium* of the Roman \*city of Valentia (mod. Valencia), in eastern \*Spain. Of the excavated archaeological remains all that is preserved is the central structure, which opens onto a front courtyard with projecting angle towers and another courtyard at the rear. It was built at the end of the 6th century or beginning of the 7th century and continued to be used into the 8th century.

Much decorative \*sculpture has been found, including a circular stone fragment bearing a \*monogram which may be read as \*Teudemir, perhaps indicating that the proprietor was the \*Visigothic \*comes who made a pact with the \*Arabs at the beginning of the 8th century (713). The peculiarities of Pla de Nadal are the fact that it appears to be a very late example of a model characteristic of the 4th century and (despite the fragmentary character of the plan) its exceptional state of preservation. **plague** See EPIDEMIC DISEASES.

**Plague, Decian (Plague of Cyprian)** Conventional name given to an \*epidemic that broke out in \*Egypt around 251. The disease spread to \*Rome in the same year, killing the \*Emperor Hostilianus, son of the Emperor \*Decius. In the following year it reached \*Carthage; the same disease may be linked to an outbreak in \*Neocaesarea in \*Anatolia around 256 and to further outbreaks in \*Syria (259), in \*Italy, \*Greece, and \*Africa (262), and finally in 270 at \*Sirmium (during which the Emperor \*Claudius Gothicus died). The name of the epidemic derives either from the ruling emperor at the time of its first outbreak (Decius, 249–51) or \*Cyprian, \*Bishop of Carthage (c.248–58), whose writings, especially his *On Mortality*, are the main sources concerning this epidemic. Cyprian writes that \*pagan populations treated the Christians as responsible for the outbreak of the disease. Some modern scholars identify the disease as measles, but the evidence is too limited to allow a secure retrospective diagnosis. DSt

Cyprianus, *De Mortalitate*, ed. M. Simonetti and C. Moreschini (CCSL 3A, 1976).

J. Drinkwater, 'Maximinus to Diocletian and the "Crisis"', in *CAH XII* (2005), 28–66.

**Plague, Justinianic (Early Medieval Pandemic)**

Conventional name given to a series of outbreaks of bubonic plague that began in 541 and returned in some eighteen waves (approximately one every twelve years) until 750. We are best informed about the first outbreak (541–4 in the Mediterranean and up to 549 in northern Europe and \*Yemen) as well as the last one (743/4–50). A variety of sources, such as \*Procopius, \*Evagrius, \*John of \*Ephesus, \*Gregory of \*Tours, \*Paul the \*Deacon, and \*Theophanes, furnish ample evidence for the various outbreaks.

The disease was disseminated over Europe and the Near East, but the Mediterranean areas were hit most often and more severely. The symptoms recorded by the sources leave no doubt as to its identification with true plague. More recently, attempts have been made to identify the disease in the laboratory, based on human remains dated to the period, but both methods and results are still controversial. The disease is termed generically a pestilence in \*Greek and \*Latin texts (*loimos*, *plaga*), while only later \*Arabic sources adopted a specific name exclusively for it (*ta'un*). The majority of

the sources reflect a perception of the plague as a divine chastisement brought about by human transgression.

The most important aspect of the pandemic is the magnitude of the mortality it caused and its effects on the political and economic history of the period. To arrive at even approximate numbers is impossible for Late Antiquity, but we may assume that large \*cities such as \*Constantinople suffered greatly: it is postulated that the city lost around 20 per cent of its \*population during the first outbreak there in 542. Although the demographic impact of the plague was considerable, it would be wrong to ascribe to it alone a transformative effect on the history of the period. The plague disappeared suddenly in 750; no plausible reason has been put forward to explain it.

**Pliny the Elder in Late Antiquity** The *Historia Naturalis* of Pliny (AD 23/4–79) was an important source for geographical knowledge, natural history, and literary authority in Late Antiquity. Solinus (*fl. c.200*; *Collectanea rerum memorabilium*) contributed significantly to its transmission. \*Symmachus sent a copy to \*Ausonius (*ep.* 1, 24). Even after \*Orosius became the principal source of geographical knowledge, \*Martianus Capella (Book 6), \*Isidore of Seville (*Laus Spaniae*), and \*Bede (*HE* I, 1) continued to rely on Pliny for \*geography. Similarly, the *Natural History* continued to

influence the understanding of nature (Isidore, *Etymologiae*, XII, 2, 11/20/28; XII, 4, 43; XII, 6, 45) and \*astronomy (Bede, *De Rerum Natura*, 15, 16, 18). Exegetical literature also drew upon the *Historia Naturalis* (\*Cassiodorus, *Expositio Psalmorum*, 28, 118, 148; Bede, *Nomina Regionum*). Pliny's grammatical treatises were known into the 6th century (\*Gregory of Tours, *Vitae Patrum Praefatio*).

**Plotinus** (AD 205–70) \*Philosopher, regarded as the founder of \*Neoplatonism. Plotinus was born in \*Egypt, possibly at \*Lycopolis (mod. Assiut). What we know about his life and philosophy comes to us mainly through \*Porphyry, his pupil and biographer. Plotinus was probably a Greek, or at least from a Hellenized Egyptian family, though his name is Roman. His language was \*Greek. From Porphyry's biography (*VPlot*) we know that Plotinus, at the age of 27, felt the impulse to study philosophy. He went to \*Alexandria, where he studied under Ammonius Saccas, which made him eager to gain knowledge of Persian and Indian philosophy. As a result he joined the campaign of the Roman \*Emperor \*Gordian III against the Persians in 242. When this ended in military failure, Plotinus returned to \*Antioch before settling in \*Rome at the age of 40, where he set up a \*school. In this milieu he became acquainted not only with fellow philosophers, but also with \*senators and men of influence in the political world at Rome, and if we are to believe Porphyry, he became friends with the Emperor \*Gallienus and his wife Salomina. Towards the end of his life and in poor health, Plotinus left the city for \*Campania, where he died aged 66. His final words are reported as: 'Try to bring back the god in us to the divine in the all' (*VPlot* 2, 26–7).

## Works

Plotinus' writings were given the title the *Enneads* (nines), as a result of Porphyry's collection and division

of the material into six books of nine treatises each. This division is artificial in that it divides some treatises and does not follow the chronology of the writings but rather attempts to group the treatises in terms of their content, directing the reader sequentially from concerns relating to the human being, the compound of body and soul, to the highest principles. In general *Ennead* I treats of ethical matters, *Enneads* II and III of physics and \*cosmology, *Ennead* IV of the soul, *Ennead* V of Intellect and the Intelligible World, while *Ennead* VI considers the highest principle of all, the One. Initially Plotinus was reluctant to divulge any of Ammonius Saccas' teachings and only did so after other former pupils had begun to pass them on. Even then, at first Plotinus committed nothing to writing. Porphyry suggests that Plotinus disliked writing and that the treatises, to some extent, reflect the period of his life in which they were written. Most of those from his middle period show Plotinus at his height; the final nine treatises reflect his failing power, noticeable especially in the last four (*VPlot* 6, 26–37).

### Doctrine

Plotinus saw himself essentially as a Platonist. The term Neoplatonist was coined at a much later stage. It is clear, though, that Plotinus did not limit himself to a literal reading of Plato's \*dialogues, but felt free to interpret their content. Plotinus was as much interested in the spirit of what Plato said as he was in the plain content of the dialogues. In addition, Plotinus' *Enneads* contain much more than Platonism; Porphyry admits that the *Enneads* are full of hidden Stoic and Peripatetic (Aristotelian) doctrines. In particular he notes that Aristotle's *Metaphysics* is concentrated in them (*VPlot* 14, 5–8). Plotinus felt free to borrow from other schools, exploiting what he found useful for his own philosophical construction, while at the same time criticizing them for what he considered flaws in their philosophical arguments and positions.

In terms of metaphysics Plotinus' ontology consists of a triad of principles. He was accused of plagiarizing this descending triad of divine powers from \*Numenius, a \*Middle Platonist of profoundly Pythagorean views (*VPlot* 17, 1–6). At the top, figuratively speaking, of Plotinus' metaphysical hierarchy is the One. It is transcendent, yet as absolute perfection its nature is to overflow and as such it becomes the source of everything else, without being diminished in any way. This overflow results in the second principle, Intellect (*Nous*). Intellect is the One in multiplicity. This is the world of real being. Here exist the archetypes of all that we have in our world of sense perception. The emanation of Intellect creates the third principle, World Soul. This is the source of individual souls. World Soul is Intellect in an inferior form. World Soul also

produces, but now at an ontological level so inferior that its products are located in Space and Time. This is the world of Nature, our sense-world, home to individual souls. Nature, too, produces, but this is now the One in its weakest manifestation, and Nature produces only Matter, the last and weakest emanation of the One. Matter can produce nothing else; is in fact nothing, non-existence, and, as such, Matter is sometimes described as evil, the furthest point from the One. Deluded about what is truly real, individual souls choose to inhabit the world of Nature instead of the Intelligible World. However, a part of our soul never leaves the intelligible realm, even if a part of it also stretches to the sense-world. With philosophical training we may become conscious again on the level of Intellect. Indeed, it is possible to raise ourselves beyond Intellect to unification with the One, achieving ecstasy in Plotinian terms (*Enn.* VI, 9). Porphyry claims that Plotinus was actually accorded such a union on four occasions during the time that they were together, and Porphyry himself experienced it once (*VPlot* 23, 16–18). This non-Christian metaphysic was tremendously influential in the development of Christian philosophy and in articulating the whole notion of salvation.

**plough** Large-scale arable farming, common on \*estates and in peasant communities, was made possible by ploughs. Various types of ard—the scratch-plough that cut into the soil but did not turn it over nor break clods without multiple passes—were typical. The main components of the plough are the plough beam, share-beam, share, and stilt. By the Roman era, the coulter (a heavy iron knife set vertically into the beam ahead of

the ploughshare) cut the soil ahead of the share. The ploughshare was often tilted to help turn the earth and sometimes had metal flanges to spread the plough soil over the seed. Mouldboards, which turned over the earth, are known from northern Europe and Roman \*Gaul and \*Britain. By the 4th century wheeled ploughs, presumably also heavier and able to till wetter and clay-based soils, were known in the Po Valley (\*Servius, *Commentary on the Aeneid*, II, 37). MD  
W. Manning, 'The Plough in Roman Britain', *JRS* 54 (1964) 54–65.

**Plutarch of Athens** (c.350–432) \*Philosopher and son of the \*Neoplatonist Nestorius (and possibly the grandson of a teacher named Nestorius as well). He was instrumental in institutionalizing in \*Athens Platonism influenced by \*Iamblichus, and c. AD 400 founded a \*school there that would endure until 529. The school may have taught \*grammar and \*rhetoric in addition to philosophy, but higher-level instruction centred upon the Platonic curriculum, including texts like the \**Chaldean Oracles*. Plutarch's teaching attracted students from all around the eastern Mediterranean and his success prompted \*Synesius to snide observations about 'Plutarchan sophists' who attract students with Hymettan \*honey instead of learning (*ep.* 136). Among Plutarch's students were \*Syrianus, Hierocles of \*Alexandria (who wrote a surviving commentary on \*Pythagorean texts), \*Proclus, and his own daughter Asclepigenia. He composed commentaries on Plato's *Gorgias*, *Phaedo*, and *Parmenides*, and Aristotle's *Categories*, all now lost. EW

Hunt, *Holy Land Pilgrimage*.

**Poetovio** (mod. Ptuj, Slovenia, formerly Pettau) \*City on the border between \*Noricum and \*Pannonia Inferior (\*Bordeaux Pilgrim, 561, 4–5), where the north–south \*Amber Road from \*Carnuntum crosses the River Drava and meets the west–east \*road between \*Aquileia in \*Italy and \*Sirmium on the \*Via Militaris. It was an important military base and in the High Empire the headquarters of the internal customs service for the \*Balkans, many of whose officials were devoted to \*Mithraism. It manufactured \*pottery, \*bricks, and woollens. A 4th-century \*bishop, \*Victorinus, a prolific writer, died as a \*martyr. The \*usurpers \*Magnentius, in 352, and \*Magnus Maximus in 388, were both defeated at Poetovio. It was the base from which \*Aëtius sent an embassy to \*Attila in 449 (\*Priscus fr. 11, 2), but was overrun by 579 by the westward expansion of \*Avars and \*Slavs. IDS; OPN

TIR L 33 (1961), 58.

**poetry and poets, Arabic** In pre- and early Islamic Arabic culture, oral poetry was the pre-eminent form of literary expression. It may have had distant ritual origins: inspiration by *jinn* is mentioned in passing, but extant pre-Islamic poetry is mostly devoid of assertions of spiritual belief or descriptions of pagan practice. The poetry is primarily nomadic, and its most famous representatives purportedly competed at market fairs such as \*Ukaz near \*Mecca.

Poets were not an isolated social class, however, and most poets were also warriors and prominent members of their \*tribes. \*Panegyric poetry was exceptional, as professional poets like \*Hassan b. Thabit could make a living praising the Christian \*Ghassanid tribe which served as Roman \*phylarchs near \*Damascus, or at the sub-Sasanian \*court of the \*Lakhimid Arabs in \*Hira near the Euphrates. Pre-Islamic poets, although

nomadic, in their contact with these courts interacted significantly with other Late Antique societies. They also occasionally use \*Greek and Persian words, and make fairly frequent mention of non-nomadic cultural elements such as \*monasticism, \*writing, seafaring, Damascene \*silks, or Indian steel.

The grandest form in Arabic poetry is the \**qasida*. This is a polythematic, usually tripartite poem ranging from 30 to 100 lines in length, with a consistent metre and rhyme throughout. The poems following the tripartite schema (not all do) begin with weeping or reminiscence over the abandoned desert encampment of a departed tribe, often that of a beloved. Sometimes transitioning very abruptly, the poet will then usually describe his mount (usually a \*camel mare or \*horse), or, in extended similes, compare his mount to desert fauna such as oryx or onagers. Finally, the poem typically concludes with boasting over the achievements of the poet's tribe, often depicting extravagant displays of generosity. The principal collection of such *qasidas* is the \**Mu'allaqat*. There is also an abundance of smaller pieces, including battle poetry, elegies (often by women), taunts directed at enemies, or descriptions of the night-time apparition of a beloved's spectre.

During the \*Umayyad period, in addition to the panegyric odes of al-\*Akhtal, al-\*Farazdaq, and al-\*Jarir, poets such as Sābiq al-Barbari produced simpler, pious Islamic poetry. This \**zūhd* verse often dwells on *ubi sunt* motifs, unevenly merging pre-Islamic wisdom sayings and proverbs with monotheistic sentiment. Pre-Islamic Arab chieftains had mentioned wine while celebrating their generosity, but the Umayyad \**khamriyya* genre specifically celebrates wine and singing girls (\**qayna*). This genre perhaps emerged first in \*Kufa, and further developed in the lyrical wine description of the purportedly debauched \*Caliph al-\*Walid II b. Yazid. \*Hunting poetry drawing on pre-Islamic animal description was developed in courtly circles. Love poetry also appears, some of it featuring idealized \*Bedouin pining for spiritualized loves (e.g. the legendary \*Qays or Majnun Layla (d. before 699)), and some more worldly and urban (e.g. 'Umar b. Abi Rabi'a (d. 712/21)).

Arabic poets would often rely on an assistant transmitter (*rawi*) to memorize and disseminate their poetry orally. The motives for the written recording of Arabic poetry by poetry transmitters such as Hammad al-Rawīyya (fl. 725) or Khalaf al-Ahmar (d. c.796) were somewhat varied. They included: tribal rivalries in new urban centres such as Kufa and \*Basra, the pedagogical and ideological needs of the Umayyad and \*Abbasid courts, the formulation of \*Arabic grammar for the first time, and eventually the use of poetic citations in the explication of the text of the \*Qur'ān. Accurate knowledge of poetry became quite valuable and prestigious, and often self-interested accusations of forgery among the

transmitters proliferated. In the 20th century T. Husayn and the English orientalist D. S. Margoliouth went so far as to call into question the authenticity of the entire pre-Islamic corpus, a thesis which has been largely jettisoned in the face of more refined accounts of the transition from oral to written culture.

The Arabic of pre-Islamic poetry is of an extraordinarily detailed, complex, and elevated register. As such, numerous commentaries were penned in the early Islamic period to explicate obscure meanings. The language was also uniform across the \*Arabian Peninsula, almost entirely transcending tribal dialects. In their stylization of pre-Islamic motifs, Umayyad poets in many instances simplified poetic diction. NAM

**poetry and poets, Germanic** Little early Germanic poetry survives and much of it is anonymous. All surviving early Germanic poetry has in common the absence of end-rhyme (with few, late exceptions) and the structural principle of alliteration in pairs of half-lines, each consisting of at least two stressed syllables. Old Norse poetry, which is younger, developed more variation of verse types and stress patterns.

Since \*literacy was dependent on Christianization, \*pagan material is almost entirely lost. Apart from short poems inscribed on some Scandinavian \*rune stones, pagan myths and legends survive best in the late and anonymous Icelandic *Poetic or Elder Edda* (13th cent.), and the fragmentary Old High German *Muspilli* (c.850), which is partially Christianized. Germanic verse also survives in a few heroic legends, most notably in the \*Anglo-Saxon (Old English) \**Beowulf* (between AD 850 and 1000) and the fragmentary Old High German *Hildebrandslied*. It was also widely employed in Christian poetry, such as the Old Saxon *Heliand* (9th cent.). The style was abandoned relatively early in Old High German, where the anonymous *Ludwigslied* (late 9th cent.) abandons alliteration in favour of rhyming half-lines.

In England, which has comparatively more surviving early poetry, alliterating verse survived into the 14th century. Noteworthy are the Anglo-Saxon *Battle of Maldon*, a heroic poem describing the tragic defeat of an Anglo-Saxon army by Vikings, and the Old English \*riddles, which adapt a \*Latin model.

**poetry and poets, Middle Iranian** In the \*Sasanian period poems were sung by bards or minstrels (MP *gōsan*) at the \*court and among the people retelling the history of the Iranian king, of heroes and villains, of \*hunting, war, and the virtues associated with \*Zoroastrianism. Two texts, the epic *\*Ayadgar-e Zareran* (*Testament of Zarir*) and the debate poem *Draxt-e Asurig* (*The Babylonian Tree*), survive in the Middle \*Persian language and script. The \*apocalyptic section (16) of the *Jamāsp-Namag* (*Ayadgar-e Jamāspig*) is also in verse. The \*Manichaean hymns contain significant quantities of poetic utterance in Middle Persian. The epic themes of pre-Islamic poetry are visible in the legendary deeds of the Christian hero Mar \*Qardagh, and were sustained in later poetry of the Islamic period. TD

**Poggibonsi** Poggio Imperiale is a promontory bounded by substantial Renaissance defences above the present town of Poggibonsi in central Tuscany. Extensive long-term excavations by Siena University have identified as a first phase a 6th/7th-century, \*Lombard-period upland settlement of dwellings built with posts. These indicate a \*village community emerging from the break-up of the Late Roman \*villa \*landscape. Other similar sites have been identified in Tuscany at Montarrenti and Scarlino. A subsequent 9th-century (Carolingian-period) phase saw a reordering of the site, much remodelling in stone, and the creation of what was probably a manor with stores and craft areas occupying

the summit of the site as the focus of the community, the earliest such securely excavated example of a manor in \*Italy. An archaeological park now frames the early medieval to modern settlements. NJC

M. Valenti, *Poggio Imperiale a Poggibonsi (Siena): Dal villaggio di capanne al castello di pietra* (1996).

**Poitiers** (*civitas Pictavorum*: dép. Vienne, France)

\*City in \*Aquitania Secunda, which acquired a wall-circuit enclosing some 42 ha (over 100 acres) in the decades around 300, excluding much of the pre-existing urban area.

\*Hilary of Poitiers is the first- and best-known \*bishop; his successors are obscure until the later 6th century, when the location of Poitiers on a fault line between rival \*Frankish kingdoms made it in the time of Bishop Maroveus a recurrent focus of conflict. Maroveus also had to contend with S. \*Radegund's foundation within the walls of Poitiers of a \*monastery for women, which soon secured a fragment of the Holy \*Cross and attracted numbers of royal and aristocratic ladies. The tensions over authority within the community that exploded after the deaths of Radegund and Agnes, its first abbess, led to a revolt described hyperbolically by \*Gregory of \*Tours. The accession to the see of \*Venantius Fortunatus, for a long time a friend of the monastery, and biographer of both Ss. Hilary and Radegund, probably sealed a renewal of harmony.

Various archaeological remains of the monastic complex have been identified, but their chronology is imprecise. A \*baptistery of Late Antique origin does survive in elevation, albeit much modified. The Hypogée des Dunes, a funerary chapel of peculiar plan and decoration, has been excavated in a \*cemetery to the east of the city; it remains somewhat enigmatic, but it is dated to the decades around 700. Later 7th-century \*charter references to the city's \*council (*curia*), \*Defensor Civitatis, and \*gesta municipalia suggest that the city's civic institutions survived in some form until a similar period. STL

*Topographie chrétienne*, vol. 10 (1998), 65–92; 16/1 (2014), 218–24.

B. Boissavit-Camus, *Le Baptistère Saint-Jean de Poitiers: de l'édifice à l'histoire urbaine* (2014).

**Poitiers, Battle of** Fight between Frankish Christians and Muslims from al-\*Andalus in 732. Muslim armies carried out multiple raids into Frankish territory in the decades after the \*Arab conquest of Spain in 711. In 732, a force under 'Abd al-Rahmān b. 'Abd Allāh al-Ghāfiqī, the \*governor of al-Andalus (r. 730–2), was

defeated by \*Charles Martel. The battle proved to be the high-water mark of early medieval Muslim expansion in Europe, although Gibbon's claim that the battle itself halted this expansion is dubious; the \*Berber revolt (740–4), the \*Abbāsid Revolution (750), and the subsequent focal shift of \*Islam to the East would seem more likely causes.

NC  
*EI* 2 vol. 1 (1960) s.v. 'Balāṭ al-Shuhadā', 988–9 (H. Pérès).  
 ed. (with SpT) J. E. Lopez Pereira, *Crónica Mozarabe de 754* (1980).

D. Nicolle, *Poitiers A.D. 732* (2008).

**Polemnius** Julius Valerius Alexander Polemnius was a \*senator who held the rank of \*Comes under \*Constantius II. He translated the \**Alexander Romance* of Ps.-Callisthenes from \*Greek into \*Latin and was perhaps also responsible for the translation of the anonymous *Itinerary of Alexander*. He may be identical with Polemnius, \*consul in 338.

PLRE I, Polemnius 3 and 4.

HLL 5, section 540.1.

**Polemnius Silvius** Author of a didactic *laterculus*, dedicated in AD 448/9 to \*Eucherius, Bishop of \*Lyons. He is usually identified with Silvius, friend of \*Hilary, Bishop of \*Arles, and with Silvius, mentally disturbed after a palatine career, who wrote a (lost) religious work in AD 438.

The *Laterculus* is primarily a Roman calendar, simplified (possibly for schoolchildren), listing traditional and Christian \*festivals and holidays, with explanatory, meteorological, and antiquarian annotations. Interspersed between the months are seven of eleven promised lists: \*emperors with \*usurpers (from Julius Caesar to the present); Roman \*provinces; \*animal, \*bird, and \*fish names; features of the City of \*Rome; brief world history (from the Flood); onomatopoeic animal sounds; \*weights and measures. It often reflects local Gallic \*Latin usage.

The emperor list perhaps used the lost \**Kaiser-geschichte* of Enman. The province list places provinces within regions, possibly \**dioceses*, in neither geographical nor status order. Neither a contemporary list of 448/9, nor generally regarded as chronologically homogeneous, its errors, interpolations, and ambiguities leave its base text and source(s) uncertain. The eastern lists include provinces created under \*Theodosius I, but not all of them; it includes \*Arcadia, but not the earlier-created \*Cappadocia Secunda. The list for \*Illyricum dates before its partition in the 390s. The list for \*Britain is appended to the eastern provinces and was probably not in the basic source for the western provinces. The list for Italy post-dates Theodosius I, but more

precise dating (to AD 399 or 413/17) remains controversial.

Canepa, *Two Eyes*, 176–81.

J. C. Liu, 'Polo and Cultural Change', *Harvard Journal of Asiatic Studies* 45 (1985), 203–24.

**polyandrium** \*Latin term from Gk. *poluandreion* ('full of men') for a communal grave (e.g. Ezekiel 39: 11). It might be used pejoratively, as by \*Arnobius (V, 6) of \*temples where pagan gods and heroes were thought to be buried. \*Epiphanius (*Panarion*, 30 on Ebionites, 7–8) tells a story about unsavoury magical practices carried on by the local population in the tombs at the *polyandrium*, a place of caves cut in cliffs, near the

hot springs at \*Gadara. \*Lactantius (*Epitome*, 67, 7) says that Polyandrium will be the name of the place where the bodies of the dead will be piled after the Last Judgement. OPN; SEB

**polycandelon** See LAMPS.

**polytheism** See PAGANISM; MONOTHEISM, HENOTHEISM, AND POLYTHEISM.

**Pontica** \*Diocesis, probably created in 313, which included the northern and east Anatolian \*provinces of \*Bithynia, \*Honorias, and \*Paphlagonia, \*Galatia I and II (Salutaris), \*Helenopontus, \*Pontus Polemonianus, \*Cappadocia I and II, and \*Armenia I and II. It was administered by a \*Vicarius whose headquarters were at Ancyra (\*Ankara) in Galatia Prima. \*Constantius II honoured his wife \*Eusebia by renaming Pontica as Pietas (\*Ammianus, XVII, 7, 6). A military command, the Comes Dioeceseos Ponticae, was created by 413 (*CTh* VI, 13, 1). The office of Vicarius was merged with that of the military \*Comes of Galatia by \*Justinian I (*NovJust* 8, 3). SM Jones, *LRE*, index s.v. Pontica.

**Pontifex Maximus** Office held by successive Roman \*emperors from Augustus onwards which authorized their general supervision of religious cults at \*Rome and their function as religious mediators elsewhere in the Empire. For the Emperor \*Julian it justified his promotion of various neo-pagan initiatives (e.g. *Letter to a Priest*, 298C). The credibility of the story told by \*Zosimus (IV, 36) that \*Gratian repudiated the robe of the Pontifex Maximus is vitiated by the facts that no distinctive robe was associated with the office, and that Gratian and his successors continued to use the style *pontifex*. The official titulature of \*Anastasius I included Pontifex Inclytus.

Christian bishops were termed 'pontifex' from at least the mid-4th century, and the \*Vetus Latina and \*Vulgate use the term for the Jewish High Priest and (in the Epistle to the Hebrews) for Christ himself, but Pontifex Maximus did not become a papal title until 1453. OPN; DMG

**Pontifices Dei Solis** In the autumn of AD 274, the \*Emperor \*Aurelian elevated the priesthoods of the \*Sun to the rank of Pontifex to serve his vast new

\*Temple of the Sun at \*Rome. Previously, the cult of the Sun had been served by lower-ranking *sacerdotes* and *kalatores*. The new Pontifices Solis were all prominent \*senators of Rome, among whom the priesthood is attested well into the 4th century. The Temple and pontificate of the Sun had no connection with \*Mithraism (*CIL* VI, 2151). SHi

S. Hijmans, 'Temples and Priests of Sol in Rome', *Museion* 10/3 (2010/2013), 383–435.

Rüpke, *Fasti Sacerdotum*.

**Pontus Polemoniacus (Polemonianus)** Part of the \*Diocesis \*Pontica, the north-east \*province of \*Anatolia extending from \*Neocaesarea, the capital, to Trapezus (\*Trebizond). It is attested in the \*Verona List of 314 and by ecclesiastical and administrative sources up to \*Hierocles' *Synecdemus*, but in 535/6 it was assimilated into \*Helenopontus (*NovJust* 28). In 528 a new military command, the \*Magister Militum per Armeniam et Pontum Polemoniacum et Gentes was created to deal with the situation in \*Lazica, where Rome faced the challenge of the \*Persian Empire (*CJust* I, 29, 5). The eastern part of the province was a \*frontier region, especially the territory of the \*Tzani south-east of Trapezus, who had scarcely been subject to Roman control before the measures of \*Justinian I, who constructed fortresses and \*roads, installed garrisons, and built churches for the previously \*pagan population (\*Procopius, *Aed.* III, 6). SM Mitchell, *Anatolia*, 159.

**poor, the** A serious problem in understanding poverty in the Late Antique world is that little of the surviving written source material derives from the poor themselves. In considering the character of Late Antique poverty it is, however, helpful to distinguish between conjunctural poverty, which was short-term or sudden, and structural poverty, which was long-term or inevitable.

Conjunctural poverty could affect those whose limited access to resources made them vulnerable to bad harvests or family deaths. Such poverty would have fuelled urban migration ('subsistence migration') into Late Antique \*cities, where the desperate might seek access to the \*food supply. In times of acute crisis the state tried to prevent such movement. Conjunctural poverty may have affected women in particular as they had fewer economic opportunities. Stories describing women falling into \*prostitution out of desperation should be approached with some caution as literary topoi, but probably also reflect real dangers faced at the time they were written.

Structural poverty is even more difficult to understand. Late Antique society was based on a pre-industrial, agrarian economy, which would have determined certain

features of structural poverty. In a world of mediocre nutrition, and virtually no social services, for example, physical disability must regularly have entailed increased poverty for individuals and their families. In such a society, however, access to land is the most important determinant of wealth and poverty, and it is clear that land was unevenly distributed, quite apart from issues of health.

The terminology used to describe poverty in Late Antiquity was malleable and imprecise. For example, the term for 'poor' (Gk. *penes*) could signify either the truly poor or those who were simply, in comparison to those better off than themselves, the not particularly wealthy; it is possible to find people who are termed poor who owned slaves, and were therefore middling householders without tremendous wealth. The 'destitute' (Gk. *ptochos*) was a term probably reserved for the genuinely poor.

It has been argued that the rise of the Christian Church in Late Antiquity promoted a revolutionary new concept of poverty. It is thought to have displaced an older, civic model of the social order and its systems of urban benefaction based on the entitlement of citizens. The Christian model, it is argued, promoted voluntary poverty in the form of \*asceticism. More radically, it also envisioned society as the totality of humanity and emphasized the virtue of caring for the poor as a distinct activity (e.g. \*Lactantius VI, 12); a Christian preacher such as \*John Chrysostom \*spoke up for the poor. The extent to which the Christian model caused change, and when this might have occurred, is, however, debated.

An increased understanding of Late Antique poverty is being provided by the bioarchaeological record. The Romans of the Early Empire were comparatively short, which suggests that there was structural pressure on the resource base. At some point in Late Antiquity mean stature in the West increased significantly. Research continues into the implications of this observation.

**population** The study of population in pre-industrial societies is concerned with two distinct but connected elements: the absolute number of people and the way that changes occur over time. The first element is concerned with the size of the population and with its demographic distribution over the land. Size is an

important indicator of the political organization's potential to extract the resources necessary to fund the public apparatus and \*army. The extent of the people's distribution over the land, and in particular the urban to rural ratio, indicate the degree to which production has been developed. In other words, in pre-modern societies a relationship is thought to exist between agricultural productivity and the percentage of the population that could be removed from primary production and used in other remunerative activities for society as a whole, for the army, for civil \*administration and the practice of religion, for commerce, and for craft production.

Estimates concerning the overall population of the Roman Empire, and the ratio of inhabitants of the towns and \*cities in relation to the predominant rural population, albeit limited by the unavailability of statistical-type data, are able to provide a demographic picture of considerable internal consistency for the period leading up to the Third Century \*Crisis. The overall population in the Early Empire (the 1st–2nd centuries AD) has been calculated at between 60 and 70 million inhabitants. The average proportion of the population living in cities oscillated between 10 and 20% of the overall population.

The crises in mortality rates prompted by the Antonine Plague (AD 169–94), and the consequent dislocation in healthcare and ways of providing food, brought to an end this lengthy phase of expansion seen in the Early Empire. Between the 2nd and 3rd centuries, these factors caused a reduction in the Empire's population, estimated in the range of around 20%. The \*epidemic caused the population to alter over time, owing to the change in the ratio between the rates of births and deaths.

The decline caused by the 2nd-century epidemic in fact illustrates the principal demographic features of the imperial age. There was a high birth rate, with numerous births per couple—on average around 5–6 children—and a very high death rate among newborns and young children. Mortality within the first year was around 30% and the overall rate of mortality in the under-fives ranged between 40 and 50% of all children born. Life expectancy at birth was still between 20 and 30 years. This was typical of ancient demographic regimes. This was a high-pressure system which could be sustained only because there was also a very high general rate of mortality; rapid decreases in population were as a rule caused only by an epidemic or food crisis. Within a system regulated by these mechanisms, the end of a mortality crisis was generally followed by a strong demographic revival; production and reproduction, the entire demographic and economic system, restarted at full speed in order to fill the various voids created in the social fabric. In the period which followed there was normally a dip in the mortality rate

to lower levels than before the crisis. This was caused by better living conditions, favoured by the reduction in demographic-economic pressure, the physical immunity acquired by the survivors, and by a strong recovery in \*marriage and birth rates, accompanied by a new intensification of migratory flows to replace the losses in the workforce. The population slowly began to grow again until the next \*famine or epidemic, which prompted a new mortality crisis and the consequent rebalancing between the surviving population and the available resources.

However, from the 4th century onwards a new trend may be observed. The consistency within the imperial demographic structure was lost, and was replaced by two contrasting population dynamics. For the western \*provinces, the 4th to 6th centuries formed a watershed in the alternation between phases of growth and decline which was typical of ancient population regimes. In these centuries, a period of population contraction began which does not, however, seem to have been prompted by a rise in the mortality rate or by a concomitant ongoing opposition between an unaltered high birth rate and growing death rate. The decline in population was instead the result of a drastic reduction in the birth rate, which took place above all in the countryside, in the context of a permanent low level of life expectancy and a high mortality rate, the mortality rate having deteriorated even more in the declining cities. The countryside therefore stopped supplying its human surplus to the cities, and the cities, no longer supported by immigration and thinned out by seasonal deaths, experienced a progressive depopulation. A typical example of this regressive trend is the demographic decline of the city of \*Rome:

- c. AD 350: 400,000/500,000;
- c. AD 470–80: 80,000/100,000;
- c. AD 530: 60,000;
- c. AD 600: 45,000.

What triggered this alternative mechanism is still a matter of dispute. The main hypotheses put forward are that the population was unable to match the pre-crisis rate of reproduction, or, alternatively, that a new system of production came into force that affected the economic organization and \*family structure of the rural populations in Western Europe.

In the eastern provinces, by contrast, a sizeable demographic growth can be seen between the 4th and 6th centuries, a growth which is directly reflected in the urban population: \*Constantinople, 400,000–500,000; \*Alexandria, 200,000; \*Antioch, 150,000–200,000; \*Jerusalem, 53,000; Hermopolis, 37,000; \*Scythopolis, 30,000. However, this positive trend came to a halt between the 6th and 7th centuries. This decline may not have been caused directly by the epidemics of the

Justinianic \*Plague, which recurred at irregular intervals for over two centuries (AD 541–750), but these did nothing to improve the situation. However large it was, the population decline nevertheless does not seem to have caused a corresponding regression in production or commercial traffic. In the same way, it does not seem to have made a significant impact on price structures, at least not at the levels of impact experienced in Western Europe. It was only from the 7th century onwards that the demographic trends in eastern and western parts again fell back again into step, both experiencing a phase of decline followed by a prolonged stagnation. In the century in question, the population in the territory of the former Roman Empire numbered around 30 million. Even so, there was a notable imbalance between east and west—with c.10 million in Western Europe and c.20 million in the Byzantine Empire—in a picture that also displayed considerable regional differences.

**Poreč** \*City on the Adriatic coast in modern Croatia; Roman Parentium in the \*province of \*Venetia et Histria, a *colonia* under Augustus or Tiberius. Most of the ancient city plan survives, but visible architectural remains of the imperial era are few (fortifications, Capitolium).

The 6th-century cathedral complex is still standing. It is called Eufrasiana after its builder, the \*Bishop Eufrasius appointed under the \*Emperor \*Justinian I. A \*mosaic \*inscription in the \*apse of his new church records Eufrasius' monumental reconstruction of an older, ruinous \*basilica. He refurbished it in \*marble with splendid wall mosaics, of comparable quality to the contemporary mosaics of S. Vitale in \*Ravenna (dedicated by \*Maximian, another native of Histria appointed a bishop under Justinian). The mosaics in the apse and on the triumphal \*arch have Christological and notably Marian themes, accompanied by saints, \*martyrs, and local dignitaries. On the arch, Christ is seated on the orb with the Apostles, in the intrados of

the arch are eight female saints; \*Mary is enthroned with Jesus in the centre of the vault, flanked by two \*angels. On the left of Jesus are two martyrs flanking a saint carrying a book; on his right, all identified by name, are the local martyr-bishop S. Maurus, Bishop Eufasius carrying a model of the basilica, the \*deacon Claudius and his son Eufasius holding candles. Eufasius also rebuilt the octagonal \*baptistery and erected a monumental bishop's palace.

Excavations in the 1960s clarified several pre-Eufasian building phases. The earliest level revealed an oratory with mosaics and a baptismal *piscina* in a remodelled private residence. In the 4th century S. Maurus' \*relics were transferred from a suburban cemetery to this site and the first church was built. An inscribed fragment of S. Maurus' \*sarcophagus commemorates these events. The tripartite church had a \*martyrium, a place of worship, and a place for the instruction of catechumens. Donors, named in mosaic inscriptions, furnished the floor decoration. Coins found in the mortar of walls and floors date the construction to the late 4th century. A new three-nave, pre-Eufasian basilica was built around the mid-5th century. It was a rectangular building without apse. The raised sanctuary had a semicircular \*synthronon. The middle and north hall of the first church were redesigned to accommodate some rooms and a large cistern in the middle, and a separate basilica, perhaps for martyr cult, on the north side. A new, octagonal baptistery was in the longitudinal axis of the basilica. Architectural remains and mosaics of all of the earlier buildings are today visible outside and under the Eufasian basilica. Eufasius placed the \*relics of martyr-bishop S. Maurus in the altar of his basilica. IDS *TIR* L 33 (1961) 56 s.v. Parentium.

**Porphyrius** (d. after 333) Poet and \*senator. Publius Optatianus Porphyrius was exiled under \*Constantine I but subsequently recalled, perhaps in 325, and was later \*Praefectus Urbi twice (329 and 333). Seeking to secure his return from \*exile, he dedicated a collection of figure poems to Constantine, praising the \*emperor's military victories and celebrating, in anticipation, his Vicennalia, the twentieth \*anniversary of his accession. He is also the author of a smaller group of non-panegyric poems. In some cases, by varying line length he shapes poems to imitate objects: a water organ, altar, or Pan's pipes. More commonly he incorporates into his poems lines of verse that run at an angle to the normal horizontal ductus of the text (*versus intexti*). Sequences of letters can be read not only vertically, but also

diagonally, tracing out geometrical patterns or images, which were picked out in red. In this way he weaves into his poems, for example, the chi-rho monogram, a palm tree, or a \*ship. In some poems, the inserted text, though written in the \*Latin alphabet, has to be read in \*Greek. The manuscripts also preserve a prose dedicatory \*letter to Constantine and the emperor's reply. Their authenticity has been questioned, but if genuine, they must relate to an earlier collection, since they make no mention of Porphyrius' exile. MJR

**Porphyrius** Famous charioteer in the reign of \*Anastasius I, when rioting by rival \*factions (the Blues and Greens) became a major problem in \*Constantinople and other \*cities. Several \*statues were erected to Porphyrius by the Blues and Greens, suggesting that he changed allegiance at Anastasius' command to maintain excitement in the \*Hippodrome and contain the rivalry here. It is likely that Porphyrius with the Green faction helped with the defences of \*Constantinople and the sea battle against \*Vitalian. \*Epigrams inscribed on statue bases attest his skill as both soldier and charioteer (*AnthGraec* XV, 50; XVI, 347; XVI, 348 and XVI, 350). FKH

Cameron, *Porphyrius*.

**porphyry** A hard stone from \*Egypt, glossy and dark \*purple flecked with white when polished, quarried at only one site, \*Mons Porphyrites high in the Eastern Desert, from the time of its discovery in AD 18 by C. Cominius Leugas until the \*quarries were abandoned in the 430s. Though difficult to carve, it was highly prized. Even after the quarries ceased production, porphyry drawn from stockpiles or reused as \*spolia continued to be used for imperial portraits (e.g. LSA 454, 1026) and \*sarcophagi (Grierson), and, in building, for columns, wall revetment, \*opus sectile floors, and as \*mosaic tesserae.

Porphyry statues were brought to Rome under Claudius (\*Pliny, *Natural History*, XXXVII, 57) and Nero was buried in a porphyry sarcophagus (Suetonius, 50). The \*Tetrarchy favoured the stone for imperial \*portraiture; porphyry groups of \*Diocletian and his colleagues survive in Venice (LSA 4 and 439), the Vatican (LSA 840 and 841), and individual portraits are known from Athribis in \*Egypt (LSA 836), \*Gazigard (LSA 845), and elsewhere (LSA, 523, 1005,

1041). \*Constantine I and members of his family were buried in porphyry sarcophagi, two of which are now in the Vatican Museum, and the centrepiece of the Forum of Constantine at \*Constantinople was a porphyry column (Çemberlitaş). Fragments of porphyry were recovered in the excavations of \*Anicia Juliana's Church of \*S. Polyeuctus in Constantinople. \*Paul the \*Silentiary praised the porphyry 'sprinkled with small bright stars' which formed part of the polychrome 'meadows of marble' to be seen in the stonework of the Church of the Holy Wisdom (625–7; cf. \*Procopius, *Aed.* I, 1, 59–60).

The term green porphyry is sometimes used to describe a green stone with large dark glassy inclusions, quarried near Sparta in \*Greece and otherwise known as *opus Lacedaemonicum* (\*Isidore of \*Seville, *Etymologies*, XVI, 5, 2) and serpentine. Paul the Silentiary calls it the 'green stone of Laconia' (628), and distinguishes it from the green \*marbles of Carystos (618–21) and Boeotian \*Thebes (641–6). Porphyry and *Lacedaemonicum* are the most expensive stones listed in the Tetrarchic \*Prices Edict (31, 1–2), both more than five times the price of marble from \*Proconnesus. OPN; WLT

*Porphyre: la pierre pourpre des Ptolémées aux Bonaparte* (Paris, Louvre exhibition catalogue, 2003).

**Porphyry of Gaza** (c.347–420) The details of Porphyry's biography are derived from a *Life* surviving in \*Greek and \*Georgian and purporting to be written by a close associate, Mark the \*Deacon. However, the prologue to the *Life* in the form in which it survives (*BHG* 1570) reproduces the preface of \*Theodoret's *Religious History*, written in the mid-5th century, and the *Life* incorporates other anachronisms.

The *Life* represents Porphyry as being born in \*Thessalonica, as having lived as a monk in the Egyptian and Palestinian deserts, being ordained \*priest in 392, and being consecrated \*Bishop of \*Gaza in 395. It focuses on Porphyry's campaigns against \*paganism in Gaza, particularly the razing of the \*Temple of Zeus Marnas, and its replacement by a church. For this the bishop is said to have obtained the support of \*John Chrysostom and the \*Empress \*Eudoxia.

Two lists of bishops from \*Palestine, of 400 and of 415, give the name Porphyry without prescribing an

episcopal see. \*Jerome mentions Marnas frequently in his *Life* of S. \*Hilarion, predicts the destruction of the Temple of Marnas in a letter of 403 (*ep.* 107, 2), and some years later exults over its replacement by a church in his *Commentary on Isaiah* (Book 7, on Isaiah 17:1–3).

The topography presented in the *Life* is detailed and the events vivid, but its historicity is highly disputable.

**Porphyry of Tyre** (Malkos; c.233–c.305) \*Philosopher and polymath and a central figure in the continuation of \*Middle Platonism and the early development of \*Neoplatonism.

## Life

Following youth in Phoenician \*Tyre and early studies in \*Athens under Cassius \*Longinus, Porphyry became in his 30th year (AD 263) a student of \*Plotinus at \*Rome (*VPlot* 4). It is clear that he was already seriously committed to Platonic philosophy. After only five years at Rome, he was advised by Plotinus to retire to Lilybaeum in \*Sicily as treatment for his suicidal tendencies (*VPlot* 6). At some point following Plotinus' death (in 270), he apparently returned to Rome and taught (though not in the school of Plotinus, which had died before its master). Porphyry's own *Life of Plotinus* states that when he wrote it he was in his 68th year (i.e. 301), while the \**Suda* informs us that he died during the reign of \*Diocletian, so sometime between 301 and 305.

## Writings

Porphyry wrote copiously on a vast array of topics. Controversy surrounds the relative dating of most of his works (especially as the majority of these now survive in fragments preserved in sources of varying reliability) and hence of his intellectual, religious, and philosophical development. He dedicated several treatises to rhetorical and philological themes, many of which probably date to his time in Athens, especially the *Listening to Litterateurs* (*Philologos akroasis*), recording a dialogue on the detection of plagiarism in classical authors, and the

*Homeric Questions*, most of which are dedicated to difficulties of a philological nature. Fragments (in paraphrase more often than verbatim form) of numerous commentaries and exegetical treatments reveal persistent concerns about the theological, cosmological, and psychological issues raised in the texts of Plato and Aristotle (and some other authors, like \*Ptolemy). Worthy of special note is the commentary on Plato's *Timaeus*, which formulated a complex demonology and expounded the nature and providential activity of the Demiurge (which he assigns to the hypostasis of Soul, not the Mind as in Plotinus). The fragments on the Myth of Er from the last book of Plato's *Republic* derive probably not from a commentary on that dialogue but from Porphyry's treatise on the freedom of the will. We possess fragments from commentaries on Plato's *Cratylus*, *Sophist*, *Parmenides* (though the anonymous 3rd/4th-century commentary on the *Parmenides* is probably not by Porphyry), *Philebus*, and *Phaedo*; and commentaries on Aristotle's *On Interpretation*, *Categories*, and *Physics*. Exegetical works of a protreptic nature include the largely intact philosophical allegory on the embodied soul, *On the Cave of the Nymphs in the Odyssey*, and the *Sentences* comprising paraphrases of select passages from Plotinus' *Enneads*, which may have served an introductory function for students. Other introductions are the *Introduction* to the first five categories of Aristotle (which reconciled Aristotelian category theory to Platonism by treating the categories as predicables rather than ontological categories) and an *Introduction to Ptolemy's Tetrabiblos*. The *Philosophic History* (of which the segment on the 'Life of Pythagoras' is the lengthiest surviving portion) may have served as an introduction to the history of Greek philosophy and contains both frivolous anecdotes and serious doctrinal discussions. His *Life of Plotinus* was intended as an introduction to Porphyry's edition of the *Enneads* while legitimizing his role as the curator of Plotinus' heritage. He performed exegesis of religious texts (\*oracles or cult images) in the fragmentary *Philosophy from Oracles* and *On Images* (and possibly a work *On the Chaldean Oracles*). The fragments of both works are probably not representative of their original scope and tendencies, due to their preservation by later authors hostile to them. Though disputed, the fragments collected under the title *On the Return of the Soul*, attested only in \*Augustine, probably belong to the *Philosophy from Oracles*. Thematic explorations of key philosophical issues raised by \*Homer and Plato survive in the fragments of the *On the Styx* and *On What is Up to Us* (a defence of free will based on *Rep.* 10). The *Letter to Marcella* and the fragments of the treatise *On the Inscription 'Know Thyself'* are both of a didactic-protreptic nature, the first dedicated to his wife Marcella, the second addressed to \*Iamblichus. Several works attest to Porphyry's involvement in philosophical

and religious debate. His *On Abstinence from Eating Meat* is the lengthiest defence of vegetarianism from Antiquity. The fragments of *Against Nemertius* defended a Platonic notion of Providence against an Epicurean contemporary; the *Letter to Anebo* raised critical questions about Egyptian theology and cult practices; and the *Against Boethus on the Soul* argued against Stoic and Peripatetic notions of the soul (further psychological explorations were pursued in the *To Gaurus on the Ensoulment of Embryos*, *On the Powers of the Soul*, and *Miscellaneous Questions*). The notorious *Against the Christians* was apparently the most thorough and wide-scale attack on Christianity in Antiquity. The nature, scope, principles, and even title of the latter work have been the subject of ongoing dispute; a reliable edition of the fragments remains a desideratum.

With his edition of Plotinus' *Enneads*, his incorporation of Aristotle into Platonism, and his wide-ranging and creative engagement with a broad spectrum of Greek and Roman knowledge, Porphyry stands as one of the greatest contributors to the growth of Late Antique Platonism. APJ

**Porphyry the whale** \*Procopius describes a ferocious whale named Porphyry (perhaps after the charioteer) which terrorized \*Bosporus shipping for half a century, till one calm day c.547/8, chasing some dolphins from the Mouth of the \*Bosporus to the Sangarius estuary, it ran aground and was killed (*Gothic*, VII, 29, 9–20; *Anecd.* 15, 37). OPN

**porter** (doorkeeper, Lat. *ostiarius*) The lowest rank of church hierarchy, first attested in 251/3 at \*Rome (Cornelius in \*Eusebius, *HE* VI, 43, 11). A porter's duties included keeping order; it was the *ostiarius* at \*Milan who prevented Monica from celebrating a \*refrigerium in the African manner at the \*martyrs' tombs (\*Augustine, *Conf.* VI, 2, 2). The 4th-century \*Council of \*Laodicea required porters to avoid theatres and taverns (Canon 24). There were 110 porters at \*Justinian I's Church of the \*Holy Wisdom in \*Constantinople (*NovJust* 3, 1). MFC; OPN  
*DACL* 14/2 (1948) s.v. 'portier', 1525–33 (Leclercq).

**portraiture, civic** The Graeco-Roman custom of erecting large-scale sculptured portraits (statues, busts) in the public spaces of \*cities and in aristocratic \*houses persisted in Late Antiquity, for instance at \*Rome and \*Aphrodisias. The main beneficiaries of public honours in Late Antiquity were provincial \*governors. Portraits also appear on such luxuries used by Late Antique \*aristocracy as \*silver and \*ivory \*diptychs, and on some \*sarcophagi.

In the late 3rd and earlier 4th century senatorial self-representation stressed the traditional magistracies and the giving of games connected with these. Educated \*otium in rural \*villas is another significant theme on \*sarcophagi. Private individuals are shown in traditional civic \*dress (\*toga, *himation*). In the late 4th century, new ceremonial garments (the Late Antique toga and \*chlamys), marking status and office within the new-formed senatorial elite, entered the representative arts in all media. Sculpture of this kind is mainly, but not exclusively, known from the Greek East (\*Corinth, Aphrodisias, \*Ephesus, \*Constantinople) and also from Rome.

The style of civic and imperial portraits diverged during Late Antiquity: non-imperial portraits are marked by 'realistic' features such as wrinkles, beards, and varying \*hairstyles, while imperial \*portraiture was heavily idealized. UG

**portraiture, episcopal** Portraits of living \*bishops are attested already in the 4th century for Meletius of \*Antioch (360–81) and three \*Patriarchs of \*Constantinople. The first preserved portraits date to the 6th century: examples include Felix IV of \*Rome (526–30) in the Church of Ss. Cosmas and Damian, and also Maximianus, Bishop of \*Ravenna depicted in the \*mosaics of S. Vitale and Bishop Eufrasius in the \*apse mosaic of the church at \*Poreč. A similar image in \*Gerasa is epigraphically attested. The Patriarchs Timothy (511–17) and Eutychius (577–82) of Constantinople are said to have removed images of their predecessors from churches and replaced them with their own. BWA

**portraiture, imperial** Images of the \*emperor were likenesses which also served as his surrogate where he was not present in person. Imperial statues were still charged with ideological and official significance in Christian times; \*Severianus of \*Gabala (d. after 408) asserts that an imperial portrait had to be present whenever a judge sat in judgement, as shown in the scene of Christ before Pilate in the \*Rossano Gospels.

The imperial image was displayed in many different media. Imperial portraits appear on triumphal reliefs of the late 3rd to early 5th century, including the Arch of \*Galerius at \*Thessalonica of 298/303, the Arch of \*Constantine at \*Rome of 312/15, and the Columns of \*Theodosius I (386/94) and of \*Arcadius (dedicated 421), and the base of the \*Obelisk of Theodosius (390/2), all at \*Constantinople. On these, there is a tendency to place the emperor in representative scenes of timeless power.

Imperial statues were still numerous in the 4th century, but had lost their central role as representations of the emperor by the mid-5th century. Only in Constantinople did the custom of erecting imperial statues continue into the early 7th century, specifically to \*Phocas (602–10), to whom a statue was also dedicated at Rome. Many Late Antique statues were made up of \*spolia, earlier sculptures reused and lightly adapted. The decrease in numbers of three-dimensional sculpted portraits may have been partly balanced by an increase in numbers of two-dimensional images; before the \*Antioch Statue Riots in 387, painted likenesses of the emperors were destroyed before their statues were overthrown.

Imperial images with official validation were painted or stamped onto the \*codicilli, the documents of appointment of high-ranking imperial office-holders, and carved on the ceremonial \*theca used in \*courts of law, as shown on the \*Diptych of Probianus of c.400. Imperial portraits also featured on precious \*metalwork (missoria), precious \*stones, and \*ivory \*diptychs exchanged in \*court ceremony and within the senatorial \*aristocracy. Non-imperial \*consuls carried a sceptre tipped with imperial busts; the emperor's image sometimes appeared on the ceremonial garb of consuls or other officials (Diptych of \*Stilicho of the late 4th century; \*Ausonius, *Gratiarum Actio*, 51). Small imperial busts were mounted on military standards. \*Weights were often decorated with imperial portraits, and the imperial image was used on coins into the 7th century.

Late Antique imperial portraits, unlike those of the earlier Empire, cannot be categorized as more or less careful versions of official types, which can in turn be securely identified by coins. Imperial portraits on Late Roman coins do not divide into clearly differentiated portrait types, and there is no series of closely related, sculptured copies to match with the coins.

Already in the 3rd century the emperor was portrayed as a military man with short cropped \*hair and a beard. The \*Tetrarchy adopted this concept, but enriched it with novelties. \*Porphyry was extensively used; in two-dimensional media the emperors were given haloes and emperors wore the \*chlamys, with jewelled \*belt (cingulum), \*fibula, and shoes (campagi). Tetrarchic imagery visualized the unanimity (concordia) of the emperors by showing them together and giving them similar features. For example, coin portraits of \*Diocletian may look different at different mints but will look similar to the other Tetrarchs from the same mint. Statue groups, including a reworked group of cuirassed statues from \*Side (now in Antalya museum) and the porphyry groups now in Venice and the Vatican also emphasize physical similarity and mutual protection.

Constantine I abandoned the military portrait for a youthful, clean-shaven image with forward-brushed \*hair, similar to that favoured by Augustus; the diadem

first appeared on coins in 325. Hairstyle and diadem then remained the defining elements of the imperial image over a long period, surviving changes of dynasties. Coin portraits also remained remarkably consistent after Constantine. Variations (omission of the diadem, individualizing features) appear primarily with \*usurpers; \*Eugenius wore a beard, other emperors (\*Honorius, \*Theodosius II) did so only occasionally. Under Theodosius II the symbol of the \*cross entered the \*coinage prominently.

A new statue type invented by the Tetrarchy was the *chlamydatus*, with long cloak (\*chlamys) pinned on the shoulder by a jewelled \*fibula (as in the Athribis bust). The traditional \*toga continued in use for imperial statues during the 4th century (e.g. the \*bronze statue from Pons Valentinianus, Rome), while two statues from Aphrodisias (of \*Valentinian II and Arcadius of 388/92) are the earliest monuments showing the Late Antique toga with mappa and sceptre, a ceremonial garb which developed into the loros of the Byzantine emperor. The military \*cuirass was used into the 5th and 6th centuries (\*Barletta colossus; statue of \*Justinian I in Constantinople). UG; OPN

**portraiture, philosophers** Numerous 3rd-century \*sarcophagi show portraits of the dead dedicated to study and clad in the *himation*, the traditional garb of the \*philosopher; this reflects the growing importance of the ideal of philosophical life and of philosophy as an ethical guide in this period. Such portraits show the deceased as an 'amateur' in contemporary headgear, while professional advisers surrounding him display 'philosophical' iconography: Greek *himation*, long \*hair, and philosopher's beard.

Late Antique philosopher portraits are mainly known from domestic contexts. Groups of philosophers and other cultural heroes were popular in \*mosaics and wall paintings. In the mid-4th century, philosopher portraits appeared also on \*contorniate medallions. Traditional iconography guaranteed that cultural heroes like Socrates and Plato were readily recognizable, while recent or contemporary sages like \*Apollonius of \*Tyana were represented with long hair and beard. A large late 4th/5th-century \*house in \*Aphrodisias, probably a setting for \*Neoplatonic higher learning,

yielded an impressive set of busts and *tondi*, including portraits of \*Pythagoras, Socrates, Apollonius (perhaps Apollonius of Tyana), and of unnamed contemporaries. \*Eunapius informs us that the mid-4th-century Neoplatonic sage Julian of \*Cappadocia kept likenesses of his pupils in his house in \*Athens.

The high veneration for Neoplatonic sages was not reflected by public honours; the rare surviving examples are exclusively from \*Athens. Some long-haired portrait heads are possibly likenesses of such men; however, no firm identification has been possible so far. The statue in the Forum of Trajan at Rome accorded to the Christian philosopher \*Marius Victorinus (\*Jerome *Chron.* 239e Helm, Augustine *Conf.* VIII, 2, 3) is long since lost.

**Portus** Artificial port of \*Rome. The \*Emperor Claudius constructed breakwaters on either side of a \*lighthouse (*Pharos*) leading toward an inner harbour with dockyards (*Darsena*), and Trajan added the large hexagonal basin connected to the Tiber by canals. \*Constantine I granted Portus the status of an independent \*city. Christian structures include the fully excavated \*Basilica Portuense, which was probably the town's cathedral, together with a 4th-century church honouring S. Hippolytus as well as a church dedicated to Ss. Eutropius, Zosima, and Benosa. In the 4th century, the monk-\*senator \*Pammachius established a \*hostel for pilgrims. In the 5th century, following the \*Visigothic attack of 408–9, walls were built to protect the city centre. The \*Ostrogothic King \*Vitigis seized Portus in 537, but the Byzantine general \*Belisarius, unable to supply Rome with \*grain, recaptured the \*harbour with imperial \*cavalry (\*Procopius, *Gothic*, V, 26–7). See also OSTIA.

**possessor** In Roman \*law, the *possessor* of a thing or piece of property was someone who held that property after the manner of an owner (i.e. who held it exclusively) and regarded it as his own, without being its actual owner (*dominus*), although he could become so if he held it for a sufficient length of time. In that sense, the *possessor* was to be distinguished from the \*tenant, whose \*lease was itself an acknowledgement of non-ownership (see LAND TENURE, ROMAN).

PS

**Possidius** (c.370–after 437) Catholic \*Bishop of \*Calama in \*Numidia from c.401, pupil and biographer of \*Augustine of \*Hippo, and compiler of the *Indiculus*, a list of Augustine's works written by the Bishop of Hippo. Having trained in Augustine's \*monastery before becoming bishop, Possidius remained throughout his life one of Augustine's closest associates. He was a vital participant in Catholic efforts to convince the imperial government to declare \*Donatism \*heresy, as well as a strong opponent of \*Pelagianism. Possidius travelled to the imperial \*court twice, once in 408–9 to complain about \*pagan \*riots that had occurred in Calama (Augustine, *Ep.* 91), the second time in 410 to ask the \*Emperor \*Honorius to convene the Conference of 411 (*Concilia Africae, Registri Ecclesiae Carthaginensis Excerpta*, 107). He left Calama for Hippo when the \*Vandals invaded and was with Augustine when the latter died in 430 (*Vita Augustini*, 31). King \*Geiseric exiled Possidius in 437 (\*Prosper, *Chron. Min.* I, 1327 [475]). ETH PCBE I, Possidius 1.

**Postumus** \*Emperor in \*Gaul 259/60–68/9. Marcus Cassianus Latinus Postumus was \*governor of a Gallic \*province when, c.258, the \*frontiers on the Rhine and in \*Raetia were under heavy pressure from \*Franks and \*Alamans. The Emperor \*Gallienus ordered him to defeat the Franks, and Postumus' success was such that his \*army acclaimed him \*emperor. He seized \*Cologne, base of the generals Saloninus and Silvanus, creating in effect a \*Gallic Empire. An \*inscription from Augsburg dates this important political event to c.260. With his rival Gallienus incapable of defending all his territories, Postumus now controlled \*Britain, \*Spain, and much of \*Gaul.

Gallienus' efforts to recover Gaul were further hampered by the defection of his officer \*Victorinus and another general, Caius Ulpius Cornelius \*Laelianus, who became further competitors for regional power. Postumus' downfall came in the course of his move against Laelianus, after his troops mutinied and killed him when he refused to allow them to pillage \*Mainz.

Postumus left a particularly rich record of \*coinage, and the numerous coins struck at his Cologne and \*Trier mints are superior in quality to those of Gallienus. He created a double sestertius, a new but short-lived issue.

**pottery, Aksumite** Aksumite pottery was made exclusively by hand, without use of the wheel. Wheel-turned vessels found on Aksumite sites were imported. Distinctive vessels were produced to serve a variety of domestic functions; allied forms made with care but less well fired were used for interment with the \*dead. Some imported forms were replicated but without the technology employed for the originals. Detailed knowledge of pottery typology and its chronological sequence is so far restricted to the area around \*Aksum itself. In contrast with other crafts, there is little evidence for large-scale specialized production of pottery, although regional styles may be recognized.

**pottery, barbarian, Germanic** Most ceramic products were used for the storage, preparation, and consumption of food and drink, but spindle whorls and loom weights, important objects in \*textile production, were also made of pottery. Manufacture of pottery in the lands that later came to be associated with Germanic peoples was active by the 4th millennium BC.

By the Roman period, regional pottery traditions reflecting specific forms, surface treatments, and ornamental techniques were well established. For example, the groups known as Elbe Germans, *situlae* along the River Elbe and in neighbouring lands, produced highly polished vessels, in forms known as *situlae* and *turines* (tureens), decorated with meander lines impressed into the vessels with toothed rollers. Pottery was commonly tempered with quartz sand and was hard-fired at a high temperature. Later, during the Late Roman period, large bowls and basins became characteristic forms. Among the Rhine–Weser Germans, on the other hand, a wider variety of pottery forms was produced; vessels tended to be more highly decorated than among the Elbe Germanic groups, a wider range of temper was used, and pottery was not fired as hard.

The specific forms and decorative elements in Germanic pottery can be traced to several different roots. These include the local traditions of earlier communities

in the regions, such as forms and designs in La Tène-style pottery associated with the Celts or Gauls, and also stimuli from the Roman provinces. Scholars are especially concerned with the degree of Roman influence over pottery forms, and in particular with the extent to which Roman \*dining practices affected the kinds of vessels produced by Germanic potters, especially the pottery produced in regions near the Roman \*frontier.

Another important question being investigated concerns the introduction of the fast-turning potter's wheel. In some regions during the 3rd and 4th centuries, increasing proportions of pottery were wheel-made. This new technology had effects both on the efficiency of production and on the forms manufactured.

**pottery, British Isles** The Romano-British pottery of the 4th and early 5th centuries shares many similarities with that of the wider Western Roman Empire, but production was regionalized within \*Britain and imports relatively rare compared to earlier in the Roman period. In the later 4th century, development in pottery styles seems to cease. This and the cessation of coin importation make the latest Romano-British ceramics extremely hard to date. For this reason, there has been a longstanding debate over when Romano-British ceramics ceased to be produced. Recent research suggests that production of some kilns continued into the 5th century, but for exactly how long remains uncertain. Recently identified handmade wares in a Romano-British tradition may belong in this final phase of production.

Whenever Romano-British pottery ceased to be produced, the east of Britain began to adopt Germanic styles of pottery ('Anglo-Saxon pottery') from the mid-5th century onward. Although some 'Anglo-Saxon' pottery, such as \*cremation urns employed in \*Anglo-Saxon mortuary practices, was probably used by migrant communities from across the North Sea, there is no reason to suppose that its use was exclusive to such groups, and it may have replaced Romano-British pottery among British communities for whom Romano-British pottery had become unavailable. Thus, it may be of little use as a cultural marker.

In western Britain, eastern Mediterranean and continental European pottery was imported (see BANTHAM; TINTAGEL). Byzantine material includes \*Phocian Red Slip Ware and African Red Slip Ware, alongside \*amphora types well known from eastern Mediterranean sites. Frankish imports include a series of colour-coated grey vessels (DSPA) dating to the 6th century,

and 'E-Ware' white coarse-ware vessels, dating to the late 6th and 7th centuries. KD

P. Tyers, *Roman Pottery in Britain* (2003).

**pottery, Egyptian** Imitations of red-slipped tablewares (especially \*African Red Slip Ware from \*Africa) were manufactured and used in \*Egypt and \*Nubia from the late 4th century into Early Islamic times. These derivatives, mainly footed bowls and dishes in a pinkish fabric, are known as Egyptian Red Slip Ware, Aswan Ware, or Coptic Red Slip Ware. They were manufactured most probably in the Aswan (\*Syene) region, southern (Upper) Egypt, proven by a Coptic ink \*inscription on a dish mentioning 'of Souan'.

Other production centres of similar fine wares existed from the 7th century onwards at al-\*Fustat (established by excavations at Istabl 'Antar) and perhaps at \*Alexandria, where eventually red-slipped tablewares were replaced by lead-glazed successors in the Islamic period.

The standard local \*amphora types of Late Antique–Early Islamic times were the crudely made Late Roman Amphora 7 (Egloff 177) from Hermopolis in northern Egypt (made of dark-brown \*Nile silt, with small straw-tempered handles), the Abu Mena (\*Abu Mina) imitation of the bag-shaped Late Roman Amphora 5 (Egloff 187 in a buff fabric), and the north-eastern Egyptian version of the Aegean-Cypriot Late Roman Amphora 2/13 (Egloff 167).

Egypt was also the production area of S. \*Menas \*pilgrimage flasks, small mould-made containers for sanctified \*oil or water, decorated with saints or simple Christian symbols in relief. They were widely distributed souvenirs for Christian pilgrims to be obtained at important shrines. JV

**pottery, Persian** Few comprehensive studies of pottery have been published from excavated Late Antique sites in the \*Persian Empire. The largest excavated assemblages come from \*Merv (Turkmenistan), Tureng Tepe (\*Gorgan), \*Qasr-e Abu Nasr (\*Fars), \*Susa (\*Khuzestan), Tell Mahuz, and \*Kokhe (\*Mesopotamia). The distances separating these sites make it difficult to find close comparanda amongst them, although certain glazed wares and shapes (bottles, jugs) were widely

distributed. Ceramic production in the \*Sasanian period was not centralized, however. Pottery of the early Islamic era shows clear continuity with that of the later Sasanian period in its shapes as well as glazes. DTP

**pottery, Roman and post-Roman** Any ware made of clay and hardened by fire may be termed pottery, including fine tablewares, coarse wares, transport jars (\*amphorae), ritual vessels, and modelled human or \*animal forms (but excluding porcelain, unknown outside \*China in Late Antiquity). Pottery may be either handmade, wheel-made (on a slow/fast wheel), or mould-made. Shapes derived from the manufacturing process sometimes imitate vessels made in other materials, such as \*metalwork. Decorative treatment varies from incising, painting, and glazing to relief ornament (moulding, stamps, rouletting, slip applications).

Pottery is important to archaeologists in dating buildings and objects associated with it and as an indicator of \*trade connections. It had various functions in Late Antiquity, some but not all largely unchanged since Hellenistic and Roman times. Earthenware vessels were cheap, everyday products mostly used to transport, store, cook, serve, eat, or drink food and liquids, as well in the case of \*lamps, for lighting. In general, distinct combinations of shape, size, and manufacturing technique characterize pottery made for specific functions. Regional or site-specific clays help to identify the sources of the many types of pottery vessels.

The scale of pottery manufacture could range from the seasonal production of a single household (typical of handmade cooking wares in the West), to more complex facilities (Lat. *fabricae*) that were capable of mass-producing a wide range of specific vessel types (typically fine wares).

Late Roman serving and eating vessels, such as thin-walled dishes, bowls, or plates, were wheel-made, or in

some cases mould-made, in fine reddish-orange fabrics, with smooth red-slipped surfaces that made them liquid-proof (the generic *sigillata* family). The most widespread tableware traded across the Mediterranean and the surrounding regions, they were mass-produced in rural and urban workshops in \*Africa (mod. Tunisia), \*Anatolia (mod. Turkey), \*Cyprus (production location not yet identified), and on a smaller scale in \*Egypt, Jordan, \*Gaul, and \*Spain, the latter serving their regional markets. The most important traded wares were \*African Red Slip Ware (ARS), \*Phocian Red Slip Ware/Late Roman C (PRS), Cypriot Red Slip Ware (CRS), and Egyptian Red Slip Ware (ERS—see POTTERY, EGYPTIAN). These also provided models for local imitations. The workshops of \*Bordeaux, \*Narbonne, and \*Provence in southern Gaul, on the other hand, specialized in the production of reduced, black-slipped vessels (Fr. *paléochrétienne grise*). The decoration of Late Antique slipped tableware ranged from mouldings to stamps and rouletting; much of this decoration and many of the forms imitated contemporary \*silverware. Decorative designs included simple geometric and repetitive patterns, but also, more rarely, complex figural patterns sometimes influenced by Christianity (e.g. saints, \*crosses, \*fish, palm branches).

The size of serving and eating vessels saw a progressive shift from small, individual vessels that went together with large plates, common until the 3rd century, to larger vessels, possibly intended for communal meals, a trend that became more widespread from the 4th century onwards. Successive typological changes in style and shape occurred comparatively quickly, making tableware a useful tool for dating archaeological contexts.

Almost all forms of Late Roman tableware can be traced to more valuable metalware items with the same function, particularly those made in \*gold, silver, and \*bronze. The intrinsic value of ceramic vessels is generally assumed to have been very low: mass-produced pottery could often outcompete local products because of its lower market price, particularly where maritime trade facilitated the transport of ceramics as bulk tertiary cargoes. The simple vessel forms of the majority of these fine wares, with low or no feet, made stacking and packaging very efficient, though this did not impede manufacture or trade in forms with high ring feet (e.g. the ARS of the 5th and 6th cent.). Outside some major centres (especially \*Rome and \*Constantinople), these red-slipped tablewares became less common towards the end of the 7th century, and may have been replaced by wooden or metal alternatives.

Small table amphorae, jugs, flagons, and other domestic items for carrying, serving, and pouring liquids (also known as 'Plain Wares') were generally made in rather fine, porous fabrics in a buff colour. Some are ribbed and combed with wavy lines, others

painted with a red/brownish slip, depending on regional traditions. Broad-line Painted Wares from southern \*Italy and \*Epirus (mod. Albania) show parallels in decorative style with contemporary painted wares from other regions, e.g. \*Crete and mainland \*Greece, the \*Balkans, the southern coast of Anatolia, Cyprus, the Near East, Egypt, and North Africa, although unrelated painted vessels were also made further away, in Spain and in north-western Europe. Decorations mostly include geometric, \*foliage, and animal motifs. A certain decorative uniformity was achieved in the Mediterranean, although these Painted Wares were manufactured in various unrelated workshops and in several different fabrics and shapes.

Lead- and alkaline-glazed tablewares appeared from time to time from the 1st century BC onwards, especially as cups and chalices with a mould-made or slip-applied relief decoration, produced in Italy, southern Gaul, Anatolia, Egypt, and \*Mesopotamia, as cheaper alternatives to silver and gold vessels. Various Late Roman manufacturing centres arose in northern Italy (e.g. Carlino, the Lagoon of \*Venice, \*Ravenna) and in the Balkans along the Danube \*frontier (e.g. in \*Pannonia) during the 4th and 5th centuries. Mass production of glazed products also began in Constantinople in the 7th century, comprising initially utilitarian vessels (cooking pots) and later tablewares (dishes) made of a whitish kaolinitic clay and covered with a glaze rich in lead oxide (the so-called 'Glazed White Wares'). One can distinguish minimal decoration, such as incised scrollwork, wavy lines, crosses, fish, and \*inscriptions on the Constantinopolitan vessels. Chemical analyses indicate some parts of Constantinople as the probable places of manufacture, among them the sites of Tekfur Sarayı on the Land Walls and of Arnavatköy (Arnavutköy) on the \*Bosporus.

Coarse wares, especially cooking pots and casseroles, were frequently made with specifically chosen materials (quartz-rich, volcanic, calcitic, or kaolinitic clays) which were particularly heat-resistant and not prone to thermal shock. Handmade cooking pots, made on a slow potter's wheel (Fr. *tournette*), tended to have flat bases and horizontal 'tab' handles, but casseroles with sagging bases are also common. Some of these, particularly the products of the Mediterranean islands of Pantellaria and \*Sardinia, were regularly traded.

Typical wheel-made cooking wares were frying pans (flat-bottomed, with a horizontal handle), open and closed-neck cooking pots with small 'strap' handles and indented omphalos or sagging rounded bases, and casseroles (shallow, with thinner walls and a rounded bottom and usually horizontal strap handles). Aegean and Levantine cooking pots, of which many were traded across the Mediterranean, are generally fairly globular with an open neck (for boiling liquids).

Pompeian Red Ware dishes of the 1st to 3rd centuries were not a part of the Late Roman repertoire. Palestinian-type 'sliced rim' casseroles with carinated bodies are a distinctive Late Antique type that replaced Hellenistic-Roman casseroles in the Levant in the 3rd century. These were still produced in \*Umayyad Egypt and were exported in quantity to western ports such as \*Marseilles and \*Tarragona. Chemical analysis of cooking wares has enabled trace identification of specific types of food such as dairy products and animal or vegetable fats. It is becoming evident that cooking pots were sometimes lined or sealed with wax, pitched, or slipped.

Lids could be part of sets with their counterparts (e.g. the Palestinian 'sliced rim' lids). Tunisian lids often had a wide, ring foot that could equally serve as a handle. More common after the 4th century were lids with a simple knob handle at the top. Large flanged domed lids (Lat. *clibanus/testum*), common in Italy, Epirus, and the Dalmatian coast, were also used as portable ovens which functioned for everything from the baking of simple \*bread to the roasting of \*meat; coals were held in place by the flange and the bread or meat was placed on a flat surface underneath, then covered. Their presence may suggest a move towards bread production in the home rather than in public bakeries.

Storage jars, if small, tended to have flat bases and an everted rim for easy sealing. Large storage jars (Gk. *pitthoi*, Lat. *dolia*) used for storing liquids or solids were specialized handmade products. Mortars (Lat. *mortaria*), heavy bowls or basins with gritted interiors for the preparation and grinding of food, were, with the exception of the products of Ras al Basit (\*Syria), a characteristically Western phenomenon. Tunisian mortars of the 5th to 7th centuries, however, were smaller thin-walled flanged bowls. Many regions used stone alternatives.

Large two-handled transport vessels (\*amphorae) were produced wherever agricultural products (liquid or dry goods) needed to be transported. The capacity of these containers ranged from less than 10 litres (17.6 imperial pints) to more than 80 litres (140 imperial pints), based on factors such as the value of the product, the scale of production, and the size of available \*ships (often indicated by *dipinti* in red paint). The shape and features of amphorae were designed to make loading and unloading from ships swift and efficient. Amphorae had a potentially long life cycle, possibly being used several times as transport vessels and subsequently as storage containers, as water pipes or for burials. The most commonly traded amphorae originate from a few regions or centres that contributed to the supply of \*wine, \*olive oil, salted \*fish, or fish sauce (Lat. \**garum*) during Late Antiquity—primarily Spain, the Levant, the Aegean, and North Africa. The distribution of such ceramics is, therefore, more heavily

determined by the trade networks of primary goods in the form of food and drink than by demand for amphorae per se. It is sometimes possible to associate a specific type of amphora with its content, as chemical analysis has confirmed.

The most distinctive and widely traded Late Antique amphora types were of Aegean and Levantine origin. These range, according to Riley's \*Carthage/Benghazi classification, from the sandy Late Roman Amphora 1 (LRA 1) from \*Cilicia and western Cyprus to the bag-shaped LRA 13 from the Aegean, supplemented by the large cylindrical North African products (in red fabrics with buff exterior surfaces) and their slender versions, the so-called *spatheia* (from Gk. *spathos*, sword). These standard amphora types may have been replaced in the late 7th–8th centuries by wooden barrels or superseded by so-called 'globular amphorae' or 'LRA 2/13 variants' produced in southern Italy, North Africa, the \*Crimea, or the Aegean (e.g. Crete, \*Cos, Paros, and Cyprus). These amphorae were often smaller and had less carrying capacity than their predecessors, and were handled easily during transport and during loading and unloading in small \*harbours.

Late Roman *unguentaria* (Lat.) or *amphoriskoi* (Gk.) from Anatolia represent a further Late Antique innovation. These are small, elongated vessels, without handles and often stamped with a Christian \*monogram, indicating their frequent association with \*martyr cults: they contained sanctified oil or water that had passed through the tomb of a saint. Similarly, there were \*pilgrimage flasks, small mould-made flasks with a disc-like body, the best known being the S. \*Menas flasks from Egypt. Christian pilgrims brought these back from holy places; they were decorated with images of saints, scenes from the life of Christ, or simple Christian symbols in relief.

**praecones** Criers and auctioneers. In the Later Roman Empire, the occupation ceased being legally stigmatized, with *praecones* becoming eligible to hold office on \*city councils. Public criers also became more visible as an element of the enlarged imperial civil \*administration. There were ten men in the Schola Praeconum of the \*Praefectus Praetorio of \*Africa under Justinian I, receiving only one \*annona each, but no doubt making money from \*sportulae. AGS

S. E. Bond, *Trade and Taboo: Disreputable Professions in the Roman Mediterranean* (2016), ch. 1.

**Praedestinatus** Anonymous work attributed to \*Arnobius Junior, consisting of a descriptive list of \*heresies, followed by a short tract ostensibly advocating an extreme form of predestination, which is then subjected to a hostile critique from a perspective resembling that of \*Julian of Eclanum. While the tract and its critique are presented as being by different authors, internal evidence suggests that Arnobius wrote both, in an attempt to discredit \*Augustine's ideas on predestination without attacking Augustine directly. D. Lambert, 'Augustine and the *Praedestinatus*: Heresy, Authority and Reception', *Millennium* 5 (2008), 147–62.

**praefectus** Title of military commanders and of various civil officials, both relatively junior, such as the Praefectus \*Annonae and \*Praefectus Vigilum at \*Rome and \*Constantinople, or very senior, such as the \*Praefectus Praetorio. Rank as *praefectus* was also accorded to other senior men, though they had precedence below those who had held substantive appointments (CTh VI, 22, 7). DSI

**Praefectus Augustalis** Since the \*Emperor Augustus the senior administrator of \*Egypt had been termed Praefectus. When the \*Tetrarchy set \*Thebais apart as a separate \*province, the territorial responsibility of the Praefectus Aegypti was reduced. His authority at first mainly covered the Delta; for a short period, c. 314/15 to 324, he was in effect governor of \*Aegyptus Jovia only. However after the \*dioecesis of \*Aegyptus was separated from the Dioecesis of \*Oriens in c. 381/2, the five, then six constitutive provinces and their \*governors became subject to the Praefectus who therefore ranked as a \*Vicarius. This left him with ultimate responsibility for Egypt's share of the annual \*annona civica destined to feed \*Constantinople. It was at this time, or thereabout, that the position acquired Augustalis as an honorific title. With Edict XIII (539) of \*Justinian I and the suppression of the Egyptian *dioecesis*, the prefect's authority was once again reduced to more modest, provincial proportions (Aegyptus Ia and IIa); he had an \*officium of 600 assistants and a salary of 400 \*solidi.

**Praefectus Praetorio and Praetorian Prefecture** (Gk. ἑπαρχος/ὑπαρχος τῆς αὐλῆς) Head of the most important civil administrative office in the later Roman Empire.

### Emergence

Since Augustus, the traditionally equestrian Praefectus Praetorio (the office was collegial) had overseen the imperial military headquarters, including the \*Praetorian Guard, and also exercised important administrative and (increasingly) judicial authority. In the early 4th century, the authority of prefects was restricted through the establishment of the \*Vicarius or Agens Vices Praefecti Praetorio as their representatives in each \*dioecesis (grouping of \*provinces). Under \*Constantine I, the prefects became the most powerful civil officials in the Empire: having transferred the exercise of supreme

military command to the newly created \*Magistri Militum, Constantine expanded the prefects' administrative and judicial duties, granting them appellate jurisdiction. In terms of protocol, the Praefecti (who now had senatorial rank) were placed first of all dignitaries, second in precedence only to the \*emperor.

Praefects seem to have been permanently attached to the imperial \*court under the Constantinian dynasty, probably also undertaking ministerial duties; at the same time, there were also independent Praefecti as heads of territorial prefectures. Constantine appears to have temporarily installed a 'proto-regional' Praefectus in \*Africa (c.333), yet it was only in 340 that more permanent regional prefectures emerged (in \*Gaul), later in \*Italy (combined with Africa), and in \*Illyricum where, however, the chronology is more complicated and administrative restructuring more frequent (e.g. under \*Theodosius I in response to military pressures). By the time of the \*Notitia Dignitatum, the Empire was split between four Praefecti, with two praetorian prefectures in the East (\*Oriens, Illyricum) and two in the West (Italy-and-Africa, Gaul). While these later Praefecti stood, at least in theory, outside the palatine system, each being attached to a particular administrative area, the *praefecti* with seats in \*Constantinople (Oriens) and \*Ravenna (Italy and Africa) were in effect members of the \*Consistorium.

### Competence

The Praefectus Praetorio had overall responsibility for the efficiency of the \*administration and the enforcement of \*law in the provinces and \*cities of his prefecture. He oversaw the \*Cursus Publicus, public building works and their financing (CTh XV, 1, 23 = CJust VIII, 11 7, 384), and supervised professional associations, including artisans (CTh XIII, 4, 2 = CJust X, 66, 1, 337), advocates (NovTh 10, 1, of 439), physicians, and teachers (e.g. CTh XIII, 3, 16, 414), and \*collegia as well as the curial order (CTh XII, 1). As head of the administration, he also exercised appellate judicial authority over provincial \*governors (CTh I, 5, 9 = CJust I, 26, 3, 389), and could, as appellate judge, issue judgements (*Edicta Praefectorum Praetorio*, ed. Zachariae v. Lingenthal; NovJust 166 and 167), unless overruled by the emperor. The Praefectus also had considerable financial responsibilities: he had to assess, procure, and disburse sufficient resources to pay and supply the army (\*annonae), to remunerate his officials, and to finance imperial building works in his prefecture (CTh XI, 5, 4 = CJust X, 17, 2, 436). As a result, the Praefectus oversaw the transport of \*grain (and, hence, the \*navicularii, e.g. CTh XIII, 5), managed and reviewed \*tax reductions, such as those granted to clergy (e.g. CTh XVI, 2, 6, 326/9), and supervised the leasing of public land (CTh X, 3, 1, 362) as well as prices (e.g. \*bread: CTh XIV, 19,

1, 398). Finally, the Praefectus remained responsible for the \*billeting of soldiers (CTh VII, 9, 2, 342).

### Staff

\*Cassiodorus' *Variae* (\*Ostrogothic \*Italy), \*John Lydus' *De Magistratibus*, as well as a comprehensive ruling from \*Justinian I (CJust I, 27, 1, 22–39, 534) furnish detailed information about the functioning of the Praetorian Prefectures in the early 6th century. They reveal that a Praefectus Praetorio supervised up to 4,000 officials, employed in two main branches. The first encompassed the financial officials who were divided into \*Scrinia under one \*numerarius (two for Oriens) who, together with their assistants (\*adiutores) and secretaries (\*chartularii), supervised officials (\*scrinarii) of various ranks. Some *scrinarii* were sent out annually to supervise the collection of taxes (\*canonicarii), arrears (*compulsiones*), or as auditors (*discussores*, λογοθέται). The second branch comprised the administrative and judicial departments, headed by the \*Princeps Officii with his immediate subordinates (in rank-order), the \*cornicularius, the *adiutor* or \*primiscrinus, the \*commentariensis, the \*ab actis, the *curae epistolarum*, and the \*regendarius. Their staff—the corps of *praefectiani*—was drawn from the \*exceptores divided into fifteen \*scholae headed by the *deputati*.

### Disappearance

The last known Praefectus in the East is Alexander in 626, and while Praefecti Praetorio are documented in the West (e.g. under the Ostrogoths) and in Africa under Justinian (CJust I, 27, 1, 534), their duties (esp. financial) are less comprehensive, and the office disappears in the mid-7th century.

**Praefectus Urbi Constantinopolitanae** (Gk. *ὑπαρχος/ἐπαρχος*) Head of \*Constantinople's city administration from 359. The prefecture replaced the office of \*Proconsul of Constantinople in order to sustain the city's growing status and place it on the same footing as \*Rome. The city was divided into fourteen \*regiones each under a \*Curator who reported to the Praefectus, who had overall responsibility for \*law and

## Praefectus Urbi Romae

the prevention of \*disorder, the \*food supply, fire control, and civic amenities. The Praefectus was responsible for organizing such imperial events as the celebration of \*Justin II's \*consulship in 566, described by \*Corippus (*In Laudem Iustini*), and also took part in such ecclesiastical ceremonies as the translation of the \*relics of the Prophet Samuel to the city in May 406 (\**Chronicon Paschale ad ann.* 406).

The Praefectus Urbi was a senior member of the imperial \*court, ranking alongside the \*Praefectus Praetorio, with his own carriage, praetorium, and \*prison. Those appointed had held senior positions in the imperial \*administration, so were men of literary learning. The first (Honoratus, in office 359–61) was a former Praefectus Praetorio. \*Themistius (Praefectus 384–5) was a renowned \*rhetorician; the poet \*Cyrus of \*Panopolis actually held the offices of Praefectus Urbi and Praefectus Praetorio concurrently between 439 and 441.

With office came accountability. In 412 the praetorium was burned down by a crowd incensed at \*bread shortages which it blamed on the Praefectus Monaxius (\**ChronPasch. ad ann.* 409). In 419 a successor, Aetius, was stabbed through his \*chlamys and \*toga in the Church of the \*Holy Wisdom; he had built a reservoir in the city. JPH

Dagron, *Naissance*, 213–94.

W. G. Sinnigen, *The Officium of the Urban Prefecture during the Later Roman Empire* (1957).

Janin, *CPByz* 165–6.

**Praefectus Urbi Romae** The principal civilian authority in \*Rome, \*Ostia, and \*Portus, responding directly to the imperial \*court. The office was created by Augustus to maintain public order, but its powers were extended in Late Antiquity, incorporating different services and magistracies. The list of prefects is well attested, and the office is well documented through laws, \*inscriptions, the \*Calendar of 354, and the \*Notitia Dignitatum.

Although the precise working of the Praefectus' department is not known, it was responsible for the overall administration of the city, the maintenance of its infrastructure and monuments, and for building works. The Praefectus presided over the \*Senate and enforced imperial decisions, communicating with the \*emperor through reports; the *Relationes* of Q. Aurelius \*Symmachus, Praefectus in 384, survive. The Praefectus was the main judicial authority within a 160-km (100-mile) radius of Rome. He played an important part in \*ceremony and religious observance, presiding at \*festivals and intervening in conflicts within the Christian community.

An imperial appointment to the prefecture, usually lasting approximately one year, was one of the highest points in a political career; a second term was an

unusual honour. During the 5th century the prefecture was progressively monopolized by the senatorial \*aristocracy, with notable exceptions, such as \*Sidonius Apollinaris (in 468). Praefecti remained important in the \*Ostrogothic period, but lost power and prestige after the \*Byzantine invasion in the 6th century.

Chastagnol, *La Préfecture urbaine*.

W. G. Sinnigen, *The Officium of the Urban Prefecture during the Later Roman Empire* (1957).

**Praefectus Vigilum** Commander of the *vigiles* (watchmen) at \*Rome and \*Constantinople, under the \*Praefectus Urbi. The \*collegiati took over his fire-fighting functions in the 4th century. \*Justinian I appointed a Praetor Plebis (*NovJust* 13 of 535) and Quaesitor (*NovJust* 80 of 539) to exercise policing powers at \*Constantinople. CARM

Jones, *LRE* 692–5.

R. Sablayrolles, *Libertinus miles: les cohortes de vigiles* (1996).

**Praejectus, S.** \*Bishop of \*Clermont, murdered in 676 during a dispute over land, and subsequently venerated as a \*martyr. His *Passio*, composed within a few years of his death, is a rich source for the interplay of local clerical and wider Frankish politics. PJF

*Passio* (BHL 6916), ed. B. Krusch in MGH SS rer. Meroving. V, 225–48.

ET (and comm.) Fouracre and Gerberding, *LMF* 271–300.

**praepositus** Title associated with various posts in the imperial military and civil administration from the \*Praepositus Sacri Cubiculi downwards.

Under the \*Res Privata, there were Praepositi Gregum et Stabulorum, presumably managers of imperial stud farms (\**Notitia Dignitatum* [or.] 14), and Praepositi of the Bastaga Privata, the Res Privata's dedicated transport corps (*occ.* 11). Under the \*Largitiones, there were several Praepositi Thesaurorum in some \*dioeceses supervising finances (*or.* 13; *occ.* 11).

In the army, *praepositus* designated the commanders of seven units on the \*Saxon Shore (*Not. Dig.* [occ.] 28), and of 36 units on the African \*frontier (*occ.* 25 and 30 and 31).

In the East there was from the 4th century onwards a local official called the Praepositus Pagi (Gk. *Pagarches*) who was responsible for collecting taxes in his \*pagus.

OPN

Jones, *LRE*.

**Praepositus Sacri Cubiculi** Principal officer of the \*Cubiculum, the department of the Roman imperial \*court most intimately connected to the \*emperor. He was chosen by the emperor from among the \*cubicularii (chamberlains), so was almost always a \*eunuch. He and

his subordinate, the \*Primicerius Sacri Cubiculi, controlled the *cubicularii*, though the \**Notitia Dignitatum* gives no details of the organization the Praepositus headed, except that it says he had responsibility for the \*Domus Divina per Cappadociam. By a law of 422 the Praepositus was assigned precedence equal to such high officials as the \*Praefectus Praetorio (CTh VI, 8).

The Praepositus Sacri Cubiculi owed his power to his close relationship with the emperor. Powerful Praepositi included \*Eusebius under \*Constantius II, \*Eutropius under \*Arcadius, and \*Narses under \*Justinian I. \*Lausus, dedicatee of the *Lausiac History*, was a Praepositus under \*Theodosius II. He was not, however, invulnerable. \*Valentinian I had his Praepositus Rhodanus burnt alive in public for cheating a \*widow (\*Eunapius, *History*, fr. 30; \*John Malalas, XIII, 31) and the Praepositus might fall foul of changes in regime as did Eusebius under \*Julian and \*Amantius under \*Justin I.

**Praescriptio Fori** In Late Roman legal procedure, one of several different types of 'prescriptions' (*praescriptiones*) that could be pleaded in order to attempt to bar or restrict a legal suit from being heard in a particular judicial venue (*forum*). The fact that individuals did, in practice, plead prescriptions against specific *fora* is clearly demonstrated by several constitutions that attempt to regulate the practice (for example, CTh XI, 30, 65 and CJust VIII, 35, 13, AD 415). The reasons for attempting to plead *praescriptio fori* could be multiple: such a plea might be entered to cause inconvenience and expense to an opponent. Those rich in time, cash, and \*patronage connections might deliberately seek judicial venues that suited them (*forum shopping*). Certain classes of litigants could plead *praescriptio fori* in order to have a specific case transferred from one jurisdiction to another, on the basis of special procedural rules. The concept of *privilegia fori* (choice between different courts) was established under the early Empire, but from the early 4th century onwards an increasingly complex mosaic of jurisdictional rules developed whereby groups of individuals, including some military and bureaucratic officials, members of the \*guilds (*collegia*) in \*Rome and \*Constantinople, \*senators (of Rome or Constantinople), \*tenants on \*imperial estates, Christian \*bishops, and other ecclesiastics could appeal to specific 'privileged' jurisdictions, under certain circumstances (again variously defined by imperial legislation). The \**Novels* of \*Theodosius II give examples of the practice in action in the 5th century (*NovTh* 7).

**praesentalis** Term for officers and regiments serving in the presence of the \*emperor and part of his \*Comitatus. There were two \*Magistri Militum Praesentalis in the East, and the Magister Militum and Magister Equitum in *praesenti* in the West (\**Notitia Dignitatum* or. 1, 5–6; occ. 1, 5–6).

JCNC

Hoffmann, *Bewegungsheer*, 9–19, 469–522, 516–19.

**Praeses** Title of \*governors of certain Late Roman \*provinces, originally ranked *perfectissimus* but by the early 5th century *clarissimus*. Praeses was also used as a general term for a governor.

DSI

Jones, *LRE* 45, 379, 527–8.

**Praetextatus** Vettius Agorius (c.320–84), Roman \*senator, \*Praefectus Urbi (367–8) and \*Praefectus Praetorio (384). Praetextatus was a zealous \*pagan who held numerous \*priesthoods and was attached to various private initiation cults. His policy of promoting \*paganism while holding office turned him into a controversial figure in life and after his death, which occurred in 384 when he was \*consul designate for 385 (\*Symmachus, *Relatio*, 12, 4 and 10). On the one hand, he was praised by \*Ammianus (XXVII, 27, 9, 10) and Symmachus, who was also his friend and correspondent (*ep.* I, 44–55). His funeral led to public demonstrations of grief in \*Rome, where the \*Vestal Virgins and the \*Senate asked the \*Emperor to erect \*statues in his honour (Symmachus, *ep.* II, 36). On the other, Praetextatus was attacked by such Christians as Jerome, who described the senator lying naked in darkest Tartarus (Jerome, *ep.* 23). He was possibly the unnamed prefect who inspired the Christian \**Carmen contra Paganos*. An erudite man, Praetextatus translated \*Themistius' paraphrases of Aristotle's *Analytics* into \*Latin (\*Boethius, *De Interpretatione*, II, 3, 7). His poetic \*epitaph, inscribed by his wife Paulina, stressed his literary interests and his knowledge of \*philosophy (*CIL* VI, 1779), preoccupations that also characterize him in \*Macrobius' *Saturnalia*, where he is compared to \*Vergil (I, 24, 21).

J. F. Matthews, 'Symmachus and Oriental Cults', *JRS* 63 (1973), 175–95.

**Praetextatus (S. Prix)** \*Bishop of \*Rouen (before 562–86). He became embroiled in \*Merovingian

politics after marrying \*Chilperic's rebellious son Merovech to Queen \*Brunhild, the \*widow of Chilperic's enemy \*Sigibert. He was tried and exiled at Chilperic's instigation (\*Gregory of \*Tours, *HF* V, 18), but returned at the king's death in 584, only to be assassinated at \*Easter 586, allegedly on the orders of Chilperic's widow \*Fredegund (VIII, 31). He wrote poetry during his \*exile, which received a mixed reception on his return EJ

PCBE IV/2, Praetextatus 5.

**praetor** Title applied to several governors in \*Justinian I's \**Novels* (24, 25, 26, and 29). The term echoes Justinian's archaizing sentiments. He introduced praetors in 535–6 in the provinces of \*Pisidia, \*Lycaonia, \*Thracia, and \*Paphlagonia, where he merged the civil and military command. DSI  
Jones, *LRE* 280.

**praetor** A prominent senatorial office, whose principal duty in Late Antiquity was to hold games. It survived at Rome into the 6th century; young men held the office in their early twenties and by 361 holders of the office were designated ten years in advance so that senatorial families could save the necessary funds. \*Symmachus spent 2,000 lb of \*gold on his son's praetorian games (\*Olympiodorus fr. 44 Müller *FHG* = 41, 2 Blockley).

Numbers of praetors occasionally varied. By 340, possibly earlier, three praetorships had also been established at \*Constantinople (*CTh* VI, 4, 5), rising to eight by 384 (*CTh* VI, 4, 25), thereby reducing the cost of the games. In the late 4th century, it became customary to commemorate these games by presenting \*ivory \*diptychs to friends and acquaintances. \*Justinian I also replaced the \*Praefectus Vigilum (police chief) with a Praetor Plebis (*NovJust* 13 of 535). AGS

Matthews, *Western Aristocracies*, 13, 18.

**Praetorian Guard** Bodyguard formation institutionalized by Augustus, and concentrated in the Castra Praetoria in \*Rome by Tiberius. Initially divided into nine cohorts, the establishment settled down to ten from Domitian through to the early 4th century. Cohorts were probably c.500 strong, raised to c.1,000 or 1,500 under Septimius Severus, each with a detachment of \*cavalry (*equites praetoriani*). One or two equestrian \*Praefecti Praetorio commanded the Guard, with each cohort under a \*Tribunus. The formation faithfully protected \*emperors for most of its history, with some lapses, and was repeatedly deployed on campaign. Praetorians presumably escorted each of the \*Tetrarchs, and they backed \*Maxentius in Rome. After his victory

at the \*Milvian Bridge in AD 312, \*Constantine I disbanded the Guard and demolished the Castra (Aurelius \*Victor, *Caesars*, 40, 24–5; \*Zosimus, II, 17, 2), although Praefecti Praetorio continued to be appointed and the Castra was mentioned subsequently (\**Notitia Urbis Romae*, 6). JCNC

S. Bingham, *The Praetorian Guard: A History of Rome's Elite Special Forces* (2013).

**Praevalitana** \*Province on the east coast of the Adriatic, formed from parts of the former \*Dalmatia, \*Pannonia Superior, and \*Moesia Superior, by the time of the \*Verona List, which places it in the \*Dioecesis \*Moesiae. Epirus Nova was the coastal province to the south. The \**Notitia Dignitatum* places Praevalitana in the Dioecesis \*Daciae (*or.* I, 123; III, 19). Its principal \*cities were \*Doclea, Scodra, and Lissus. ECD; OPN  
*TIR* K-34, 103.

*Barrington Atlas*, 101.

**Pragmatic Sanction (*Pragmaticum*)** Term referring to a legal decision of the \*emperor that applied to a specific \*province, \*city, or corporate body. In particular, it designates the settlement of 13 August 554 imposed by \*Justinian I on \*Italy after the \*Byzantine invasion. GBG

ed. R. Schoell and W. Kroll, *Corpus Juris Civilis* (1928), vol. 3, appendix VII (799–802).

**praise** In politics such as the Later Roman Empire where multiple hierarchies, rather than equality, are deemed both normal and natural, praise is the practical and active acknowledgement of the superiority of another being. \*Augustine, a subtle theorist of praise, thought it axiomatic that being a part of God's creation should make one desire to praise one's Creator (*Conf.* I, 1, 1). He also saw, with a shrewdness sharpened by close reading of Sallust, that desire for glory, the love of being praised, was the engine behind the civic ethics of classical \*cities, particularly the heroes of the Roman Republic (*City of God*, V, 12–21). \**Philotimia*, love of honour: 'No word, understood to its depths, goes farther to explain the Greco-Roman achievement' (MacMullen, 125).

Sons of Romans who could afford it were taught the \*rhetoric of praise and blame, the *stilus major*, alongside the rhetoric of argument and explanation, as part of their educational curriculum under a *rhetor*. This education would equip them to deliver rhetorical praise in a variety of social contexts; \*Menander Rhetor's treatises recommend approaches for praising cities and \*harbours, as well as the \*emperor. Examples of this sort of application survive in both \*Greek and \*Latin in \*Libanius, *Oration* 11, and \*Ausonius, *Ordo Urbium Nobilium*. This 'political' praise had a pronounced

literary turn in imperial prose and verse \*panegyrics, which were often presented in the context of a \*ceremony, such as the \*adventus of an emperor or \*governor, which expressed the willingness of a community to accept authority.

Praise was not a standard motivating force in Roman education itself—rather, fear of corporal punishment motivated schoolboys, as is made plain by Quintilian, Ausonius (*Commemoratio Professorum Burdigalensium*, 10), and Augustine (*Conf.* I, 9, 14), all three men former teachers. However, and despite occasional expressions of suspicion and even contempt for praise-giving as unRoman and venal, there were many outlets for praise in Roman life. Within the framework of \*patronage, letters of recommendation, such as those by Libanius and \*Symmachus, often praise their subject. Religious devotion expresses praise of the Divine (\**Laudes Domini*); indeed, Augustine thought the central characteristic of a Christian was not to seek to be praised oneself but to give glory to God (*City of God*, XIV, 28). \*Funeral orations, such as \*Ambrose's discourses on the deaths of \*Valentinian II and \*Theodosius I and Ausonius' *Parentalia*, present the achievements and character of the deceased in terms of praise. The rhetoric of praise could also inform literary genres such as \*historiography (\*Ammianus, XVI, 1, 3; XXXI, 16, 9, \*Eutropius, X, 18, 3), \*biography (\*Eusebius, *VCon*), \*martyr passions, and \*saints' lives. In the nature of things, fewer texts survive which express blame, but \*Lactantius, *On the Deaths of the Persecutors* (*Mort.*), from the early 4th century, and \*Procopius, *Secret History* (*Anecd.*), from the 6th century, while denouncing their powerful victims often neatly and entertainingly invert commonplaces conventionally associated with praise.

**Praxagoras of Athens** (fl. c.330) Author, in his 22nd year, of a panegyric history of \*Constantine I in two books. A synopsis survives in the *Bibliotheca* of \*Photius (62), emphasizing Constantine's successive victories over a \*lion set upon him by \*Galerius, over \*Maxentius, and \*Licinius. The most recent event mentioned is Constantine's \*foundation of \*Constantinople. A \*pagan from an old Athenian family, Praxagoras earlier wrote two books on the ancient kings of \*Athens, and in his 30th year a history of Alexander the Great.

**prayer, Christian** From Jewish literature (esp. the \*Psalms) and experience (esp. in the \*synagogue) the earliest Christians developed, alongside the \*Eucharist, new forms of prayer, offered frequently, in straightforward language (Matt. 6:7, 1 Thess. 5:17). Although first addressed primarily to God as Father, prayers came to be directed to Jesus, the Holy Spirit, \*Mary the Mother of God, the saints, and (especially among groups which had \*gnostic notions) other divine beings, such as the \*angels.

Communal prayer was essentially \*liturgical, so had developed by the 4th century into daily, weekly, and yearly cycles. The genres of utterance included petitions (for both the living and the dead), intercession, penitence, and doxologies (\*acclamations of \*praise). Except for confession of sin, performed kneeling, worshippers generally stood to pray with their hands open at shoulder height in the 'orans' position; they faced east, the direction from which the Sign of the Son of Man was expected. \*Music was involved; soon after AD 100, Pliny reported that Christians in \*Bithynia gathered before dawn to sing a \*hymn to Christ as God (*ep.* X, 96, 7); early surviving hymns include \**Phos hilaron*. Candidates for \*baptism were formally taught the 'Our Father' (e.g. \*Augustine, *Sermons*, 56–9), whether before or after \*Easter; expositions of it survive by Tertullian, \*Cyprian, and \*Origen.

For the prayer of individuals, Origen recommended a sequence, rooted in Scripture, which moved from praise through thanksgiving, confession, and petition to doxology (summarized in *On Prayer*, 33). Origen's sequence is representative but not universal. Christians who wrote on prayer included \*Evagrius Ponticus and \*John Cassian. Prayer formed the heart of new types of Christian community, including \*monasticism, and controversial movements like the \*Messalians. JDK ed. **prayer, Islamic** Daily prayer (Ar. *salat*) is prescribed as an obligatory duty in \*Islam. Most Muslim sects

observe five daily prayers spaced throughout the day and evening, beginning at dawn, with a midday, afternoon, sundown, and evening prayer. These vary in length and are comprised of units of prayer called *raka'at*. Other supererogatory prayers are not prescribed, but there are some traditional prayers that may be performed in thanksgiving upon completion of a journey, upon entering a \*mosque, during the month of \*Ramadan, at a funeral, or in observation of the practice of \*Muhammad. These last are referred to as \**sunna* prayers, connoting the customary practice of Muhammad.

While Islamic prayer generally follows a formulaic pattern of repeated motions, bowing, and prostration, the \*Qur'anic verses read during prayer are not prescribed and may consist of very short or very long verses. Ablution with water is required before prayer, in order to achieve ritual purification. If water is not available for ablution, ritual purification may be symbolically achieved by using sand dust instead, a practice called *tayammum*. Some variations in the methods of prayer and ablution indicate the different traditions held by adherents of a particular school of \*law.

Another kind of supplication, called *du'a'*, is a more free-form prayer and may be said at any time or place. It is not formulaic or prescribed, but traditional *du'a'* exist, based largely on the customary practice of Muhammad. These supplications may be uttered for all kinds of daily activities, including before eating or drinking, before entering a home or mosque, for ritual slaughter, upon the birth of a child, when visiting the sick, or any other activity. Early Islamic prayer resembles in some respects the practices of other Late Antique Middle Eastern religious communities, and there is some evidence for the shared use of ritual space in very early Islam. **prayer, Jewish** Jewish prayer has its origins in Temple worship and sacrificial rituals in conjunction with the biblical calendar of festivals. The cycle of weekdays, Sabbath, and festivals was preserved in Jewish communal life after the destruction of the Second Temple, when the \*synagogue gradually developed into the main communal centre. Regular services were held there and communal daily prayer stimulated the functioning of the synagogue as the central meeting place of \*Jews in the Diaspora.

\*Rabbinic sources testify to the adoption of fixed patterns in the structure and contents of prayer complexes. The basic element is the blessing formula (*berakhab*) with a standard introductory clause: 'Blessed are you, O Lord'. Blessings were incorporated in the conclusions of two standard public prayers, the reading of

Deuteronomy 6:4 (*Shema*), and the 'Eighteen Benedictions' (*Amidah* or *Tefillah*). These prayer structures were fixed but the wording seems to have been flexible until the time of \*Islam.

\*Talmudic utterances confirm the wish for spontaneity and improvisation in prayer: 'A man is bound to say one hundred blessings daily', but there is an underlying tension in the ambition to unify prayer texts for the sake of the universality of Jewish worship. In Late Antiquity, Jewish communities were still in the midst of this dilemma, as can be learned from the interrelations of synagogue prayer and poetry (*piyyut*): inserted \*hymns are sometimes at variance with prayer texts. The third benediction of the *Amidah* (*Qedushah*) represents the glorification of God by \*angels, and its core is Isaiah 6:3: 'Holy, holy, holy is the Lord of hosts, the fullness of the whole earth is His glory.' The people of Israel essentially participate in angelic liturgy by reciting the *Qedushah*, but the sages stress that God prefers Israel's sanctification above that of angels. *Qedushah* prayers and hymns (*Qedushta'ot*) appeared in Late Antique synagogue liturgy on the mornings of Sabbath and holidays. Recent scholarship has learned that Hebrew and occasionally Aramaic were not the exclusive languages of Jewish prayer. The existence of \*Greek prayer texts suggests new possibilities for understanding the nature of Jewish–Christian interactions and the adoption of Jewish prayer in a Christian context. WJvB I. Elbogen, *Jewish Liturgy: A Comprehensive History* (1993).

**prayer, pre-Christian** Actions and verbal actions intended to align human hopes with the forces of nature took many forms among pagans. We know more about the actions than about the words. Words alone were not considered as effective as words accompanied by acts: 'prayers without \*sacrifice are words, prayers with sacrifice are inspired words' (\*Sallustius Neoplatonicus, *On the Gods and the World*, 16). The calendar customs of civic religion required \*processions and sacrifice to ensure their effectiveness. At great \*temples such as the healing shrines of Aesculapius at \*Pergamon or \*Epidaurus the morning began with the singing of \*hymns and the offering of \*incense, and \*lamps were lit ritually at night; 'without incense', a pagan would complain, 'the performance of religion limps' (\*Arnobius, VII, 26). Set forms of words were, however, required, and especially in the Latin-speaking West it was considered necessary for them to be composed as exactly as a chemical formula, otherwise they would not be effective. Even in the Greek world, an expert mystagogue might be called in to assist with particular rites (e.g. *SIG* 3, inscr. 900 = *Inscripfen von Stratonikeia*, inscr. 310, lines 49–54). The consecration of statues which could utter \*oracles was another particular skill (e.g. \*Eusebius, *HE* IX, 3; Athenagoras, *Legatio*, 26).

Managing relations with the gods required expertise; a \*philosopher who admired Moses praised him for being 'skilled at praying' (Numenius, fr. 9). No doubt this technology contributed to the development of \*theurgy, the private religious practices of pagan intellectuals which persisted long after public sacrifice had been made illegal.

Philosophers might also practise more intimate forms of prayer to entities who ranked higher in the chain of being than the public gods of cities; 'the God of Gods is worshipped only through silence', said \*Iamblichus (*On the Mysteries*, VIII, 3); 'the sage honours God in silence', \*Porphyry wrote to his wife (*To Marcella*, 16). But such silence was not simply passive and receptive, but requires, \*Plotinus advises, inner action: 'Call up all your confidence, strike forward yet a step—you need a guide no longer—strain, and see' (*Ennead*, I, 6, 9). Even at its most intimate and contemplative, where it passed beyond words, the spirituality of \*Neoplatonism required action. OPN

**preaching, Christian** \*Sermons reached maturity as an independent form of \*rhetoric in the 4th century with such Christian preachers as \*Ambrose, \*Augustine, and \*John Chrysostom, and the \*Cappadocian Fathers, \*Gregory of \*Nyssa, \*Gregory of \*Nazianzus, and \*Basil of \*Caesarea. The relationship between Christian preaching and Jewish \*synagogue and Greek philosophical teaching remains a matter of debate. Whatever the origins of Graeco-Roman Christian preaching, it is agreed that by the 3rd century it drew upon models of communication current in synagogues and various philosophical \*schools. By the 4th century, exegesis of the \*Bible and moral exhortation were normal elements. In the \*Syriac-speaking East preaching emerged in a different cultural context, so the boundary between chanted and spoken instruction was blurred, as the works of \*Ephrem indicate. Preaching everywhere occurred in the context of the \*liturgy and in association with cycles of scriptural readings ordered, as is apparent, for instance, from sermons delivered by the Cappadocian Fathers (Bernardi *Prédication des Pères Cappadociens*) and by Augustine on the \*festivals of \*martyrs (Saxer *Morts, martyrs, reliques*), by \*Bible lectionaries which varied from one locality to another.

Preaching practice and style varied. In some regions, only \*priests and \*bishops were permitted to preach, in others \*deacons preached also. Some preachers adopted a simple style (*\*sermo humilis*), others employed openly ornate \*rhetoric. Some preachers stood, others sat to

preach, some on a platform in the middle of a church's nave, others in the \*apse. At festivals a series of preachers might address the same congregation in succession. When country people came to \*Antioch for festivals, John Chrysostom had a Syriac translator to interpret his sermons. Christian preaching was not immune from the expectations and behaviour associated with secular public oratory and thus its reception varied. Enthusiastic applause, the chanting of \*acclamations, and calls for the preachers to cease and let someone else preach are all recorded. People wandered in and out of churches and \*martyria during sermons, and preachers complained about distracting chatter and laughter. Congregations also waxed and waned according to the season, the day of the week, the perceived importance of the occasion, and the popularity of the preacher. WEM

**preaching, Islamic** The \*Qur'ān itself is a kind of preaching (*tabligh*), sometimes exhorting or enticing and sometimes admonishing or threatening in its effort to convey God's promise of reward and threat of punishment in the next world. Certain verses in the Qur'ān direct \*Muhammad to proclaim and warn people to turn from polytheism. \*Hadith collections report that preaching was integral to the communal \*prayer on Fridays from the earliest period. Preaching preceded the prayer on Fridays but followed it on feast days.

Standard practice included set invocations to God prior to the sermon (*khutba*) and the custom of dividing the sermon into two parts (including recitation from the Qur'ān and pious reminders). Both parts were delivered standing on the pulpit, but the preacher sat down between the two parts; they might be legitimately accompanied by a display of emotion. Hadiths strongly insist on audience silence.

It was customary for the preacher to lean on a staff or sword, suggesting that the pulpit in \*Islam developed from a pre-Islamic seat of judgship. There may also have been influence from Jewish and Christian \*liturgical practice. Preaching served religious and political purposes and was undoubtedly used to stir believers to take part in the conquests.

Sermons of Muhammad's \*Companions became models of eloquence to emulate. Muhammad famously preached a sermon during his farewell (and only) \*pilgrimage to \*Mecca in 632, in which he set down certain social norms (e.g. on usury and treatment of wives) and exhorted his audience not to wrong one another but to view one another as brethren in Islam. **Prefect of the City of Constantinople** See PRAEFECTUS URBI CONSTANTINOPOLITANAE.

**Prefect of the City of Rome** See PRAEFECTUS URBI ROMAE.

**press, olive and other** Presses were mostly used to produce \*olive oil or wine. The most common type was the lever press, in which stone uprights anchored one end of a beam and the opposite end was lowered by means of a windlass or screw attached to a massive stone. Stacks of baskets containing milled olive paste, oleiferous seeds, or grapes were placed at the fulcrum point. As workers lowered the beam the mass of the machinery expressed oil or grape juice into a collecting vat.

Olive oil presses have been best studied in North \*Africa, where large examples could have processed 10,000 kg (22,046 lb) of olives per harvest (Mattingly). The remains of these presses are among our best indicators for the commercial scale of many oil operations.

Many wine presses were also of the lever type, but the Romans adopted the direct screw press, developed in the Hellenistic period, in which wooden uprights were linked at the top by a heavy cross-beam cut in the centre and housing a wooden screw. Turning the screw moved the pressboard fixed below onto a stack of grapes and expressed the juice into a collecting vat. Wine can actually be produced by treading grapes underfoot without mechanical equipment, so the widespread use of wine presses within the Roman Empire indicates a desire to extract more juice than is possible by treading alone and a wish for speedier processing. **price and price regulation** Reliable price data is extremely scarce for the later Roman Empire and even

more obscure for other regions in Late Antiquity. Prices, moreover, probably fluctuated significantly seasonally, regionally, and as a result of political, climatic, and other changes. \*Anastasius I's \*coinage of 498, for example, caused \*disorder among the urban \*poor, for whom changes in the ratio of \*gold to \*bronze coinage caused a dramatic increase in real market prices (Sarris, 201). In the Roman Empire prices were usually expressed in monetary terms, and in many parts of the post-Roman world this continued to be the case even where barter played an increasing role in actual transactions.

Some of the best data for prices in fact come from documents connected to price regulation, though these are problematic as they usually reflect moments of crisis rather than stability, and are prescriptive rather than descriptive. Nevertheless, efforts by the state to fix prices highlight periods of intense instability in market exchange and suggest that most of the time the Roman Empire operated on the basis of comparative price stability.

Price regulation might be effected by state operations such as \*taxation, compulsory purchases, \*debasement of coinage (lowering the precious-metal content in coins), and altering the output of coinage. Perhaps the most notable example of price fixing was the Tetrarchic \*Prices Edict of 301, which gave mandatory maximum prices for a broad range of goods and services. While widely promulgated and frequently used in discussion of Late Antique prices, however, the edict does not seem to have affected market prices significantly.

The Prices Edict occurred during a period of serious \*inflation: between c. AD 270 and c. 370 prices in units of account multiplied by a factor of ten and went on to rise for another century. Despite government efforts to control these changes, it was not until \*Constantine I's issue of the \*solidus as a reliable, high-purity \*gold coin and unit of account that prices stabilized, apparently due to market forces. Sarris, *Economy and Society*.

**price of books** In Late Antiquity books were produced in various forms (mainly rolls and codices), using different writing materials (mainly \*papyrus and parchment). Books could vary greatly in terms of quality and

consequently price, ranging from expensive copies written by trained scribes and calligraphers in bookshops and *scriptoria* to books copied either by hired scribes or personally on recycled writing materials. There is scattered information on prices of books and book production in ancient sources. \*Origen sold his library in return for an income of 4 obols a day (\*Eusebius, *HE* VI, 3, 9). The *\*Apophthegmata Patrum* mentions a complete Bible worth 18 *\*solidi* owned by Abba Gelasios (PG 65, 145); \*John Moschus refers to a price of 3 *solidi* for a copy of the New Testament (*Pratum Spirituale*, 134, PG 87.3, 2997). A recent estimate of book production costs in \*Egypt, combining the Tetrarchic \*Prices Edict's data with literary and papyrological evidence, has concluded that a complete copy of the Bible would command prices ranging from 6.2 to 16 *solidi* if written on parchment, and from 4.3 to 14 *solidi* if written on papyrus (Bagnall, 57). **Prices Edict, Tetrarchic** A measure of 301 issued by \*Diocletian and his colleagues, intended to stem \*inflation by enacting price limits for goods and services. Its text is preserved substantially complete in \*inscriptions from over 40 locations, everywhere in \*Latin except for \*Achaëa, where the tariff list is in \*Greek. Promulgation was probably confined to the East, although the contents reflect the entire Empire. Its relationship to the contemporaneous \*Tetrarchic Currency Reform, which retariffed the \*coinage from 1 September 301, remains unclear, since their relative chronology is disputed. The Edict consists of a lengthy rhetorical preamble, followed by a tariff list, organized under 69 separate headings, detailing some 1,500 items, each with a maximum price in *denarii*, covering staples and luxuries, skilled and unskilled wages, and transport costs. The preamble, emphasizing imperial foresight (*providentia*) and restraint, describes hard-won peace disturbed by avarice-driven inflation, with soldiers as typical victims. Contravention, including manipulating supply, was to be a capital offence. Attributing economic problems to Diocletian's misgovernment, \*Lactantius (*Mort.* 7, 6–7) describes how, despite executions, the \*Edict made shortages worse, so that enforcement was abandoned. \*Papyri from \*Egypt, however, suggest that some state transactions were pegged to the Edict's maximums for a decade afterwards. **Priene** \*City and bishopric suffragan to \*Ephesus, on the north flank of the \*Maeander delta plain. A columned \*basilica with a \*mosaic floor and narthex, built largely of ancient \*spolia, dates in its original form from the 5th or 6th century. PJT

S. Westphalen, 'Die Basilika von Priene, Istanbul Mitteilungen', *MDAI(I)* 48 (1998), 279–340.

**priest, Christian** The second in rank among Christian ministers, between \*deacon and \*bishop. The NT refers, perhaps synonymously, to *episkopoi*, (Eng. 'bishop') and *presbyteroi*, (from which derives Eng. 'priests'). By the 2nd century, *episkopoi* and *presbyteroi* were distinct orders, both commissioned for ministry by ritual laying on of hands. While the bishop remained the ordinary minister of sacraments and the principal preacher, presbyters also could administer \*baptism, celebrate the \*Eucharist, and preach (only in the medieval period with the development of sacramental confession did presbyters also begin to absolve sins). Christians initially hesitated to apply Jewish or \*pagan priestly terminology (Gk. *hiereus*, Lat. *sacerdos*) to their ministers. During the 3rd century, reflection on the OT priesthood and on the high-priestly typology of the NT Letter to the Hebrews, along with the further development of Christian \*liturgy, particularly at the Eucharist, led to *hiereus* and *sacerdos* becoming synonyms for *presbyteros*. *DictSpir* 12/2 s.v. Presbyterat, cols. 2069–87 (Lamarche, Solignac, Bifet).

**priesthood, pagan** The offices held by men and women in Roman \*cities responsible for imperial, civic, or mystery cults were not full-time 'jobs', and the responsibilities associated with them were ritual not pastoral. The functions and status of pagan priests remained relatively unchanged from the Early Empire to the time of \*Constantine I. Priests were responsible for the \*temples, \*festivals, and rituals that animated the relationship between human communities and the gods. As \*Pontifex Maximus, the \*emperor exercised religious authority at \*Rome and the provincial \*priesthood of the

## priesthood, provincial

\*imperial cult conferred high \*honour. Both \*Maximinus Daza and \*Julian tried to systematize pagan priesthoods. With the rise of Christianity during the 4th century, imperial policy towards public priesthoods varied; the Christian \*Constantius II filled the priestly colleges of Rome, but later \*Gratian disendowed the \*Vestal Virgins. The evidence available shows a progressive decline in the number and involvement of priests in local life; apart from offices connected to the much secularized imperial cult (even in \*Vandal \*Africa), most priesthoods are not attested after the early 5th century. CARM

Rüpke, *Fasti Sacerdotum*, lists all priests and priesthoods from the City of Rome. The English translation of

D. Richardson (2011) lacks some of the essays printed in vol. 3 of the original German edn. (2008).

Cameron, *Pagans*.

A. Wardman, 'Pagan Priesthoods in the Later Empire', in M. Henig and A. King, eds., *Pagan Gods and Shrines of the Roman Empire* (1986), 257–62.

**priesthood, provincial** The *Sacerdos Provinciae* was elected by and presided over the provincial council (\*Conventus). He organized banquets (\**epulae*) and public \*entertainments in honour of the \*emperor, and remained in office for one year, receiving the title *sacerdotalis* for life. Although formally still related to the maintenance of \*temples and the celebration of \*imperial cult (*CTh* XII, 1, 112; *CIL* XI, 5283), the office was largely secularized from the time of \*Constantine I onwards. Its most important function became the organization of lavish and expensive games in the provincial capital, sometimes subsidized by the imperial \*administration. The provincial priesthood was an honourable appointment held by the most important members of the local \*aristocracy, and it could lead to a \*title of honour, such as that of *vir clarissimus* in \*Asia. During the 4th century, local titles like Asiarch and Syriarch were associated with this priesthood. Provincial priests are recorded well into the 5th century, in different parts of the Empire, and even in \*Vandal \*Africa. CARM

**Primasius** (fl. c.550) \*Bishop of \*Hadrumetum of \*Byzacena (mod. Sousse, Tunisia). Author of an extant commentary on Revelation, influenced by \*Tyconius

and \*Augustine, as well as a lost book on \*heresy. A commentary on S. Paul's epistles has been erroneously ascribed to him. \*Junillus, \*Quaestor Sacri Palatii for \*Justinian I, met Primasius in 541 or 542 at \*Constantinople and subsequently dedicated his *Instituta Regularia Divinae Legis* to him. Primasius was in Constantinople again in 551 after having been summoned with Pope \*Vigilius by Justinian to discuss the \*Three Chapters, which Primasius and the pope supported, and the \*emperor did not. According to \*Victor Tonnennensis, when Primasius reversed his opinion in 552, Justinian rewarded him with the title of Primate of \*Byzacena. ETH

**primicerius** Title of various officials. Primicerius was a rank in the \*army, both in the \*provinces and military \**fabricae*, and also in the \**scholae palatinae*, the \**protectores* and \**domestici*. In the civil \*administration, the Primicerius Sacri \*Cubiculi (a \*eunuch) ranked second to the \*Praepositus, Sacri Cubiculi. There was a \*Primicerius Notariorum, and *primicerii* of the \**exceptores*, of the Sacrae \*Largitiones, of the \*Res Privata, and in other departments. Churches had *primicerii* of their \**notarii*. The word derives from the name of the holder of the office standing in first place on the wax tablet (*cera*) listing officials. HCT

Jones, *LRE* 634, 674–5 (army), 599 (military), 835 (*fabricae*), 639–40 (*domestici*), 567–9 (Cubiculum), 585 (financial), 911 (Church).

**Primicerius Notariorum** Head of the \**notarii*. The title is first attested in 381 (*CTh* VI, 10, 2). The function must be older; \*Ammianus (XXV, 8, 18) describes the murder in 363 of Iovianus, 'first among the *notarii*'. According to the \**Notitia Dignitatum* (occ. 16.3–5, or. 18.2–4), the Primicerius maintained the \**Laterculum Majus* and issued (for substantial \*fees, enumerated in *NovJust* 8 of 535) \**codicilli* of appointment to senior officials. Teitler, *Notarii*, 59–60.

Kelly, *Ruling the Later Roman Empire*, 40–1, 163, 235.

**Primiscrinii** See RANKS IN CIVIL SERVICE.

**Princeps Officii** The chief officer of an \**officium*, whether of a \*Praefectus, \*Vicarius, or provincial

\*governor. He was often appointed from outside the *officium* he headed, from among the \**agentes in rebus*, though this was less frequent at provincial level. AGS B. Palme, 'Die Officia der Statthalter in der Spätantike.

Forschungsstand und Perspektiven', *AntTard* 7 (1999), 85–133, esp. 103–10.

**principales** (civic) Management board typically of about ten men within each \*city council (*curia*) and sometimes referred to in the \**Theodosian Code* as the *decemprimi*. \*Isidore of Seville defines them as the first among magistrates (*Etymologiae*, IX, 4, 25). The \**Digest* (XLVIII, 19, 27) laid out specific procedures for considering the crimes of *principales* meriting \*exile or capital punishment. *Principales* were natural candidates for membership of provincial \*assemblies. AGS Jones, *LRE* 731, 1300–1.

**principalis** A principal officer in various civil and military \**officia* of the imperial \*administration. The term, which had often referred to senior legionaries, had evolved to cover senior civil officials by the early 3rd century (*CJust* IX, 51, 1). AGS

**Prisca** \*Diocletian's wife, so mother of \*Valeria Galeria. She sacrificed at the start of the Great Persecution (\**Lactantius*, *Mort.* 15,1), and was beheaded by \*Licinius in 314/15 (*Mort.* 51). OPN

*PLRE* I, Prisca.

*NEDC* 31.

**Priscian** (late 5th/early 6th cent.) A \**grammaticus* from \*Caesarea in (prob.) \*Mauretania, Priscian was active in \*Constantinople under the \*Emperor \*Anastasius I, whom he celebrated in a \*panegyric per-phases datable to 503.

By 526 he had completed his great work, the *Principles of Grammar* (*Institutio Grammatica*) in eighteen books. In this work he attempted to apply the teachings of earlier \*Greek grammarians, esp. Herodian and Apollonius Dyscolus, and correct his \*Latin predecessors' errors. The *Institutio*, which alone of ancient Latin grammars extensively treats issues of syntax, ultimately supplanted the handbook of \*Donatus and, from the 12th century on, was the foundation of Latin learning in Europe.

Beyond the panegyric of Anastasius already mentioned, Priscian's other works include: the *Principles of the Noun, Pronoun, and Verb* (*Institutio de Nomine, Pronomine et Verbo*), a compendium intended for school use drawn from the larger *Institutio*; grammatical analyses of the first verse of each of the twelve books of \*Vergil's *Aeneid* (*Partitiones Duodecim Versuum Aeneidos Principalium*), also for the schools; a versified version of the geographical survey of Dionysius Periegetes; and

several minor works dedicated to the Roman aristocrat Q. Aurelius Memmius \*Symmachus (*De Figuris Numerorum, De Metris Fabularum Terentii, Praeexercitamina*). As is to be expected in view of his date, Priscian was a Christian (Keil, *Gramm. Lat.* II, 238, 5f.). RAK

**Priscianus, Theodorus** Physician thought to be from North \*Africa and a pupil of \*Vindicianus. He is credited with several medical works written around AD 400. His *Euporista* in three books deal respectively with external, internal, and gynaecological ailments. Additional short works dealing with medical topics are also attributed to Priscianus, such as the *Physica* and *De Simplici Medicina*. Priscianus' sources are essentially \*Greek; he translated and adapted them into \*Latin for a new audience, a popular approach among medical authors of this period. CP

**Priscillian** A highly educated layman who began to promote a new, idiosyncratic form of Christianity in the 370s, and created in \*Spain a new religious community including both laypeople and the clergy. The spreading of Priscillian's ideas and the increase of his followers alarmed Hyginus, \*Bishop of \*Cordoba, who informed \*Hydatius, Bishop of \*Merida, about Priscillian's threat to the Spanish Church. After Hyginus' denunciation, Priscillian became the object of constant opposition and persecution on the part of the Spanish Church. In October 380 Priscillian and his religious community were criticized and attacked at a \*council held in Saragossa.

After the election of Priscillian as the new Bishop of Avila by his supporters in 381, Hydatius appealed to the \*Emperor \*Gratian and obtained a \*rescript that banned all heretics, including Priscillian and his community, from churches, \*cities, and every land. At this stage,

Priscillian decided to travel to \*Italy to seek the support of the bishops \*Damasus at \*Rome and \*Ambrose at \*Milan, and plead his cause before the Emperor Gratian. After Priscillian was denied support from both Damasus and Ambrose, he appealed to Macedonius, Gratian's \*Magister Officiorum, and the rescript banishing him was revoked, so that he could return to Spain and to his see.

In 383, Gratian while preparing to fight the \*usurper \*Magnus Maximus in \*Gaul was assassinated in a conspiracy. Maximus entered \*Trier as the new emperor and showed a stricter attitude to the defence of orthodoxy, and Priscillian's opponents took advantage of this new situation. In 384, Priscillian was charged with \*heresy at a \*council held in \*Bordeaux, but instead of appearing at this trial, decided to appeal directly to the Magnus Maximus. His case was therefore transferred to Trier and handled by the secular authorities, who finally found Priscillian guilty of sorcery. As a consequence of these accusations of practising \*magic, Priscillian was executed with several of his followers, being the first Christian heretic to be condemned to death together with members of his community.

Considering the opposition that Priscillian found as a religious leader, and the persecutions that led to his \*execution, one might expect that he professed a clearly unorthodox form of Christianity, which the Church would find it necessary to reject. However, nothing of the sort appears from the works discovered in Würzburg by Schepss in the late 19th century, which were partly written by Priscillian and partly by his followers. This raises a question whether the Church accused Priscillian of being a \*Manichaean or \*gnostic, because he tried to introduce an \*ascetic form of Christianity which threatened the contemporary Spanish Church. The answer is unclear. It is likely that Priscillian expressed certain heterodox theological ideas in his doctrine, of which only traces of a \*Neoplatonist, Monarchian, and astrological character appear in the apologetic and festal writings of his corpus. At the same time, his religious community was seen to raise ecclesiological problems for the 4th-century Spanish Church. MC CPL 785–87:

**Priscus** \*Neoplatonic \*philosopher, closely associated with the \*Emperor \*Julian. He was a pupil of

\*Aedesius, and probably met Julian in \*Athens. Julian wrote to Priscus from \*Gaul, inviting him to join him there. Priscus went on the \*Persian expedition of 363, and was at Julian's deathbed. He was arrested under \*Valens but returned to \*Greece, where he died c.395.

SFT

PLRE I, Priscus 5.

**Priscus** General under \*Tiberius and \*Maurice, admired by \*Theophylact Simocatta's military sources. He served \*Phocas as \*Comes \*Excubitorum and married his daughter, but invited \*Heraclius to overthrow him. In 612 he recaptured \*Caesarea of \*Cappadocia from the Persians, but on returning to \*Constantinople was forcibly ordained and confined to the Chora \*monastery.

OPN

PLRE III, Priscus 6.

Whitby, *Maurice*, 15–16, 98–105.

**Priscus Attalus** See ATTALUS.

**Priscus of Panium** (c.401–after 457) Historian and \*rhetorician. A native of Panium of \*Europa in \*Thracia, Priscus was employed as an adviser first to the general \*Maximinus and later to \*Marcian's \*Magister Officiorum, Euphemius. He accompanied Maximinus on a number of diplomatic missions, most famously in 449 to \*Attila the \*Hun, when Attila was threatening both parts of the Empire.

Priscus published \*letters and rhetorical exercises, nothing of which has survived, and a history, title unknown, which covered the period c.434 to c.474. The history survives in a large number of passages, some quite extensive, preserved in the \**Excerpta De Legationibus*, and was clearly popular in its time, since much material derived from it, directly or indirectly and sometimes by name, appears in various writers: \*Jordanes' *Getica*; \*John of Antioch; the *Ecclesiastical Histories* of \*Evagrius Scholasticus and \*Nicephorus Callistus Xanthopolus; \*Procopius' *Vandalic War*; the \**Chronicon Paschale*; the *Chronicles* of \*Theophanes and \*John Malalas; and the \**Suda*.

The history is an important source for the reigns of \*Theodosius II, Marcian, and \*Leo I, including the barbarian attacks upon both parts of the Empire, and especially the relations between the Romans and the Huns. Priscus' best-known passage is his eyewitness account of the embassy of 449 to the court of Attila which, together with Ammianus Marcellinus, XXXI, 2, is the most detailed literary account of the ethnography of the Huns.

Priscus' work is situated firmly within the tradition of classicizing \*historiography, with its consistently secular approach, its emphasis upon the leading personalities of the period, its vague terminology and topography, lack

of numbers, and weak causation, but also its narrative strength and descriptive clarity. RCB

**prisons** In the Later Roman Empire, prisons were used predominantly for custody before trial and before execution of the penalty, or for coercive detention to restore public order. The Tullianum in \*Rome, still in use in the 4th century (\*Ammianus, XXVIII, I, 57), provides a rare case of archaeological evidence. Late imperial \*law expected all prisons to follow a similar outline, with a subterranean prison for convicts in chains, and a vestibule for those awaiting trial (*CTh* IX, 3, 1). Defendants of higher rank could also be held in military custody or house arrest rather than in public prisons (*CTh* IX, 2, 3).

Late Roman laws rarely prescribe incarceration as a penalty in itself, although there are exceptions (e.g. *CJust* IX, 5, 2). The early 3rd-century jurist Ulpian seems to record a prohibition of prison as a penalty (\**Digest*, XLVIII, 19, 8, 9), but Lovato has recently called into question this common interpretation of the *Digest* passage. Even if it was legally recognized, prison as a penalty played only a marginal role throughout Roman Antiquity.

Late Roman \*emperors tried to ease prison conditions by ordering swift trials and exactions of penalties for those held in custody (*CTh* IX, 3). Many Late Antique authors also describe the negligence of \*governors in observing correct criminal procedure, leading to illegal long-term detention (e.g. \*Libanius, *Oration*, 33, 45). Possible reasons for overcrowding of prisons include an increase in Late Antiquity of criminal prosecution of such offences as \*theft, and the reluctance of Christian judges to perform \*executions.

Christian writers frequently called for charity for prisoners, as the Gospel commands (Matt. 25:36). Miraculous release from prison was an expected consequence of sanctity (Acts 12:5–17) and a way of differentiating religious and secular power, particularly in \*saints' lives from 6th-century \*Gaul (e.g. \*Gregory of \*Tours, *Miracles of S. Martin*, 4, 39). At the same time, Late Antique bishops, such as the 6th-century Bishop Paul of \*Gerasa, increasingly kept prisons themselves, in accordance with the increase of their judicial responsibilities (*SEG* 35 (1985), 1571). **prisons, private** Private \*prisons were illegal under Roman \*law, and were the subject of legislation contained in both the \*Theodosian Code and \*Justinian's Code. It is clear from these laws that those who violated such provisions were primarily the owners of large \*estates, who used such prisons to control and discipline their workforce. This impression is confirmed by documentary \*papyri from \*Egypt, which record \**coloni* \**adscripticii* on the \*Apion estates, for example, being threatened with the estate prison if they attempted flight or failed to perform their duties satisfactorily. PS  
O. Robinson, 'Private Prisons', *RIDA* 15 (1968), 389–98.

**Proaeresius** (274/5–c.366/7) Renowned Christian \*rhetorician originally from \*Armenia who taught in \*Athens. He studied in \*Antioch before coming to Athens, where he taught rhetoric after the death of Julian of \*Cappadocia. His students number \*Basil of \*Caesarea, \*Gregory of \*Nazianzus, and \*Eunapius, author of *Lives of the Philosophers and Sophists*. Proaeresius also had imperial connections. The \*Emperor \*Constans I summoned him to \*Gaul where he won the \*emperor's favour. He may have taught \*Julian at Athens in 355. \*Jerome reports that Julian exempted Proaeresius from the edict of 362 forbidding Christians to teach the liberal arts, but that Proaeresius resigned anyway (*Chron.* 242f Helm). SFT  
PLRE I, Proaeresius.

**Proba** Author of a Christian \*Vergilian \*cento of 694 verses, usually identified as Faltonia Betitia Proba, wife to Clodius Celsinus Adelphius, \*Praefectus Urbi at \*Rome in 351 (\*Isidore, *Etymologiae*, I, 39, 26; *Vir. Ill.* 18, 22), and mother of Q. Clodius Hermogenianus Olybrius (\*consul 379) and Faltonius Probus Alypius (Praefectus Urbi 391). The cento is usually dated to c.360. The poetess confesses that her earlier work had included an account of civil war (1–8, 47–51)—conventionally assumed to be an \*epic poem about \*Constantius II. The cento gives versions of the Old and New Testaments—from Creation to the Flood, then Christ's life, death, resurrection, and ascension. RDR

**probatoria** Certificate of appointment to a permanent post (or honorary equivalent) in the imperial \*civil service (cf. \**codicilli*, the certificates presented to the highest-ranking officials). They were issued—on payment of \*fees (*sportulae*)—by the Sacra \*Scriinia: by the Scrinium Memoriae to \**agentes in rebus*, \*Largitiones, and \*Res Privata; by the Scrinium Epistularum to the staff of a \*Praefectus Praetorio, \*Praefectus Urbi, proconsul, and a \*Vicarius; by the Scrinium Libellorum to the staff of a \*Magister Militum and \*Dux (\*John Lydus, *Mag.* III, 67; *CJust* XII, 59, 9–10; *CTb* VIII, 7, 21–2). The term is used also for enlistment papers issued to soldiers by a \*Magister Militum or a \*Dux (though in 472 \*Zeno required that imperial approval also be obtained for soldiers recruited to serve on the \*frontiers: *CJust* XII, 35, 17). CMK Jones, *LRE* 378, 576.

**Probus** \*Augustus 276–82. Knowledge of Probus' reign is clouded by the heavily fictional \**Historia Augusta*. Marcus Aurelius Probus was a 3rd-century \*Balkan soldier-emperor, born at \*Sirmium. He served under \*Aurelian (270–5), and was proclaimed emperor by his troops after the death of \*Tacitus. His rival, Tacitus' brother \*Florian, was murdered by his own soldiers. Probus himself faced usurpations from the little-known figures of Bonosus, Proculus, and \*Saturninus, while he campaigned actively on the Rhine and Danube \*frontiers. He was killed by his troops in 282 at \*Sirmium, and \*Carus was acclaimed emperor. The *Historia Augusta* (*Probus*, 24, 1–3) claims that an omen promised greatness to his descendants, possibly alluding to the 4th-century aristocratic \*family of \*Petronius Probus. DMG *PLRE* I, Probus 3.

Potter, *Empire at Bay*, 271–5.

CAH XII (2005), 54–7.

**Probus** Nephew of \*Anastasius I. Probus introduced \*Severus of \*Antioch to Anastasius. Around 526 Probus was sent to hire \*Huns to protect \*Iberia, but instead gave funds to missionaries working among them. During the \*Nika Riot, he hid from a crowd threatening to proclaim him \*emperor; the crowd burnt his house instead. \*Justinian I exiled him, but in 533 recalled him to \*Constantinople, where from 540 to 542 he sheltered the \*Miaphysite historian \*John of Ephesus. OPN *PLRE* II, Probus 8.

Greatrex, *RPW* 142–4.

**processions, political and secular** Throughout Antiquity public processions (Gk. *proeleusis*, *pompe*; Lat. *pompa*) were both a grand spectacle and an essential element in political life, civic, royal, and imperial. Politics was not only done, it was seen to be done.

Roman \*emperors in the 3rd and 4th centuries were perpetually on the move, so it is no surprise that one of the most frequent \*ceremonies in which they were involved was that of \**adventus*. By receiving their ruler with \*panegyrics, lights, flowers, sacrificial animals, and cheering crowds, a \*city signified its consent to be governed. Individual arrivals might have specific significance. \*Constantius I arriving in \*London after repressing the rebellion of \*Allectus in 297, as depicted on the largest \*gold medallion from the \*Arras Hoard, reasserted the sovereignty of the central government of the \*Tetrarchy. The *adventus* to \*Rome of his son \*Constantine I after defeating \*Maxentius at the Battle of the \*Milvian Bridge also enacted a change of regime. Constantine used one of his three visits to Rome (312, 315, 326) to signify a religious change; he declined to ascend the Capitol and perform the customary \*sacrifices. Much might be deduced from the demeanour of an emperor during such a procession. \*Constantius II passing through Rome in 357 seemed to \*Ammianus stiff—he looked rigidly straight ahead and did not pick his nose or face (XVI, 10), whereas \*Honorius coming through the crowds from the Milvian Bridge to the Palatine in 403 seemed affable (\*Claudian, *De Sexto Consulatu Honorii*, 494–522, 543–4). \*Julian's *adventus* to \*Antioch in 362 was marked by the ill omen of women ritually mourning for Adonis (Ammianus, XXII, 9, 15).

When the eastern emperors settled at Constantinople after 395, processions through the street became a regular feature of the \*city's calendar. Annually on the birthday of the city, 11 May, a wooden statue of Constantine was brought by a guard of soldiers through the streets to the \*Circus, where the emperor of the day did obeisance to it and to the \*Fortuna (*Tyche*) of the City (\*John Malalas, XIII, 8, 322). Imperial officials also had their place in the processions of the imperial city. It was said that when \*Cyrus held the offices of \*Praefectus Praetorio and \*Praefectus Urbi concurrently between 439 and 441 he would go out in the carriage of one of his prefectures and return in the carriage of the other. Official processions were a familiar sight in 5th-century Constantinople; when a \*Goth leant out of window to watch S. \*Daniel the Stylite being carried shoulder-high by an enthusiastic mob, he said, 'Look here comes our new \*consul'—and fell out of the window and died (*VDanStyl* 75). \*Justinian I even revived the ancient triumph for \*Belisarius after he had conquered \*Africa in 534 (\*Procopius, *Vandalic*, IV, 9).

Evidence is most plentiful for emperors and the cities where they lived, but processions featured also in the

regular life of provincial cities. \*Governors were met with a ritual *adventus* on entering the cities of their \*provinces. The \*iconography of Christ's entry into \*Jerusalem had points of similarity with this familiar ceremony. \*Basil's description of S. Gordius going to his martyrdom evokes the excitement of a civic procession—'no woman showed herself absent from the spectacle, nor any man whether obscure or distinguished' (*Sermon on S. Gordius*, 6, = PG 31, 501 BC). When the \*relics of S. \*Symeon Stylites the Older were brought from his pillar at \*Qalat Seman to the city of \*Antioch they were accompanied by a procession lasting five days accompanied by the \*Dux Syriae and 600 soldiers.

**processions, religious** Religion in Antiquity was not primarily a private matter. Regular public parades through the \*streets of a \*city, to and from public games and \*sacrifices, had always formed part of the \*ceremonies through which Romans and Greeks had tried to assure the normal cooperation of the forces of nature with the needs of their communities. The beginning of the navigation season was marked in seaside places by a procession to the water's edge and the launching of the \*Ship of \*Isis (Apuleius, *Metamorphoses*, XI, 9–19). Such ceremonies were deemed to be prohibited by the provisions of a law of 407 (\**Sirmondian Constitution*, 12, cf. \*Augustine, *ep.* 91, 8), but in the autumn of 417 \*Rutilius Namatianus found celebrations in honour of Osiris still occurring in a \*village on the coast of \*Italy (I, 371–6).

Christians also prayed and sang together in the public streets, particularly with the development of patterns of \*stational liturgy when on certain stated days a \*bishop would go across his city to celebrate a specific \*festival at a particular church. At \*Constantinople from the late 6th century onwards a procession in honour of the \*Theotokos went from the Blachernae to the

Chalcoprateia every Friday, and was modelled on a similar weekly observance at \*Jerusalem which went from Mount Sion to Gethsemane. In addition to these calendar customs, processions also occurred as part of particular celebrations such as that illustrated on the \*Translation of Relics \*ivory, and with litanies to seek divine assistance during emergencies, as after an \*earthquake in \*Constantinople in 396 (\*Orosius, III, 3, 2; \*Sozomen, II, 4, 4).  
 OPN

**processions, pagan** An important element in religious celebrations, processions were normally organized and funded by \*priests specific to individual cults, and occupied an integral place in the calendars of \*city \*festivals. There were two main types of processions, the ordered and scripted *pompe* and the more orgiastic *komoi*, which attracted the criticism of Christian and pagan writers alike. Some festivals were celebrated all over the Empire, like the \*Kalends of January. Others had a local character, but could still attract crowds from other regions, like the Panathenaic procession in \*Athens. Processions connected the secular and the sacred, blurring boundaries between the two spheres. In 384, the great pagan \*Praetextatus held political office as \*Praefectus Praetorio under Christian \*emperors and had recently been designated \*consul for the following year; \*Jerome describes scornfully the popular applause as he went triumphantly up the Capitol in \*Rome, preceded by the civic dignitaries (*ep.* 23, 3). Processions could also lead to religious violence: in 408, a procession celebrating the Kalends of June in \*Calama (\*Numidia) passed in front of a church, resulting in a riot between pagans and Christians (\*Augustine, *ep.* 90–1). Dissociated from \*sacrifices, pagan processions continued in some cities into the late 5th century.

E. Rebillard and C. Sotinel, eds., *Les Frontières du profane dans l'Antiquité Tardive* (2010).

M. Meslin, *La Fête des kalendes de janvier dans l'empire romain* (1970).

**processions, Christian** From at least the middle of the 4th century processions were a feature of Christian \*liturgy, especially in the more important urban centres. The first extensive evidence for them can be found in the \*pilgrimage account of \*Egeria (381–4). She recounts daily processions within the Holy Sepulchre/Golgotha complex at \*Jerusalem as well as processions to special sites, e.g. to \*Bethlehem on the eve of \*Epiphany (Jerusalem's Nativity celebration) and from the Mount of Olives on Palm Sunday.

Processions also figure importantly in the religious life of \*Constantinople. \*Socrates (VI, 8) and \*Sozomen (VIII, 8), 5th-century church historians, describe rival processions of \*Arians and Orthodox in the 4th century which ended in violence. \*John Chrysostom describes a procession by land and sea carrying a saint's \*relics to

a coastal suburban shrine which 'turned the sea into a church' (*Homilia in S. Phocam martyrem*, 1 = PG 50, 699–706 at col. 700). The remains of the prophet Samuel arrived in 406, and were conducted to their new home by an enthusiastic procession which stretched, says \*Jerome (*Contra Vigilantium*, 5), all the way back to \*Palestine; the \*Praefectus Praetorio and the \*Praefectus Urbi were present, and the \*emperor led the way. There were numerous processions from the Church of the \*Holy Wisdom to other churches in the city on \*festival days throughout the year, forming part of the city's \*stational liturgy.

There were also various processions in the Late Antique liturgy of the city of \*Rome. \*Prudentius (*Peristephanon*, XII, 55–66) succinctly describes the episcopal procession from the \*Vatican to the \*Basilica of S. Paul's-outside-the-walls for the double celebration of the feast of Ss. Peter and Paul. The 'Great Litany' (25 April) was a procession that offered \*prayers for a safe harvest. Pope Sergius I (687–701) instituted processions on four major feasts related to the Virgin \*Mary, the Presentation (2 February), Annunciation (25 March), Dormition (15 August), and Nativity (8 September). Processions from gathering points (*collecta*) within the city to churches where the liturgy was celebrated (*stationes*) also took place on the weekdays of Lent. JFB

R. Janin, 'Les Processions religieuses de Byzance', *RÉB* 20 (1962), 68–89.

**Proclus** (410–85) One of the most prolific and influential \*philosophers of Late Antiquity. Proclus was born in 410 to \*pagan parents from \*Lycia in \*Constantinople. His father was a lawyer and, following grammatical studies in Lycia, Proclus studied \*rhetoric at \*Alexandria under the sophist Leonas and the grammarian Orion (*VProcli* 8) and also studied \*Latin in order to prepare for a legal career. Leonas introduced Proclus to political figures in Alexandria and Constantinople and, while visiting Theodorus the \*Praefectus Augustalis, Proclus became convinced that he should shift his focus to the full-time study of philosophy. He returned to Alexandria, abandoned the study of rhetoric, and began attending the Aristotelian seminars of the teachers \*Olympiodorus and Hero. He developed so close a relationship with Olympiodorus that Proclus was offered his teacher's daughter in \*marriage, an offer that Proclus declined (*VProcli* 9). He soon grew disenchanted with the type of teaching done in Alexandria and left the city to study in \*Athens at the Platonic school headed by \*Plutarch.

#### *Athenian period*

Proclus arrived in Athens in 429 or 430. Plutarch led Proclus through Plato's *Phaedo* and Aristotle's *On the*

*Soul* (*VProcli* 12), but \*Syrianus served as Proclus' primary teacher. In slightly more than two years, Proclus read with Syrianus nearly all of the works of Aristotle (*VProcli* 13). He progressed quickly through the standard Platonic curriculum as well and, by the age of 28, he had written commentaries on the *Phaedo* and the *Timaeus* (*VProcli* 13). Following the completion of the *Timaeus* commentary, Syrianus offered Proclus instruction on the Orphic hymns (*VProcli* 26). Proclus supplemented this formal study with study of Chaldean texts, instruction in \*theurgy provided by Plutarch's daughter, and investigations into the practices of a range of traditional Mediterranean cults.

#### *Proclus the scholar*

Proclus took over the leadership of the Athenian school following Syrianus' death in c.440. His first few years were difficult and he was compelled to spend one year in exile in \*Lydia, probably after finding himself on the wrong side of some Athenian political conflict. Athens remained friendly to both traditional religion and the religiously tinged Platonism which Proclus taught. After returning from Lydia, Proclus allowed Plutarch's grandson Archiades to serve as the school's political advocate while he directed its teaching (*VProcli* 14). When the statue of Athena was removed from the Parthenon by 'the people who move that which should not be moved', a beautiful woman appeared to him in a \*dream and told him to get his house ready 'because the Athenian Lady wishes to dwell with you' (*VProcli* 30). By the 460s, his school had become the most important centre for philosophical instruction in the eastern Mediterranean world. Students came from \*Anatolia, \*Syria, \*Palestine, and \*Egypt. Many of them then returned home and set up schools in which they taught according to the models they had learned under Proclus. By the 480s, teachers trained by Proclus seem to have dominated the philosophical \*schools of Alexandria, \*Aphrodisias, and Athens.

#### *Works*

Proclus' extensive writings included commentaries on at least ten Platonic texts, \*Euclid's *Elements*, Nicomachus' *Arithmetic*, the *Tetrabiblos* of \*Ptolemy, and the *Enneads* of \*Plotinus. He wrote a number of polemical works including one directed against Aristotle's criticisms of the *Timaeus* and another aimed apparently at Christian objections to the Aristotelian notion of the world's eternity (later answered by \*John Philoponus). He composed a series of original works (most notably his *Elements of Theology* and his *Platonic Theology*) that collectively outlined his metaphysical system. Other works also evince a particular concern with providence and the degree to which unchanging powers can influence the affairs of men. Proclus' commentaries show a

great dependence upon \*Iamblichus, but the 6th-century Platonist \*Damascius strongly criticized Proclus' particular use of Iamblichus.

### Legacy

Proclus died in 485 after a long and debilitating illness. His successor, the sickly \*Marinus, proved unable to maintain the prominence of the Athenian school, and its influence diminished until \*Damascius revitalized the institution in the 510s. The intellectual legacy of Proclus was more secure. By the early 6th century, he was routinely called 'the great Proclus' (\*Ammonius, *In Analytica Priora*, 4, 6; Philoponus, *De Aeternitate Mundi*, 59, 24–5) and his Platonic commentaries formed the basis of discussion in classes led by other Platonists (most notably Damascius). His theological works also probably influenced Christians, his ideas being present most notably in the writings of the shadowy \*Dionysius the Pseudo-Areopagite. EW

**Proclus, Patriarch of Constantinople** (sed. 434–47) Author in 435/6 of the *Tomus*, a *Letter to the*

*Armenians* concerning \*Nestorianism. Proclus was ordained by \*Bishop Atticus and may have become patriarch through the influence of the \*Empress \*Pulcheria. Proclus had the \*relics of \*John Chrysostom transferred to Constantinople on 27 January 438, which reconciled John Chrysostom's followers with the patriarchate. Proclus mediated between the positions of \*Antioch and \*Alexandria on matters of Christology.

Over 30 \*sermons, some of which may not be authentic, are preserved in \*Greek, \*Syriac, \*Armenian, Ethiopic, \*Georgian, Old Slavonic, \*Arabic, and \*Latin (Solignac). Many of them were delivered on \*festivals of Christ.

Proclus' homilies on the \*Theotokos were instrumental in the debate over the status of the Virgin \*Mary. The first of these was possibly delivered in 430, on 26 December (Constas, 57–9) on the newly instituted festival of Mary, and in the presence of, and against, Nestorius, who attempted to quell her veneration; it was appended to the minutes of the \*Council of \*Ephesus of 431, thus receiving canonical status (*ACO* I, I, I, 103–7). Its importance in the development of Christology towards the Council of \*Chalcedon is undisputed.

Eight \*letters (*ACO* I, II, IV; CPG 4:5896–915) are preserved, mostly in Latin. Letter 2, known as the *Tomus ad Armenios* (435 or shortly after), is extant in Greek, Latin, Syriac, and Armenian, with fragments in Arabic and Ethiopic. Proclus addresses Armenian concerns about Nestorianism and the writings of \*Theodore of \*Mopsuestia, thereby prompting a removal of Antiochene influence on the Armenian \*translation of the \*Bible and upholding the Armenian Church's western affiliation. The Armenian translation of the *Tomus* mentions Theodore of Mopsuestia. The *Tomus'* relevance stretches well beyond its immediate purpose; Proclus' Theopaschite formulation *Unus e Trinitate passus* ('One of the Trinity suffered') was accepted at \*Rome only under John II (533–5). TMvL

**Proconnesus** (\*mod. Marmara Adası, Turkey) \*Island in the Sea of \*Marmara (Propontis), close to \*Constantinople, which it supplied with white \*marble. Proconnesian marble is typically coarse-grained with blue veins. Finished carvings were exported throughout the Mediterranean in Late Antiquity and they established a super-regional style that was imitated by various local workshops.

The formal repertoire of Late Antique architectural \*sculpture initially derived from \*Docimium. It developed further when \*Theodosius I enlarged Constantinople, using considerable Proconnesian marble. The repertoire then absorbed Sasanian influences during the building of \*Anicia Juliana's Church of S. \*Polyeuctus, and finally appeared soon afterwards fully matured in Justinian I's Church of the \*Holy Wisdom.

Under the \*Tetrarchy the \*quarries had been used as a place of hard labour for those condemned under the \*Manichaean Law. \*Valens sent into \*exile to labour on Proconnesus monks and others loyal to the theology of the \*Council of \*Nicaea (\*Theodoret, *HE* IV, 22). Convicts were still working the quarries in 536 (*NovJust* 22, 9). Marble production at Proconnesus ceased in the middle of the 6th century. PhN

**proconsul** Title of the \*governors of \*Africa, \*Asia, and \*Achaia. Africa and Asia had long been the most prestigious public \*provinces. The proconsulship of Achaia was created in the early 4th century (possibly under \*Constantine I). Proconsuls of Achaia included the poet \*Porphyrius and the pagan \*senator \*Praetextatus. Proconsuls were the highest-ranking governors, and by the late 4th century the only ones with the \*title of *spectabilis*, whereas all other governors were ranked *clarissimi*. Unlike other governors, proconsuls came directly under the \*emperor, and not under a \*Vicarius or \*Praefectus Praetorio. \*Justinian I gave the governor of \*Palaestina Prima the title Proconsul (*NovJust* 103). DS1

**Proconsul of Carthage** The \*governor of Roman \*Africa Proconsularis was \*Proconsul Africae. After the \*Vandals captured \*Carthage in 439, their kings occupied the Proconsul's \*residence on Byrsa Hill, but a

judicial official bore the title Proconsul Carthaginiis. Two are certainly attested, Victorianus of \*Hadrumetum in 484 (\*Victor of Vita, 3, 27) and Pacideius in 484/96 (\*Dracontius, *Romulea*, 5 *explicit*). AHM

**Proconsul of Constantinople** Head of the \*city's administration from 324 until 359, when his functions were taken up by the \*Praefectus Urbi. Most of the ten known proconsuls held office in the course of a high-flying career in the imperial \*administration. In 342, the Proconsul Alexander was forced to flee \*Constantinople in a \*riot. Libanius (*ep.* 480) congratulated Araxius on his appointment in 356. The last proconsul was the famous orator \*Themistius. OPN; JPH

*PLRE* I, p. 1056 (*fasti*).

Dagron, *Naissance*, 215–26.

**Procopius** (c.326–366) \*Usurper (365–6). Procopius came from \*Cilicia (\*Ammianus, XXVI, 9, 11; XXVI, 6, 1). Given a high military command by \*Julian, and possibly intended as his successor (\*Zosimus, IV.4–13), he gave way to \*Jovian and retired. However, during the reign of the unpopular \*Valens, Procopius was acclaimed as \*emperor by the \*army in \*Constantinople in 365. He himself became unpopular when forced to raise taxes, and was defeated and killed by Valens (Ammianus, XXVI, 9, 8; \*Socrates, IV, 5; \*Sozomen, VI,8). SEB; FKH

*PLRE* I, Procopius 4.

Matthews, *Ammianus*, 192, 198–9.

**Procopius of Caesarea** (c.500–c.560) \*Historian and Assessor (Consiliarius) of the general \*Belisarius.

#### *Life and career*

Procopius came from \*Caesarea in Palestine and trained as a lawyer. He obtained the post of assessor, i.e. legal adviser, to Belisarius when he became \*Dux \*Mesopotamiae in 527. He accompanied the general in his campaigns on the eastern \*frontier from 527 to 531 and was present, like Belisarius, in \*Constantinople during the \*Nika Riot of January 532. He served Belisarius again in North \*Africa during the war against the \*Vandals (533–4), and likewise for the first part of the war against the \*Goths in \*Italy (535–40). During the \*siege of \*Rome he undertook a mission to resupply and reinforce Belisarius' besieged forces (*Gothic*, VI, 4). Having returned to Constantinople with Belisarius in 540, he devoted himself to writing up his histories; he was certainly present in the capital when the Justinianic \*Plague struck in 542, and he provides a detailed description of it (*Persian*, II, 22–3). The first seven books of the *Wars* were published in 550 or 551 and enjoyed wide circulation (*Gothic*, VIII, 1, 1); he therefore added a final book to this work, which appeared in

late 552. At some point he considered producing a *Church History*, but none has survived. It is uncertain how long Procopius lived in Constantinople: the date of publication of his two other works is contested (see below). An identification with a homonymous \*Praefectus Urbi of 562 is unlikely; he certainly died before the end of \*Justinian I's reign in 565.

### Works

#### Wars (*Persian, Vandalic, and Gothic*)

Procopius organized his account of the wars waged during Justinian's reign geographically: the first two books cover the Persian wars, Book I dealing with the period up to the \*Everlasting Peace of 532 and a little beyond, while Book II concerns the hostilities that broke out in 540. Books III and IV treat the \*Byzantine invasion of Africa, i.e. the Vandal Wars, and the struggles against the \*Moorish tribes following the defeat of the Vandals. Books V–VII narrate the course of the war in Italy against the \*Ostrogoths, with a particular emphasis on the year-long siege of Rome of 537–8. Book VIII, on the other hand, is divided between the eastern front, where the war with the \*Persian Empire continued in \*Lazica, and the Italian theatre. Procopius writes in the classicizing style, seeking to emulate Thucydides and Herodotus as far as possible; Christianity and its trappings are largely absent, but most scholars suppose that the author was nonetheless a conventional Christian. The geographical arrangement of material was an unusual choice that caused Procopius some difficulties in inserting certain episodes: in the *Persian Wars*, for instance, he reports the Nika Riot in Constantinople (*Persian*, I, 24) and intrigues against the \*Praefectus Praetorio \*John the Cappadocian (*Persian*, I, 25; II, 30 and 49–54), as well as an invasion of the \*Balkans (*Persian*, II, 4). In his final book, however, he prefers a more chronological approach. The separation into areas allows Procopius to provide introductory material on the three foes in question, which he draws from earlier authors. These preliminary sections are far more superficial and patchy than his main narrative, which is detailed and vivid: he was an eyewitness to many of the events he describes, and evidently benefited from close contacts with the commanders of the time.

#### Secret history (*Anecd.*)

Initially lost for centuries, this work of \*invective has become Procopius' most popular. It recounts at length all the failings of Justinian's administration, pinning the blame squarely on the \*emperor himself, portrayed as a \*demon incarnate, on his sexually voracious wife \*Theodora, and on their entourage, including Belisarius, cuckolded by his wife \*Antonina. The work breaks down into three parts, the first of which (chapters 1–5) targets the excessive influence of women in the state;

the second (6–18) inveighs against the emperor and his wife, while the last (19–30) offers more general criticisms of imperial policies. The whole work represents a systematic attack on the interventionist and reforming nature of Justinian's regime: Procopius was a traditionalist who resented the emperor's intolerance and dogmatism. Despite the exaggerated tone of some of the criticism, he can be shown to be alluding to specific \*laws of the emperor and no errors of fact have so far been detected. The work refers to the elapse of 32 years of Justinian's reign, which is generally taken to include that of Justinian's uncle \*Justin I, which would imply a publication date of 550; no events securely dated to the following years have been detected, although some scholars still prefer 559, i.e. 32 years from Justinian's accession as sole ruler. It was never published in Procopius' lifetime: he explains the dangers he faced in writing it (*Anecd.* 1, 2–3).

#### Buildings (*Aed.*)

In this work Procopius surveys and \*praises the numerous building projects of Justinian, starting in Constantinople (I), then moving to the East (II–III), the Balkans (IV), \*Anatolia and \*Palestine (V), and \*Egypt and Africa (VI). The work exists in two recensions, a longer and a shorter, which may both go back to the author, who thus evidently revised and expanded his work as he gathered more information. The longer recension (the version generally cited) may date to 554 or 559: some think that \*Theophanes' reference to construction work on the \*Sangarius Bridge, reported also in Procopius' work (*Aed.* V, 3, 8–11), favours the later date, but the accuracy of Theophanes' date is doubtful.

He devotes most attention to church building, notably to the Church of the \*Holy Wisdom in Constantinople, where he stresses the emperor's personal involvement, and to defensive works such as \*Dara. In the latter case he tends to underplay work carried out by the Emperor \*Anastasius I in order to amplify Justinian's achievements, but generally archaeological work has tended to confirm his descriptions. While some parts of the work are highly polished, others offer lengthy lists of forts strengthened by Justinian, notably in the Balkans. The tone of the work is \*panegyric, in contrast to the *Anecdota*, though some have detected ironic touches.

**Procopius of Gaza** Greek orator and teacher of \*rhetoric active in \*Gaza in the late 5th and early 6th centuries. After studying rhetoric and possibly \*philosophy in \*Alexandria he returned to his native \*city where he succeeded \*Aeneas of Gaza as teacher of rhetoric, a position that may have been publicly funded. Among his pupils was \*Choricus, who wrote his teacher's \*funeral oration in 535/6. The major part of Procopius' extant output consists of commentaries on the Old Testament in the form of \*catenae or chains of quotations from the Church Fathers. His surviving rhetorical corpus consists of his \*panegyric of \*Anastasius I, a classic example of a *basilikos logos*, pronounced on the occasion of the erection of a statue of the \*emperor in Gaza probably in 502; the opening of an encomium of the \*Magister Militum, Asiaticus; an epithalamium for a former pupil named Meles; several short addresses (*dialexeis*) in the form of *ekphrasis* and *ethopoiiai*; and descriptions of two monuments in the city—a sophisticated clock and a painting of Hippolytus and Phaedra. \*Photius also mentions a *metaphrasis* of \*Homer, a monody for \*Antioch (datable to 526 or 528), and further funeral speeches and declamations. Procopius' authorship of the encomium of Anastasius is an indication of his status in Gaza as representative of the city.

The *dialexeis*, in which the themes of spring, the rose, and the story of Aphrodite and Adonis figure prominently, were probably delivered on the occasion of a local Rose Festival, also celebrated by \*John of Gaza.

A collection of over 150 \*letters reveals Procopius' efforts to reconcile his activities as a public sophist and as a Christian teacher and philosopher. His combination of Christian scholarship, philosophical debate, and traditional rhetorical output, complete with rich mythological allusions, is indicative of the rich and complex culture of Late Antique Gaza. Greatrex, *RPW* 135.

**Procurator Monetae** Mint official, first attested under Trajan. From the 4th century, possibly as part of the reforms under the \*Tetrarchy, procurators are recorded at provincial mints (*\*Notitia Dignitatum* [or.] XIII, [occ.] XI), though earlier they may have been restricted only to the principal imperial mint. They were directly subordinate to a *rationibus* up to c.350 or to the \*Comes Sacrarum Largitionum thereafter, but their precise duties remain uncertain. \*Cassiodorus (*Variae*, VII, 32) refers to guaranteeing the quality of \*coinage carrying the imperial likeness. The office is last recorded in 401 (*CTh* XI, 28, 3). RRD

M. Peachin, 'The Procurator Monetae', *NumChron* 146 (1986), 94–106.

**Progymnasmata** (Gk. preliminary exercises) Collection of graded exercises that constituted the first stage in rhetorical training. Many different versions of the *Progymnasmata* were in circulation in Antiquity, some with different approaches and exercises. The surviving texts by Theon (1st century), Ps.-\*Hermogenes (3rd century), \*Aphthonius (4th century), and

\*Nicolaus (5th century) are similar in content. The survival of this group reflects the selections and modifications made in Late Antique and Byzantine Schools. A \*Latin translation of Ps.-Hermogenes was made by \*Priscian in the 6th century, and the original state of Theon's text survives in an \*Armenian version of the same period. The series of exercises usually begins with simple narratives, moving on to discussions of sayings, exercises in argumentation and in the presentation of characters and events. Some resemble miniature speeches, as in \*praise (*encomium*) and blame (*psogos*) and *thesis* (a miniature deliberative speech). Model exercises by \*Libanius and Severus of \*Alexandria survive from Late Antiquity, as do further sets of examples attributed to Nicolaus. The influence of the *Progymnasmata* manifests itself in Late Antique literary and rhetorical productions, both in passages that resemble the exercises in form and in broader habits of organization and analysis. Some of the types of exercise, notably \*ecphrasis, were used as independent works in their own right. RW

**Projecta Casket** See ESQUILINE TREASURE.

**pronoetes and prostasia** In \*Egypt, the *pronoetes* was an estate steward who, under contract of hire (best specimen: P.Oxy. I 136), collected the landlord's rents and taxes. He kept accounts for the district, or *prostasia* (an abstract expression encompassing responsibility for a small group of settlements, i.e. \*villages and hamlets), named in his \*contract, based on existing 'rent rolls' (*apaitesima*). His service was called *pronoesia*. JGK

T. M. Hickey, *Wine, Wealth, and the State in Late Antique Egypt* (2012).

**prose rhythm, Greek** In \*Greek prose, as in \*Latin, patterns of rhythmical cadence (or clausulae) can often be observed at the end of clauses or sentences. According to Aristotle (*Rhetoric*, 1408–9), prose should be rhythmical to a certain extent, but should avoid the excessive metricality that might tip it over into poetry. Thus certain metrical patterns were best avoided: the epic hemiepes (–uu–uu–) was too grand and lacked the intonations of spoken language, whilst the iambic metron (x–u–) was too much like the language of ordinary

people. Greek clausulae exhibit more diversity than Latin ones, though many similarly tend towards variations on the cretic (– u –). These clausulae—generally between four and six syllables in length—were originally determined by quantity, i.e. the length of the syllables. Over time, however, as the accentuation of Greek changed from a pitch accent to a stress accent, and the length of vowels was no longer differentiated, clausulae changed from quantitative to accentual, i.e. the stress placed on individual syllables was now used to determine the metrical pattern. Before the transition was completed, writers such as Clement of \*Alexandria in the late 2nd century AD can be observed operating under a mixed metrical economy, where stress accent affects some syllables, but other syllables still maintain a quantitative value. RECS

**prose rhythm, Latin** Rhythmic patterns were integral to good \*prose style in both \*Greek and \*Latin, and as \*rhetoric was at the heart of higher education in the Later Roman Empire, the ability to compose elegant prose was the mark of an author who knew what he was talking or writing about, and was the principal path to positions of influence in the civil \*administration.

At the beginning of the 3rd century, the preferred mode of rhythm in \*Latin prose was a canon of quantitative patterns drawn from the Asiatic school of \*rhetoric and popularized by Cicero: cretic-trochee, dicretic, ditrochee, dicretic, cretic-tribrach, and paeon-trochee. By c. AD 250, however, the rhythms of the clausula (the end of a sentence or clause) had undergone change, as the word accent now coincided with the ictus (the beat) of the metrical units. Thus, the quantitative pattern cretic-trochee now fell under the accentual scheme ́́́́́ (as in *fata terrarum*); the dicretic or cretic-tribrach, under ́́́́́́ (as in *posse praescribere, legis imperio*); the ditrochee, under ́́́́́́́ (as in *legibus vindicasse*); and the paeon-trochee, under ́́́́́́ (as in *sola brevitatis*). This alignment of word stress and metrical ictus usually restricted the rhythm to the final two words, with an even number of syllables occurring between the two word accents. Thus, metrical word strings such as *quae tamen vera sint* (dicretic) disappeared and yielded to structured rhythms such as *tempus advenerit* (dicretic under ́́́́́).

This system (termed *cursus mixtus* in modern scholarship) pervades the texts of nearly all authors, pagan and Christian, from the mid-3rd century and was a

mark of elevated prose style. The metrical aspect initially was carefully observed, but by the late 4th century, the accentual scheme became so dominant that metre could be ignored. Accent-only clausulae, inspired by \*Greek practice and called *cursus* in medieval handbooks, was used by \*Ammianus Marcellinus, late church fathers (\*Jerome and \*Augustine), and the legal chanceries. The *cursus* system had four basic patterns: *planus* (sssss), *tardus* (ssssss), *velox* (sssssss), and *trispomdaicus* (sssssss). After the \*Fall of the Western Empire, both the *cursus mixtus* and the *cursus* survived in \*Ostrogothic \*Italy (\*Cassiodorus), Frankish Gaul (\*Gregory of \*Tours), \*Visigothic \*Spain, the papal chancery and popes (\*Gregory the Great), and \*letter writers.

**prose style** \*Greek and \*Latin writers of Late Antiquity used a variety of prose styles in accordance with audience, purpose, theme, and exigencies of genre. Some authors sought a humbler style, inspired by the Bible (\**sermo humilis*), while others used an elaborate, learned style marked by periodicity, \*prose rhythm, ornate imagery and diction, and \*rhetoric.

SMO

**prose style, Greek** Formal \*Greek prose in Late Antiquity was subject to classicizing norms of both language and style. Educated writers (and speakers) were expected to approximate the lexicon and \*grammar of the classical Attic \*Greek language, and to make effective use of stylistic techniques identified by \*grammarians and \*rhetoricians in canonical prose authors of the Classical period.

Training was accordingly founded on the study of classical models, and their imitation (in the sense of creative emulation, not passive reproduction). Elementary codification of stylistic techniques can be observed in the many handbooks that define and illustrate figures of diction and thought; the power of these devices is demonstrated in the fragmentary 'transformations' (*μεταποιήσεις*) attributed to \*Sopater (which of several rhetoricians of the same name is uncertain), which subject sample passages to a series of paraphrases,

each generated by the application of a different figure of thought.

Advanced stylistic training was based on the theory of types of style ('ideas'). This theory, found in a relatively simple form in Ps.-\*Aelius Aristides' *Art of Rhetoric*, reached a peak of sophistication in \*Hermogenes' *On Types of Style* (*περὶ ἰδεῶν*); his theory's complexity may explain why this work achieved canonical status later than *On Issues*. Hermogenes distinguishes seventeen different types of style (e.g. purity, solemnity, rapidity, sweetness, indignation), which can be produced by coordinated manipulation of eight aspects of discourse (thoughts, approach, diction, figures, clauses, word order, clausula, \*prose rhythm). The blending of these types gives a text its distinctive overall stylistic profile.

**prose style, Latin** What \*Latin pagan authors of the late 2nd and 3rd centuries thought about prose style cannot be recovered because too few texts are extant. But Christian writers faced a conundrum. Stylistic ornamentation (*ornatus*) was the mark of an educated person and formed part of the cultural and literary heritage shared by both pagan and Christian. Furthermore, refuting \*paganism, making the Christian message attractive to possible converts, and conveying the message to those already converted required an eloquent style. Christian writers were therefore initially uneasy at using the classical literary and rhetorical models in which they themselves had been trained and which they liked to use.

Christian authors, from \*Lactantius to \*Ambrose, \*Jerome, and \*Augustine, compromised by subjecting Cicero's levels of style (*genera dicendi*) to Christian revision in various ways. The flourish and adornments of secular prose style, with all the hallmarks of *Kunstprosa* (art prose) periodic hypotaxis and rhythm, was a style still used by pagan authors. It was deemed appropriate for Christians when directed toward religious and moral instruction and other Christian purposes—although a simple style, \**sermo humilis*, imitative of the stylistic patterns of the \*Bible, was best reserved for the pulpit. Style also varied among writers as they adapted traditional genres (\*dialogue, encyclopedia, \*biography) or developed new genres (travel literature, narratives of

\*pilgrimage, vision literature, devotional works, and exegetical literature).

Christianity carried Latin into areas of the Western Empire where it had not previously penetrated and language remained an official medium of rule after the \*Barbarian Migrations into Western Europe. Non-native speakers in areas of \*Gaul, \*Spain, and the British Isles learned Latin and wrote it, modelling their individual style on the Bible and such authors as Jerome, \*Orosius, and Augustine. Some writers (many of them \*bishops) were proficient in both prose and verse (\*hymn writing), while others (\*Martianus Capella, \*Boethius) experimented with prosimetric narratives alternating prose and verse. The Carolingian Renaissance of the late 8th/early 9th centuries revived ancient learning, also influencing Latin prose style beyond scriptural and patristic texts. SMO

**proskynesis** See ADORATIO.

**Prosper of Aquitaine** (c.388–after 455) A lay Christian writer connected with \*Augustine and Pope \*Leo I (\*Gennadius, *Vir. Ill.* 85). In \*Marseilles, c.416, he became an ardent defender of Augustine's extreme positions on grace against the objections of *doctores Gallicani* or \*semi-Pelagians', a term first used by Prosper, who included \*John Cassian and \*Vincent of \*Lérins in their number. Prosper later settled in \*Rome to serve Leo I (r. 440–61) as an adviser or secretary, and shifted his attention and concern to the papacy.

Among his seventeen authentic works are summaries of Augustine's teachings. Composed in Rome, his *Liber Sententiarum*, a moderate version of Augustine's doctrine of grace, was a source for the canons of the Second \*Council of Orange of 529, when the conflict initiated by Prosper was finally resolved. They were known by the Carolingians, and also translated into \*Greek. *Epigrammata*, a shortened verse form of the *Liber Sententiarum*, became a popular medieval textbook for learning \*Latin.

The *Epitoma Chronica* contains a summary version of world history to AD 377, drawn from \*Eusebius and \*Jerome, followed by Prosper's continuation. Four

different editions were produced between 433 and 455, and arranged by Roman \*consuls. Prosper's account of salvation history centred on the papacy, especially as represented by Leo. Its memorable retelling of Leo's meetings with \*Attila (452) and \*Geiseric (455) contributed to Leo's reputation. The chronicle was a valuable source for Western events, and was copied and even translated into \*Greek.

An anonymous 7th-century Italian chronicler (Copenhagen Kongelige Bibliotek ms. 454) combined Prosper's chronicle with Jerome's, Isidore's, and an unknown source for the years up to 455, and continued it down to 625. The \**Consularia Hafniensia* ('Copenhagen Continuator of Prosper') introduced more precise material into Prosper's additions, and provided information on and details of important events of the 4th–7th centuries not found in other sources. **prostitution** The spread of Christianity between approximately AD 250 and 550 contributed to important changes in Roman moral ideology concerning prostitution. More unequivocal condemnation came to supplant earlier attitudes, which, though characterized

by a certain ambivalence, had been broadly tolerant. There arose instead a tendency to assimilate prostitution to adultery and other sexual transgressions (Lat. *stuprum*) by lumping them together as \*fornication (Gk. *porneia*, Lat. *fornicatio*). Another change is that Christians generally assign equal moral responsibility to both the men and the women involved, at least in theory. In contrast to negative attitudes expressed towards the profession itself and towards other practitioners, greater sympathy is expressed for female prostitutes, though this is neither universal nor unqualified. There was, indeed, always the hope of repentance; the story of S. \*Mary of \*Egypt was popular in both \*Greek and \*Latin, and the \*Empress \*Theodora made appropriate provision for the reformed prostitutes of \*Constantinople in the \*Monastery of \*Metanoia on the \*Bosporus.

Female prostitution remained both legal and to all appearances highly profitable. Although some Christian \*emperors were evidently uneasy that the long-standing tax on both male and female prostitutes might imply an official endorsement of the sale of sex, the imperial administration continued to collect it until \*Anastasius I abolished it in 498. Christian views were certainly not monolithic; in the course of explaining the orderliness of the world, \*Augustine concedes that prostitutes, like executioners, have their place (*De Ordine*, 2, 4, 12 = CCSL 29, 114).

Most Late Roman legal utterances regarding female prostitutes appear in the context of legislation on \*marriage and adultery. Laws concerning marriage which seem to have modified the legal conception of prostitution in this period include an enactment of \*Constantine I of 336 disinheriting illegitimate children fathered by high-born men with actresses, tavern-keepers, slaves, and the daughters of \*gladiators and pimps (*CTh* IV, 6, 3 = [with changes] *CJust* V, 27 1), and a law of \*Marcian of 454 forbidding the marriage of \*senators to women of the same sort (*NovMarc* 4), a prohibition also expressed in the *Rules* attributed to Ulpian (Excerptum, 13). Legislation on adultery which affected the standing of prostitutes included a ruling by Constantine in 326 that a barmaid could not be accused of adultery, though the wife of a tavern-keeper could (*CTh* IX, 7, 1 = [with changes] *CJust* IX, 9, 28[29]); the *Sententiae* of \*Paul expressed similar sentiments (II, 26, 11). Such developments may be explained as the expression in law of longstanding prejudice.

The repression of pimping can be traced through a series of imperial enactments preserved in the law codes, from the regulation of the sale of Christian slave-women by \*Constantius II in 343 (*CTh* XV, 8, 1) through \*Theodosius II and \*Valentinian III in 428 removing *patria potestas* (the rights of a \**paterfamilias*) from men who force their daughters or slaves unwillingly into prostitution (*CTh* XV, 8, 2 = [with a minor

change] *CJust* XI, 41, 6 = [abbrev.] 1, 4, 12), Theodosius II in 439 freeing the slaves of procurers who defile \*Constantinople (*NovTh* 18), and \*Leo I allowing reluctant prostitutes to seek the protection of the \*bishop (*CJust* I, 4, 14 = (?) XI, 41, 7 of 457–68) to \*Justinian I's absolute, empire-wide ban in 535 (*NovJust* 14). There is little ground for optimism about the effectiveness of all this legislation—S. \*Theodore of \*Sykeon, after all, was the son of an innkeeper's daughter and a travelling acrobat (*VTheodSyk* 3–5). The same holds for repression of male prostitution, which could be harsh (Aurelius \*Victor, *Caes.* 28, 6–7; Jerome, *Commentary on Isaiah*, 1, 2, 5 = CCSL 73, 32; \*Constantius II and \*Constans in *CTh* IX, 7, 3 = *CJust* IX, 9, 30 [31] of 342; \*Valentinian II, \*Theodosius I, and \*Arcadius in \**Collat.* 5, 3 of 390).

**protectores** Imperial bodyguards attested on \*inscriptions from the mid-3rd century AD, and prominent under \*Gallienus, \*Aurelian, the \*Tetrarchy, and thereafter. They were mounted and fulfilled a wide range of functions. Those present at \*court were termed *protectores domestici*, serving in a *schola protectorum domesticorum*, under the \*Comes Domesticorum (\*Amianus, XXVI, 5, 3; *CTh* VI, 24, 3). *Protectores* supplied officers for other formations, such as the \**scholae palatinae*, acted as aides-de-camp, and were sent on special missions, rather in the same way as the earlier *beneficarii*. \*Diocletian was Comes Domesticorum before his elevation (Aurelius \*Victor, *Caesars*, 39, 1). *Protectores* away from court served under the \*Magistri Militum and more junior officers in the \*provinces (e.g. Ammianus, XIX, 9, 2; *CTh* VII, 4, 27; VIII, 5, 49). Promotion to the rank of *protector* might open up a glittering career, but the best-known protector is the historian Ammianus Marcellinus. After AD 400 a new formation of *protectores* was perhaps created purely for \*palace functions.

JCNC

Frank, *Scholae Palatinae*, 34–45, 81–97, 121–6, 179–82.

**Proterius** Chalcedonian \*Patriarch of \*Alexandria (r. 451–7). Previously in the entourage of \*Dioscorus, he assented to Dioscorus' condemnation at the \*Council of \*Chalcedon (451) and, with imperial backing, was himself appointed Patriarch. Local opposition to him coalesced around \*Timothy Aelurus, as rival patriarch. After mounting factional violence, Proterius was murdered (possibly by his own guard) during Holy Week, 457 (\*Evagrius, *HE* II, 8; Mango and Scott, *Theophanes*, 170; \*Zacharias Rhetor, III, 2; IV, 2). CJH

**prothesis** (Gk. setting forth) 1. Ritual mourning in the presence of the body of the deceased.

2. In Christian \*liturgy, the preparation of the \*bread and \*wine of the \*Eucharist, and the place where this is done, often north of the \*apse, corresponding architecturally to the \*diaconicon on the south side. SMS

Mathews, *Early Churches*, 105–7.

**Provence** A fluid political territory in southern \*Gaul. It effectively came into being after the \*Frankish victory at the Battle of \*Vouillé when \*Theoderic the \*Ostrogoth and his army intervened from \*Italy to prevent the Franks and \*Burgundians from expanding southwards. Theodoeric then took south-eastern \*Gaul under his direct rule. The initial absorption of Provence into the Italian orbit was soon superseded by the restoration of the Gallic prefecture at \*Arles with \*Liberius as \*Praefectus Praetorio. This Ostrogothic 'province' was handed over to the \*Franks in 536 in an attempt to buy their neutrality during the impending \*Byzantine invasion of Italy. Under Frankish rule, the region continued to be governed by a \*patricius, an Ostrogothic legacy, though it was intermittently divided into Burgundian and \*Austrasian provinces, administered from \*Arles and \*Marseilles respectively, by magnates such as \*Dynamius, drawn from a regional \*aristocracy which maintained the trappings of Late Roman classical culture. By the 7th century Marseilles had become the dominant political and economic centre in the region, while Arles remained pre-eminent within the Church. STL

R. Buchner, *Die Provence in merowingischer Zeit* (1933).

**province** Unit of Roman provincial \*administration overseen by a \*governor, centrally appointed and holding office generally only for a year or two. Local notables met him annually at the provincial \*conventus. Under the \*Tetrarchy provinces were subdivided and grouped in \*dioeceses, each supervised by a \*Vicarius

(cf. \*Verona List). \*Justinian I also reorganized provincial administration. DSI

**provincial administration, Roman** See ADMINISTRATION, ROMAN PROVINCIAL.

**Proximus** Highest-ranking official (ahead of the \*Melloproximus) in each of the Sacra \*Scriinia (*CTh* VI, 21, 2, 4, 17), and not to be confused with *proximi* (lit. 'those nearest') used as a descriptive term for influential courtiers surrounding an \*emperor (\*Ammianus, XIV, 11, 1; XV, 8, 2; XXX, 4, 1). CMK Jones, *LRE* 577–8.

**Prudentius** (348–after 404/5) Aurelius Prudentius Clemens, a native of \*Spain, probably Calahorra, enjoyed a successful secular career, holding two provincial \*governorships and a high position in the imperial civil \*administration, before retiring to devote himself to the service and celebration of God. That celebration took the form of a substantial body of poetry, produced apparently in the last years of the 4th century and the first of the 5th. His poems amount to a common project, giving expression to the mental, spiritual, devotional, and material world of late 4th-century Christianity. They include two works of anti-\*heretical didactic, the *Apotheosis* and *Hamartigenia*; a single book \*epic, the *Psychomachia*, recounting the battle of Virtues and Vices for the human soul in the form of \*personification \*allegory; a work of Christian apologetic in two books, the *Contra Symmachum*, completed in 402, that takes its impulse from the controversy surrounding the attempt to restore the \*Altar of \*Victory to the \*Senate House in 384; a collection of paraliturgical \*hymns for the hours of the day and the main \*festivals of the Christian year, the *Cathemerinon*; and a somewhat heterogeneous collection of poems on the \*martyrs, the *Peristephanon*. Prudentius also wrote a collection of 49 tetrastichs on subjects from the Old and New Testaments, the *Dittochaeon*. His poems, along with those of \*Ambrose and \*Paulinus of Nola, herald a remarkable flourishing of Christian Latin poetry in the late 4th and early 5th centuries. Of all late Latin Christian poets Prudentius exploits most fully the resources of Christian allegory and \*typology to invest his narrative and descriptions with multiple levels of meaning, whether it is the individual Christian waking at cock-crow, a saint on the way to martyrdom, or the construction of the \*temple of the soul at the end of the *Psychomachia*. In his poem collections, the *Cathemerinon* and *Peristephanon*, he shows striking versatility with \*metre, under the influence of classical (Horace, Seneca) and Late Antique models. His poetry, especially the *Psychomachia*, was much read and admired in Late Antiquity and the Middle Ages. MJR

## Psalms

- PLRE I, Clemens 4.

**Psalms** A collection of 150 hymns, originally in Hebrew, constituting a book of the OT and widely used by Christians in liturgical and private \*prayer. The Psalms and the prophecy of Isaiah were the texts most frequently quoted by New Testament authors because of their messianic allusions. The major patristic authors from \*Origen onwards wrote exegetical scholia or commentaries on the Psalms; for the monastic movement, chanting Psalms was a means of realizing ceaseless prayer and became a central ascetic practice. In his *Letter to Marcellinus* on the Psalms, \*Athanasius claims that he learned about the richness of the Psalter from an 'old man' (*gerōn*), presumably a monk. The *Letter* describes the Psalter as an epitome of the whole \*Bible, emphasizing its instructive value. It assigns each Psalm to a thematic category, explains the particularly intimate quality of the Psalms, and notes the calming effects of singing them. These points would be developed further in monastic writings. The centrality of the Psalter in monastic practice would have wider repercussions in the further development of the non-monastic \*Liturgy of the Hours, and the \*sermons of S. Augustine on the Psalms, the *Ennarationes in Psalmos*, illustrate their importance in non-monastic worship. CAS

**pseudo-imperial coins** Term for the first \*gold coins minted in the post-Roman Germanic kingdoms. These were indeed not minted in the name of the Germanic kings, but showed on the *recto* the portrait and name of the Roman \*emperor. The rule that only Roman emperors should appear on gold coins was respected even

in times of conflict with the Empire: in these cases the contemporary emperor was generally replaced by a previous emperor who had had a friendly relationship with the minting authority. In some cases the local kings were identified through a \*monogram (e.g. with \*Gundobad, \*Sigismund, and \*Godomar in \*Burgundy) or with a letter (as for \*Theoderic in \*Italy). By the second half of the 6th century many Roman-Germanic \*successor states started minting gold coins without the portrait and name of the Roman emperor and often with those of their kings (the first was \*Theudebert I in \*Merovingian \*Gaul), thus abandoning pseudo-imperial coinage for 'national' coinage. Some regions, such as \*Lombard Italy, went on minting pseudo-imperial gold coins into the 7th century. \*Silver and \*bronze had less symbolic value and the kings appeared on \*silver and \*bronze coins already in the time of \*Odoacer. **psogos** See INVECTIVE.

**Ptolemais** Principal \*city of \*Libya Superior from \*Diocletian's reign until the later 5th century. See of \*Synesius. Work on the \*water supply and \*baths dates to the 4th and 5th centuries. \*Procopius claimed that Ptolemais was deserted by \*Justinian I's time (*Aed.* VI, 2, 9) but intramural fortified buildings, including a fortress of \*Anastasius I's reign or earlier, probably replaced the \*city walls during the 5th century. Three churches are known. Occupation continued after the \*Arab conquest. GMS

**Ptolemy in Late Antiquity** The *Almagest* and *Handy Tables* of the 2nd-century AD astronomer and geographer \*Ptolemy were taught, commented upon, and used in Late Antiquity by professional astronomers and astrologers, in particular by \*Pappus and \*Theon of \*Alexandria. A fragment pre-dating Theon's *Greater Commentary* points out a discrepancy between lunar data in the *Handy Tables* and their theoretical basis in the *Almagest*. The Ptolemaic tables were explained in the so-called *Preceptum Canonis Ptolomei*, redacted

about 528–34, and in a commentary written about 610–17 and ascribed to \*Stephanus of Alexandria. The margins of the manuscript Parisinus Graecus 2394 preserve the redaction of a course on the *Handy Tables*, dating probably to the 5th century. \*Porphyry the Neoplatonist wrote a commentary on Ptolemy's *Harmonics*, discussing the relationship between astronomical and musical intervals.

**Pulcheria** \*Aelia (399–453). Augusta in the East 414–53. Born to \*Arcadius and \*Eudoxia, she took charge after Arcadius' death in 408, persuading her younger siblings \*Theodosius II, \*Arcadia, and \*Marina to adopt Christian \*asceticism (\*Sozomen, IX, 1). In 412 she and her sisters took vows as \*virgins, and in 414 Theodosius elevated Pulcheria to imperial rank. Termed *epitropos*, 'guardian', by Sozomen, she lacked formal regency and thus exercised power by influencing her brother. Laws against pagans, \*Jews, and heretics in subsequent years may be reflections of her policies. Herself a virgin, she came into conflict with \*Nestorius, \*Patriarch of \*Constantinople, who denied the Virgin \*Mary the title \*Theotokos, and Nestorius himself blamed her for his deposition after the First \*Council of \*Ephesus of 431. She promoted the cult of the Virgin in Constantinople, allegedly founding churches dedicated to her. After her brother's death in 450, she took \*Marcian, the next emperor, as her nominal husband and with him engineered the calling of the \*Council of \*Chalcedon in 451 which annulled the decisions of the 'Robber' Council of \*Ephesus of 449. She died in 453.

## punishment and Roman theories of punishment

C. Mango, *IntCongChrArch XIII—Split—Porč* 25.9.–1.10.1994 (1998), vol. 2, 61–76 at 62–7.

**Pumbedita** One of the two major rabbinic centres in Jewish Babylonia (alongside \*Sura). Situated on the Euphrates in northern Babylonia (near mod. al-Fall-ujah) in Persian territory, it was founded by Rav Judah b. Yehezkel (d. 299) shortly after the destruction of its mother institution at \*Nehardea in 259 by invaders from \*Palmyra.

IMG

Oppenheimer, *Babylonia Judaica*.

**Punic language** The Semitic language introduced into North \*Africa by the Phoenicians when they founded \*Carthage, and more prevalent in the coastal areas than in the Libyan (\*Berber)-speaking hinterland. By Late Antiquity, \*Latin had been the dominant language in Africa for centuries, especially in the \*cities, but Punic was still to be found. Latino-Punic \*inscriptions (Punic text written in Roman characters) survive from \*Tripolitania and Sirte, but are nothing like so common as Latin inscriptions, though they were employed openly on religious dedications and tombstones. This may be as much a reflection of the character of the 'epigraphic habit' as of the prevalence of the language; it is notable that the vast majority of stelae set up to honour \*Saturn (the *interpretatio Romana* of Punic Baal-Hammon) bear images but no inscription in any language

\*Letters of \*Augustine (*ep.* 209 and 20\* Divjak) indicate that it was thought desirable that a \*bishop appointed for the small town of \*Fussala, 40 Roman miles from \*Hippo Regius, should be a Punic speaker. One fact which emerges from the ensuing scandal (unrelated to language) is that the Primate, the senior bishop of \*Numidia, was able to address the country people in Punic. In other country places the \*Donatist clergy might employ a Punic interpreter (*ep.* 108, 5, 14). Though Punic books were still valued by Augustine (e.g. *ep.* 17, 2) there is no evidence that they were still being written. \*Procopius records that Punic was still used in his time in the mid-6th century (*Vandalic* IV, 10, 20).

## punishment and Roman theories of punishment

Early imperial legal discourse expected the discretion of a judge to serve retributive justice that matched the quality of the crime and the disposition of the offender to the appropriate level of punishment. The punishment was also intended to deter others (Aulus Gellius,

*Noctes Atticae*, 7, 14). In practice, it was social class that usually determined the type of punishment, with corporal penalties (e.g. crucifixion) reserved for the lower classes (\**humiliores*).

Late Roman laws on the one hand increased the focus on retribution and deterrence by prescribing severe penalties for severe crimes, at times regardless of rank. For example, \*Constantine I restated the penalty of the sack (*poena cullei*) for \*parricide (*CTh* IX, 15, 1), which had been used against at least one Christian in the Great Persecution (\*Eusebius *MartPal* [S] 5,1). On the other hand, the rise of Christianity promoted discussion of the \*emperor's role in Christian salvation. Debates on the legitimacy of \*execution and clerical intercession ensued (\*Ambrose, *ep.* 25, \*Augustine, *ep.* 134). Late Roman emperors also instituted regular amnesties for minor crimes at \*Easter and allowed some offenders to avoid punishment altogether through public confession and \*penance (*CTh* XVI, 5, 41; *Nov-Just* 77).

The Church controversially embraced civil laws as a legitimate form of religious coercion (e.g. Augustine, *Contra Litteras Petilian*, II, 83, 184). Despite this collaboration, church \*councils also reminded clerics and laypeople not to bring criminal lawsuits to civil courts (e.g. the Third Council of \*Carthage canon 9). This may show that not all victims of crime were interested in the retributive and expensive justice a civil court could offer. This must have contributed greatly to the rise of judicial powers of \*bishops. The frequent repetition of canons discouraging recourse to civil courts may also mean, however, that some victims of crime preferred civil justice to ecclesiastical justice. In fact, ecclesiastical penalties increasingly mimicked those of public courts, adding more coercive methods such as flogging to the customary excommunication and clerical deposition.

**punishments, Persian** (MP *publ*) \*Zoroastrian \*law was criminal law in the \*Sasanian Empire. The aim of punishment in Zoroastrian law was to save the convict's soul from the crime's supernatural consequences. Individuals punished in this life were cleansed of impurities and spared divine retribution after \*death. Since

corrective punishment was considered salutary, \*torture was justified and confessions could be exacted under torture. There are details in the \**Madayan-i Hazar Dastan* or *Book of a Thousand Judgements*.

The most common punishment mentioned is the use of the lash, with crimes theoretically distinguished in severity by the number of lashes, even up to absurd levels. Amputation of the nose was recommended for \*adultery. More spectacular punishments existed too, especially when connected to apostasy. An apostate's tongue could be torn out and his jaw broken in the course of a trial. Decapitation by sword was the most common method of capital punishment, often preceded by the amputation of the convict's fingers, arms, and legs. Crucifixion was reserved for thieves and sorcerers. Some were hung by their feet until dead. Thieves and Christians were trampled by \*elephants, a fate which purportedly befell the entire city of \*Susa under \*Shapur II. More rarely applied techniques included the burning of convicts alive with naphtha, cutting them to pieces, stoning them, or gouging out their \*eyes with hot nails. The \**Letter of Tansar* (tr. Boyce, 23) refers to execution by the 'donkey' or the 'cow', animal-shaped cauldrons filled with molten lead. Because the \*Sasanian king was considered inviolate, the spilling of royal blood was avoided. Suffocation in ashes or garrotting were the preferred methods of execution for princes, who could also be mutilated to preclude them from claiming or returning to the throne.

Leone, *Changing Townscapes in North Africa*.

**purity** Traditional Greek, Roman, and Jewish cultus regulated purity for individuals and communities, whether pollution was incurred by moral transgression

or inadvertent violation of literal or figurative boundaries. Philosophical and prophetic critics questioned such approaches, but they remained central publicly and for most individuals. In later Antiquity the rise of traditions closer to 'religion' in the modern sense saw ritual and cultus de-emphasized but not expunged, and often a shift toward interiority.

For \*Jews, the destruction of the Jerusalem Temple in AD 70 encouraged a shift to priestly purity universalized in everyday life, reflected in the explorations of extinct cultus in Mishnah and \*Talmuds. Additionally the \*rabbis located the source of personal purity and order not in cosmic principles, but in personal moral agency.

Christianity also involved recasting images and ideas from local cultus via the person of Jesus into a notion of sin as cosmic and personal. \*Baptism and \*Eucharist as described by \*Cyprian (d. 258) or the *Apostolic Tradition* functioned as new rituals of catharsis and maintenance of purity, while moral and particularly sexual order focused on an ideal of \*virginity. \*Monasticism saw these ideals concentrated in ascetic specialists, exemplified in the *Life of S. \*Antony*. Growing emphasis on thought as well as action found expression in concern about doctrine, with \*heresy understood as a form of pollution.

Early \*Islam built on these prior traditions, emphasizing a nexus between purity of intention, physical cleanliness (by way of performance of ablution), and ethical action. The notion of ritual purity or *ṭahāra* in the \*Qur'an included, as in much older traditions, concern for inadvertent pollution as well as for impurity acquired by improper thought or act. Purity could include a militant piety combining \*asceticism and readiness for combat (Ibn Mubarak). AMcG

**purple** The best purple resembled 'congealed blood, blackish at first glance but gleaming when held up to the light' (\*Pliny, *Historia Naturalis*, IX, 62, 135). In the Roman Republic and Empire purple marked aristocratic rank (Livy, XXXIV, 1–8; XLV, 39, 2; Polybius, VI, 53). 'Sea purple' alone was resistant to fading, but purple from inferior \*dyes was widely worn (Reinhold, 51–61).

Tertullian recorded the wearing of purple by gymnasium managers (*Ad Martyras*, III, 3) and denounced the use of purple for clothes and wall hangings by Christians (*De Cultu Feminarum*, 8). The Tetrarchic \*Prices Edict mentions twelve qualities of purple \*textile, ranging in price from 10,000 *denarii* for red wool to 150,000 *denarii* for purple \*silk (Hall, 229–36).

Use of purple was restricted because it signified imperial power (\*Ammianus, XIV, 7, 20; XV, 16; XVI, 8, 3–8; XVII, 11, 1; XX, 5, 3; Reinhold, 64–7; *CTh* X, 21, 3; X, 20, 18; XV, 7, 11). This applied to the purple granite called \*porphyry as well as to purple cloth. The imperial dye-works at \*Tyre produced the finest purple \*textile dye from the marine mollusc called the \*murex. The right to perform \*adoratio purpurae, to kiss the hem of the imperial purple robe, was the perquisite of certain imperial officials (*CTh* VI, 13, 1; Ammianus, XV, 5, 18).

In Christian \*mosaics and paintings, saints and biblical characters were increasingly depicted with either purple striped garments like public officials or in triumphal purple robes (Elsner, 9, 101, 228–9), and books of the \*Bible were copied into \*purple codices. LJH

**purple codices** \*Jerome complained to Eustochium that, while Christ's \*poor starve, rich women own \*purple manuscripts of scripture written in \*gold ink, with \*book covers encrusted with precious \*stones (*ep.* 22, 32; cf. *ep.* 107, 12 and his prologue to Job). Purple Old \*Latin Gospels surviving from the 5th/6th centuries include Codices Veronensis (b), Palatinus (e), Brixianus (f), Sarzanensis (j), and Vindonensis 1235 (l); there are also psalters. The purple manuscript of \*Ulphilas' Gothic version of the Gospels in the Codex Argenteus (Uppsala, Universitätsbibliothek DG 1) has affinities with Codex Brixianus. Chemical analysis of the deeply dyed Codex Brixianus shows that \*murex formed part, but not the largest part, of the colouring of the parchment. Among \*Greek purple manuscripts of the NT surviving from the 6th century wholly or partly are Codices Petropolitanus (N, 022) and Beratinus (Φ, 043), and the \*Sinope (O, 023) and \*Rossano Gospels (Σ, 042). The latter two and the \*Vienna Genesis are illuminated. NAS; OPN

**Pythagoras in Late Antiquity** Pythagoras (6th cent. BC) was reputedly the inventor of \*philosophy (e.g. \*Lactantius, *Inst.* III, 2, 6). Interest in his doctrines revived from the later years of the Roman Republic onwards. Following the rise of Christianity, pagan philosophers developed new accounts of the origins of their ideas, to counter Christian demonstrations of the antiquity of their own wisdom rooted in the Old Testament. Pythagoras thus came to play an unexpected part in reimagining the early history of pagan philosophy.

\*Neoplatonism was crucial in associating Pythagorean elements with the legacy of Plato. \*Porphyry and \*Iamblichus in the early 4th century made significant contributions to this trend through their respective works on the history of philosophy, which included Porphyry's *Life of Pythagoras* (which opened his *History of Philosophy*) and a *Collection of Pythagorean Doctrines*, in which Iamblichus demonstrates ample Pythagorean knowledge and collects evidence. Such works were influential in transmitting Pythagorean doctrines (in a broad sense) to the East. Porphyry also promoted vegetarianism as an essential element of a philosophical life, following the path of Pythagoras. Indeed Pythagorean

doctrines went beyond the realm of philosophy and included \*mathematics, \*music, and more. In particular, it is likely that the Pythagorean tradition was linked to the rise of \*alchemy and the use of natural remedies, as hinted in Theodorus \*Priscianus' *Physica*, where Pythagoras is quoted alongside Democritus as an authority in this field.

**al-Qadisiyya** Located in what is now south-west Iraq, al-Qadisiyya was the site of the decisive Muslim victory over the \*Persian Empire in AD 636 (AH 14). This defeat, described by al-\*Baladhuri (*Futūh al-Bul-dān*, I, 409–16), opened up a route for Muslim forces to the \*Sasanian dynasty's winter capital of \*Ctesiphon, leading eventually to the defeat and subjugation of Iraq and Iran, and the end of Sasanian rule.

RHos

*EI* 2 vol. 4 (1978) s.v. al-Ḳādisiyya, 384–7 (Lassner).

**Qalat Seman** \*Martyrium complex at the site of the column of S. \*Symeon Stylites (d. AD 459), on a hill above the village of Telanissus in the \*Jebel Seman. The site became an important centre of \*pilgrimage during the \*holy man's own lifetime, and continued to be a significant focus of Christian cult after his death, although the saint's body was taken to \*Antioch and later transferred to \*Constantinople. The complex was a Christian counterweight to the \*pagan sanctuary on top of Jebel Sheikh Barakat, which lies across the Valley of Telanissus, immediately to the south-west.

The main structure on the site was arranged in the shape of a \*cross, with four basilical halls meeting in a central octagon that housed the remains of the saint's pillar. The easternmost of these basilicas served as a church and the other three were used as assembly halls for pilgrims. It is not clear whether the central \*octagonal building was roofed or open to the sky; the \*capitals of the columns supporting it represent leaves blown by the draught. The cruciform structure was constructed in the

latter part of the 5th century, probably during the reign of \*Zeno (474–91). Immediately south-east of the martyr-ium was a \*monastery and cloister for visiting clergy (constructed c.490–500). The complex was approached from Telanissus by a series of monumental gateways, the last and innermost of which was surrounded by \*hostels, stables, and a \*baptistery. The buildings survive in a remarkably fine state of preservation; only the saint's column itself is poorly preserved.

**Qalb Lozeh** \*Village in the Jebel Ala of the \*Limestone Massif of northern \*Syria, in which there is a magnificent and well-preserved \*basilica, built between about 450 and 475 (the exact date is debated, but a date closer to 450 is generally favoured). It has a number of innovative or unusual features. The entrance is flanked on either side by a projecting \*tower, recalling the \*façades of certain earlier \*pagan \*temples in Syria. The \*apse is in the form of a semi-dome, elaborately decorated, projecting from the east end of the church. The broad nave is separated from the aisles by arcades on piers, rather than columns. Arcades were used in this way in a number of later churches in the region. The aisles had flat \*roofs composed of stone slabs, some of which survive in situ.

**Qaryat al-Fāw** Oasis in the south of modern Saudi \*Arabia containing remains of settlements from the 4th century BC to the 4th century AD. Al-Fāw straddles a strategic point on caravan routes passing through the southern Arabian Desert connecting south \*Arabia (Arabia Felix, Yemen) with the Mediterranean basin and \*Mesopotamian routes which formed the principal artery of the \*incense trade.

Different groups occupied the site to control \*trade. \*Inscriptions of the 3rd century AD describe al-Fāw as ruled by \*Kinda and Qahtan' and/or 'Kinda and Madh-hij' (al-Ghabban, 313). Kinda was a celebrated pre-

Islamic Arabian kingdom. Although in its 5th-century heyday Kinda was based further south in \*Ḥaḍramawt and this post-dates the abandonment of al-Fāw, al-Fāw may have been Kinda's first capital. Archaeological finds from al-Fāw reveal economic prosperity, extensive Hellenistic cultural influences, and funerary and religious material giving evidence of the polytheistic religion of the pre-Islamic \*Arabian Peninsula. PAW

A. R. al-Ansary, *Qaryat al-Faw* (1982).

A. I. al-Ghabban et al., eds., *Roads of Arabia* (2010).

**Qaryatayn and Dayr Mar Elyan** Located on the Roman \*frontier, Qaryatayn had been the centre of a Middle Bronze Age kingdom, but by classical times was a minor settlement on the more northerly of the routes linking \*Damascus and \*Palmyra. A substantial tell and Roman remains lie south of the modern town.

West of Qaryatayn is the \*Monastery of Mar Elian esh-Sharqi or esh-Sheikh (S. Julian of the East/the Old Man) which is a Late Antique foundation and held the \*sarcophagus and shrine of the saint. The monastery was bulldozed by DAESH in 2015. EL

J. Montgomery, *The Vagaries of the Qasida* (1999).

**Qasr al-Hallabat** An \*Umayyad-era 'desert castle' located approximately 60 km (36 miles) north-east of \*Amman. It stands upon a 6th-century \*Ghassanid \*palace and \*monastery that was in turn built upon a 2nd- or 3rd-century Roman fort. \*Caliph \*Hisham (r. 724–43) redeveloped the Roman site as a complex that included a \*mosque, a \*bathhouse, and an extensive \*irrigation system, suggesting that \*olives and vines may have been cultivated there. The central palace was of square construction in basalt and limestone and lavishly decorated with wall paintings, \*stucco sculpture, and \*mosaics. AM; EL

I. Arce, 'Qasr al-Hallabat Revisited', in H. Kennedy, ed., *Muslim Military Architecture in Greater Syria* (2006), 26–44.

**Qasr al-Hayr al-Gharbi and Qasr al-Hayr al-Sharqi** Two \*Umayyad \*palace complexes developed

by the \*Caliph \*Hisham (r. 724–43) located on the \*road between \*Damascus and al-Rusafa/\*Sergiopolis. The former is west of \*Palmyra, and the latter east of it, hence their designation as 'western' (al-Gharbi) and 'eastern' (al-Sharqi). Al-Sharqi is a wholly \*Umayyad construction with later additions; al-Gharbi was built on the remains of a \*Ghassanid structure. Qasr al-Hayr al-Gharbi comprises a palace, small \*bathhouse, reservoir, two further buildings constructed around courtyards, a water-\*mill, dam, and agricultural enclosure of 46 ha (114 acres), irrigated by an \*aqueduct. In contrast, Qasr al-Hayr al-Sharqi has been described as a 'new town'. It comprises a large palace and two very large agricultural enclosures of 746 and 160 ha (1,843 and 395 acres), irrigated by a number of aqueducts. Adjacent to the palace is a larger compound in two storeys. These monumental buildings are surrounded on three sides by a variety of others, covering more than 30 ha (74 acres). AM; EL

H. Maguire, *Earth and Ocean: The Terrestrial World in Early Byzantine Art* (1987).

**Qasr-e Serij** 6th-century \*monastery and church in northern \*Mesopotamia dedicated to S. \*Sergius. The site was located at a spring 5 km (3 miles) south-west of Tell Hugna, and 60 km (37 miles) north-west of \*Mosul. The \*basilica (c.23 by 14 m, 76 by 46 feet) was constructed of limestone ashlar. An arcade springing from pilasters divided its nave into three aisles. In place of a \*prothesis, a rectangular \*martyrium lay south of the \*apse. It was accessible through a large \*arch from the south side aisle and a small door that led to the church's south porch. Though located in the \*Persian Empire, its design stemmed from churches at north \*Syrian \*pilgrimage centres in the Roman Empire such as \*Sergiopolis (Resafa). The \*metropolitan of the \*Miaphysite Church in \*Mesopotamia, Mar \*Ahudemme (r. 559–75), founded Qasr Serij specifically to rival Sergiopolis-Rusafa (*History of Mar Ahudemme*, ed. Nau, 29–30). \*Khosrow I reconstructed it after \*Nestorians burned it. MPC

**Qasr-e Shirin** Archaeological site between Holwan and Khaniqin in western Iran where \*Khosrow II built a \*palace associated in early Islamic lore with his Christian wife \*Shirin. Situated on an artificial terrace 8 m (c.26 feet) high, it measured 285 × 98 m (935 × 322 feet) and was reached by a double staircase leading to a massive courtyard or \*garden. A tall entrance hall with \*ayvan led to a great hall area and apartments flanking successive courtyards or gardens. DTP

J. Schmidt, 'Qasr-i Shirin: Feuerempel oder Palast?', *Bagh-Mitt* 9 (1978), 39–47.

Schwarz, *Iran im Mittelalter*, 687–93.

**Qasr ibn Wardan** A 6th-century complex of church, \*palace, and military barracks, located in the Syrian Desert approximately 60 km (c.37 miles) north-east of \*Epiphania (Hama). It is architecturally striking due to its unusual 'tiger-striped' construction in bands of black basalt and yellow brick. This lavish construction technique necessitated the transport of many of the building materials long distances to the site, and was helped by the fact that this was an imperial project financed by the \*Emperor \*Justinian I (527–65) who built a line of new fortifications and strengthened existing outposts across \*Syria in an attempt to stave off Persian invasions.

## Qasr Ibrim

Imperial \*patronage therefore accounts for the design of the church at Qasr ibn Wardan, which was square, galleried on three sides, and surmounted by a \*dome. These were all innovations from \*Constantinople that would have appeared revolutionary to the Syrians who had yet to embrace the dome as an architectural form. This also means that the complex should be studied by comparison with Constantinople and Justinian's other imperial projects, rather than being viewed as an example of typical 6th-century Syrian architecture. EL

P. Grossman, 'Zu den Bogen und Gewölben in dem Wüstenpalast von Qasr ibn Wardan', *DamasMitt* 12 (2000), 291–302.

**Qasr Ibrim (Roman In Primis)** Long-inhabited crag strategically located overlooking the \*Nile, c.200 km (120 miles) south of Aswan. An important centre of the Noubades in Lower \*Nubia in the 5th century, it remained an important town under the Christian kings of Noubadia from the 6th century onwards. JHFD  
*CoptEnc* 7 s.v. Qasr Ibrim, cols. 2036b–2038a (W. Y. Adams). W. Y. Adams, *Qasr Ibrim: The Earlier Medieval Period* (2010). Dijkstra, *Philae*, 164–8.

**Qasr Kharana** This rectangular early \*Umayyad fortress is approximately 60 km (36 miles) south-east of \*Amman and was occupied prior to 710, as a \**graffito* found in the fortress says that it was abandoned before that year. Although there has been debate as to whether the site actually pre-dates \*Islam and was initially built by the \*Sasanians, most scholars now accept the findings of Urice that Qasr Kharana is one of the earliest of the network of \*Umayyad palaces built in the Jordanian and Syrian deserts.

The evidence suggests that the site was only ever occupied for short periods of time and acted more as a permanent camp for nomadic travellers than a palace in the conventional sense. This observation is supported by the fact that the fortress had no permanent water supply and only a shallow \*cistern in the central courtyard to conserve seasonal rainfall. It is this lack of water that probably caused the abandonment of the site. EL

D. Genequand, *Les Établissements des élites Omeyyades en Palmyrène et au Proche-Orient* (2012).

S. K. Urice, *Qasr Kharana in the Transjordan* (1987).

**Qatada b. Di'ama b. Qatada al-Sadusi** (c.680–c.735) Blind traditionist from \*Basra famous for his memory and extensive knowledge of Arab genealogy and Muslim traditions. He was a student of \*Hasan al-

Basri and was also considered a proponent of the doctrine of free will. HBR

*EI* 2 vol. 4 (1978) s.v. Qatada b. Di'ama, p. 748 (Pellat).

**qayna** Arabic female musical entertainers, rooted in pre-Islamic slavery traditions and widely attested after the \*Arab conquests in the \*Umayyad and \*Abbasid \*Caliphates. Their repertoire consisted of *ghina'* (song) in both 'heavy' (*sinad*) and 'light' (*hazaj*) styles, as well as *nawh* (lamentations), often self-accompanied on instruments. The tradition is most fully documented by al-Jahiz' and al-Isfahani. AJH

*EI* 2 vol. 8 (1993) s.v. *qayna* (Ch. Pellat).

Shahid, *BASIC* II/2 (2010), 182–91.

**Qays** According to the Islamic-era genealogical sources, Qays, or Qays 'Aylan, was one of the two principal divisions of the north Arabian \*tribes or *al-'arab al-musta'ribah* (the Arabized Arabs), descended from the eponym Mudar. Qays is not said to have functioned as a confederation prior to \*Islam. Of its subdivisions, Hawazin and Thaqif were both powers near \*Mecca just prior to the rise of Islam. The focal point of their interactions was the lucrative trade site of 'Ukaz, and the Meccan victory over the Hawazin and some branches of the Thaqif in the 590s AD ensured \*Qurashi dominance in regional \*trade. Following the Second \*Arab Civil War (683–92), Qaysi tribes became a leading element in factional conflict within Islamic \*Syria, opposing the 'southern' Quda'a. This competition for power between 'northern' and 'southern' tribes became a dominant aspect of politics across the Islamic empire, and eventually contributed to the collapse of \*Umayyad power. RHos; AM

**Qays b. Salamah b. al-Harith** (fl. c. AD 531) Grandson of al-\*Harith b. 'Amr of \*Kinda. He probably assumed the title of \*phylarch over the Arab \*tribes of Kinda and Ma'add upon the death of his grandfather in 528, holding it till his resignation in 531. After a dispute between Qays and a familial relation of Esimiphaeus (Sumyafa' Ashwa')—the Christian king of the \*Himyar—resulted in the latter's death, Qays fled into the wilderness (\*Procopius, *Persian*, I, 20, 9–10). \*Justinian, anxious to break the \*trade monopoly of the Persians, tried to unite Qays with Esimiphaeus to form an Arab military contingent, but, despite promises from both sides, ultimately failed in his attempt. **Qenneshre, monastery of** Located on the eastern bank of the Euphrates, facing \*Europus (mod. Jirbās/Jarablus, near the Turkish–Syrian border), Qenneshre was the most important intellectual centre of the \*Syriac Orthodox (\*Miaphysite) Church from the 6th to the early 9th century.

Around 530, fleeing imperial persecution of Miaphysites, \*John Bar Aphthonia led a group of monks from the \*Monastery of S. Thomas near \*Seleucia Pieria eastward towards the Euphrates to found Qenneshre, which means 'Eagles' Nest' in \*Syriac. It seems that Qenneshre, like the Monastery of S. Thomas its founders came from, was dedicated to S. Thomas. John bar Aphthonia himself was \*bilingual in \*Greek and Syriac, and wrote in both languages. From the beginning, Qenneshre seems to have been associated with knowledge of Greek and bilingual \*education in the Syriac Orthodox Church.

Qenneshre soon began to produce \*bishops; from Julian I (sed. 591–c.596) to \*Dionysius of Tel Mahre (sed. 818–45), six Miaphysite \*Patriarchs of \*Antioch had their origins there. The *Vita* of \*Theodota of \*Amida (d. 698) suggests that for at least part of the 7th century, Syriac Orthodox Patriarchs of Antioch resided in Qenneshre.

Most of the major intellectual figures of the Syriac Orthodox Church in the 7th and 8th centuries were trained at Qenneshre, including \*Thomas of Harkel, \*Paul of \*Edessa, Athanasius of Balad, \*Jacob of Edessa, and also possibly \*Severus Sebokht and \*George, Bishop of the Arab Tribes. These men were bilingual in Greek and Syriac and were responsible for the \*translation and retranslation of a number of biblical, patristic, and secular texts (notably Aristotle) from Greek into Syriac. It can be argued, in fact, that behind the translation and retranslation of these texts lay a Miaphysite curriculum of study which had its origins at Qenneshre.

In this early medieval period, Qenneshre lay at the centre of a network of Miaphysite monasteries—including Tell 'Adā and Mar Zakai, among others—which formed the intellectual backbone and leadership of the Syriac Orthodox Church. In its heyday, Qenneshre was the most important centre of Graeco–Syriac translation in the entire Near East. It remains an open question for scholarship whether there was a specific translation technique associated with and taught by and in the monastery.

Qenneshre was sacked and burned down by Arab Muslim marauders c.811 in the chaos that followed the death of Harūn al-Rashīd in 809. It was rebuilt in 820; bishops would come from Qenneshre as late as the 10th

century, and Arabic Muslim sources suggest that it was a destination for visitors into the early 10th century. Archaeological work at the site suggests that the site of Qenneshre was inhabited until the first half of the 13th century. Nevertheless, after its destruction in the early 9th century, the monastery never returned to its previous prominence and importance.

The monastery of Qenneshre should not be confused with the Syrian city \*Qinnasrin (\*Chalcis). JT

**qibla** The direction faced in Muslim \*prayer, the orientating point of which is the \*Ka'ba, the small approximately cubic building in the sanctuary at \*Mecca.

Outside this sanctuary, \*mosques indicate the direction of the *qibla* with the placement of a wall niche, called a \**mihrab*. The *qibla* also serves as the orientation point for ritual acts besides \*prayer, including ritual slaughter and the placement of bodies in burial.

According to the biography of \*Muhammad and numerous \*hadith, the *qibla* had originally been oriented toward \*Jerusalem, but was changed to the Ka'ba in 624. Midway through the noon prayer, Muhammad turned from Jerusalem to the sanctuary, as described in \*Qur'an 2: 144. The change of the *qibla* took place while Muhammad and his followers were in \*Medina, and the mosque there became known as 'Masjid al-Qiblatayn', the mosque of the two *qiblas*.

Across the Islamic empire, determining the proper direction of the *qibla* led to a flourishing of \*mathematics and astronomical observation. Medieval cartographers also used the *qibla* in Mecca as an orientation, and \*maps often depict the Ka'ba at their centre, with each corner of the building representing a cardinal direction. NK

EI 2 vol. 5 (1986) s.v. Qibla, 82–8 (Wensinck and King).

B. Sulayman, 'Qibla musharriqa and Early Muslim Prayer in Churches', *The Muslim World* 81 (1991), 267–82.

**Qinnasrin** \*Arabic name of the Roman fortress-\*city of \*Chalcis ad Belum 25 km (15 miles) south-west of \*Aleppo, and name of a \**jund* of the \*Umayyad period. The *jund* was created out of that of \*Homs by \*Ali or \*Yazid I. Al-\*Baladhuri notes the surrender of the city to Abu Ubaydah in AD 636/7 during the \*Arab conquest of \*Syria, and its subsequent resistance, siege, and

'reduction' (*Futūh al-Buldān*, I, 223–234). The site of Chalcis has few remains of the Islamic period.

Al-Baladhuri mentions also the Hadir Qinnasrin, an existing Arab watering-place and camp ground, some of whose people \*Abu Ubaydah 'summoned to \*Islam', though others preferred to remain Christians and pay the poll-tax (\**jizya*). He also says that they later built \*houses there. Qinnasrin was demolished by a Byzantine army in the mid-10th century.

C. P. Haase identified as Hadir Qinnasrin a tell and lower settlement called Hadir 4 km (2.5 miles) east of the site of Roman Chalcis. During subsequent sondages by D. Whitcomb, and then by M. Barrucand and M.-O. Rousset, a 3rd-century coin and 46 sherds of the 3rd/4th century AD were found, and a few coins of \*Justinian I, \*Heraclius, and \*Abd al-Malik, and also substantial evidence of housing, \*irrigation works, \*glass manufacture, and \*pottery dating from the early Islamic period, but no pottery of the 5th/6th century. The relative paucity of walls and abundance of detritus is compatible with the presence of an encampment comparable to the settlement outside the walls of the Umayyad desert \*palace at \*Qasr al-Hayr al-Sharqi.

Qinnasrin should not be confused with the important \*Syrian Orthodox \*monastery and intellectual centre of \*Qenneshre near modern Jerablus. OPN M.-O. Rousset, ed., *Al-Hadir: étude archéologique d'un hameau de Qinnasrin (Syrie du Nord, VIIe–XIIe siècles)* (2012).

**Qobad I (MP Kawād)** Persian King of Kings (r. AD 488–96 and 498–531). Qobad was the only surviving son of \*Peroz, who had lost his life fighting the \*Hephthalites in the east.

Qobad I was responsible for beginning important administrative and financial reforms which his son \*Khosrow I completed. During his rule the \*Zoroastrian priest \*Mazdak was used by Qobad to stage a social revolution where the power of the great noble houses was broken. Because of this the \*aristocracy conspired to place Qobad I in the Prison of Oblivion in AD 496, thus interrupting his rule. In his place the nobility placed his brother \*Jamasp (Zamasp) on the throne. However, with the help of his sister Qobad and some supporters fled to the lands of the \*Hephthalites, where he then raised a force and came back to reclaim the throne in AD 498/9.

Impoverished by this interlude, Qobad sought financial subvention from the Roman \*Emperor \*Anastasius I. Such payments had previously been made on a voluntary basis, so Roman sources aver (\*Joshua the Stylite, 8–10; \*Procopius, *Persian*, I, 7, 1–2), in order to sustain the defence of the \*Caucasus Passes against the threat to both empires of steppe warriors from \*Central Asia. Persians appear to have preferred to think of the money as a debt due to them. Anastasius' refusal to make a loan

(\*Theophanes, AM 5996) gave offence, so in 502 Qobad mounted a lightning invasion of Roman territory. First he captured \*Theodosiopolis (Erzerum) and then, while his allies harried \*Harran and \*Constantia-Tella, he marched south to besiege \*Amida, which he captured after a siege of three months (\*Zacharias Rhetor, VII, 3–4). The account known as the *Chronicle of Joshua the Stylite*, apparently written by a resident of \*Edessa, gives a graphic account of these hostilities which persisted until a seven-year peace was signed in 506 (Procopius, *Persian*, I, 9, 24), though attempts to obstruct the building of the Roman fortress at \*Dara opposite \*Nisibis persisted, as did a proxy war in southern \*Arabia, while Roman \*diplomacy secured serious advantages in \*Iberia.

In 527 Qobad made a further demand for money; attempts at compromise failed and in 530 he made surprise attacks on \*Satala and Dara, where the Romans defeated him in an open battle of which Procopius gives an eyewitness account (*Persian*, I, 14). The following year Qobad campaigned in the Euphrates Valley but died before his troops could capture the Roman \*frontier town of \*Martyropolis in \*Armenia Quarta (*Persian*, I, 21, 19–20).

Throughout these external conflicts, Qobad persisted with his internal reforms. The Office of Protector of the Poor and Judge was created from the ranks of high \*Zoroastrian priests who were in charge of pious foundations, to help the poor (MP *drayush*/NP *darwish*). In addition, four chanceries were created for the civil \*administration of the Empire, matching those of the military division. A \*council of the \*Church of the East held in 524 asserted the autocephalous authority of its \*catholicus. TD; OPN

**Qobad II (MP Kawād)** \*Sasanian King of Kings (r. 628) also known as Shiruye (Gk. Seiroe in *ChronPasch* AD 628, Shiroe in \*Theophanes). His father was \*Khosrow II (r. 590–628). He ascended the throne after murdering his father and committing extensive fratricide, leaving the \*Persian Empire without other able heirs. He then made peace with the Romans; the despatch sent back to \*Constantinople by \*Heraclius, including a \*letter to him from Qobad, was read aloud in the Great Church of the \*Holy Wisdom on 15 May 628, and survives as the final entry in the \**Chronicon Paschale*.

Qobad's peace treaty with \*Heraclius saw territories returned to the Romans along with the \*relic of the

True \*Cross. He died after complaining of abdominal pain, while taking part in the customary migration of the Sasanian \*court from the hot plains of \*Mesopotamia to the uplands of Media (\**Chronicle of Khuzestan*). His young son \*Ardashir III (r. 628–29) briefly succeeded him, followed in short order by the general \*Shahrwaraz and by Qobad's sister (also his wife) \*Boran (629–31). AZ; OPN

**Quadi** Small Germanic tribe originally belonging to the Elbe Germanic cultural group. They acquired a martial reputation fighting alongside the \*Marcomanni against Marcus Aurelius (\*Ammianus, XXIX, 6, 1–2; cf. XXX, 5, 3), and were then settled immediately north of the Danube \*frontier. Excavations in their territory have revealed Germanic-style structures but Roman small finds and \*pottery.

The Quadi invaded \*Pannonia in the time of \*Galienus (\*Eutropius, IX, 8, 2; \*Jerome, *Chron.* 220 *l* Helm; \*Orosius, VII, 22, 8), were driven back from \*Italy by \*Aurelian, and defeated again by \*Carinus. Along with \*Suebes and \*Sarmatians they invaded the \*Balkans in 357–8 (Ammianus, XVI, 10, 20; XVII, 12), leading \*Constantius II to mount a punitive expedition against them from \*Brigetio, after which they swore fealty, 'drawing their swords, which they venerate as spiritual beings' (XVII, 12, 21).

In 374, infuriated because Roman fortresses had been built on their side of the Danube and because a Roman general had assassinated their king, they attacked once more, again in alliance with Sarmatians (XXIX, 6, 1–16). It was while ranting at an embassy of Quadi the following year that \*Valentinian I suffered his final apoplexy (XXX, 6; \*Zosimus, IV, 16, 4–17, 2).

In the 5th century the Quadi gave their name to a Roman \*army unit stationed in \*Egypt (\**Notitia Dignitatum*, or. XXXI, 56). TF; OPN

**quadrant and graduated ring** Astronomical instruments for measuring the altitude (angle above the horizon) of a celestial object, such as the \*Sun or a star. \*Ptolemy described a quadrant of stone or wood for taking solar altitudes (*Almagest*, I, 1) and a related instrument, the meridian ring. In the former, a quarter circle is divided into 90 degrees; in the latter, a complete circle is divided into 360 degrees. According to \*Proclus (*Hypotyposis*, III, 5), a meridian ring should be at least

half a cubit in diameter. A graduated quarter-circle, half-circle (\*John Philoponus, *Traité de l'astrolabe*, Segonds, 144–5), or full circle was often engraved on \*astrolabes for use with the instrument's rotatable sights to measure altitudes, a necessary step in telling time. A specialized hand-held quadrant (the horary quadrant), used for telling time at a particular latitude, was described by al-Kwārizimī, c. AD 820. Universal horary quadrants, for approximate time-telling at any latitude, were developed shortly afterwards. JCE

D. A. King, 'A *Vetustissimus* Arabic Treatise on the *Quadrans Vetus*', *JnlHistAstron* 33 (2002), 237–55.

**Quadriga Messii** (Lat. 'Chariot of Messius') Metaphor used by \*Cassiodorus (*Institutiones*, I, 15, 7) for the quartet of \*Latin authors (\*Vergil, Terence, Cicero, Sallust) used by the late 4th-century \*grammaticus Arusianus Messius. RDR

**quaestor** Public office in the Roman Empire, which derived originally from the most junior magistracy in the *cursus honorum* of the Roman Republic. In the Later Roman Empire the quaestorship was the first step in the career of a scion of the senatorial \*aristocracy; some quaestors were younger than 16 (*CTh* VI, 4, 1). From the reign of \*Constantine I onwards, the \*Senate annually elected an unknown number of quaestors in \*Rome. They could also be nominated by the \*emperor as a *quaestor candidatus* (*HA Alexander Severus*, 43). Quaestors had no major public function except that they funded public games. They are rarely mentioned in \*inscriptions, but are still attested in the 5th century. The office of quaestor is distinct from that of \*Quaestor Sacri Palatii, the emperor's principal legal draughtsman. DN

Jones, *LRE* 530–2.

A. Chastagnol, *L'Évolution politique, sociale et économique du monde romain* (1982), 120–1.

**Quaestor Sacri Palatii** (imperial quaestor) Originally the \*emperor's spokesman, a role he never lost, the imperial quaestor became, by the mid-4th century, the emperor's main legal adviser and draughtsman of imperial legislation. He was thus *ex officio* a member of the imperial \*Consistorium. Holders of the office included Eupraxius, who advised \*Valentinian I on the law of \*treason, and the poet \*Ausonius. The Quaestor had no office staff but instead made use of the various secretariats; when the office was vacant, the \*Magister Memoriae may have acted as his deputy.

Under \*Theodosius II, the imperial quaestors, notably \*Antiochus Chuzon, were the driving force behind the compilation of the \*Theodosian Code and, from 529 to 534, \*Justinian I's Quaestor, \*Tribonian, supervised the committees which produced \*Justinian's *Code*, the *Corpus Iuris Civilis*. Many quaestors are known by name and others can be identified by their distinctive styles, which ranged from the floridly rhetorical to the austere simplicity of the professional jurist. JDH

J. D. Harries, 'The Imperial Quaestor from Constantine to Theodosius II', *JRS* 78 (1988), 148–72.

T. Honoré, *Tribonian* (1978).

**Quaestura Exercitus** New military, administrative, and judicial entity headed by a Quaestor of the \*army established by \*Justinian I to regulate and supply the \*armies on the embattled Danube \*frontier more effectively (*NovJust* 41, of 536). It comprised \*Moesia Inferior, \*Scythia (both on the Lower Danube), with \*Caria, the \*Insulae, and \*Cyprus. This geographical diffuseness soon necessitated reorganization, so that after 540, legal appeals from Caria, Insulae, and Cyprus were directed to \*Constantinople (*NovJust* 1). The quaestorship is still attested in 575 (*NovJust* 11; \*Menander Protector, fr. 21), so the reform was presumably successful. PNB

Jones, *LRE* 280, 482–3.

*Cambridge Companion Justinian*, 50 and 120.

J. Wiewiorowski, 'Quaestor Ioustinianus Exercitus: A Late Roman Military Commander?', *Eos* 93 (2006), 319–42.

**quarries and quarrying** Our knowledge of the quarrying of \*marble, and of its diffusion across the Roman Empire, is extensive, because the origin of many marbles can be identified by eye, and because they have been widely studied. The quarrying of marble had boomed in early imperial times, with \*cities and the \*aristocracy all over the Empire vying to erect lavishly decorated public and private buildings. In Late Antiquity there was no falling off in the appreciation of fine stone; indeed the 4th to 6th centuries were a high point in the production of sophisticated patterned marble flooring and wall veneer (known as \*opus sectile); but much of the marble in use, including many of the columns of the new Christian churches, now consisted of \*spolia, reused elements from older buildings. Consequently, several quarries closed in Late Antiquity, including the once-flourishing \*Luna quarries (near modern Carrara) in \*Italy. In the east Mediterranean, however, some quarries flourished, most notably those on the island of \*Proconnesus (in the Sea of \*Marmara) which provided much of the fine stone with which \*Constantinople was built. Some large-scale quarrying of fine stone continued until at least the mid-6th century; but by the 7th century it appears to have ceased. Much

less is known about the quarrying of humbler building stone, but the pattern detectable in marble—of a shift of activity eastwards in the 5th and 6th centuries, followed by generalized decline—probably also applied to less valuable building materials. The \*Limestone Massif of Northern Syria, for instance, is covered in 5th- and 6th-century rural houses built of newly quarried stone, but there is no evidence that new houses were added into the 7th century. **Quedlinburg Itala** Six leaves bearing parts of the Books of Kings from an illustrated Vetus Latina \*Bible manuscript, written in uncial \*script at \*Rome, in the early 5th century, now in Berlin (cod. theol. lat. fol. 485). Comparable in size and length to the \*Cotton Genesis, the four surviving Quedlinburg miniatures exist in a large square frame, divided into four compartments, so that several images occupy a full page. Its style resembles that of the \*Vatican Vergil; both books have been ascribed to the same scriptorium within two decades of 400. NAS

H. Degering and A. Boeckler, eds., *Die Quedlinburger Itala-fragmente* (1932).

J. Lowden, *Early Christian and Byzantine Art* (1997), 57–9.

**Quentovic (Cuentawich)** (départ. Pas-de-Calais, France) 'The *wik* of the Cuent' was an early medieval port (*wik* or *emporium*) situated in the estuary of the *Cuent* (mod. Canche), a small river in the Ponthieu, 30 km (c.18 miles) south of Boulogne (Gesoriacum), formerly the base of the Roman \*fleet called the Classis Britannica. From the early 7th century, when the first coins were struck from *Wic in Pontio*, to the end of the 9th century, Quentovic was the main continental port for relations between southern England and northern \*Gaul, where many \*Anglo-Saxon missionaries and pilgrims landed en route to \*Rome. SL  
S. Lebecq et al., *Quentovic: environnement, archéologie, histoire* (2010).

**Querolus** The only Latin comedy to survive since Terence, the *Querolus* ('Complainer') was dedicated by its anonymous author to a *vir illustris* named Rutilius, probably \*Rutilius Namatianus, author, in 417, of *De Reditu Suo*. It thus dates to the early 5th century and is an example of the occasional literature written in Late Roman \*aristocratic literary circles. Written in the style of Plautus, the *Querolus* says much about contemporary social practices. The legal vocabulary suggests an author with legal training. RWM

**Quinisext Council** Church \*council of 220 \*bishops, mostly from \*Anatolia and the \*Balkans, convened by \*Justinian II sometime between 1 September 691 and 31 August 692. They met in the Trullan hall of the imperial \*palace in \*Constantinople (where the sixth Œcumenical Council was held), so this is also called the Council In Trullo. It claimed to be the continuation of the fifth and sixth Œcumenical Councils (the Second and Third Councils of \*Constantinople), so is also known as the fifth-sixth (Quinisext) Council.

The Quinisext Council generated three documents: a long prologue called the *Logos Prosphonetikos* that contextualized the council, 102 canons, and a subscription list. The *Logos* shows that Justinian provided the principal initiative behind the council, and that its purpose was to purge the Empire of immorality and disorder, as causes of contemporary decay. The subscription list reveals that six places were left vacant for Western bishops, particularly that of \*Rome, to sign. Uniquely, Justinian II signed before all the bishops.

The canons in some ways complete and codify early \*canon law, and are a valuable source for social history. The canons are divided into sections covering clergy, monks, and laity. Alongside recurrent canonical bugbears such as clerical \*marriage (canon 6) and ecclesiastical discipline are found more novel issues of lay morality, \*liturgical practice, and religious art (canons 73, 82, 100). Several extant pre-Christian festivals, such as the Brumalia, are condemned (canon 62), while churches are not to be polluted through sexual intercourse (canon 97), or bibles destroyed (canon 68). A few canons critical of Roman practice (canons 13, 36, 55) have been posited as the cause of papal resistance to the Quinisext Council, but it is plausible that Justinian's pretensions and Constantinople's claim to jurisdiction over the sees of east \*Illyricum were the primary causes of contention. H. Ohme, 'The Causes of Conflict about the Quinisext Council', *GOTR* 40 (1995), 17–43.

**Quinquegentiani** A large-scale alliance of \*Moorish tribes (the 'five peoples') in the Grand Kabylie mountains south-east of modern Algiers, perhaps in the Babors. Under the \*Tetrarchy, they and the Bavares caused serious disturbances, relying on 'inaccessible mountain ridges and natural protection' (*PanLat.* VII [VI], 8, 6). In 297/8 the Emperor \*Maximian defeated them (\*Jordanes, *Getica* 110); the campaign in \*Mauretania Sitifensis was recalled, probably a hundred years later, by the author of the \*martyr passion of S. Typasius (*BHL* 8354), drawing probably on \*Eutropius (IX, 22–3). DAC

*New Pauly s.n.* Quinquegentiani (W. Huß).

**quinquennalia** See ANNIVERSARIES, IMPERIAL.

**Quintillus** \*Augustus 270. Brother of \*Claudius II Gothicus, acclaimed as \*emperor on Claudius' death, but killed seventeen days later at \*Aquileia (\*Eutropius, IX, 12; \*Jerome, *Chron.* 222b Helm, cf. \*Zosimus, I, 47), either by his troops (*HA Claudius*, 12, 5–6) or by himself (*HA Aurelianus* 37, 6). DMG  
*PLRE* I, Quintillus 1.

**Quintus Smyrnaeus** (3rd cent. AD) Author of the *Post-Homerica* (*Ta meth'Omerou*), an epic poem in fourteen books that attempts to fill the 'gap' between the burial of Hector at the end of *Iliad* 24 and the story of the returns of the Greek heroes after the Sack of Troy. It is envisaged as a direct continuation of \*Homer's *Iliad*, picking up the narrative without the traditional invocation to the Muse, from the last line of Homer's epic. In a moment of literary self-consciousness the poet-narrator identifies himself as a shepherd from \*Smyrna (traditionally regarded as the birthplace of Homer) and the reader is given no reason to doubt that it is Homer himself who is continuing to narrate his own story. Recent critics have highlighted the poet's sophisticated use of earlier Greek texts (in particular Greek tragedy which was much occupied with the same point in the story of Troy) and creative engagement with Homer both in terms of language and of narrative patterning. Quintus' fondness for 'Stoic' *gnomai* (related by both primary narrator and epic characters) is a particularly notable feature of his style. Similarities with

## Qune

Latin texts (e.g. \*Vergil, *Aeneid*, II) have been noted and explored, but the argument for Quintus' familiarity with \*Latin literature remains unproven. RECS

**Qur'an** The Qur'an is divided into 114 suras, i.e. literary units of diverse literary genre and undetermined length. Whereas the unit 'sura' was the medium of the earliest proclamation of the Qur'an, their somewhat mechanical arrangement in the corpus according to their length betrays the absence of any particular historical or theological interest on the part of the redactors who—according to tradition—were active during the reign of the third \*caliph \*Uthman b. 'Affan (r. 644–56). The term sura, which goes back to the Qur'an itself (see e.g. Q. 10: 38), seems to denote a recited text, more precisely, the quantity that is presented in public on a single occasion.

### Early Meccan suras

The earliest suras are probably those that make use of the particular style related to the pre-Islamic soothsayer or seer, who claimed superhuman origin for his enunciations. This literary form, known as rhymed prose, *saj'*, consists of short syntactical units marked by an expressive rhyme, often ultima-stressed. This pattern of phonetic correspondence between the verse endings is more flexible than the poetic rhyme used in the corpus of ancient Arabic \*poetry, allowing semantically

related verses to be bracketed by a rhyme of their own and thus form clearly distinct verse-groups. Among these earliest suras are the following (cited in a roughly chronological order): Q. 111, 99–108, 77–97, 73–5, 68–70, 55–6, 51–3. As against those suras that remain close to the soothsayer speech model attesting the speaker's ecstatic disposition (e.g. Q. 111, 101, 100, 99, 84, 82, 81, 79, 77, etc.), there are other early suras that in their quiet and solemn mood (Q. 95, 94, 93, 87, 74, 73, etc.) remind one of Christian \*hymns or adaptations of psalms rather than of a pagan ritual such as the performance of the soothsayer. What they still have in common is the shortness of the verses, which do not exceed one syntactically complete sentence. In the suras reflecting the pagan model the expression itself is often enigmatic, thus stressing the strangeness that adheres to a superhuman communication. A striking characteristic of this style is the use of \*oaths and oath-clusters, conjuring heavenly bodies, thunderstorms, and bands of inimical raiders, all of which are phenomena pertaining to the imagination of desert dwellers rather than to the stock of images in the monotheistic tradition. There are equally less menacing oaths that conjure sacred places—including monotheistic shrines—and sacred times, that have been known as times of prayer in pre-Islamic times. These texts document a merger between a 'pagan' form and a biblically inspired content. Moreover, many early suras are replete with hymnal elements that are standard expressions in Christian and Jewish worship.

Whereas the imperative to worship is always there (e.g. Q. 96: 1: 'recite in the name of your lord who created' (*igra' bi-smi rabbika lladhi khalaq*)), and God is always mentioned, many texts do not seem to be, first and foremost, addressed to the Prophet \*Muhammad, but could equally be addressed to the believer. Most imperatives are however unequivocal addresses to the Prophet, like Q. 74: 2f.: 'Arise and warn and magnify your lord' (*qum fa-andhir warabbaka fa-kabbir*), and his figure gradually becomes prominent in the suras. It appears that the early recitation took place in the framework of already existing rituals. There is, then, an obvious convergence of the early Qur'ānic text to liturgy. The event of the day of judgement is the topic of a number of suras and is extensively elaborated: the catastrophic events that precede the judgement fill large sections of the early suras, and so do the scenes of retribution—either in punishment by fire or in the admittance to lofty gardens. Indeed, the entire corpus of early texts pursues one task: to convince the listeners of the omnipresence of God and thus of the moral responsibility to which they will be held on the last day.

Several Qur'ānic motifs and structures are not known from earlier \*Arabic literature: beside the eschatological

prophecies the so-called *ayat*, 'signs', are prominent which incorporate descriptions of the 'biosphere', of copious vegetation, fauna, an agreeable habitat for humans, the natural resources at their disposal, into paraenetic appeals to recognize divine providence and accept divine omnipotence. Properly decoded, these benefits will evoke gratitude and submission to the divine will. The perception of nature, which in pre-Islamic poetry appears alien and threatening, provoking the poet's heroic defiance of its roughness, has crystallized in the Qur'ān into the image of a meaningfully organized habitat ensuring human welfare and arousing the awareness of belonging.

'Signs' (*ayat*) of divine omnipotence may also manifest themselves in history. Very short narratives—an invasion of \*Mecca (Q. 105) repelled by divine intervention, the Thamud myth about a divine punishment of disbelievers (Q. 91: 11–15), the story of Pharaoh and Moses (Q. 79: 15–26)—or ensembles of narratives like that in Q. 51 including Abraham and Lot, Moses and Pharaoh, the 'Ad, the Thamud, and Noah—or evocations of stories (Q. 52, 53, 69), occur from the earliest suras onward. Narratives then develop into retribution legends or punishment stories, serving to prove that divine justice is at work in history, the harassed just being rewarded with salvation, the transgressors and the unbelievers punished by annihilation. At the same time, legends that are located in the \*Arabian Peninsula may be read as reinterpretations of ancient Arabian representations of deserted space. Sites no longer lie in ruins due to preordained natural processes, but because of an equilibrium, maintained by divine providence, that balances between human actions and human welfare.

#### Later Meccan suras

Later suras become more complex and polythematic. The references to the Meccan sanctuary as the central warrant for the social coherence of the community have been replaced by new symbols: evocations of scripture, be they clad in an oath (Q. 36: 2; 37: 3; 38: 1; 43: 2; 44: 2; 50: 1) or in a deictic affirmation of its presence (Q. 2: 2; 10: 1; 12: 1; 13: 1, etc.). Moreover, later Meccan suras broaden the scope of space for the listeners, who are transported from their local surroundings to a distant landscape, the \*Holy Land, the setting where the history of the community's spiritual forebears, the Israelites, took place. The introduction of the direction of prayer (the \*qibla) towards \*Jerusalem, reflected in Q. 17, is an unequivocal testimony of this change in orientation. Ritual coherence has thus given way to scriptural coherence. For the bulk of the middle and late Meccan suras, the claim of a tripartite composition focusing biblical stories in their centre is sustainable.

The focus is thus shifted from the deserted sites of the real homeland to the orbit of the messengers of the People of the Book. The phenomenon of recurring narratives in the Qur'an, retold in slightly diverging fashions, deserves attention as a testimony of a progressively changing narrative pact, to a continuing education of the listeners, and to the gradual development of a moral consensus that is reflected in the texts.

On the formal level the early densely structured verse forms in later Meccan times have given way to a more loose flow of prose, with verses often exceeding one complete sentence, the rhyme end taking the form of a simple *-un* or *-in* pattern, easily achieved through a morpheme denoting masculine plural. The listeners' anticipation of an end marker of the verse is fulfilled by a new device: the verse concludes with an entire syntactically stereotypical rhymed phrase, a 'cadenza' which reiterates a linguistic pattern charged with a meta-discourse. Many cadenza-phrases are semantically distinguished from their context adding a moral comment to it, such as 'truly, you were one of the sinners' (*innaki kunti min al-khita'in*, Q. 12: 29). They thus transcend the main narrative or argumentative flow of the sura, introducing a spiritual dimension: divine approval or disapproval. These metanarrative insertions into the narrative or argumentative fabric which in a written text would appear disturbing, delaying the information process, in an oral text add fundamentally to the impact of the recitation. The Qur'an thus styles itself as a text evolving on different, yet closely intertwined, levels of discourse and mediality.

### Types of Medinan suras

In \*Medina, suras not only give up their tripartite scheme, but they also display much less sophistication in the patterns of their composition. One type may be aptly termed the 'oratory' sura or sermon (Q. 22, 24, 33, 47, 48, 49, 57–66); they consist of an address to the community whose members are called upon directly by formulae such as *ya ayyuha l-nas* (Q. 22: 1, 'Oh people'). In these suras, which in some cases (Q. 59, 61, 62, 64) are stereotypically introduced by initial hymnal formulae strongly reminiscent of the biblical Psalms, the Prophet (*al-nabi*) appears as one personally addressed by God (Q. 33: 28, 'Oh Prophet' (*ya ayyuha l-nabi*)) or as an agent acting synergistically with the divine persona (Q. 33: 22, 'God and his Prophet' (*allahu wa-rasuluhu*)). As against these 'monolithic' addresses, the bulk of the Medinan suras are the most complex of the entire Qur'an. Most of the so-called 'long suras' (*tiwal al-surwar*, e.g. Q. 2–10) cease to be neatly structured compositions, but appear to be the result of a process of collection. Though their structure may be secondary, their message sheds important light on particular ritual changes whose symbolic value cannot be

underestimated. The Medinan regulations, whose binding force is sometimes underlined by a reference to the transcendent source, do not display any structured composition, nor do they form part of neatly composed units.

A new element appearing in Medinan suras is accounts of contemporary events experienced or enacted by the community, such as the Battle of \*Badr (Q. 3: 123), Uhud (Q. 3: 155–74), the expulsion of the Banu l- Nadir (Q. 59: 2–5), the siege of Khaybar (Q. 48: 15), the expedition to Tabuk (Q. 9: 29–35;) or the farewell sermon of the Prophet in Q. 5: 1–3. It is noteworthy that these reports do not display a special artistic literary shaping, nor do they betray any particular pathos. It comes as no surprise, then, that, unlike the situation in Judaism and Christianity, where biblical history has been fused to form a mythical drama of salvation, no such great narrative has arisen from the Qur'an itself. A metahistorical blueprint of the genesis of \*Islam was constructed only later, through the *sira*.

**Quraysh** The \*tribe of the prophet \*Muhammad, inhabitants of \*Mecca. Apparently since the 5th century AD, Quraysh established an economic and religious system based on a network of agreements with other Arabian tribes, and perhaps also with powers outside the \*Arabian Peninsula. Their system encompassed \*trade, management of the \*pilgrimage to the \*Ka'ba, and succour for the Qurayshite poor. Elders ran the town jointly, always trying to avoid external and internal \*feuds. Being pagan, or henotheists, and having their own customs, Quraysh actively opposed \*Muhammad and his monotheistic beliefs and laws (\*Ibn Ishaq, \*Tabari VI). They were reconciled to \*Islam in AD 630, and their former high status was restored and enhanced by the Prophet's policy. They became the ruling elite of the Islamic empire. The \*caliphs in \*Medina and the subsequent two dynasties (\*Umayyads and \*Abbasids, based in \*Damascus and Baghdad respectively) were Qurashis. However, many Qurashis remained in the \*Hijaz and opposition movements were often led by Qurashis too. The caliphal office, if not real power, remained with Quraysh until its extinction by the Mongols (1258). Local power in the \*Hijaz remained Qurashi.

E. Landau-Tasseron, 'Arabia', in *NCHIslam*, 398–413.

**qurra'** A term applied to groups active in political and military events of early \*Islam. Its meaning and their identity are disputed. Most commonly it is read as the plural of *qari'* (reader or reciter) and interpreted as referring to those skilled in reading or reciting the \*Qur'ān. In later Islam that is the usual sense of the word, but there are problems about applying it to the *qurra'* who are reported as fighting for the \*caliphs against the \*Ridda tribes (632–3), supporting and then opposing \*Ali in the First \*Arab Civil War (656–61), and taking part in the anti-\*Umayyad rising of Ibn al-Ash'ath (c.703). M. A. Shaban and G. Juynboll, deriving *qurra'* from the Arabic for 'village' (*qarya*), identified them with certain Arab settlers in \*Mesopotamia. N. Calder linked *qurra'* with Arabic *qar'* ('period of time') and identified them as temporary fighters. GRH

*EQ* s.v. Reciters of the Qur'an (Asfaruddin and Melchert).

*EI* 2 vol. 5 (1978) s.v. Qurra, 499–500 (Nagel).

**Qurra b. Sharik** \*Arab governor of \*Egypt from 709 to 714. Originating in the \*Syrian town of \*Qinnasrin, Qurra had served the \*Caliph al-\*Walid I (r. 705–15) as one of his secretaries before being appointed head of the wealthy and important province of Egypt. While narrative \*Arabic sources describe Qurra as one of the dynasty's ruthless and oppressive governors in keeping with their general anti-\*Umayyad sentiments, the \*papyri show another side. While Qurra's letters in \*Greek and Arabic to the \*pagarch of Ishquh/\*Aphrodito contain countless warnings to pay taxes in time, they also show the governor insisting on the fair treatment of Egyptian subjects concerning tax payments and legal justice. Qurra organized a tax census, supervised the registration of fugitives, and drained land to have it planted with sugar cane, all leading to an increase of Egypt's tax returns. He also enlarged the main \*mosque of \*Fustat. Qurra's brother Marthad was governor of Qinnasrin for al-\*Walid I. PMS

N. Abbott, *The Kurrah Papyri from Aphrodito in the Oriental Institute* (1938).

**Qusayr 'Amra** Small \*Umayyad audience hall and \*bathhouse complex, with associated well and \*cisterns, shielded from flash floods by a protective wall, and associated with a \*mosque and other building works. The complex lies approximately 85 km (52 miles) east of \*Amman in the limestone desert. The interior of the audience hall and bathhouse carries the most extensive surviving wall paintings from Late Antiquity. Inscriptions show that the site was developed by al-Walid b. Yazid (later \*Caliph al-\*Walid II, r. 743–4) during the reign of his uncle, Caliph \*Hisham (r. 724–43).

The wall paintings include diverse subjects associated with royal power in the Late Antique world, among them artisans at work, the signs of the \*Zodiac, \*hunting scenes, and explicitly erotic images of naked women bathing and dancing, indicating that Islamic injunctions against figural representations were relaxed in the private and secular sphere. The choice of imagery, not least the complexity of the astronomical information, suggests that the artists and/or \*patron had a significant knowledge of Greek science and literature. The *caldarium* \*dome represents the signs of the Zodiac and a number of constellations from the northern hemisphere in the earliest known astronomical representation on a curved surface. The image of an enthroned prince in the audience hall and the so-called 'six kings' image in the western aisle have attracted particular attention as visual representations of Umayyad power and authority. # R

**rabbis and rabbinate** Rabbis were self-proclaimed Jewish religious leaders in Roman \*Palestine after the destruction of the Temple in AD 70 and in Babylonia from the 3rd century onwards. There is no evidence of the existence of a rabbinic movement outside the Near and Middle East in Late Roman and early Byzantine times. Rabbis, who had ordinary professions and families, devoted their lives to Torah study and discussion, the instruction of small circles of students, and halakhic advice (i.e. advice in matters of Jewish religious law) to lay people. They were not leaders of local communities in Antiquity, although individual rabbis could be appointed to local offices (e.g. as judge or teacher) by the \*Patriarch and/or the communities themselves. Their interest in communal matters seems to have varied. Communal involvement seems to have increased from the 3rd century onwards, after R. Yehudah ha-Nasi was \*Patriarch, when relatively more rabbis were present in the major \*cities of Judaea (\*Lydda), the Galilee (\*Sepphoris and \*Tiberias), and the coastal plain of \*Palestine (\*Caesarea).

The main function of rabbis was to interpret the Torah and to apply it to the various circumstances of their own times. The Torah was the most important body of Jewish religious law and Torah study and observance the main marker of Jewish identity. Rabbis developed halakhic rules for all circumstances of daily life, from family matters to damage to one's neighbours' property. Their halakhic worldview was all-encompassing and linked to the notion that one's relationship to God should be enacted in everyday life with its social and economic practices.

Men could become rabbis themselves after many years of study with one or more rabbinic masters. Observation of a master's practices was as important as memorization of his opinions. Once a teacher considered his disciple sufficiently learned and others asked him for advice, a student would be called 'Rabbi' (lit. 'my master'), but the allocation of the title remained disputed. Rabbis 'agreed to disagree' (Shaye J. D. Cohen) on almost all issues they discussed but, at the same time,

considered each other's views part of the so-called Oral Torah which was traced back to Moses at \*Sinai, that is, it was believed to possess divine legitimacy.

In Babylonia a rabbinic movement developed from the 3rd century AD onwards which was modelled after the Palestinian rabbinic movement. In the 3rd century, Babylonian scholars travelled to Palestine to study with Palestinian masters. Upon their return they set themselves up as rabbis in Babylonia (Persian \*Mesopotamia) and maintained relations with Palestinian colleagues. In both Palestine and Babylonia rabbinic legal and exegetical traditions and stories about rabbis' practices were transmitted by successive generations of students and eventually collected in the Palestinian \*Talmud (Yerushalmi), edited in the 4th–5th centuries, and the Babylonian Talmud (Bavli), edited in the 6th–8th centuries. **Rabbula Gospels** Illustrated \*Syriac Gospel manuscript, now in the Laurentian Library at Florence (ms. Plut. I. 56), written, according to the lengthy colophon, in AD 586 at the \*monastery of S. John of Zagba, by the monk Rabbula. The text is the \*Peshitta version of the four Gospels, including prefaces and canon tables. The relationship between the text and the illustrations, which are all grouped together on the first fourteen folios of the manuscript, is a matter of discussion among scholars.

**Rabi'a** Islamic-era genealogical sources count the Rabi'a tribal group among *al-'arab al-musta'riba* (the Arabized \*Arabs), and ascribe common descent from Nizar to them and to Mudar. Rabi'a supported the \*Kindite ruler al-\*Harith b. 'Amr (*fl.* late 5th/early 6th cent. AD). In Islamic times, elements of Rabi'a are found allied both with the 'northern' and 'southern' factions of the Arabian elite, in different times and places.

**rachinburgi** Term for \*court \*assessors and local repositories of legal knowledge who appear in Frankish sources attesting \*law and legal procedure. The term is sometimes translated as 'law-speakers' because of their role in declaring the law in \**Lex Salica*. Their resemblance to Roman-law *boni homines* has sometimes confused scholars, and also, it seems, the writers of the early Frankish legal \*formulae, where both terms appear.

**Radagausius** \*Gothic King who in 405/6 led a large, ethnically diverse force into \*Italy from the Middle Danube basin. Before the onset of the Hunnic crisis in 376, no Goths had lived so far west. Radagausius' force reportedly ran to hundreds of thousands, but it certainly comprised men, women, and children, and \*Stilicho had to mobilize 30 regiments as well as barbarian auxiliaries (including the \*Huns of Uldin) to counter it. Eventually, a substantial elite component of Radagausius' army (several thousand strong) transferred its allegiance to the Empire, leaving Radagausius to be executed and many of his lower-status followers to be sold into \*slavery. Only two years later much of this elite group probably transferred its allegiance again to \*Alaric's new \*Visigothic alliance, when many of their wives and children, quartered in Italian cities, were killed in the pogroms which followed the fall of Stilicho.

**Radbod** King of the \*Frisians (d. 719). He first appears c.689 as \*Dux (in Frankish sources) or *rex* (in \*Anglo-Saxon sources) of the Frisians. His power was contested by the \*Franks in the Rhine delta area, and, after a battle near \*Dorestad, \*Pippin II took over Frisia south of the Rhine. A long period of latent conflict between Pippin and Radbod followed, during which Frankish and Anglo-Saxon missionaries tried to convert Radbod to Christianity, and eventually contributed to a reconciliation which saw \*Grimoald, the son of Pippin, marry Theudesind, the daughter of Radbod. On Pippin's death in 714, however, Radbod rose up against the Franks and recovered Rhenish Frisia. His death in 718 was celebrated as the victory of Christianity over \*paganism. SL

**Radegund** (d. 587) Saint and queen of \*Chlothar I, later founder of the \*Monastery of the Holy Cross at \*Poitiers. When the \*Franks overthrew the \*Thuringian kingdom (c.531), Radegund, a member of their royal family, was carried off to Chlothar's kingdom and eventually became his wife. She persisted in her religious devotions as queen, however, and when her brother was murdered on Chlothar's orders, she obtained permission to leave the \*court, and had herself consecrated a \*deaconess by Bishop \*Medard. She lived ascetically at the royal \*villa of Saix, before she founded (with Chlothar's support) a monastery for women at \*Poitiers in the late 550s, and obtained a monastic Rule from \*Caesaria the Younger at \*Arles. At the Monastery of the Holy Cross she is said to have lived a strictly ascetic, self-mortifying life as a humble nun under the authority of the abbesses Richilda and Agnes, while using her political influence to obtain \*relics for her monastery from the East, most notably a fragment of the True \*Cross from the \*Emperor \*Justin II and the \*Empress \*Sophia, and to mediate in the recurrent conflicts within the \*Merovingian royal family. One regular conduit to the outside world was her close friend and admirer \*Venantius Fortunatus, who wrote numerous poems to her and Agnes. A lengthy \*letter of Radegund to the bishops on the safeguarding of her monastery is quoted in full by \*Gregory of \*Tours (*HF* IX, 42) in the context of the scandal that broke out in the community shortly after her death. Gregory gives a vivid account of Radegund's obsequies, at which he officiated (*Glory of the Confessors*, 104). Fortunatus wrote the first of her two *Lives* shortly afterwards (*BHL* 7048). This was complemented c.600 by a second

**Radulf** King of \*Thuringians, fl. 639. Appointed \*Dux in Thuringia by the Frankish King \*Dagobert I c.633, and led successful military campaigns against the Wends. He revolted against \*Sigibert III in 639 and, after defeating the \*Austrasians in battle, declared himself king. RVD

*PLRE* IIIB, Radulfus.

Ebling, *Prosopographie*, no. CCLXI.

**Raetia Prima and Raetia Secunda** Two Alpine \*provinces resulting from the division of the former single province of Raetia. Raetia Secunda lay north of Raetia Prima and had \*Noricum to the east and barbarian territory to the north and west; its principal city was Augusta Vindelicorum (Augsburg, Germany). Raetia Prima was bounded on the south by the provinces of northern \*Italy and on the west by \*Maxima Sequanorum; its principal city was Curia Raetorum (Chur, Switzerland).

The \*Verona List has only one Raetia, possibly in error, but \*Ammianus Marcellinus names them in the plural when describing \*Constantius II leading resistance to the \*Alamanni in 355 (XV, 4, 1). The \**Notitia Dignitatum* records Raetia Prima and Secunda, each governed by a \*Praeses (occ. 1, 43) in the \*Dioecesis Italiae (II, 22–3), but with a single military command (occ. XXXV).

Although not rich provinces, they were strategically important for control of important routes between

\*Italy, the \*Balkans, and barbarian lands beyond the Danube \*frontier. Raetia was a key military zone during the Marcomannic Wars in the late 2nd century; the area was overrun by Alamanni in the 5th century. ECD *TIR* L-32; M-32.

*New Pauly: Antiquity s.n.* Raeti, Raetia.

**Ragamfred** \*Mayor of the Palace in \*Neustria-  
\*Burgundy, 715–17. After the expulsion of the \*Pippinids from Neustria in 714, he allied with the \*Frisian \*Radbod and attacked \*Austrasia, but was defeated together with King \*Chilperic II by \*Charles Martel at \*Vinchy in 717. He retreated to his base in Angers and after attempting to regain power in 724, remained there until his death in 731. Ragamfred was the last independent leader of Neustria. PJF

Ebling, *Prosopographie*, no. CCLXV.

**Ragnachar** \*Frankish King at \*Cambrai, fl. late 5th–early 6th century and a kinsman of \*Clovis I, whom he assisted against \*Syagrius. He was subsequently defeated by Clovis and executed with his brothers. RVD *PLRE* II, Ragnacharius.

M. Heinzelmann, 'Gallische Prosopographie 260–527', *Francia* 10 (1982), 678.

**Raithu** Monastic area at a \*harbour oasis on the south-west coast of the \*Sinai Peninsula (Wadi al-Tur/Ras Raya), active from at least the 5th to the 11th century. Late antique sources blame barbarian raids for the \*martyrdom of 40 monks from Raithu (on the same day as another 40 perished at the Monastery of Mount \*Sinai, according to the *Report* written by the monk Ammonius (*BHG* 1300). \*Cosmas Indicopleustes identified the site with biblical Elim, and \*John Moschus visited in the late 6th/early 7th century. At about the same time, the monk Daniel of Raithu wrote the *Life* of \*John Climacus (*BHG* 882). AY *BHG* 1300: ed. in D. Tsames and K. A. Katsanes, *To Martyrologion tou Sina* (1989).

**Rakote** See ALEXANDRIA.

**Ramadan** The ninth month in the \*Islamic calendar, and the only month named in the \*Qur'an (2: 183–7), which prescribes \*fasting (Ar. *sawm*) every day from sunrise to sunset. In the classical legal tradition, this is described as abstention from the ingestion of food, drink, and any other substances, as well as from sexual intercourse, during these hours. The month is viewed as a period of purification of religious practice, and the Qur'an is traditionally read in its entirety at nightly superogatory prayers over the course of the month. The end of the fast is commemorated by Eid al-Fitr, the Feast of the Fast-Breaking. NK

*EI* 2 vol. 8 (1993) s.v. Ramaḍān, 417–19 (Plessner).

**ranks in civil service** Ranking structures in the imperial \*administration of the Later Roman Empire varied between branches of the civil service. It happens that the best-documented \**officium* in the central administration is that of the Sacrae \*Largitiones, as the structure of the *largitionales* is summarized in a law of 384 (*CJust* XII, 23, 7; cf. *CTh* VI, 30, 7) and in the \**Notitia Dignitatum* (or. XIII, 21–35 and occ. XI—the latter including provincial offices). See table. Senior *largitionales* received equestrian \*titles of honour at the grades of *perfectissimus*, *ducenarius*, \**centenarius*. The *epistulares* were probably also of equestrian rank. The senior *perfectissimus* within the Scrinium Exceptorum was \*Primiscrinus for the entire Officium Largitionum. More junior *largitionales* were graded in *formae I–III*. *Privatiani* were perhaps graded similarly. The *castrensi* were graded in *formae I–III*. There were waiting lists of supernumeraries, also graded, and progression was regulated. The *Notitia Dignitatum* lists the titles of officials in many other *officia*, both palatine and provincial, though it gives much less detail concerning ranks. AGS Jones, *LRE* 571, 583–5.

**rape** In Late Roman \*law rape was among the most heinous offences, and was punished by death without amnesty. A harsh statute of \*Constantine I on *raptus* (*CTh* IX, 24, 1) was concerned with abduction \*marriage rather than rape, and also penalized the girl regardless of her consent. Rape and violent abduction were common in the post-Roman West and are handled as serious crimes in all Germanic codes. In Persian law, rape was punished by a fine. AAr

**Ratiaria** (mod. Archar, Bulgaria) Capital of \*Dacia Ripensis and military base on the Danube \*frontier. Its fortified area (c.30 ha, 74 acres) probably includes an early 4th-century extension. The \*Huns sacked it in 440–1, but an \*inscription and \*tile stamps (*IGLRomania* 112 and 1113) indicate restoration by \*Anastasius I, and \*Procopius records similar work by \*Justinian I (*Aed.*

IV, 6, 24). The \*Avars took it in 586. Excavations have revealed the west gate and a large 4th-century hall with \*mosaics, rebuilt in the late 5th/6th centuries. ER

**rationales (Gk. *katholikoî*)** Roman financial officials. The most important *rationales* were those with general responsibility for \*taxation, mints, and mines under the \*Rationalis Rei Privatae (later known as the \*Comes Rei Privatae), who was a member of the \*emperor's inner circle (\*Comitatus). He was in charge of revenues derived from and affairs pertaining to crown properties and those of the state (the \*Res Privata), and of local *rationales* who oversaw such affairs at the level of the \*dioecesis and the \*province. See also TAXATION, ROMAN AND POST-ROMAN. PS

Jones, *LRE* 48–50, 376, 412–14, 427–8, 485–6, 492.

**Rationalis Rei Summae** High-ranking officer with responsibility for the collection of \*taxation, minting, and \*mining. From the late 3rd century, however, his office was eclipsed by that of the \*Praefectus Praetorio, whose initial responsibility for the collection of supplies for the \*army in kind burgeoned into a more wide-ranging fiscal jurisdiction (mirroring growing military domination of affairs of state and the progressive re-monetization of taxation in kind). The Rationalis Rei Summae nevertheless remained responsible for mines and mints, certain money taxes, and levies of bullion. The term was also used for the chief financial officer (Gk. \*Katholikos) of a \*dioecesis. *See also* COMES REI PRIVATAE; COMES SACRARUM LARGITIONUM. PS Jones, *LRE* 412–14; 427.

**rations, military** Roman troops received a regular ration allowance (\**annona militaris*), usually paid in cash; troops therefore often provided their own food. However, for campaigns the state provided rations. A law of \*Constantius II from 359 (*CTh* VII, 4, 5) ordered that troops be issued with twenty days' rations (*expeditionalis annona*) for campaigning purposes. These included double baked biscuit (\**bucellatum*), or \*bread, \*wine (either regular wine or *acetum*), and \*meat (pork or mutton). The dried goods could be supplemented by locally foraged \*fruit and \*vegetables. Persian \*armies had similar systems, but most barbarian \*armies did not, so their operations were limited logistically, and they were frequently forced to retreat or disperse because of lack of food and fodder. HE

**Rauching** Frankish \*Dux (576–87). A leading magnate who, according to \*Gregory of \*Tours, apprehended clerics sent by Queen \*Fredegund to assassinate \*Childebert II in 585, only then to plan a coup against the king in 587. The plot was revealed to Childebert by his uncle \*Guntram, and Rauching was brutally executed. RVD  
*PLRE* IIIB, Rauchingus.  
*PCBE* IV/2, Rauchingus.

**Rava (Rav Abba bar Rav Joseph bar Hamma)** (d. 352) Head of the \*Rabbinic academy at \*Mahoze, a suburb of the \*Sasanian winter capital of \*Ctesiphon. Rava is known for his numerous legal disputes with \*Abbayei, the head of the \*Pumbedita academy until his death in 338. Save for six cases, all these disputes were resolved in favour of Rava. Whereas Abbaye considered transmitted knowledge to possess ultimate legal authority, Rava apparently maintained that independent reasoning trumps tradition. Rava considered devotion to the study of Torah to be the highest form of Jewish commitment, and thus one who studies the laws of sacrifices no longer requires the actual rituals. In a

similar vein, one who studies Torah is greater even than the High Priest who enters the Holy of Holies.

Rava played a central role in the development of *aggadah* and *midrash* in rabbinic Babylonia, and appears to have been deeply influenced by Palestinian systems of *halakhic* exegesis. Ctesiphon was at times the seat of the \*Exilarch as well as the local Christian \*bishop, and Rava's proximity to the Sasanian capital brought him into contact with a broad range of non-rabbinic \*Jews as well as prominent Gentiles. One of these, the Talmud reports, was the mother of King \*Shapur II. The Talmud is also aware of numerous converts to Judaism residing in Mahoze, some of whom maintained ties with Rava. IMG  
Neusner, *Babylonia* vol. 4; Elman, Rava.

**Ravenna, churches of** After \*Ravenna became the normal residence of the Western \*emperors in 402, the city experienced an architectural boom. Its rulers, \*bishops, and wealthy citizens built churches, chapels, \*baptisteries, and an episcopal palace to suit the needs of the growing population and to express their faith and wealth. Architecturally, the buildings situate Ravenna between East and West: while their \*domes are constructed in the Italian mode with hollow ceramic vaulting tubes (*tubi fittili*), the centralized plan of S. Vitale reveals the influence of \*Constantinople. These buildings were decorated lavishly with some of the finest wall \*mosaics to survive from the period; although heavily restored, details of the original decoration are preserved in the *Liber Pontificalis Ecclesiae Ravennatis* of the \*priest \*Agnellus (c.805–after 846). The buildings are described in chronological order of their construction:

#### *S. Giovanni Evangelista*

Built by the \*Empress \*Galla Placidia after 425, the \*basilica was dedicated to S. John the Evangelist in return for his act of saving Placidia and her children from a storm at sea. The church featured portraits of Placidia and her Theodosian relatives and forefathers, but was destroyed in the Second World War.

#### *Mausoleum of Galla Placidia*

Also built by Galla Placidia between 425 and 450 and originally thought to be her mausoleum, this cruciform chapel, probably dedicated to S. \*Lawrence, was connected to the south end of the \*narthex of the Church of S. Croce. The interior is adorned with high-quality glass wall mosaics. Above the entrance, Christ is represented as the \*Good Shepherd tending His sheep. On the lunette of the south arm, S. Lawrence carries a processional \*cross and strides towards the instrument of his \*martyrdom, a fiery gridiron; opposite, an open cabinet contains the Four Gospels. The barrel-vaulted arms of the chapel are decorated with \*foliage mosaics

of acanthus and grapevine scrolls, while the end of the west arm of the chapel features a lunette of \*deer approaching a spring (Ps. 42 (41): 2). In the central dome, a golden \*cross appears in a starry \*sky against a dark blue background, and the four symbols of the Evangelists (also the 'living creatures' of Rev. 4: 7) appear at the corners; the lunettes below depict eight Apostles who raise their right arms in gestures of \*acclamation.

#### *Baptistry of the Orthodox and Cathedral*

Associated with the large cathedral built by Bishop Ursus c.405, the \*octagonal baptistry was built by Ursus and redecorated by his successor, Bishop Neon (c.450–73), in the 450s. The building has four projecting apsidioles, a central octagonal font, and \*marble, mosaic, and \*stucco decoration. In the dome, S. John the Baptist baptizes Christ in the River Jordan. The Twelve Apostles, each named, process around the dome; empty \*thrones prepared for Christ at the Last Judgement (*Hetoimasia*) and the Four Gospels encircle the procession. Below, the \*stuccoes of prophets and evangelists standing within architectural niches were originally painted. The lower zone is decorated with mosaic \*inscriptions which paraphrase or quote verses from the \*Bible related to \*baptism.

#### *Baptistry of the Arians*

Constructed to the south-west of the \*'Arian' Cathedral (now the Church of S. Spirito), the octagonal baptistry was built of reused Roman \*bricks in the early 6th century and originally featured a covered ambulatory. Only the dome mosaics survive; these were inspired by those of the Baptistry of the Orthodox and were executed between 500 and 550. The Twelve Apostles surround the central scene, the Baptism of Christ, and process towards a throne which has been prepared for Christ (*Hetoimasia*).

#### *Archbishop's Chapel (Capella arcivescovile)*

Connected to the episcopal palace, this functioned as a private chapel for the archbishop. The cruciform structure, built by Archbishop Peter II (494–520) during the reign of \*Theoderic the \*Ostrogoth (493–526), includes a mosaic in the narthex of Christ dressed as a victorious \*emperor trampling a \*lion and a serpent: he holds an open \*book inscribed 'I am the Way the Truth and the life' (John 14: 6), a key text used in arguments against Arians and \*Homoeans. The chapel vault is decorated with mosaics of four \*angels elevating a gold chrismon, the symbols of the Four Evangelists, and medallions of twenty-four apostles and martyrs.

#### *S. Apollinare Nuovo*

Built by Theoderic as his \*palace church c.500, originally dedicated to Christ, rededicated to S. \*Martin by

Archbishop \*Agnellus in the 560s. The church was paved with \*opus sectile and featured a set of columns, bases, \*capitals, and liturgical \*furniture of \*marble imported from \*Proconnesus, probably carved in Constantinople. The wall mosaics of the west end of the lower zone depicted the city of Ravenna, with the colonnaded \*façade of his \*palace (labelled Palatium), male and female figures (probably Theoderic and his relatives or officials) standing in front, and the \*harbour of Classis (Classe) opposite. At the east end are mosaics of Christ enthroned (on the south side) and the Virgin \*Mary and Child (on the north). In the second upper zone, haloed prophets or evangelists appear against a gold ground. The top zone depicts a Christological cycle, with \*miracle scenes on the north wall and scenes of the Passion on the south wall. After the \*Byzantine invasion and occupation, Archbishop Agnellus replaced the figures of Theoderic and his court with images of \*curtains and replaced the original lower-zone mosaics with images of \*processions of female saints and the Magi (on the north side) and male saints (on the south) moving toward the \*apse.

#### *S. Apollinare in Classe*

Basilica constructed by Bishop Ursicinus between 533 and 536 in the suburb of Classe, featuring a wooden \*roof, floor mosaics, and massive columns of \*Proconnesian marble carved on site. The church served as the burial church for the archbishops of Ravenna from the late 6th century. The only mosaics to survive are those of the apse and triumphal arch. In the apse conch is a unique image of the Transfiguration: a monumental jewelled cross with Christ's face in the centre appears in a blue medallion dotted with stars, flanked by the prophets Moses and Elijah. The lower half of the mosaic depicts an \*Earthly Paradise in which S. Apollinaris, the patron saint and first Bishop of Ravenna, stands and extends his hands in \*prayer. Twelve lambs signifying the Apostles approach the saint from either side. Below, the bishops of Ravenna—Ecclesius, S. Severus, S. Ursus, and Ursicinus—stand between the apse \*windows. Mosaics of the archangels Michael and Gabriel dating to the mid-6th century decorate the base of the triumphal arch. The north and south apse walls display 7th-century mosaics of the Emperor \*Constantine IV giving privileges to the Church of Ravenna, and Abel, Melchisedek, and Abraham and Isaac presenting offerings.

#### *S. Michele in Africisco*

This small church, built c.545 by the \*banker \*Julianus Argentarius and Bacauda, was dedicated to the Archangel Michael, but has been put to commercial uses since the early 19th century. Reproductions of the apse and triumphal arch mosaics of the church, which depict

Christ flanked by the archangels Michael and Gabriel, were executed by the restorer Giovanni Moro in the 19th century; they are now in Berlin, though fragments of the 6th-century heads of Christ and an angel survive in Torcello and London.

### S. Vitale

Founded by the Bishop Ecclesius in the 520s to replace a small 5th-century chapel, the building was finally consecrated by the Archbishop \*Maximian in 547. The project was funded by Julianus Argentarius, who contributed 26,000 \*solidi to fund the elaborate decoration, including large amounts of Proconnesian marble. The centrally planned church is laid out as a double-shelled octagon, with an ambulatory around the domed central core, influenced by buildings in Constantinople and \*Milan. The wall mosaics of the sanctuary are substantially original. Christ sits enthroned on a globe in the apse conch, flanked by archangels, the patron saint Vitalis, and Bishop Ecclesius, who presents a model of the church. The heavenly cities of \*Bethlehem and \*Jerusalem appear on the triumphal arch above. The sanctuary vault is adorned with an \*inhabited scroll populated with \*birds, \*animals, and \*fish; at its apex, four angels elevate a wreath framing the Lamb of God. On the apse walls, \*Justinian I and \*Theodora appear with their retinues; Justinian holds a \*paten, while Maximian stands behind him (replacing a portrait of his predecessor, Victor), and Theodora offers a chalice. On the upper sanctuary walls, the Four Evangelists are juxtaposed with the Old Testament prophets Jeremiah and Moses. Below, the south lunette depicts Abel and Melchisedek presenting offerings—instances of \*Old Testament \*typology for the offering of the \*Eucharist; scenes from the story of Abraham, including the sacrifice of Isaac, decorate the north lunette. Portrait medallions of saints decorate the soffit of the arch in front of the sanctuary.

### Ravenna, city topography and secular buildings

After the \*Emperor \*Honorius relocated the principal imperial residence in the West from \*Milan to Ravenna in 402, the \*city experienced an intense period of development within the earlier Roman settlement (*oppidum*). New city walls were built in the late 4th or early 5th century, and the imperial administration reorganized Roman watercourses and dug new canals, surrounding the city with water. Honorius or his successors built an imperial \*palace (Palatium, known as the 'Palace of \*Theoderic') on the foundations of an earlier \*villa, which featured a large colonnaded courtyard and apsidal reception hall paved with \*opus sectile; only a small portion of the complex has been excavated. The imperial \*mint (Moneta Aurea) was constructed near the palace. Other imperial and civic buildings remain undiscovered. Theoderic, King of the \*Ostrogoths, who took control of the city in 493, renovated the palace, adding a \*triconch dining room (*\*triclinium*) and new \*mosaic pavements; repaired the Roman \*aqueduct; and reorganized the warehouses and workshops at Classe, the port of Ravenna. His two-storey tomb, the Mausoleum of Theoderic, built of large blocks of imported Istrian limestone, is unique in its ten-sided ground plan and its restrained decoration. After the Byzantine reconquest of the city, repairs were made to some monuments, including the \*aqueduct (in the early 7th cent.), and new buildings such as public \*baths were built. The \*exarchate of Ravenna used the Palace of Theoderic as its administrative centre.

**Ravenna, exarchate of** Term applied to the territory or province governed by the Byzantine governor-general or \*exarch based at \*Ravenna from the 570s, although the actual word *exarchatus* was not used (first in the \**Liber Pontificalis* of \*Rome) until after the death of \*Eutychius the last exarch and the final conquest of the territory of the exarchate by the \*Lombards in the mid-8th century. The exarchate was subdivided into half a dozen individual areas, each under a \*Dux. Initially it encompassed lands extending north of the Po River, but \*Lombard expansion and rebellious imperial *duces* gave rise to progressive losses, and its boundaries were stabilized only after the early 7th century.

It was perhaps at this point that a separate southern jurisdiction, known as the Pentapolis, was created: this district extended from \*Ariminum (Rimini) to Ancona, and defended both the Adriatic coast and the Via Flaminia, the key \*road to \*Rome across the Apennines. Additional reductions in territory occurred following Lombard military operations under \*Rothari and \*Liutprand in particular, shrinking the exarchate's western boundaries back towards Bologna.

Defence of the exarchate will have been arduous given its extended frontier along the Po, in the western Po plain, and in the Apennines in \*Aemilia and Tuscany. The Po frontier will have been partly overseen by naval riverine units and reinforced by defended \*cities and *castra* containing troops, such units, for example, as are documented for Brescello, Ferrara, and Argenta. Important *castra* also lay along the Via Aemilia, which formed the main land route across the territory, to the rear of the Apennines. These *castra* were supported by lesser fortresses like Montebellium, Verabulum, and Persiceta, sites documented by \*Paul the \*Deacon and in \*George of \*Cyprus, *Descriptio Italiae*. Little is known of the way in which defence along these lines was actually articulated, but it was presumably maintained by the observation and control of routes, under the local authority of \*comites and tribunes. **Ravenna, See of** The \*bishops of \*Ravenna gained particular authority through the increase of Ravenna's importance as an imperial \*city. \*Agnellus in his *Liber Pontificalis Ecclesiae Ravennatis* claimed that the Apostle Peter made S. Apollinaris the first Bishop of Ravenna, but the first firmly attested bishop is Severus, who attended the Council of \*Serdica in 343. During the 5th century, with \*emperors residing in Ravenna, the Church enjoyed imperial benefaction. \*Peter Chrysologus (bp. 432–50) secured Ravenna's \*metropolitan authority over the \*province of \*Aemilia. Under Eastern imperial control (540–751), emperors enhanced the Church's authority as a means to strengthen political control in \*Italy. \*Justinian I in 546 appointed as bishop \*Maximian, who is depicted in the sanctuary \*mosaic of the Church of S. Vitale and whose \*ivory throne survives; Justinian increased Maximian's metropolitan authority with the \*pallium in order to advance imperial interests in the \*Three Chapters Controversy. The

\*Pragmatic Sanction of 554 transferred to the See of Ravenna properties of the former \*Homoean (\*Arian) Church patronized by the \*Ostrogoths. Probably from this time, the Bishop of Ravenna obtained \*metropolitan authority over all of \*Flaminia, \*Liguria, and Istria. The Church also controlled scattered properties from \*Ariminum (Rimini) to \*Perugia and in \*Sicily. In 666, \*Constans II granted Ravenna autonomy (*autocephalia*) from the Church of \*Rome, signalling the continued importance of the See in forwarding Eastern imperial ambitions in Italy. Ravenna's bishop worked closely with the \*exarch in the appointment of provincial governors in northern Italy, in judicial administration, and in the management of public works and the \*food supply at Ravenna. MSB

Deliyannis, *Ravenna*.

T. S. Brown, 'The Church of Ravenna and the Imperial Administration in the Seventh Century', *EHR* 94 (1979), 1–28.

**Ravenna and Classe** Ravenna is a \*city in north-east \*Italy, formerly a major Adriatic \*port but now c. 10 km (c. 6 miles) distant from the coast. The port city of Classe (Lat. Classis = fleet) grew up to the south of its \*harbour channel. Between Ravenna and the sea was the suburb of Caesarea 'full of luxury' (\*Jordanes, *Getica*, 151).

#### Architecture and infrastructure

Ravenna is justifiably famous for its remarkable collection of architectural and artistic survivals from the late 4th to 7th centuries AD. Promoted to principal residence of the Western Roman \*emperors in the early 5th century at a period of substantial military upheaval (incursions by \*Visigoths in \*Dalmatia and subsequently \*Italy, covering over a decade; invasions and raids into \*Gaul and \*Germania across the Rhine \*frontier), the residence in the city of emperor, \*court, and \*metropolitan \*bishop conditioned monumental investment comprising \*palaces (imperial and episcopal), cathedral and \*baptistery, churches, \*monasteries, \*circus, and defences, together with expansion of the harbour complex of Classe. Sizeable urban growth is thus attested—a rarity in the Late Roman West.

Little is known of the deeply buried Roman, earlier imperial *colonia*, whose outline is incorporated in the Late Antique city's south-western corner; there was probably much suburban development in the form of \*villas and workshops. This was all sacrificed when the new capital was laid out. The new defences were probably composed of \*brick \*spolia from demolished villas and monuments, with other material drawn from further afield. The walls are fairly well preserved (in places to 3 m, nearly 10 feet, in height), but follow a somewhat irregular course, reflecting perhaps the marshy ground conditions described by \*Sidonius (*ep.* I, 5, 5–6 of 467)

and \*Procopius. Deep \*timber piles are known to have been used to reinforce the circuit's foundations.

The Late Roman town plan is fairly well understood, with the \*city gates recorded, \*street lines attested, as well as water courses and probable canals. However, few secular \*houses are known yet in detail. The first \*palace complex is presumed to have lain in the north-west sector; however, the later \*Ostrogothic palace was more centrally placed, towards the zone of the presumed circus in the south-east quarter, and it might be argued that this was the area where the later imperial palace also stood. To the south of the city lay the suburb of Caesarea which may have been where the garrison was stationed. Just south of that zone lay the port of Classe (Classis).

### *Ravenna as capital city*

Ravenna became a capital under \*Honorius and \*Stilicho, who was assassinated in the city (\*Zosimus, V, 34). Ravenna maintained that status under the Germanic rule of \*Odoacer (from 476) and, after Odoacer had suffered a three-year siege in Ravenna (Procopius, *Gothic*, V, 1, 7–26), under the Ostrogothic King \*Theodoric (from 493). It then remained the seat of power after the \*Byzantine invasion and occupation of Italy, up until its capture by the \*Lombards in 751. The mint of Ravenna opened in 402 and struck Roman and Ostrogothic \*coinage and again, after \*Belisarius' capture of Ravenna in 540 and the subsequent exarchate of \*Ravenna, Roman coinage until 751. In the late 8th century Charlemagne treated Ravenna with significant respect and struck some coins there even if he denuded its palaces of prized \*marbles and \*mosaics for his own capital of Aachen. Carolingian and Ottonian kings of Italy did not revive Ravenna as their capital, and although it retained some economic significance, it was not important in the Middle Ages, its port silted up, and the coastline shifted.

### *Churches*

Medieval stagnation provided the fortunate circumstances for the survival of Ravenna's treasures, which range from nearly intact 5th- and 6th-century \*basilicas and 10th-century belltowers, to magnificent Late Antique wall and floor mosaics, \*sarcophagi, and a remarkable collection of \*papyri, and texts such as the *Liber Pontificalis Ecclesiae Ravennatis* written by \*Agnellus in the 9th century, which provides details of lost \*inscriptions and insights into contemporary society. The churches did see such changes as the remodelling of \*façades, chapel additions, etc., but not the wholesale rebuildings seen in more flourishing medieval settlements. However, floor levels were constantly raised to avoid the high water-table, and in some churches this meant a sacrifice of some of the ancient

fabric, e.g. reduced columns and entablatures. The extensive restorations of the churches since the 19th century has made possible full sight of the Late Roman architecture, and appreciation of its imperial and royal \*patronage, and of artistic and iconographic evolution across the 5th to 8th centuries.

The churches of S. Apollinare Nuovo and S. Apollinare in Classe, both belonging to the early 6th century, are magnificent expressions of Ostrogothic power, piety, and cultural assimilation. Both were employed for Gothic \*Homoean (\*'Arian') use but rededicated for the Catholic rite by the Byzantines after they captured Ravenna in 540. S. Apollinare Nuovo was the palace church of Theodoric—this palace complex was partly excavated in the early 20th century. It is famous for the mosaic friezes above the nave \*colonnades, one side depicting a procession of 22 female \*virgin saints and the three Magi paying homage to the Virgin and Child flanked by \*angels, the other side a procession of 26 male \*martyr saints approaching the enthroned Christ. Between the \*windows of the clerestory are figures of saints and prophets, and above these are panels depicting Christ's \*Miracles and Parables, and his Passion and Resurrection. Prominent at the entrance end of the long friezes are images of the city-port of Classe and of the palace and cityscape of Ravenna.

The architecturally distinctive Church of S. Vitale in the city's north-west quarter of the capital, partly financed by the local \*banker \*Julianus Argentarius, is best known for two sizeable mosaic panels of the 540s, depicting the Emperor \*Justinian I and his entourage (including \*Maximian, Bishop of Ravenna), and the Empress \*Theodora. The high-quality \*marble work (used extensively also in floors and as veneer) at S. Vitale and the Ostrogothic examples reflect Eastern imports of both materials and craftsmen from Constantinople. King Theodoric also drew on skilled masons and artists for his distinctive \*tomb outside the city's north-east perimeter, with stone imported from across the Adriatic, from Istria; the mausoleum is surmounted by a massive, monolithic \*dome.

### *Classe and trade*

Much wealth derived from the fact that Ravenna was an imperial and royal residence and this favoured networks of \*trade; Sidonius describes how the harbour offered 'every opportunity for commerce'. Excavations at the port of Classe since the 1980s have helped provide information about the commodities of Late Antique life and about the supply systems of Ravenna. The vast numbers of finds recovered attest to imports from all around the Mediterranean and further afield, as well as to the vitality of local production, active well into the 7th century. Workshops, stores, and canals have been excavated, and a striking feature is the reuse of

\*amphorae for drains, \*burials, or, broken up, as bedding for floors or even for \*roads. Classe grew substantially in the 5th and 6th centuries, as is reflected in written references to up to twenty churches and \*monasteries, some suburban. Subsequently, coinciding with \*Arab expansion and Byzantine decay in the eastern Mediterranean, serious decline occurred at Classe, matched by a dramatic reduction in building and maintenance work within Ravenna. Excavations at Classe have shown simple housing in former warehouses, shrinkage of activity zones, burials, etc. The port-city's fate is reflected in the fact that almost no above-ground remains survive, apart from the Church of S. Apollinare and the partly excavated S. Severo complex; plough land and some modern housing now shroud the rest of the ancient site.

**Ravenna Annals** See *CONSULARIA MARSIBURGENSIA*.

**Ravenna Cosmographer** See *ANONYMI COSMOGRAPHIA*.

**Ravenna papyri** Collection of 59 documents, known by the abbreviation P. Ital., preserved in the ecclesiastical \*archive of \*Ravenna, dated 443/4–700/5. They pertain to a wide range of legal matters (\*estate records, donations of property, \*wills, \*manumission), making them valuable for the social, economic, and legal history of \*Italy. Tjäder's edition is superior,

although Gaetano Marini (1805) included documents later unavailable to Tjäder. Most of the P. Ital. originated at Ravenna, being drafted for private individuals or members of the clergy; only a few (P. Ital. 2, 10, 11) relate to affairs of the government. There is a notable contrast in style between the P. Ital. and the rhetorical manner and content of documents from the \*Ostrogothic chancery, such as \*Cassiodorus' *Variae*. Several stable features (inclusion of protocols, signatory witnesses, case narratives, transcription from previous legal documents, and inventories of goods and properties) make the P. Ital. particularly valuable as witnesses to the continuity of legal and administrative habits. Two documents (P. Ital. 8, 34) preserve writing in Gothic.

**Rayy** Biblical Rages (e.g. Tobit 1: 14) and ancient Rhaga, 'the greatest of the cities in Media' (*Parthian Stations*, §7), 8 km (5 miles) south-south-east of Tehran on the \*Khorasan \*road which linked \*Mesopotamia and \*Central Asia. Nearby sites include Cheshme 'Ali, with Parthian remains; Tepe Mil, where a \*Sasanian \*palace stood; and \*Chal Tarkhan, where an elite residence with Sasanian \*stucco has been excavated. According to \*Tabari, Rayy had an important \*fire temple. In 642, \*Yazdegerd III took the fire with him when he fled from the \*Arab conquest after the Battle of \*Nihawand.

J. G. Davies, 'Deacons, Deaconesses and the Minor Orders in the Patristic Period', *JEH* 14 (1963), 1–15.

**Reccared** (d. 601) \*Visigothic king (586–601), responsible for \*conversion of the \*Visigoths from \*Homoeanism ('Arianism') to the Nicene faith and its announcement at the Third \*Council of \*Toledo (589). Reccared worked closely with \*Leander, \*Bishop of \*Seville, to achieve this goal but faced substantial opposition from elements in the Arian Church and Visigothic nobility, putting down at least three rebellions after deciding to convert in 587. The \*Franks used this instability as an excuse to invade Visigothic territory twice (\*John of Biclar, *Chron. s.a.* 587 and 589); they were repelled by Reccared's forces. The Byzantines may also have made some inroads into Visigothic territory in the south during this period. Reccared corresponded about the conversion of his people and \*diplomacy, and ecclesiastical governance with Pope \*Gregory I in the 590s.

**Reccesuinth** \*Visigothic king (r. 653–72). He first reigned jointly with his father \*Chindasuinth from 649 and then succeeded him in 653. He summoned two \*Councils of \*Toledo (653 and 656) and promulgated a code of \*laws, the \*Book of Judges (*Leges Visigothorum*), in 654. Nothing is known of his long reign after he suppressed the short-lived revolt of Froia in late 653. He died at the \*villa of Gerticos in 672. The \*Treasure of Guarrazar (discovered in 1858) includes a votive \*crown bearing his name.

**Reccopolis** \*City in central \*Spain founded by the \*Visigothic King \*Leovigild in 578, probably intended

as a residence for his son, \*Reccared. It was well planned, with a \*palace, a \*basilica, workshops, homes, walls, and an \*aqueduct. Reccopolis mirrored \*Toledo, the Visigothic capital, in its situation on an outcrop above the River Tagus, and \*Constantinople in its role as a co-capital providing a base for central royal power from a second location. It was abandoned during the Muslim period and briefly resettled after the Christian reconquest.

**re-coinage** Re-coinage of divisional coins occurred when reform of the monetary stocks required the withdrawal of the existing currency and the minting of new coins. Particularly evident cases are the reform of AD 348, and the second reform of \*Anastasius I in AD 512.

\*Valentinian I ordered in AD 366–7 (*CTh* XII, 6, 12; XII, 7, 3) that all \*gold cashed by the state should be immediately melted and transported in the form of ingots, to make new coins; a similar law was probably issued also for \*silver. It is from this point onwards that coins bear the marks OB (for \**obryzum*) for gold and PS (for \**pusulatum*) for silver guaranteeing their purity.

**recruiting, military** The Roman authorities exploited sources of military manpower both within and outside the Empire in Late Antiquity. Inhabitants of the Empire were recruited as both conscripts and volunteers, although the mechanisms in place for compulsion suggest this was usually the more important

source. As part of the Late Roman \*taxation system, landowners were required to provide either a number of recruits proportional to the size of their landholdings or the monetary equivalent (*aurum tironicum*), with the government specifying which was to be provided, according to context. It has been suggested that conscription became less important by the 6th century, but the evidence is inconclusive. Hereditary obligation to undertake military service was another feature of Late Roman practices within the Empire. Certain regions of the Empire were recognized as particularly good sources of suitable recruits in Late Antiquity, especially the \*Balkans and \*Isauria. The authorities were also willing to draw significantly on manpower from outside the Empire because of the martial qualities of many of its neighbours. Defeated enemies were often resettled on imperial territory with an obligation to provide recruits (cf. \**laeti*), while others sought service in the Roman army voluntarily, attracted by career prospects which, in some cases, led to senior commands. This aspect of Late Roman recruiting has sometimes resulted in charges of 'barbarization' weakening the effectiveness of the army, but the extent of the phenomenon has been exaggerated, as also its consequences, and there is little reason to doubt the loyalties of such recruits to the empire.

**Red Monastery** \*Monastery near the city of Sohag in Upper \*Egypt, which began as an ascetic community founded by a monastic leader named Pshoi in c. AD 350. By the late 4th century, it had become part of a large monastic federation centred on the nearby \*White Monastery. The federation is best known for its charismatic and powerful leader, \*Shenoute of Atripe (d. 465), who built a monumental \*basilica at the

White Monastery c. AD 450. Approximately 50 years later, the monks of the Red Monastery erected their own church, modelled on that of Shenoute. The \*triconch sanctuary contains the best-preserved ensemble of Late Antique \*sculpture still *in situ* in Egypt, as well as the most extensive surviving example of painted architectural polychromy anywhere in the Late Roman world. Three principal phases of painting were undertaken between about AD 500 and 700. They included monumental depictions in the sanctuary's three semi-domes of the Ascension of Christ (east; first phase), Christ in Majesty (south; third phase), and the nursing Virgin \*Mary (north; third phase). While these subjects belong to an Empire-wide repertoire, other smaller paintings of \*Patriarchs of \*Alexandria, and of monastic leaders of the federation, create an Egyptian and local monastic identity. A major conservation project, completed at the beginning of the 21st century, made it possible to see the previously soot-blackened paintings clearly for the first time in centuries.

ESB

E. S. Bolman, 'Late Antique Aesthetics, Chromophobia, and the Red Monastery, Sohag, Egypt', *Eastern Christian Art* 3 (2006), 1–24.

**Redwald (Rædwald)** (d. 616/27) King of the East Angles (the first recorded). Almost all information about Redwald comes from \*Bede, *HE*, whose list of overkings [\*Bretwaldas] includes him (II, 5), though it is not clear why. He sheltered the exiled \*Edwin of Northumbria, and aided Edwin against Æthelfrith (II, 12). He had received Christian instruction in Kent, but Bede knew someone who had seen the Christian and \*pagan altars which, persuaded by his wife, he maintained in the same fane (II, 15). He was probably not buried in Mound One at Sutton Hoo.

HFF

*ODNB* s.n. Rædwald (Campbell).

S. Keynes, 'Rædwald the Bretwalda', in Kendall and Wells, *Voyage to the Other World*, 103–23.

**referendarii** Judicial clerks and messengers on the imperial staff in the 5th and 6th centuries. They presented the ruler with \*petitions and conveyed and certified his replies and commands. Some might be confidential advisers. They are first mentioned in 427, under \*Theodosius II (*CJust* I, 50, 2), and also appeared in the West, continuing under the \*Ostrogoths (Cassiodorus, *Variae*, 6, 17). Under \*Justinian I, there were three official posts but as many as fourteen who carried out the relevant functions, though a reduction to eight was ordered (*NovJust* 10; Constantine Porphyrogenitus, *de Caeremoniis*, 1, 86).

In the Frankish \*courts of the 6th and 7th centuries *referendarii* appear, in the plural, charged with drawing up documents and certifying royal commands. One

(or more) was entrusted with a royal signet \*ring. A substantial number of Frankish *referendarii* appear to have ended their careers as \*bishops. ACM; AGS Jones, *LRE* 575, 261.

J. B. Bury, 'Magistri Scriniarum, ἀντιγραφῆς and ρεφερενδάρτοι', *HarvStClassPhilol* 21 (1910), 23–9.

**refrigerium** Graveside meals which were a central element in commemorative rites for the \*dead. Christians naturally continued the practice. From the mid-4th century, however, \*bishops such as \*Ambrose of \*Milan in north \*Italy (e.g. \*Augustine, *Conff.* VI, 2, 2) and Augustine in \*Africa (e.g. Augustine, *epp.* 22 and 29) objected to meals at the \*tombs of \*martyrs. In the East meals do not seem to have been condemned as long as they were moderate. Meals at the tombs of the ordinary dead were permitted and are attested until at least the 8th century. ERe

R. MacMullen, *Christianity and Paganism in the Fourth to Eighth Centuries* (1997).

H. Lindsay, 'Eating with the Dead: The Roman Funerary Banquet', in I. Nielsen and H. S. Nielsen, eds., *Meals in a Social Context: Aspects of the Communal Meal in the Hellenistic and Roman World* (1998), 67–80.

**regalia, Persian** While princes and nobles wore small diadems, only the Sasanian King of Kings could wear a diadem with superlatively long, streaming ties. This was worn around the base of his unique regnal \*crown. Early diadems were cloth, but by the time of \*Khosrow II, the kings had adopted a diadem composed of jewelled plaques like the Roman diadem, though retaining the streaming ties. Each king's clothing and crown was distinguished by colour, though all wore red footwear (\**tzangia*). As depicted on \*rock reliefs and \*coins, the kings wear jewelled \*belts, chest harnesses, and cloaks clasped at the chest. In state, the king always appears seated on a throne or standing on a dais holding his sword vertically between his knees (as on the Cup of \*Khosrow). The heroic bull-headed mace (MP *warz*, NP *gorz*) was an important emblem though it was not often portrayed. Precious \*stones and \*pearls proliferated on late Sasanian royal \*dress, which was made of richly ornamented \*silk \*textiles. The king's crown worn in audiences became so heavy that it was suspended from the ceiling on a \*gold chain. The early Sasanian kings crowned themselves or were crowned by their predecessors, until the reign of \*Bahram V (420–38) when the chief priest (*mowbedān* \**mowbed*) began crowning the king. MPC

*EncIran* VI/3 s.v. coronation 277–9 (A. Sh. Shabazi). Canepa, *Two Eyes*, 189ff.

**regalia, Roman and post-Roman** The term regalia is not used in the sense of *insignia imperatoris* until the 12th century AD. \*Emperors wore their regalia particularly on occasions of \*ceremony, such as their \**accessio*, \**adventus*, appearances at public \*entertainments, events marking their \*anniversaries, and \*victory celebrations. Numerous depictions survive on the \*coinage, and on monuments as various as the \*Obelisk-Base of \*Theodosius I in the \*Constantinople \*Circus and the sanctuary of the Church of S. Vitale in \*Ravenna, but until recently, only dubious or fragmentary remains of original regalia were known. In 2006, items unearthed near the Palatine Hill in \*Rome, three lances, four javelins, three orbs, a sceptre, and a standard base, have been (controversially) identified as the imperial \*insignia of \*Maxentius (306–12).

The most immediately identifiable mark of an emperor was the \*Purple, which was kissed in \**adoratio* by those admitted to high office. It might be a civilian \*chlamys, as worn by \*Justinian I at S. Vitale or a military cloak or \**paludamentum*, worn over a metal breastplate (\**cuirass*) and fastened at the shoulder with the distinctive circular \*fibula with three pendants peculiar to emperors. To this \*Constantine I added the diadem, a \*crown characteristic of Hellenistic kings, and his body continued to wear it during his lying-in-state (\*Eusebius, *VCon* IV, 66, 2). The diadem was already by 361 considered so characteristic of an \*Augustus that when \*Julian was proclaimed by his troops at \*Paris a search was made for a suitable substitute, and the \*gold torc of a standard-bearer was used in its place.

Other imperial or royal emblems included the laurel wreath (from the \*Tetrarchy onwards the particular headdress of a \*Caesar), sceptres whether short or long, tipped by an eagle (the \**scipio*), by imperial images, an orb, or a \*cross, orbs surmounted by the statuette of \*Victory or by a cross, and ceremonial \*arms and armour. Late Roman insignia evolved from Republican emblems of a magistrate's regular military, civilian, or religious functions, or from extraordinary distinctions awarded to particularly successful office-holders. Their clothing and attributes were embellished by ever more elaborate decorations and finally monopolized by the emperor. The most outstanding civil garment of Republican times was the purple *vestis triumphalis* (\**toga picta* and *tunica palmata*) of the *triumphator*; eastern \*consuls of the 6th century were depicted on their ivory presentation \*diptychs wearing the *toga picta*. Under the Empire, the purple toga became the regular dress of a consul until it was reserved exclusively for the emperor. In Late Antique regalia,

## Regalianus

military and civilian connotations slowly merged, while the objects' meaning was increasingly infused with Christian significance.

The emperor from time to time granted to other rulers the right to specific regalia. In the reign of \*Justin I, \*Tsathes (Ztath), King of \*Lazica, broke off his alliance with the \*Persian Empire, and in 522 went to Constantinople, was baptized, and then presented with regalia described in detail by the \**Chronicon Paschale* (AD 522) and \*John Malalas (XVII, 9; cf. \*Theophanes, AM 6015). He was given a crown, a \*belt of office decorated with \*pearls; his chlamys had imperial gold embroidery and a portrait of the emperor in purple, but the garment itself was white, like that of a high-ranking official, not purple like that of an emperor. His red shoes, 'studded with pearls in the Persian fashion', came from his own country and were like the \**tzangia* by long tradition granted by the emperor to the satraps of the \*frontier area which became under Justinian the \*province of \*Armenia Quarta (\*Procopius, *Aed.* III, 1, 23).

Increasingly in the post-Roman West, barbarian kings developed their own regalia, while remaining aware of the Roman past. Royal insignia are known from the treasures of Guarrazar (votive crown of \*Reccesuinth, never designed to be worn) and the \*Sutton Hoo \*ship burial (the ceremonial helmet and the stag-topped whetstone sceptre). The long \*hair of the \*Merovingian kings is no longer thought to have had ritual significance. JW; OPN

**Regalianus** General in the \*Balkans, and, as one of the \*Thirty Tyrants of the \**Historia Augusta* (10), \*usurper after the defeat of \*Ingenuus at \*Mursa in

260. He was swiftly suppressed by troops loyal to \*Gallienus (Aurelius \*Victor, 33, 2). DMG

*PLRE* I, Regalianus.

*CAH* XII (2005), 43.

Potter, *Empire at Bay*, 256.

**regendarius** Member of the \**officium* of various departments of the \*central administration, military and civil. In both East (\*John Lydus, *Mag.* 3, 4; 21) and West (\*Cassiodorus, *Variae*, 11, 29) the Regendarius of the \*Praefectus Praetorio issued *evectioes* (i.e. travel permits for the \*Cursus Publicus), probably as one of his controlling functions. AKO

*RE*, I A.1 (1914), 464–5 (Eger) s.v. regendarius.

Kolb, *Transport*, 171–3.

**regiones** Administrative subdivisions of \*Rome (where the \**Regionary Catalogues* count fourteen) and \*Constantinople (where the \**Notitia Urbis Constantinopolitanae* enumerates fourteen). Each was headed by a \*curator (two at Rome, apparently \*senators) and subdivided into \*vici, headed by \*vicomagistri. CARM Jones, *LRE* 694.

Chastagnol, *La Préfecture urbaine*.

Janin, *CPByz* 43–58.

**Rehovot (Ar. Ruheibeh)** Modern name given to a remote archaeological site in the \*Negev. No written or inscribed source has preserved the ancient name of this Nabataean town. Two of the four Christian \*basilicas discovered have been partially excavated. The northern one has a large crypt under its presbytery, attesting to large-scale \*pilgrimage probably to a famous \*relic, but none of the \*inscriptions found in the church mentions a specific saint. Rooms along the walls of the atrium have been interpreted as belonging to a \*monastery. PFi Y. Tsafir, *Excavations at Rehovot in the Negev*, vol. 1: *The Northern Church* (1988).

**Reims** (Roman Metropolis Civitas Remorum: dép. Marne, France) Important Roman \*city, with a vast wall-circuit enclosing around 500 ha (c.1,235 acres), which in Late Antiquity became the capital of the \*province of \*Belgica Secunda, and had acquired a \*bishop by the time of the \*Council of \*Arles in 314.

The settlement had begun to contract by the second half of the 3rd century, and soon (perhaps early in the 4th cent.) it was equipped with a reduced *enceinte* defending around 55 ha (c.135 acres). In 407, the region was very probably affected by the barbarian crossing of the Rhine, but the supposed passage of the \*Huns and martyrdom of Bishop Nicasius in 451 is more hypothetical. By 481, Reims had fallen under \*Frankish control, and \*Clovis I was probably baptized

there by its Bishop \*Remigius. The cathedral complex as a whole is poorly known, but four phases of its \*baptistery, beginning from the late 4th century, were identified in excavations in the 1990s.

In the 6th century the city became the main seat of \*Theuderic I and his descendants, and then of \*Sigibert I. Under Sigibert the main focus of the \*Austrasian kingdom shifted to \*Metz, although Reims remained a significant and at times disputed centre. Its numerous churches included a cluster established in a Late Antique \*cemetery south of the city. The most important of these housed the tomb of S. Remigius and a number of his episcopal successors; the area gradually developed into the \*vicus of S. Remigius. \*Flodoard, writing in the mid-10th century, provides much valuable information about the earlier history of the Church of Reims, including the \*wills of several of its 7th-century bishops.

*Topographie chrétienne*, vol. 14 Reims (2006), 21–45 (L. Pietri et R. Neiss).

**relics and shrines** Relics and shrines played an important role in the Late Antique cult of the saints. The phenomenon of paying concern to the bodies of the 'special' \*dead is not unique to Christianity and can be linked to both Graeco-Roman hero cult and Jewish practices, as well as to traditional piety paid to the bodies of the deceased.

Nonetheless, distinctive practices venerating the relics of Christian saints can be traced to the pre-Constantinian period, for instance in several of the most famous \*martyr passions in both East and West. The *Passion of S. Polycarp* depicts the Christian community collecting for burial the remains of \*martyrs 'that were dearer to us than precious stones, and finer than gold'. The veneration of secondary or 'contact' relics also goes back to the pre-Constantinian period, as in the *Passion of \*Perpetua, Felicity Saturus and their Companions* which recounts how the martyr Saturus dipped the ring of the soldier guarding him into the blood of his wound, returning it to him as a record of his bloodshed.

Relics were of many sorts. As well as the whole body of the saint they included fragments, ashes, and even dust. Relics might also be non-bodily: the discovery of the Relic of the True \*Cross and the Holy Nails, allegedly by \*Helena, was influential. Secondary relics were multiplied by the devotional practices of the cult of the saints, as oil, cloth, and water were brought into contact with the bodies of saints at their shrines, and then became treasured relics in their own right. \*Pilgrimage flasks were sometimes placed on the tombs of saints.

A law of 386 (*CTh* IX, 17, 7) sought to control what was already a burgeoning trade in martyr relics, but this attempt clearly failed. In the West, \*Augustine attacked corrupt monks trading in dubious relics, but his ecclesiastical father figure \*Ambrose of \*Milan set up a whole network which distributed relics to his fellow bishops for the edification of their faithful. After Ambrose's famous *inventio* or discovery at \*Milan of the bodies of the hitherto unrecorded \*martyrs Ss. \*Gervasius and Protasius in 386 (as well as his promotion of Ss. \*Vitalis and Agricola, discovered in 392/3 in Bologna) relics were both brought publicly and prominently within the city walls and also became an important element in ecclesiastical \*patronage and relationships.

In the case of one particularly prominent *inventio*, the miraculous discovery of the relics of S. Stephen the Protomartyr in 415, the relics of the saint travelled across the Mediterranean world. The arrival of these relics at Uzalis in North \*Africa brought about a great change of heart in Augustine, who preached about the \*miracles performed by these relics (\*Sermons, 320–4) and wrote about them in the closing chapters of the *City of God*, making use of a pamphlet recounting the miracles at Uzalis. Collections of miracles performed at particular shrines (such as the famous collection of \*Gregory of \*Tours) would become important in promoting local shrines, their saints, and their bishops.

Shrines to saints were erected all across the Late Antique world. They ranged from simple commemorative installations (as evidenced by many \*inscriptions from North Africa) to elaborate monuments; they were built both independently as separate \*martyria and within existing churches and other ecclesiastical complexes. Martyria were built in \*Cappadocia by \*Basil at \*Caesarea and by \*Gregory at \*Nyssa; these are no longer extant, but we can compare the surviving remains of the martyrium of S. Philip at \*Hierapolis in \*Phrygia. Relics and shrines provided an important impetus to \*pilgrimage, most famously in the \*Holy Land, as is apparent from the pilgrim \*Egeria. \*Damasus provided a monumental setting for the cult of saints in the Roman \*catacombs by installing a series of inscribed shrines (\**Liber Pontificalis*, 39).

\*Constantinople also became notable for shrines of saints. It was dedicated to the God of the martyrs, and had started out with its own local martyr, S. \*Mocius. During the 4th and 5th centuries, it acquired many and various relics of saints. In 356/7 S. Andrew the Apostle, S. Luke the Evangelist, and S. Timothy, the companion of S. Paul, came to the city, and in 406 the Old Testament patriarch Samuel. In 438 the body of S. John Chrysostom returned to the city from which in life he had been banished. As time went on, Constantinople gathered to itself relics from the provinces, such

as in 574 the \*Camuliana \*icon of Christ and in 944 a cloth which purported to be the \*Mandylinion of \*Edessa.

As well as ecclesiastical distribution of relics, private possession was also significant. Wealthy and influential families, including that of Gregory of Nyssa, sometimes had their own relics and built private martyria to house them. Literary sources persistently link the custodianship of relics to women in particular, though we might suspect that this became a literary cliché, rather than a historical fact. Anxiety regarding the proper veneration of genuine relics is a recurring concern amongst the ecclesiastical establishment. The \*Emperor \*Julian mocked Christian relic cult. There was also criticism from within the Christian Church. The \*priest Vigilantius of \*Aquitaine attacked such practices as \*kissing relics and carrying them about encased in precious materials; he claimed that the veneration paid them at shrines had pagan antecedents. Nonetheless, veneration became a dominant feature of Late Antique Christianity. For those who believed seriously in the resurrection of the body, the bodies of the saints were not simply a sloughed-off skin, they were the physical containers to which the close friends of God would one day return.

### Religious Disputation at the Court of the Sasanids

In this anonymous \*Greek disputation of the late 5th/mid-6th century AD, King Arrhinatus of Persia commands an examination of the testimonies of Christ in the writings of \*Philip (of \*Side) and Dionysarus. Five disputations follow, between the \*pagan Aphroditianus and the \*bishops (§5), between Oricatus the magician and the bishops (§34), between the \*Jews Jacob and Pharas and Aphroditianus (§44), between Jacob and Pharas and between the bishops (§55) and Jacob and Pharas and the Jews Simon, Bar-naes, and Scillas (§67). In the end Jacob, Pharas, and 'sixty souls' are baptized. The narrator concludes that Aphroditianus has surpassed Philip 'in saying great things about Christ' (§85).

**reliquaries** Containers securing \*relics—fragments of sacred material, usually bone or other bodily remains of a holy figure, or an object or substance sanctified through contact with such a person. Reliquaries regularly identified and authenticated the remains by naming the holy person or place of origin in \*inscriptions either outside or inside. Some famous reliquaries, such as the 5th-century \*ivory Samagher Casket from \*Histria or the 5th- or 6th-century \*silver 'Capsella Africana' from \*Numidia, were made of precious materials and adorned with figural decoration. However, most surviving Late Antique examples are more modest and include unadorned stone chests, sometimes in the shape of miniature sarcophagi, or even simple terracotta pots. Though earlier examples exist, by the 6th century reliquaries become increasingly common and were regularly associated with \*altar foundations. A single reliquary could contain numerous relics, and additional relics could be added to the collection over the course of a church or \*monastery's history.

**Remaclus** (d. c.680) Abbot of Stablo-Malmedy. Remaclus was born in \*Aquitaine and became the first abbot of S. \*Eligius' foundation at Solignac in 638 before pursuing his religious vocation in the Ardennes, initially as Abbot of Cugnion. With the support of \*Sigibert III and the \*Austrasian \*Mayor of the Palace \*Grimoald, he then founded a double \*monastery at Stavelot in the \*diocese of Maastricht and Malmedy in the diocese of \*Cologne in 647/8. He is described as *abbas episcopus*, though it is unclear if he ever became \*Bishop of Maastricht (651/2–670), or was merely Abbot-bishop of Stavelot-Malmedy. His various *Lives* (*BHL* 7113–41) are late and unreliable.

ADier

*RG12 s.v.* Remaclus, XXIV (2003), 485–504 (C. Bayer).

P. George, 'St Remacle, évangelisateur en Ardenne (ca. 650): mythe et réalité', in J.-P. Massaut and M.-E. Henneau, eds., *La Christianisation des campagnes* (1996), vol. 1, 47–70.

**Remesiana** (mod. Bela Palanka, Serbia) \*City of \*Dacia Mediterranea on the \*Via Militaris between \*Niš and \*Serdica (\*Bordeaux Pilgrim, 566, 6, as Romansiana).

The writer \*Nicetas (d. after 414) was \*Bishop of Remesiana. Remains include a 4th-century fortification enclosing 4.5 ha (11 acres) with a monumental complex with portico and apsidal hall. A necropolis with Christian \*basilica was located nearby. \*Justinian I rebuilt the fort (\*Procopius, *Aed.* IV, 1, 32). ER

Ćurčić, *Architecture in the Balkans*, 50–1.

D. Mladenović, *Urbanism and Settlement in the Roman Province of Moesia Superior* (2012), 63.

**Remigius of Reims** (c.438–c.533/5) \*Bishop of \*Reims from c.460. Born into a local aristocratic family, Remigius became \*metropolitan of \*Belgica Secunda, probably with the assent of the \*Frankish King \*Childe-ric I and the \*Magister Militum \*Aegidius.

According to \*Gregory of \*Tours (*Glory of the Con-fessors*, 78; *BHL* 7151), who had access to a lost *Vita*, and the much later *Vita* by Hincmar of Reims of c.870 (*BHL* 7152–9), he played a pivotal role in the \*baptism of \*Clovis I.

Two of his four surviving \*letters (*Epistulae Austrasicae*, 1–4) are addressed to the king, the first, of 481, giving the young king advice, the second, written after his baptism, consoling him on the death of his sister. A third responds to episcopal criticism of a \*priest he had ordained at Clovis' behest. His \*will (*BHL* 7160), of which only the short version is authentic, written in Roman form after 511, is a rich source of information about his \*family and his landed wealth, as well as for the churches of \*Reims and its province.

He was buried in Reims in a church which was then dedicated to him. His cult developed rapidly at Reims and more widely in \*Austrasia. A third, short *Vita* of the 7th/8th century, misattributed to \*Venantius Fortunatus, gives further biographical details. MG

M.-C. Isaïa, *Remi de Reims: mémoire d'un saint, histoire d'une Église* (2010).

**Remiremont** (ancient *Habendum*, dép. Vosges, France, ancient *Habendum*) Double \*monastery founded between 613 and 626 by Romaric (d. 653), a wealthy \*Austrasian \*aristocrat linked to the Pippinids, and Amatus, a monk of \*Luxeuil trained at \*Agaune, who opposed \*Eusthasius in the \*Agrestius affair. Wrongly seen as 'Columbanian', it was initially a rival of Luxeuil and of \*Faremoutiers-en-Brie, and welcomed \*Arnulf of \*Metz towards the close of his life. Its liturgical practice involved *laus perennis* (perpetual \*praise) on the model of Agaune. ADier

**remuneration** Payment for services and for \*wage-labour might be rendered in cash, kind, or a combination of both. Pay was frequently in the form of cash and food allowances, which were usually destined for daily consumption. Some workers received daily pay or other forms of salary, while others were paid according to work completed. The Tetrarchic \*Prices Edict (AD 301) set the wage for a variety of unskilled workers at 25 \*denarii plus maintenance.

Such food allowances, usually consisting in Late Antiquity of \*grain, \*olive oil, and \*wine and in rare instances \*meat, entitled workers to various food items otherwise precluded or in limited supply. The Prices Edict fixed wheat rations around five Italic \*modii per month at 100 denarii for each modius castrensis (= 66.67 denarii per Italic modius). Wheat alone therefore added an increase in income equivalent to 11.1 denarii per day to the mandated minimum of 25 denarii cited above.

The \*papyri from \*Egypt suggest daily wages were usually proportionally higher than monthly and yearly wages, which were thus not a multiplication of daily pay, but were based on a different and probably lower standard. The annual average wage was probably around 5 or 6 \*solidi. The actual value of this wage naturally varied with the price of consumer goods, which ranged during the 4th to 6th centuries, according to Egyptian data, from c.4.33 solidi to c.2.9 solidi per head, the equivalent of 36 annual modii of wheat).

In the Late Roman \*army, which constituted the single largest employer in the Late Roman world with perhaps 350,000–400,000 men, the average soldier was remunerated through ration allowances commuted into cash at fixed rates of 4 and 5 solidi in 445 (*NovVal* 13, 4) and in 534 (*CJust* I, 27, 1) respectively. Along with these commuted \*annonae a \*donative of 5 solidi was distributed every five years beginning from the \*emperor's \*accession and usually connected with the \*indiction of other taxes collected in precious metals (\*aurum coronarium, aurum oblativum, and \*collatio lus-tralis or chrysargyron—though the last was usually gathered every four years). The yearly wage was therefore c.5 or 6 solidi plus occasional gifts, and probably left soldiers better off than other workers.

In early Islamic Egypt and the Near East real wages appear to have increased while nominal wages did not.

In the post-Roman West the scanty evidence seems to suggest increasing remuneration in kind, even where wages and rental payments were still expressed in terms of \*gold and later \*silver coins. PT

F. Morelli, *Olio e retribuzioni nell'Egitto tardo* (1996).

**reports of proceedings** The papyrological record of \*papyri, alongside 'paraliterary' texts such as \*martyr passions and the *Acta Alexandrinorum*, provide evidence for interactions between litigating parties and their trial judge. The idea of a judge's general obligation to justify his sentence is modern. However, Roman magistrates kept records of their administration (*commentarii*). These records could include the sentence and its basis; the hearing's course; the parties' pleadings, and the taking of evidence; all of which were inserted into a public \*archive where copies could be made. From the late 3rd century onwards scholars speak of a new 'case transcript style': 'The written transcripts as excerpts from the *commentarii* disappear; the latest example is of AD 274 (P. Mert. I, 26 \*Oxyrhynchus), and appearing in their place is the individual transcript regarding a specific *causa*' (Palme). The standard form shows a \*Latin 'frame' while direct speech is reported in the original language (Latin or \*Greek). Around 55 \*bilingual court proceedings survive from the later 4th and 5th centuries. JP; CH

**Resaina** (Syr. Resh'aina, mod. Ras el-Ain on the Syrian–Turkish border) An important \*city in the Roman \*province of \*Mesopotamia, near the Roman–Persian \*frontier, often on the Persian invasion route. \*Shapur I was defeated here in 263. \*Theodosius I made it a city in 383 and renamed it Theodosiopolis (not to be confused with the Armenian \*Theodosiopolis, mod.

Erzerum). According to the *\*Notitia Dignitatum* (or. XXXVI, 1 and 20) it was a *castellum* under the \*Dux of \*Mesopotamia, housing a detachment of the Equites Promoti Illyricani. \*Justinian I refortified the fortresses around it (\*Procopius, *Aed.* II, 6, 13), but the Persians sacked it several times in the late 6th century.

Peter of Resaina was one of the Mesopotamian \*bishops banished from their sees by \*Ephrem of \*Amida, Patriarch of \*Antioch, in 519 on account of their \*Miaphysite convictions (\*Zacharias Rhetor, *HE* VIII, 5, b). \*Sergius of Resaina, a doctor (d. 536), was a prolific author and translator of medical and philosophical texts from \*Greek into \*Syriac. \*George of Resaina wrote in Syriac a *Life* of \*Maximus the Confessor. Resaina remained important in later conflicts between Byzantines and Arabs.

Ruins of possible Late Roman fortifications were seen by Consul Taylor in the 1860s and by an American team in the 1940s. The site has been the subject of various archaeological investigations and excavations since the 1860s, focusing principally on the Ancient Near Eastern remains at Tell Fakhariya (Fecheriye). AMC

**rescripts** (*rescripta*, sometimes *subscriptiones*) Answers from local, provincial, or ecclesiastical officials or \*emperors to \*petitions, sent by private individuals or groups or civic entities; cf. \*letters, which describe requests and responses between officials. According to T. Honoré, stylistic analysis reveals that imperial rescripts were composed by the \*Magister Libellorum, though not all scholars agree. Rescripts had authority only over those circumstances outlined in their petitions, but acquired a wider force of precedent later confirmed by codification. Imperial rescripts from the reigns of Hadrian to the \*Tetrarchy were collected in the \*Gregorian and \*Hermogenianic Codes and subsequently in \*Justinian's Code. SDC

Corcoran, *Tetrarchs*, 43–58.

Honoré, *Emperors*, esp. 24–53.

**Res Gestae Divi Saporis (ŠKZ)** Monumental trilingual \*inscription in Middle \*Persian, Parthian, and \*Greek carved at the Ka'be-ye Zardosht in front of the great \*rock reliefs of \*Naqsh-e Rostam in the province of Persis (\*Fars, Pars) by \*Shapur I (AD 240–70), after his victories over the Romans. The inscriptions provide the genealogy of the king, followed by an enumeration of the \*provinces that he ruled over. Here he is called the 'Mazda-worshipping Majesty Shapur, King of kings of

the Iranians and non-Iranians, whose lineage is from the gods'. The territories listed in the inscription are as follows: Persis, Parthia, \*Khuzestan, Mesene, Assyria, \*Adiabene, \*Arabia, Azerbaijan, \*Armenia, \*Georgia, Segan [Makhelonia = Mingrelia], Arran [Caucasian \*Albania], Balasakan, up to the Caucasus mountains and the Gates of Albania, and all of the mountain chain of Pareshwar, Media, Gurgan, \*Merv, \*Herat and all of Aparshahr, Kerman (\*Kirman), Seistan (\*Sagastan), Turan, Makuran, Paradene, Hindustan [\*India = Sind], the Kushanshahr up to Peshawar, and up to \*Kashgar, \*Sogdiana and to the mountains of Tashkent (\*Chach), and on the other side of the sea, \*Oman.

Shapur I then relates his victories over Gordian III, Philip the Arab, and \*Valerian in some detail. The first battle with Rome took place in AD 242/4. Gordian is said to have moved out from \*Antioch and been killed in a \*pitched battle on the border of Persian \*Mesopotamia at Misiche, so that the site of the battle was renamed (in MP) Misiche-\*Peroz-Shapur, 'Misiche-(where)-Shapur-is-victorious'. Negotiations with Philip the Arab in AD 244 resulted in the payment of 500,000 *denarii* and a promise to relinquish control over \*Armenia. The inscription then states that the Caesar lied and again did wrong to Armenia. In 252/6 a second battle was fought at Barbalissos, upstream from \*Callinicum on the Euphrates, against a Roman force 60,000 strong. Shapur relates that 36 Roman \*cities were taken as a result of his victories. In AD 260 a battle was fought beyond \*Harran and \*Edessa in which Valerian was captured, along with the \*Praefectus Praetorio, \*senators, and chiefs of the army; captives were then taken and settled in the province of Persis.

This part of the inscription is very much in the manner of the Persian epic tradition, where the king captures the Roman emperor by his own hands. The deeds of the king and notions of valour and single combat loom large. It is followed by an enumeration of \*Zoroastrian sacred \*fires established for each member of the royal family, and details of \*sacrifices and ceremonies. The last section provides important information on the \*administration and the courtiers and nobles who comprised it during the time of \*Papag, \*Ardashir, and Shapur I.

ed. P. Huyse, *Die dreisprachige Inschrift Šābuhrs I. An der Ka'ba-i Zardūst (ŠKZ)*, 2 vols. (CII Part III, vol. 1, Texts 1; 1999).

ET (partial) in Dodgeon and Lieu, *Roman Eastern Frontier*, 34–6, 50, 57.

**responsory** (Lat. *responsorium*) Chant sung after the lessons at the night Office, first attested as an independent genre in the *Rule of S. \*Benedict* (*RegBen* 9 and 11: *lectiones cum suis responsoriis*) and described by \*Isidore of \*Seville (*De Ecclesiasticis Officiis*, 1.8) as an

ancient Italian practice. Although sung responsorially, in the form choral respond–solo \*psalm verse(s)–choral *repetendum* (the respond abbreviated), the precise connection, if any, between the ancient practice of responsorial psalmody and the liturgical genre of the *responsorium* remains unclear.

AJH

H. Huckle, 'Das Responsorium', in W. Arlt, E. Lechtenhahn, and H. Oesch, eds., *Gattungen der Musik in Einzeldarstellungen* (1973), 144–91.

**Res Privata** A financial department of the Roman state which administered the private property of the \*emperor (known as his Patrimonium) and crown lands belonging to the imperial office. The main revenues of the Res Privata were derived from rents and income derived from \*estates and urban properties (such as \*houses, \*shops, and warehouses) certain of which had come into imperial control by confiscation or forfeiture. The Res Privata also handled the sale or grants of land to imperial favourites, meaning that it had something of the character of 'a clearing house' for estates as they passed in and out of imperial ownership. Rural properties owned by the Res Privata were partly administered by agents specifically employed for the task, or alternatively were leased out on long-term or perpetual leases (see *EMPHYTEUSIS*), which members of the Late Roman imperial \*aristocracy of service appear to have been especially eager to acquire. The Res Privata was administered by the Magister or \*Rationalis Rei Privatae (later known as the \*Comes Rei Privatae) who was a member of the imperial inner circle or entourage (\*Comitatus). Beneath him served a staff of bureaucrats (\**officium*) comprising officials known as *privatiani* or \**palatini*. There existed one *officium* for the Western and one for the Eastern part of the Empire, each divided, according to the \**Notitia Dignitatum* into five sections (*scrinia*), although the differences between these various bureaux and their differing responsibilities are not entirely clear. The Res Privata also had a strong regional presence, with a lower-level Rationalis Rei Privatae appointed to each \**dioecesis* possessing judicial powers and his own staffs (known as *Caesariani*). At the provincial level, the Res Privata was represented by officials styled *procuratores* and \**actores Rei Privatae* who administered and oversaw imperial interests on the ground. In addition to its extensive body of personnel, the Res Privata possessed its own transport service (*bas-taga privata*) under the charge of officials known as *praepositi*, who had charge of stables on which the imperial service depended for its mounts.

PS

Jones, *LRE* 411–27.

**Reticus of Autun** (d. c.334) \*Bishop of \*Autun in \*Gaul under \*Constantine I. He was one of the bishops appointed by the \*emperor to resolve the Donatist question at the \*Lateran Council of 313 (\*Letter of

Constantine in \*Eusebius, *HE* X, 15, 9). He wrote a *Commentary on the Song of Songs* and a work *Against Novatian*, neither of which survives. He was noted by \*Jerome (*Vir. Ill.* 82), quoted as an authority by \*Augustine (*Contra Julianum Pelagianum*, I, 3, 7 and I, 7, 32–3; *Contra Julianum opus imperfectum*, I, 55), and remembered by \*Gregory of \*Tours (*Glory of the Confessors*, 74). SJL-R

Bardenhewer, 2, Reticius von Autun.

PCBE IV/2 (2013) s.v. 'Reticius', 1608–9.

**revaluation** The opposite of \*devaluation of \*money. It indicates a deliberate raising in the nominal value of a currency which is in fixed exchange ratio to other currencies. The Late Antique world did not witness the revaluation of Roman imperial coinage in respect to foreign coinage. What is attested is a raising of the value of coin denominations within the imperial system of coinage itself. The best-known case is the revaluation (in this case an exact doubling of value) of \*silver and (maybe all) divisional coins in AD 301, brought about by the \*Tetrarchic Currency Reform. The known cases do not represent a true revaluation, since every denomination of coin was raised in value so they all appreciated only in respect to \*gold and in respect to the wares with which they were in a floating exchange rate. FC

**Rev-Ardashir (Rishahr)** Archaeological site near modern Bushehr on the Persian coast of the Gulf. Possibly identical to the Seleucid foundation of Antiochia-in-Persis, it was refounded by \*Ardashir I (\*Tabari), and was the seat of the \*Church of the East \*metropolitan of \*Fars, from at least the later 5th century, when a \*bishop of Rev-Ardashir translated \*Syriac \*hymns into Persian. **Rhabdion** See TUR 'ABDIN.

**rhetoric and rhetoricians** Throughout the ancient world, rhetoric was a practical skill. Much public business, in \*cities, in \*courts of law, and in the imperial

\*administration, was conducted orally and the spoken word was a vital means of mass communication. Formal instruction in rhetoric (the art of public speaking) was common wherever \*Greek and \*Latin were spoken and spread into areas where other languages, such as \*Syriac, were the *lingua franca*, so that language, rather than, for instance, \*mathematics, was at the core of ancient education and the correct deployment of words was the mark of an educated man (\*Augustine, *Conff.* I, 16–18, 26–30).

Inherited from models fashioned in classical Greece, adopted by Rome, particularly through the influence of Cicero, in the Republican period, and gradually adapted to suit the needs of Empire, rhetoric continued to flourish in Late Antiquity. Taught by a *rhetor*, rhetoric remained the principal subject of study in the third and final stage of Greek and Roman education, following on from the study of letters and \*grammar. It continued to distinguish between three forms of rhetoric identified by classical Greek practitioners, the deliberative, the forensic, and the demonstrative. Rhetoricians in the West and the East taught in Latin and Greek respectively, though until at least the 5th century both languages formed part of the normal curriculum in both parts of the Empire. \*Latin was of particular value to those intending to study \*law, and Greek was the language of \*philosophy and intellectual enquiry. Teaching generally took place in dedicated schools, some of which, such as \*Bordeaux (where \*Ausonius and much of his \*family taught), \*Milan (where Augustine taught), and \*Antioch (where \*Libanius taught), were highly respected; such schools could have a very wide geographical catchment area. Special legislation governed the behaviour of those who came from the \*provinces to \*Rome and \*Constantinople to pursue their studies (*CTh* XIV, 9, 1).

There was not a universal or consistent system of funding for rhetoricians. Those who were more successful drew a salary from the state or city treasury, as Augustine did at \*Carthage, but not when he spent a year teaching in Rome. Students would also pay to attend (Augustine, *Conff.* II, 3, 5 and V, 12, 22; \*Philostratus, *Lives of the Sophists*, 591). Appointees to publicly funded positions were well paid (e.g. *CTh* XIII, 3, 11 of 376). Some rhetoricians held other, non-educational positions as well. In some cases, the avocation of rhetorician became a family tradition. Typically, a student attended classes with only one rhetorician; teachers formed long-lasting and loyal bonds with those who studied under them. Rhetoricians were respected and influential figures in their community, and could often speak for the community in relevant oratorical form, as when Aelius Aristides made the \*Emperor Marcus Aurelius weep with his plea to rebuild \*Smyrna, devastated by an \*earthquake

(\*Philostratus, *Lives of the Sophists*, 9, 582). They also often acted as representatives or \*patrons for their students.

The Later Roman Empire, unlike democratic Athens or the Roman Republic, did not promote political dissent expressed in oratorical form. Rather, \*panegyrics of emperors, governors, and other potentates articulated consent to be ruled, often on occasions of formal \*ceremony, such as an \*adventus. The imperial administration valued the traditions of rhetorical education inherited from earlier centuries and these were adapted to suit new conditions. Just as rhetorical schools sought state funding for their services, so the imperial government wanted graduates from such schools as the Maecianae at \*Autun to serve in the administration, which expanded hugely from the time of the \*Tetrarchy onwards. The technical rhetorical skills and the values they enshrined were prized in government, so that a mutually beneficial relationship grew up between schools and government. Rhetoricians were powerful agents in securing positions in the administrative services for their students (e.g. \*Libanius, *epp.* 805, 810, 832, 1119). Greeks and Romans conceived of education and character as being closely linked (e.g. *CTh* XIII, 3, 5). Rhetorical training was therefore essential in the education of a young man (in Greek, *paideia*), not simply so that he would know how to speak and write in an elevated manner, but also so that he would know how to behave, judge, and advise in the whole range of professional and private contexts, including religion, so that he could be, in the words of Cato, *vir bonus dicendi peritus*, a good man skilled in speaking (Quintillian, *Inst.* XII, 1).

Schools of rhetoric often turned out to be a training ground for church leaders. The canonical authors for rhetorical study and emulation had been \*pagans—Cicero in Latin and Demosthenes in Greek—but in order to convince their contemporaries that Christianity was a faith which could be taken seriously by educated men, Christian apologists such as \*Eusebius and \*Lactantius (the 'Christian Cicero') harnessed the erudition and eloquence of the rhetorical schools. Some Christians found troubling such marriages of Christian faith and secular rhetoric (e.g. \*Jerome, *ep.* 22, 29–31). But it was possible to adapt what was seen as the best of rhetorical learning to Christian purposes (e.g. \*Basil of \*Caesarea, *Address to Young Men on Greek Literature*). The career change from *rhetor* to Christian \*bishop was not unusual; rhetoric could be useful in the composition of \*sermons, and it continued to be at the centre of Christian education, especially in the post-Roman West into the time of \*Bede and beyond.

**rhetoric and rhetoricians, Greek Late Antique** Greek rhetoricians inherited from 2nd- and 3rd-century predecessors a curriculum structure and theoretical resources significantly different from those of Hellenistic and early imperial rhetoric. Training began with a series of preliminary exercises in composition (\*progymnasmata). Epideictic oratory was taught by adapting the general principles of progymnasmatic *encomia* to specific ceremonial contexts (e.g. wedding, \*panegyric for \*adventus of a visiting dignitary); the treatises attributed to \*Menander Rhetor illustrate this approach. The foundations of forensic and deliberative oratory were laid in the theory of issues (*staseis*), which distinguished thirteen kinds of dispute and specified appropriate heads of argument for each; by the end of the 3rd century, \*Hermogenes' *On Issues* was the standard teaching text. It should be noted that the undeniable importance of epideictic oratory in Late Antiquity did not marginalize forensic and deliberative rhetoric: Menander, known to modern scholarship as an expert on epideictic, was celebrated primarily for the detailed application of issue-theory in his commentary on Demosthenes.

Having mastered the fundamental techniques for analysing disputes, students learned to embody their argumentative strategies in the structure of a complete speech: the relevant tactical resources were theorized in treatises on the parts of a speech, such as [Ps.-Hermogenes] *On Invention*. The theory of stylistic types ('ideas', Gk. *ideai*) was developed in its most sophisticated form by Hermogenes; although his *On Types of Style* did not rapidly become a standard text, it was included in the comprehensive rhetorical corpus that was formed by the early 6th century. The separation of preliminary analysis from invention produced a curriculum with multiple exit-points: students could abbreviate their studies if they expected to practise in low-level courts, where elaborately structured or expressed speeches were not required although a tool-kit of resources for both prepared and impromptu argument was essential. Theoretical instruction accompanied close study of classical and modern models, and practical exercises. At advanced levels, these took the form of declamation, in which students took the role of one party to a forensic or deliberative dispute. Declamation also provided sophists with an opportunity to display their expertise. Rhetoric faced competition as a means of career advancement from \*law and \*shorthand, but the true impact of this trend is hard to estimate: despite

\*Libanius' tendentious complaints, there was a continuing demand for rhetorical training at all levels. MFH R. Cribiore, *The School of Libanius in Late Antique Antioch* (2007).

**rhetoric and rhetoricians, Latin** Rhetoric continued to be taught in the Latin-speaking West of the Later Roman Empire much along the lines that had evolved during the Early Empire. For example, Julius Victor (probably dating to the 4th century AD) wrote an *Ars Rhetorica*, which essentially reprised Cicero and Quintilian. For the educated classes, schools of rhetoric, with their influential and often inspiring professors, were popular destinations, especially as part of preparation for careers in \*law, \*education, and imperial \*administration (*PanLat* VI (VII), 23; \*Ausonius, *Commemoratio Professorum Burdigalensium*, 1, 9–10; \*Augustine, *Conf.* VIII, 2). In fact, some *rhetores* themselves went on to hold posts in the imperial service. And so, there developed a close and mutually advantageous relationship between rhetorical schools and the imperial government.

Celebrated Latin schools of rhetoric included the *Maenianae* (\*Autun), \*Bordeaux, and \*Toulouse in \*Gaul (for which our evidence is strongest), but there were many others in \*Spain, \*Italy, and \*Africa. Some schools, such as the *Maenianae* refounded under the \*Tetrarchy with \*Eumenius as director, benefited from imperial funding. Eumenius even quotes his letter of appointment to the school in his surviving speech (*PanLat* IX(5), 14). Other professorships were funded by individual \*cities, including \*Rome and \*Carthage.

The names of rhetoricians come down to us as authors of surviving treatises (in addition to Julius Victor, for example, Aquila Romanus, Julius Rufinianus, Chirius Fortunatianus, whose works share a taste for technical taxonomy, definition, and exemplification) or as references in other contexts and genres (notably, Ausonius, *Commemoratio Professorum Burdigalensium*). Many of the Latin church fathers (such as \*Arnobius, \*Lactantius, Augustine) had taught rhetoric, and so too

did Ausonius. Authors of \*panegyrics (Ausonius, the XII \**Panegyrici Latini*) as well as of \*sermons (Augustine) testify that *rhetores* were well placed to deliver oratory as well as teach its precepts. It is true that some Christians found rhetoric incompatible with Christian humility and its study unnecessary for effective preaching; such doubts contributed to the fact that it took Augustine about 30 years to complete his *De Doctrina Christiana*, a work intended to provide rhetorical guidance to Christians. Despite such disquiet, \*Gregory of \*Tours and \*Aldhelm of Malmesbury still considered a mastery of rhetoric (and metrics) an essential quality in a Christian cleric, and \*Bede's *Ars Rhetorica* indicates that it was an integral part of the education provided at the double \*monastery of \*Wearmouth-Jarrow.

As it had done from the Greek classical period, rhetorical theory recognized three forms of rhetoric—deliberative, forensic, and epideictic (demonstrative)—each with its own traditions and arguments. The curriculum under a rhetorician (*rhetor*) would be in incremental stages: although all surviving examples are \*Greek, it seems likely the first stage even in the Latin West would have been the equivalents of \**progymnasmata*, short preliminary exercises designed to equip the student with the repertoire necessary for the more sustained construction demanded by the subsequent challenge of \*declamation. The scenarios presented in surviving Latin *controversiae* suggest that forensic rhetoric received more attention than the other two branches. On the other hand, the richest body of secular Latin oratory surviving from Late Antiquity is the panegyric material of the XII \**Panegyrici Latini*, \*Symmachus, Ausonius, \*Ennodius, \*Merobaudes, and \*Cassiodorus. The evidence of these speeches and fragments suggests that although they conform to recognizable types and their rhetoric was consistently elevated, there was scope for stylistic variety. RDR

**rhetoric and rhetoricians, Syriac** Artistic use of language for persuasive purposes is apparent in the earliest significant \*Syriac author, \*Ephrem Syrus, and has usually been understood to reflect a native Mesopotamian rhetoric. Employment, however, of devices such as parallelism and chiasmic structures, by both Ephrem and \*Greek theologians, and the identification of

Greek philosophical concepts in Ephrem's writings, have suggested the possibility that a Graeco-Roman \*education including rhetoric may also have had an influence upon him.

Other early Syriac writers possibly influenced by classical rhetoric include the author of the \**Liber Graduum* (deliberative rhetoric), \*Balai, and \*Narsai (judicial rhetoric). Epideictic rhetoric is evident in a \*panegyric 6th-century *Life* of \*John bar Aphthonia, born in \*Edessa. Its author was a monk of \*Qenneshre, the \*monastery founded by John which became the leading centre of Greek studies in the Syriac language area. He reports that John's father was imbued with secular wisdom, which, he says, culminated in the art of rhetoric.

The only extant treatise on rhetoric in Syriac is that by Antony of \*Takrit, probably of the 9th century, but it contains many concepts of Greek origin and can best be understood as the result of a tradition of rhetorical teaching going back to Late Antiquity. JWW

**Rhodian Sea Law** (Νόμος Ῥοδίων Ναυτικός) A collection of maritime law comprising three parts, the first being a disputed prologue, the second containing 19 chapters, and the third 47 chapters. The date of the *Rhodian Sea Law* is uncertain: the 7th, 8th, or even 9th centuries have all been considered. The regulations it contains—which do not stem from \*Justinian's *Code*—concern issues of liability (e.g. in case of jettison), contribution, profit-sharing, behaviour on board \*ship, and so on. The text survives in many manuscripts and is part of Book 53 of the later Byzantine legal compilation called the *Basilica*. ThEvB

**Rhodopa** Late Roman \*province occupying the southern portion of the former province of Thracia, along the Aegean coast, bordering \*Thracia (north), \*Macedonia (west), and \*Europa (east). The \*Via Egnatia ran through it (between \*Constantinople and Thessalonica).

The \*Verona List places it in the \*Dioecesis \*Thraciae, as does the \**Notitia Dignitatum*, which says that it was governed by a \*Praeses (or. I, 114; II, 56; XXVI, 13). The 6th-century geographer \*Hierocles (634, 4–635, 2) lists seven \*cities in Rhodopa. ABA

*Barrington Atlas*, maps 101 and 102.

TIB 6 Thrakien (1991).

**Rhodopolis** (mod. Vardsikhe, \*Georgia) City in the Imereti plain, on a trade route between Artaxata and \*Sebastopolis. A necropolis indicates occupation from Hellenistic times, but the first record appears in the 4th–5th centuries. In the 6th century it was 'a very large and ancient fort' (*NovJust* 28, cf. \*Procopius, *Persian*, II, 29, 18); later, it changed hands between Romans and Persians (\*Agathias, IV, 15, 1–3). Remains of Late Roman buildings had traces of fire. MO

**ribat** Islamic military institution. A precise definition of *ribat* is difficult, since its meaning changed over the course of the medieval period. In early \*Islam, a *ribat* seems to have been a basic staging-post for military campaigns: simply a place to tie up \*horses. By the 10th century—as attested by al-\*Muqaddasi—if not before, the term had come to be applied to fortified coastal watchtowers. A century or so after that, it had come to signify a spiritual retreat, sometimes but not always with a military dimension. NC

**Richarius** (fl. 630s) Founder of a \*monastery at Centula (Somme) which went on to become one of

the most significant in northern \*Gaul, also known as S. Riquier. His earliest *Life* suggests he was also active 'across the sea in *Saxonia*'. EJ; STL *LexMA* s.n. Riquier, vol. 7, 828–9 (J.-C. Poulin). *Life* (BHL 7245), ed. B. Krusch in MGH SS rer. Meroving. 7, 438–53.

**Ricimer** (c.405–72) Roman general of royal \*Suebic and \*Gothic parentage whose military power enabled him in effect to rule the remaining territory of the Western Roman Empire from 456 until his death in 472. Coming to notice as a soldier under the \**patricius* \*Aëtius, he was appointed \**comes* by the \*Emperor \*Avitus in 456. His subsequent successes in defeating \*Vandal forces in \*Corsica and \*Sicily earned him acclaim, the \*title of *patricius*, and the post of \*Magister Militum. Deriving his power from this position, Ricimer exercised political control, first deposing Avitus and then appointing \*Majorian as emperor in 457. In August 461 he had Majorian executed and in November nominated \*Libius Severus who reigned until Ricimer facilitated his death in 465. He then accepted \*Anthemius as the imperial nominee of the Eastern Emperor \*Leo I and married Anthemius' daughter Alypia. By 470 he was in public opposition to the Emperor Leo. Opposition became open war by 472; as a result Anthemius was captured and killed at \*Rome. Ricimer then appointed \*Olybrius as emperor, but died shortly after. His authority passed to his nephew, the \*Burgundian \*Gundobad. He was an \*Homoean ('Arian') and built at Rome the Church of S. Agatha of the Goths. BC

**Ricomer** Prominent general of the late 4th century. A \*Frank and a \*pagan, he fought at the Battle of \*Adrianople in 378 as \*Comes Domesticorum of \*Gratian. In the early 380s, he became \*Magister Militum per Orientem, befriending \*Libanius, and was \*consul for 384. In 388 \*Theodosius I sent him against \*Magnus Maximus, but Ricomer died just before the launch of Theodosius I's campaign in 393 against the \*usurper \*Eugenius and the general \*Arbogast (Ricomer's own nephew). SFT PLRE I, Richomeres.

**Ridda Wars** (Ar. *hurub al-ridda*, 'Wars of Apostasy') Collective term for the conflicts on the \*Arabian Peninsula that began shortly before the death of the Prophet \*Muhammad in 632 and ended in 634 as the

new west Arabian polity extended its influence beyond the Peninsula into the territories of the Roman and \*Persian Empires. Despite their name, the Ridda Wars consisted of conflicts not just against \*tribes which had broken allegiance at the death of Muhammad, but also against others that had never had previous involvement with \*Islam. The conflicts were characterized by the appearance of rival prophets among some tribes, such as \*Sajah (\*Tamim), \*Musaylima (\*Hanifa), and Tulayha (Asad). Muhammad's successor, \*Abu Bakr (r. 632–4), presided over the Ridda Wars (al-\*Baladhuri, *Futūḥ al-Buldān*, I, 143–62). The wars greatly assisted in the formation of central authority for the Islamic state, successfully uniting fractured tribes into a unified force. AM; JL

**riddles** Ancient literary theorists (e.g. Aristotle) saw the riddle as an essentially metaphorical procedure. The \*Greek word *ainigma* (riddle) is etymologically related to the Greek word *ainos* (saying, proverb). To interpret both riddles and *ainoi* it is necessary to make inference by way of analogy. In the case of riddles this involves surprise and poses a challenge—a stock situation in riddle-tales is that the addressee's life is at stake if he fails to solve it, as, for instance, in the story of the Gymnosophists in the \**Alexander Romance*.

The competitive dimension is apparent in the traditional setting of the drinking party (*symposium*), as in Aulus Gellius' reminiscences about problem-solving during a \*Saturnalia spent with friends in \*Athens (*Attic Nights*, 18, 3) and a discourse about riddles by Larensis in Athenaeus' *Deipnosophistae*. The preface of a collection of 100 \*Latin riddles attributed to \*Symphosius, each consisting of three hexameters, envisages a light-hearted Saturnalian setting. Yet the essential problem-solving element might emphasize intelligence, wit, even *paideia*; in the *Romance of \*Apollonius King of Tyre* the hero uses his native wit (shored up by books) to solve Antiochus' riddle, and in turn rises to the challenge to his *prudentia* to solve a series of riddles, several taken from Symphosius.

There are riddles among the poems of \*Ausonius (e.g. *Technopaegnion*, 13), some (epigrams 85 and 87) of a rare indecency. Another, specialized, form is the number riddle, or *gematria*, in which letters receive a numerical value; the method is ascribed to Pythagoras, but was especially popular in late Judaism as well as \*Gnosticism, Hermetism, and \*magic.

In later Latin collections, many of them (such as those of \*Aldhelm and the *Aenigmata Eusebii* of Hwaetberth, Abbot of \*Wearmouth-Jarrow c.716/17–

after c.747) influenced by Symphosius, there is a movement away from the tangible to the spiritual worlds. Tatwine (Archbishop of \*Canterbury 731–4) included items on the cardinal virtues and Christian theology among his riddles, and \*Boniface chose ten virtues and ten vices for his theme.

A vernacular Germanic tradition is represented by over 90 riddles preserved in the Exeter Book (Exeter, Cathedral Library 3501) of the mid-10th cent.

**Riha Treasure** One of four dealers' assemblages of Christian liturgical \*silver that comprised the \*Kaper Koraon Treasure. Initially the Riha group consisted of three objects: a paten, fan, and chalice. Scholars later assigned two ewers to the Riha treasure on the basis of their identical \*inscriptions.

MH

Mango, *Silver from Early Byzantium*.

**rings** The distinctive ring form of the Byzantine period has a flat hoop and a raised bezel. Signets set with engraved precious \*stones become increasingly rare after the 3rd century, though some are cut with early Christian themes (3rd–5th cent.) and a significant group of garnet intaglio-set rings of the late 5th century was influenced by \*Sasanian examples and displays a variety of subjects—\*monograms, \*crosses, \*birds, dolphins, as well as \*lions and scorpions (probably signs of the \*Zodiac).

There are also some splendid imperial portraits depicting \*Constantine I, \*Theodosius II, and his successors down to the time of \*Justinian I, as well as intaglios depicting contemporary barbarian rulers, \*Alaric II, \*Ricimer, and, cut on the metal of a \*gold ring, \*Childeric I. These were almost certainly \*insignia of office employed by high officers of state.

Other rings belong to the sphere of ornament, particularly female ornament, frequently in openwork. In many, especially from the 5th century, the bezel is particularly prominent. Some are inscribed on the metal bezel for \*marriage and not infrequently such gold rings bear male and female \*portraits. Others are engraved with religious motifs or with \*monograms. Episcopal rings are attested in the 7th century.

**Ripuarii** See FRANKS.

**roadhouses** See HOSTELS.

**roads, Persian** Minimal archaeological investigations have been undertaken on the road system of the \*Persian Empire in the \*Sasanian period. What can be deduced derives from the work of Islamic geographers such as Ibn Khurdadhbih's *al-Masalik wa-l-Mamalik*. The itineraries of these medieval travellers followed those used by \*merchants. They all start from \*Mesopotamia, on roads taking a northern route via Hatra and \*Nihawand to \*Khorasan, Tokharistan, and \*Transoxiana. A southern route via Deh Luran and Susangird went towards \*Khuzestan and took a coastal road along the Persian Gulf to Persis (\*Fars) and beyond. A northern road went through Azerbaijan to \*Armenia and \*Lazica. All roads were served by toll-stations to tax commercial goods, and services were offered to travellers, although the extent of these is not apparent archaeologically. However archaeological evidence of \*bridges, way stations, and \*rock reliefs provides clues to important routes.

*EncIran* VI/1 (1992) s.v. commerce, iii. In the Parthian and Sasanian periods, 61–4 (R. N. Frye).

**roads, Roman and post-Roman** Late Antiquity inherited an extensive network of public roads designed and maintained, largely at local expense, in the interests not of private or commercial travellers but of the state. The public roads, punctuated by \*milestones, underpinned the state transport and communication system, the \*Cursus Publicus. Although they are compilations of routes rather than catalogues of public roads, the Antonine Itinerary, from the \*Tetrarchic period, and the diagram on the Peutinger Map give an impression of the comprehensiveness of the network.

The last major new projects were the militarily significant \*Strata Diocletiana on the desert fringe in \*Syria and the Via Herculia in central southern \*Italy, both undertaken by the Tetrarchy. The foundation of \*Constantinople took advantage of a key nodal point where European and Asian routes converged. The \*Bordeaux Pilgrim provides a detailed itinerary across the Alps and northern \*Italy along the \*Via Militaris in the north \*Balkans to the new capital, on to the \*Holy Land by the \*Pilgrims' Road, and back by way of the \*Via Egnatia and up \*Italy through Rome to \*Milan. \*Inscriptions record repair and upgrading at state expense in \*Baetica and \*Germania Secunda under \*Valentinian I (*CIL* II, 4733 and XVII/2, 565), with the last such investment known from the Western Empire being replacement of the milestones along the Via Aurelia in Gallia \*Viennensis in 435 (*ILS* 806).

Roman \*law codes give an insight into the mechanisms for the maintenance of the transport system (*CTh* VIII, 5 = *CJ* XII, 50) and its physical infrastructure (*CTh* XV, 3), and reiteration of some regulations by the \*Burgundians (*\*Lex Romana Burgundiorum*, 17, 1) and \*Visigoths (*Breviarium of \*Alaric*, 8, 2) shows that the system did not entirely vanish with the Roman state. In \*Ostrogothic Italy, a nineteen-mile stretch of the Via Appia through the Pontine marshes was renovated by \*Theoderic c.510 (*ILS* 827; \*Cassiodorus, *Variae*, 2, 32–3). In the East, repairs to the coast road in \*Cilicia Prima by a Roman military commander are recorded in 519 (*AE* 1973, 542) and, after the \*Byzantine invasion of Italy, inscribed verses celebrated \*bridge repair on the Via Salaria north of \*Rome by the general \*Narses in 565 (*ILS* 832).

**rock reliefs, Persian** The Sasanians continued a long tradition of ancient western Asian monumental relief carving and were some of its most prolific patrons. Together with \*inscriptions, \*coins, and \*seals, rock reliefs are among the few unquestionably authentic

primary sources for the study of Sasanian Iran (Canepa, *Two Eyes*, xvii–xx).

Thirty-four \*Sasanian rock reliefs are known on the Iranian plateau (39 if one counts multiple panels within reliefs). Given their shape, wear, and location, nine or ten unfinished reliefs could be also Sasanian. The Sasanians carved the majority of the reliefs in their home province of \*Fars (MP Pārs). The majority cluster around Persepolis. Six reliefs survive along trade routes on the northern Iranian plateau as far west as the Sasanian province of Azerbaijan (MP Ādurbāyagān) and as far east as the modern province of Baghlan in Afghanistan (Grenet et al.). As attested by a damaged relief of \*Shapur I, it is likely that other reliefs carved outside Pars were destroyed after the fall of the Sasanian dynasty. First documented by Early Modern explorers, scholarship identifies rock reliefs by their New Persian site name and a number that corresponds to their relative locations, and not by their dates (Errington and Curtis, 3–16, Vanden Berghe).

Most Sasanian reliefs are flat rectangular panels with low \*relief sculpture. The last two Sasanian reliefs (\*Taq-e Bostan, 2 and 3) replicate rock-cut \**ayvan* architecture. Many reliefs received a high polish and all were probably painted. Some have suggested that later reliefs had details added in \*stucco, to which the forms of the relief sculptures often relate (Herrmann and Curtis). The two most frequent subjects of Sasanian reliefs were triumph and divine investiture (de Waele). \*Hunting occurs frequently too.

Almost all Sasanian reliefs were carved between the reigns of \*Ardashir I (224–40) and \*Shapur III (383–99), with a final reinvigoration in the early 7th century under \*Khosrow II. In addition to claiming sacred sites, the Sasanians carved reliefs to create tangible connections between themselves and the sites and traditions of their predecessors, be they the half-remembered Achaemenid dynasty or their Sasanian forebears (Canepa 2010). Multiple rock reliefs accumulated at ancient sites important for the Persian identity, such as \*Naqsh-e Rostam, or at new sites near cities (such as \*Sar Mashhad), sources of water (such as Salmas, Barm-e Delak, Tang-e Qandil, Sarab-e Bahram, \*Darabgerd, \*Naqsh-e Rajab, or \*Taq-e Bostan), or both (such as \*Firuzabad and \*Bishapur). The only non-Sasanian to usurp the royal prerogative was \*Kerdir, the chief priest of the Empire under \*Bahram II (276–93), who carved three profile busts with \*inscriptions.

**Roderic** Last \*Visigothic king in \*Spain (710–11), killed in battle by Muslim forces under \*Tariq b. Ziyad at the Guadalete in 711. Latin \*chronicles blame the defeat on traitorous partisans of his predecessor \*Witiza, or on Roderic himself for usurping the throne, while \*Arabic narratives claim that Roderic raped the daughter of the \*Comes Julian of Ceuta, who in revenge invited Tariq to invade. He is one of six kings in a wall painting at the 8th-century \*Umayyad \*desert \*palace of \*Qusayr 'Amra, symbolizing the world inherited by the \*Arabs. GDB

R. Collins, *The Arab Conquest of Spain, 710–797* (21994).

**Rogation** Term applied to two originally distinct Christian liturgical observances, also known as the Greater and Lesser Litanies (or Letanies). The \*processions called the Greater Rogation held at Rome annually on 25 April are first attested in a \*letter of \*Gregory the Great.

What is sometimes termed the Lesser Rogation, the public practice of strenuous communal \*prayer, penitence, psalmody, and \*fasting performed by all classes on the three days immediately preceding Ascension Day (40 days after \*Easter), was introduced by \*Mamertus, \*Bishop of \*Vienne in \*Gaul (c.451/2–after 474). The deliverance from natural disasters which prompted its introduction is described by \*Avitus of Vienne (*Homily* 6, cf. \*Gregory of \*Tours, *HF* II, 34), and by \*Sidonius Apollinaris, who ascribes the robust spirit of his own people at \*Clermont in the face of barbarian invasion to his introduction of Rogation in 473 (*ep.* 7, 1). Earlier public supplications, Sidonius claims, had been poorly supported and simply requested fair weather (*ep.* 5, 4). \*Caesarius of \*Arles promoted the observance of Rogation (*Sermons*, 143, 148, 157, 160A, 207–9), as did the first \*Council of Orléans of 511 (canon 27). **Roma and Constantinopolis** See PERSONIFICATIONS OF CITIES.

**Romanus** See JURA FATHERS.

**Romanus the Melodist** (466/93–after 555) Under \*Justinian I highly dramatic sung-\*sermons were immensely popular in \*Constantinople. Their innovative metrical patterns and rhetorical finesse are the product of Romanus, the premier poet of the \*Greek-speaking Church.

According to tradition Romanus, born in \*Syria, served as a \*deacon in \*Beirut before settling in Constantinople. There the Virgin \*Mary appeared in a \*dream and instructed him to swallow a scrap of \*papyrus; after awakening he recited his famous \*Christmas \*hymn. Subsequently he wrote many similar poems (called \*kontakia) for major \*festivals and to commemorate saints. Although approximately 85 surviving works bear the name of Romanus, scholars judge that fewer than 60 of these attributions are valid. Most works deal with Christ's life; others treat episodes in the Old or New Testaments; a handful focus on the demands of Christian life. Of the extant hagiographical poems, only that on the \*Forty Martyrs of \*Sebastia seems authentic. (The authorship of the \*Akathistos Hymn, sung in Orthodox churches on the feast of the Annunciation, remains controversial.)

His honorific title suggests that Romanus also created—and probably performed from a pulpit—the melodies to which his works were sung. After a brief introduction, every *kontakion* contains 18–30 stanzas, of half a dozen or more lines, composed in identical metrical patterns based on word-accent, not the \*metres of classical Greek poetry which were based on syllable-length. The first letter in each stanza creates an \*acrostic phrase typically featuring the poet's name: 'Song of the humble Romanus.' The last verse in each stanza is a refrain, inviting the congregation to make its repeated contribution to the presentation.

A *kontakion* was sung after the recitation of the scriptural passage during morning \*prayers; in this liturgical setting it discharges the functions of a conventional prose homily: interpretation of the biblical reading, clarification of doctrinal points, application of a moral message. The exploitation of snatches of dialogue or potential drama lying beneath the surface of the original text is a prime characteristic of Romanus'

re-creation of his scriptural material. For example, Joseph and Potiphar's wife sharply debate his passionate chastity; \*Mary's laments at the Crucifixion prompt Jesus to justify his apparent lack of pity; counterpoint panic by the infernal powers mirrors their losses during the Harrowing of Hell. Frequent examples of \*typology (vibrant intertestamental parallels) punctuate the *kontakia*. The opening stanzas of a Resurrection hymn echo several key elements of the official, \*Chalcedonian theological stance. Another work describes the havoc caused by \*earthquakes and the \*Nika Riot (532), followed by the magnanimous response of the \*Emperor Justinian and \*Theodora his wife. Jonah's fervid mission to \*Nineveh triggers an exhortation to Christian repentance—even for the 'stiff-necked' prophet himself. Five stanzas of dialogue between Christ and Simon the Pharisee pivot around a parable on generosity and forgiveness. Although the musical dimension of the *kontakia* has been totally lost, intricate rhetorical flashes, ingenious wordplay, and mastery of biblical allusion gleam throughout the texts.

The Melodist was surely familiar with Syrian literature, but the precise impact of the extensive works by \*Ephrem, the illustrious \*Syriac-language poet, on his masterpieces is difficult to gauge. Rampant pseudepigraphy and tangled manuscript traditions also cloud the extent of Romanus' borrowings from patristic homilies, but some close imitations of shape and content have been detected. Several \*papyrus fragments from known *kontakia* have been found. The numerous variant readings in these 6th/7th-century Egyptian documents support a judgement of 'contaminated' transmission for the collected manuscripts—they lack definitive lines of priority and dependence. Moreover, the papyri might have been recorded directly from an oral, liturgical presentation, thereby increasing the probability of incidental lexical and metrical divergence. Eastern churches celebrate the feast of S. Romanus on 1 October. RJS

**Rome, catacombs of** Underground tombs cut into the tuff bedrock around the \*City of \*Rome ('catacombs' from Gk. *kata kymbas*, 'near the hollows'). They were in regular use for burials from the 1st to 5th centuries and later for veneration of Roman saints and \*martyrs. The term *ad catacumbas* was used initially for the tombs beneath the Via Appia associated with the soldier martyr S. Sebastian who was venerated there, and then applied more generally.

Extensive networks of burials were excavated in existing pozzolana \*quarries, taking advantage of the easy-to-cut tuff to create new cemeteries which sometimes replicated conventional tomb formats with vaulted chambers housing \*sarcophagi in large niches. High-status tombs were often located in large chambers, while the walls of passages permitted the burial of many individuals in *loculi*, long horizontal niches cut for each tomb, sometimes stacked several niches high. Individual tombs were often sealed with \*inscriptions on \*marble or markers, while group complexes were sometimes decorated with wall paintings or \*mosaic scenes and ornament. From the 4th century, tomb walls were increasingly decorated with biblical scenes, images of saints, and symbols of piety, often painted in vibrant colours and bold shapes to be legible in the dark underground rooms. Paintings from the catacombs constitute the most significant repertoire of popular imagery from Late Antique Rome, preserving commemorative and devotional decoration from various periods and of differing qualities.

As the cult of Roman saints developed in the 4th and later centuries, shrines, oratories and \*basilicas in honour of Roman martyrs and saints were built near their presumed resting places in catacombs, sometimes administered by \*monasteries. These enjoyed active \*patronage and \*pilgrimage in Late Antiquity, as large spaces within catacombs were sometimes used for liturgical services in honour of saints, and benefactors such as \*Constantina and \*bishops such as \*Damasus encouraged veneration at saints' tombs. Many saints' \*relics were moved into the

city of Rome in the 8th and 9th centuries causing the catacombs to be less visited. From the Renaissance onwards, they were the subject of much fascination and research by antiquarians such as Antonio Bosio (d. 1629) and Giovanni Battista de Rossi (d. 1894). CJG

**Rome, churches of** Before \*Constantine I, private houses or *domus ecclesiae* (such as the one in the city block, the *insula*, discovered under the Church of Ss. Giovanni e Paolo on the Caelian Hill) served the Christian community in \*Rome for the celebration of the \*liturgy and other gatherings. Some of these \**tituli* bore the name of the owner of the property, for example, Titulus Anastasiae. The titular churches constitute one of the earliest strata of ecclesiastical architecture in Rome.

Superimposed on this network were the monumental buildings sponsored by Constantine and others in the early 4th century, whose grand scale and luxurious materials marked a decisive break with the past. Constantine built the \*Lateran for the \*Bishop of \*Rome as a \*basilica in the imperial mould (cf. the Basilica Ulpia), with red and green columns in the nave and aisles, \*silver statues of Christ and the Apostles, and gold \*mosaics. The \*emperor commissioned other churches to honour the graves of \*martyrs. With the erection of S. Maria Maggiore by Sixtus III (432–40) on the Esquiline the papacy emerged as an important provider of church buildings in Rome. The basilica plan was employed also for parish churches, which filled the interstices between the magnificent imperial and papal establishments. WLT

**Rome, churches of, Castel Sant'Angelo** The ancient mausoleum of the \*Emperor Hadrian (d. AD 138), fortified and incorporated into the Aurelian Walls in 403 (\*Procopius, *Vandalic*, III, 5, 3–5). In the 7th century a chapel dedicated to the Archangel Michael was probably built here (Ado, *Martyrologium*, 29 Sept.). DN

Richardson, *Topographical Dictionary*, 249.

**Rome, churches of, Lateran (Constantinian) Basilica** The church now known as the Basilica of S. Giovanni

in Laterano, in Late Antiquity the Basilica Constantiniana, or (first in 649/53) Basilica S. Salvatoris, is the episcopal seat of the \*Bishop of \*Rome, and apparently the first church endowed by the \*Emperor \*Constantine I (\**Liber Pontificalis*, 34). The complex, located on the Caelian Hill in \*Regio II near the \*city walls, included the first \*baptistery as an independent building, as well as \*baths and the Lateran Palace, principal residence of the popes until the 14th century.

The present building (100 × 55 m/330 × 181 feet) is mostly the result of a rebuilding by Borromini (1646–50). Constantine's construction, possibly a \*votive offering following his victory over \*Maxentius at the Milvian Bridge, superimposed an \*apsed \*basilica—its typological origins still debated—on the demolished site of the Castra of the \*Equites Singulares, a corps suppressed probably for its support of \*Maxentius, and on several other *domus*. One of these, the Lateran Domus, gave the neighbourhood its name; another, the Domus Faustae, was the site of the \*Lateran Council of 313.

Constantine's church (built after 312) was oriented in reverse, with a porticoed atrium and triple-\*door entrance at the east, and its \*apse to the west. As reconstructed from Krautheimer's excavations and 17th-century *veduti*, the church was 333.3 Roman feet long and comprised an apse and a central nave (15 m (50 feet) high) lit by \*windows in the clerestory walls, which rested on an entablature with a colonnade of red granite columns, set with \*spolia bases and \*capitals. Two aisles flanked the nave on each side (9 m each), lit by windows above the intercolumniations. The ends of the outer aisles terminated in rectangular chambers, whose connection to the aisles—whether closed as sacristies or open as a transept—cannot be determined from the surviving foundations. A lean-to \*roof covered the aisles, while a truss roof covered the nave—whether this roof was open or coffered, or the trusses gilded, remains debated. The exterior was simple with \*brick and plaster.

Little remains of the ancient interior decoration apart from written testimony. The *Liber Pontificalis* (34) records that Constantine donated \*lamps and lighting fixtures, a \*golden apse \*mosaic, and a two-sided *fastigium* with life-sized \*silver \*statues of Christ enthroned among the Apostles, supported by four \*bronze columns that survive now over an \*altar in the transept. The *fastigium* (which consisted of 2,025 Roman pounds of silver) was carried off by \*barbarians in the \*Sack of 410, but replaced by the Emperor \*Valentinian III (*Liber Pontificalis*, 46). Anastasius Bibliothecarius (fl. under Hadrian I, 772–95) indicates the presence of Old and New Testament scenes on the high walls of the nave, whose \*typological arrangement is redolent of the early 5th century (cf. \*S. Maria Maggiore).

The *Liber Pontificalis* also attributes to Constantine the foundation of the Lateran Baptistery on the site of a

## Rome, churches of

private \*bath, 50 m (165 feet) to the north-west, which was remodelled by Sixtus III (432–40, *Liber Pontificalis*, 46) and Hilarius (461–8, *Liber Pontificalis*, 48), who added three cruciform, mosaic-decorated oratories, of which two are partially preserved. A bath complex existed before \*Constans II's visit in 661 (*Liber Pontificalis*, 78). Later Pope Hadrian I restored its water supply, the \*aqueduct called the Aqua Claudia.

**Rome, churches of, Pantheon** Converted to church use by Boniface IV with the approval of the \*Emperor \*Phocas in 608 as Sa. Maria ad Martyras, the Pantheon was the first \*pagan \*temple in \*Rome to be dedicated as a church (*\*Liber Pontificalis*, 69, 2). Its interior is very largely preserved.

LHCG

S. De Blaauw, 'Das Pantheon als christlicher Tempel', *Boreas* 17 (1994), 13–26.

**Rome, churches of, Quattro Coronati** Church (the Titulus Aemiliana) standing on the north side of the Caelian Hill between the Colosseum and the \*Lateran \*Basilica. It is now embedded in a larger complex of buildings, mostly monastic, and consists essentially of a nave flanked by aisles and terminating in a large \*apse. This clearly represents successive medieval reworkings of the church built in the 4th century. The \*relics of the \*martyrs by whose title it is now known were probably brought to the church from the \*catacomb of Ss. \*Marcellinus and Peter *ad duos lauros* by Leo IV (847–55). They should be identified either with four (or five) sculptors from \*Dalmatia allegedly \*martyred in the Great \*Persecution or with four police officers from \*Rome.

Lia Barelli, *The Monumental Complex of Santi Quattro Coronati in Rome*, tr. C. McDowall (2009).

**Rome, churches of, S. Agnese fuori le mura** Church on the Via Nomentana most likely founded by \*Constantina (*ILCV* 1768), though her father \*Constantine I is also credited with its endowment (*\*Liber Pontificalis*, 34). The \*martyr S. Agnes is mentioned as early as the \*Codex-Calendar of 354; she was admired by \*Ambrose (*De Virginibus*, I) and romanticized by \*Prudentius (*Peristephanon*, 14). The ruins of the church form part of a complex including \*S. Costanza, the \*catacomb of S. Agnes, and the present \*basilica, built by Pope \*Honorius I in the early 7th century, replacing a 5th-century foundation. The first church

was a large ambulatory basilica used for burials, as well as for celebrating the \*Eucharist and \*martyr cult. The adjoining \*triconch building was probably originally intended as Constantina's mausoleum.

Delahaye, *Origines*, 276.

**Rome, churches of, S. Clemente** The Late Antique \*Titulus Clementis, near the Colosseum, survives as part of the later Church of S. Clemente. According to legend its origin goes back to the 1st century as the home of S. Clement; and the ancient church was dedicated to the saint by Siricius (bp. 384–99). The building converted for this purpose had already experienced a range of uses, including the installation of a Mithraeum in the early 3rd century and a (probably public) hall in the 4th century. The 4th-century church, based on this hall, was a three-aisled \*basilica, with \*narthex and colonnaded atrium. Most of what can be seen in the church of today corresponds to later restorations and remodellings. Various elements surviving from the 6th-century church, including columns, \*capitals and \*marble furnishings which are preserved in the medieval church, while recent excavations have also uncovered a \*baptismal font from the same period.

LHCG

*Corpus Basilicarum*, vol. 1, 118–36.

F. Guidobaldi, *San Clemente: gli edifici romani, la basilica paleocristiana e le fasi altomedievali* (1992).

**Rome, churches of, S. Costanza** Part of the larger complex associated with the 4th-century church of \*S. Agnese on the Via Nomentana, though the difference in masonry technique indicates that S. Agnese and S. Costanza were erected in different building campaigns. S. Costanza was a church by at least AD 865, but was built as an imperial mausoleum (almost certainly for \*Constantina, daughter of \*Constantine I); two \*porphyry \*sarcophagi were found here. Like other contemporary mausolea, it is a centralized circular structure, with an outer ambulatory separated from the domed central space by twelve pairs of columns. Much of the building's rich decoration of \*marble and \*mosaics survives, though often heavily restored. The ambulatory mosaics include traditional funerary decorative motifs, including fruit trees, birds, and vintaging *putti*. The surviving mosaics in the central area depict Christian subjects, including Christ handing the law to S. Peter, with S. Paul in attendance.

La Regina, *Lexicon Topographicum: Suburbium*, vol. 2, 140–7.

**Rome, churches of, S. Croce in Gerusalemme (Basilica Hierusalem, Basilica Heleniana)** Urban church, built in the 4th century out of a late 2nd-century vestibule of the Sessorian \*Palace, which became a large \*palace chapel next to the imperial residence on the eastern edge of \*Rome. The arcades along the side walls of the hall were blocked, and an \*apse and an atrium were added to the short sides, forming a \*basilica. According to the *Liber Pontificalis* (34), this conversion was undertaken by \*Constantine I. The apartments formerly occupied by the emperor's mother, \*Helena, at the palace held a \*relic of the True \*Cross, which the *Liber Pontificalis* claims was brought from \*Jerusalem to \*Rome (34, 22). Helena's involvement in the creation of the church is plausible. CJG

**Rome, churches of, S. Lorenzo in agro Verano** The last of the ambulatory \*basilicas from the Constantinian period, built on the Via Tiburtina, in communication with the \*Catacomb of S. \*Lawrence, and handsomely endowed (*Liber Pontificalis*, 34, 24–5). The cult of S. Lawrence was important, and his *confessio* was embellished further by \*Damasus (*Liber Pontificalis*, 39, 2) and again by Xystus (Sixtus) III (*Liber Pontificalis*, 46, 5). Mausolea abutted onto the luxuriously fitted basilica, but only part of its foundations have been excavated. In the late 6th century Pelagius II built a new church directly above the \*martyr's shrine (*ILCV* 1770; *Liber Pontificalis*, 65, 2), part of the present S. Lorenzo fuori le mura. The triumphal arch retains its original \*mosaic, though much restored.

A basilica dedicated to S. Lawrence was built by Xystus (Sixtus) III with the permission of \*Valentinian III (*Liber Pontificalis*, 46, 6). This may be the church of which 4th/5th-century foundations and masonry survive built into the present Church of S. Lorenzo in Lucina on the Campus Martius. LHCG; OPN

La Regina, *Lexicon Topographicum: Suburbium*, vol. 3, 203–11. *Corpus Basilicarum*, vol. 2, 1–144 (San Lorenzo in agro Verano) and 161–86 (San Lorenzo in Lucina).

O. Brant, 'The Early Christian Basilica of San Lorenzo in Lucina', in O. Brandt, ed., *San Lorenzo in Lucina: The Transformations of a Roman Quarter* (2012), 123–54.

**Rome, churches of, S. Maria Antiqua** The second church (after Ss. \*Cosmas and Damian) to be installed in an imperial building, in this case part of the Palatine

complex, in the Forum Romanum. The Church of S. Maria Antiqua was first referred to as such in c.635, the title probably referring to an \*icon of the Blessed Virgin \*Mary. Elsewhere it is designated as a *diaconia*. It is notable for its profusion of wall paintings, dating from various periods from the 6th to the 8th century; often painted one on top of another. The earliest, of the 6th century, depict Maria Regina and the Annunciation. A second phase of paintings, done under the Greek Pope John VII (705–7), employ a mixture of Western and Eastern \*iconography. After \*earthquake damage in 847 the main body of the church was abandoned.

**Rome, churches of, S. Maria in Cosmedin** Located near the Tiber in the area of the Forum Boarium, the present church, a three-\*apsed \*basilica with a nave flanked by aisles and entered through a narthex, is largely the result of rebuilding in the 8th and 12th centuries. Modern restorations have revealed two prior structures embedded in its walls, a loggia of the 4th or early 5th century, which has been interpreted as part of the Statio of the \*Annona, the food distribution system of ancient and Late Antique \*Rome, and a *diaconia* hall, possibly of the 6th century. Some features associate the *diaconia* hall to \*Naples and \*Sicily; it has therefore been linked to the arrival of a Greek community from south \*Italy following the \*Byzantine invasion under \*Justinian I. WLT

*Corpus Basilicarum*, vol. 2, 279–310.

G. B. Giovenale, *La Basilica di S. Maria in Cosmedin* (1927).

**Rome, Churches of, S. Maria Maggiore** The \*Basilica Sanctae Mariae on the Esquiline was founded by Sixtus III (bp. 432–40; *Liber Pontificalis*, 46). While this church has been associated with the earlier \*titulus of \*Liberius (bp. 352–66), it is clear from the archaeological evidence that the new church did not directly replace the earlier titular foundation but was built over a secular building from the imperial period. The new church was dedicated to the *Genetrix Dei*, the \*Theotokos proclaimed by the \*Council of \*Ephesus of 431.

This three-aisled basilica was the largest early papal foundation in \*Rome; it is generously proportioned, with large clerestory windows and a \*baptistery, which has not survived. Nevertheless, the church is one of the best-preserved early Christian sites in Rome, particularly notable for its \*mosaics. Those surviving today adorn the triumphal arch and the clerestory, where 27

out of an original 42 remain. The mosaics on the left and right of the triumphal arch depict scenes from the infancy of Christ, from the Annunciation to the Presentation in the Temple. These scenes are complex, and identification of key figures has been debated. In the centre of the arch is the 'empty throne' or *Hetoimasia*, complete with jewelled \*Cross and diadem; on either side are Ss. Peter and Paul and the symbols of the Four Evangelists. Underneath is a mosaic \*inscription proclaiming *Xystus episcopus plebi Dei* (Sixtus the bishop to the people of God), a striking claim for religious primacy in the \*city of \*Rome. The \*apse mosaics, featuring scenes from the life of \*Mary, date from the 13th century, but they may follow at least in part the original 5th-century decoration, which focuses on Mary, *Genetrix Dei*, as well as on Christ, the ruler of the world. The panels under the clerestory windows constitute a unique narrative cycle from the Old Testament. The south-west panels feature scenes from the lives of Abraham, Isaac, and Jacob; the north-west panels deal with Moses and Joshua. The mosaics are of particularly high quality, featuring a wide range of colours, against a gold background, adding to the striking impression of \*light and richness in the basilica.

**Rome, churches of, S. Paolo fuori le mura** Christian \*basilica and place of \*pilgrimage, south of the \*city walls on the Via Ostiensis near the Tiber. Its present form is a nearly total reconstruction of the basilica, which was completely destroyed by fire in 1823. The \**Liber Pontificalis* (34) attributes to the \*Emperor \*Constantine I the considerable endowment of a church commemorating the Apostle Paul on this site. The church was located near the traditional place of S. Paul's \*martyrdom where \*Eusebius (*HE* II, 25) reports the presence of a small shrine.

Constantine's church, with its \*apse in the west, was reoriented and enlarged by the emperors \*Theodosius I, \*Valentinian II, and \*Arcadius, starting in 384, in order to accommodate increasing numbers of pilgrims. The remains of the Apostle were placed in a \*sarcophagus with libation holes and the \*inscription *Paolo/apostolo mart[yr]*, located beneath the main altar.

The enlarged basilica of the late 4th century used newly carved granite columns to separate the main hall into a nave and four aisles with a large atrium and forecourt. Like the \*Vatican Basilica, S. Paolo was

given a transept at the \*apse end, where the \*altar was located. At S. Paolo, this transept was much taller and wider than that at the \*Vatican, and its triumphal arch was supported by a pair of giant columns and decorated with a \*mosaic depicting the Elders of the Apocalypse handing their crowns to Christ, unusual \*iconography apparently selected by Pope \*Leo I and executed in the mid-5th century. \*Prudentius noted the beauty of the renovated imperial basilica and the significance of the paired \*stational liturgies of Ss. Peter and Paul at their respective basilicas (*Peristephanon*, XII). Imagery in the church included the depiction of the Concordia Apostolorum, scenes from the life of S. Paul, and other biblical narratives. A series of portraits of popes also lined the walls of the nave, and these were brought up to date during the Middle Ages.

**Rome, churches of, S. Pietro in Vincoli** Church (possibly the \*Titulus Apostolorum or Basilica Eudoxiae) built in the 5th century, incorporating part of a private \*garden and hall. At the time of Sixtus III (432–40) it was rebuilt as a \*basilica with nave colonnades using \*spolia. It housed the \*relic of the chains of S. Peter, purportedly sent from \*Jerusalem to the \*Empress \*Eudoxia (438–55). In the left aisle of the church a \*mosaic depicts S. Sebastian holding a \*crown of \*martyrdom; the mosaic may date from the \*plague outbreak of 680 in \*Rome and \*Pavia, when Romans and \*Lombards alike invoked S. Sebastian for healing.

**Rome, churches of, S. Prisca** The \*Titulus Prisca, on the southern slope of the Aventine is first recorded in funerary \*inscriptions of the 5th century, commemorating presbyters associated with the Tit[ulus] Prisca. In 499 the Titulus sent a single presbyter to the Roman synod suggesting it was only a minor church. The first church was built over earlier structures, including a Mithraeum. The present church was built around 1100. The titular S. Prisca has been identified traditionally with the wife of Aquila, known from the

Pauline epistles, whose legend is recorded in the *Passio Sanctae Priscae* (BHL 6926), perhaps of the 6th century. LHCG

*Corpus Basilicarum*, vol. 3, 260–79.

La Regina, *Lexicon Topographicum: Suburbium*, 162–3.

**Rome, churches of, S. Pudenziana** The ancient \*Titulus Pudentis, situated on the modern Via Urbana, in the ancient Subura, is first attested in 384 and was founded as a Titulus, probably under \*Damasus (bp. 366–84), by the presbyters Leopardus and Ilicius, presumably in cooperation with a lay donor from the Pudens family, present in \*brickstamps at the site. Its early history is known through epigraphic evidence; early medieval hagiographic sources are unreliable. The church was installed in an apartment block, seemingly without visible external changes. The impressive \*apse \*mosaic is one of the earliest to have survived. At its centre Christ sits on a jewelled throne, holding an open book which calls him 'Dominus Conservator Ecclesiae Pudentianae', surrounded by apostles and other figures. This is set against an \*apocalyptic background, which features the buildings of the heavenly Jerusalem, and a gem-studded \*cross, as well as the symbols of the Evangelists. LHCG

*Corpus Basilicarum*, vol. 3, 280–305.

**Rome, churches of, S. Sabina** The Titulus Sabinae on the Aventine was founded by Peter, a presbyter, under Celestine I (422–32). Excavations under the church have revealed a luxurious private \*house, the walls of which were integrated into the church. The best-preserved early church building in \*Rome, it was also one of the most lavishly appointed and well proportioned, and is notable for its decoration, including its panelled wooden \*doors, carved with biblical scenes, from the Old and New Testaments, eighteen of which remain. The most famous scene is one of the earliest representations of the Crucifixion. The original dedicatory \*inscription is preserved on the western wall: it depicts personifications of the 'Church of the Gentiles' and the 'Church of the Circumcision', accompanied by a six-line hexameter dedicatory inscription (*ILCV*, 1778a). While the nave \*mosaics are lost, the arcades are decorated with \*opus sectile, including the depiction of liturgical vessels on the spandrels. LHCG

Steinby, *Lexicon*, vol. 4, 221–3.

*Corpus Basilicarum*, vol. 4, 72.

**Rome, churches of, Ss. Cosmas e Damiano** Founded in 527 under Felix IV, the first church to be situated in the Forum Romanum, Ss. Cosmas and Damian was converted from an \*apsed hall, once part of Vespasian's Forum Pacis complex. The dedication to the Eastern twin doctor saints has been associated with

medical presence in this area, as well as providing a potential counterpoint to the nearby cult of the Dioscuri. The apse \*mosaic depicts the Second Coming of Christ, greeted by apostles and \*martyrs, including the titular saints, and also a dedicatory \*inscription. The triumphal arch mosaic depicts further \*apocalyptic scenes. LHCG

Steinby, *Lexicon*, vol. 1, 324–5.

*Corpus Basilicarum*, vol. 1, 137–43.

**Rome, churches of, Ss. Giovanni e Paolo** In the late 4th century a three-aisled titular \*basilica, first associated with \*Pammachius, was installed in a building on the Caelian Hill. The complex includes a luxurious *domus* built on the site of an abandoned *insula*, both visible in the modern excavations. Earlier excavations uncovered a small Christian household shrine with late 4th-century paintings depicting the martyrdoms of three figures. This does not appear to be part of a tomb and the identification of the \*martyrs remains unclear; the association with Ss. John and Paul (BHL 338–44) is much later. LHCG

*Corpus Basilicarum*, vol. 1/4, 267–303.

B. Brenk, 'Microstoria sotto la Chiesa di Ss. Giovanni e Paolo', *Rivista dell'Istituto nazionale d'archeologia e storia dell'arte Serie III* 18 (1995), 169–206.

**Rome, churches of, Ss. Marcellino e Pietro** Church on the Via Labicana endowed by the \*Emperor \*Constantine I c.320, in close connection with the \*catacomb where the eponymous \*martyrs were buried. It was built on imperial territory, close to the cemetery of the disbanded \*Equites Singulares. The importance of the church is demonstrated by the large number of properties donated for its upkeep (*Liber Pontificalis*, 34, 26). Only the foundation walls remain, revealing a three-aisled ambulatory \*basilica, adjoined by a number of mausolea including that of the \*Empress \*Helena herself. The tomb of Ss. Marcellinus and Peter was marked above ground with another mausoleum. LHCG

La Regina, *Lexicon Topographicum: Suburbium*, vol. 4, 19–25.

*Corpus Basilicarum*, vol. 2, 191–204.

**Rome, churches of, S. Stefano Rotondo** S. Stephanus on the Caelian Hill was consecrated by Simplicius (\*bishop 468–83; *Liber Pontificalis*, 49). A memorial, rather than a parish church, its dedication to S. Stephen demonstrates the popularity of the cult of the first Christian \*martyr. The church is notable for both its size and its architecture. A perfectly circular building, its nave is surrounded by an ambulatory with four transept arms. The decoration is lavish, featuring coloured \*marbles on the walls and floor and \*Proconnesian marble in its columns and \*capitals. LHCG

*Corpus Basilicarum*, vol. 4, 204–32.

**Rome, churches of, S. Vitale** Church on the vicus Longus, founded during the episcopate of Innocent I (401/2–17), under the patronage of the \*Milanese \*martyrs Ss. \*Gervasius and Protasius, and funded by a woman *illustris*, Vestina, hence its designation as the *titulus Vestinae* (\**Liber Pontificalis*, 42, 3–6). The dedication to S. Vitalis became established during the 6th century. LHCG

*Corpus Basilicarum*, vol. 4, 299–316.

**Rome, churches of, Vatican Basilica** The present Church of S. Peter in the Vatican, New S. Peter's, is the product of the Renaissance and Baroque rebuilding of the Late Antique and medieval edifice, Old S. Peter's, which according to the \**Liber Pontificalis* (34) was endowed by the \*Emperor \*Constantine I. G. Bowersock and others attribute the building to the sons of Constantine.

Old S. Peter's was a monumental structure, with a nave flanked by two aisles on either side, an \*apse at the west end separated from the nave by a transept, and at the east, a \*narthex preceded by an atrium. The colonnades of nave and aisles were composed of columns, \*capitals, and bases reused as \*spolia. The walls were covered with \*marble revetment and the apse with \*mosaic.

The church was built with the apse at the west so that it would be positioned in relationship to the grave of S. Peter, the first of the Apostles, revered by the Roman Church as its founder, who the Church believed was martyred in the Circus of Nero in the Vatican and buried in an adjacent necropolis. The transverse space of the transept between apse and nave accommodated pilgrims who wanted to visit the shrine of the Apostle sited on the chord of the apse. The shrine incorporated the 2nd-century tropaion, whose top part stood above the level of the floor of the apse, surrounded by a baldacchino composed of six vine-encrusted twisted columns (four surrounding the tropaion and two to the sides), as depicted on an \*ivory plaque on the 5th-century Capsella of Samagher (Pola Casket).

In large part because of the pre-eminence of the Apostle to whom the church is dedicated, the architectural form of Old S. Peter's became a model to be emulated in Rome (as, for example, at the Church of S. Prassede) and elsewhere. The effort to outfit the church with a figural decorative programme was probably carried into effect in stages in the 4th and 5th centuries, and continued with additions throughout

the Middle Ages. The apse contained a monumental figure of Christ with Ss. Peter and Paul, the *Traditio Legis*, and the nave had an Old Testament cycle on the right wall (north) and a New Testament cycle on the left wall (south).

The nave also accommodated the graves of pious Christians who wanted to be buried in proximity to the saint (*ad sanctos*), including a \*Praefectus Urbi, \*Junius Bassus, whose massive \*marble \*sarcophagus of 359 was discovered when Old S. Peter's was being demolished. Papal burials in the church were initiated by \*John VII (705–7), who had an oratory with an image of the Virgin \*Mary above the altar constructed at the east end of the south aisle, where he was buried. Throughout the Middle Ages, altars, shrines, images, and \*relics were added to the church. WLT

**Rome, food supply of** The \*food supply of \*Rome was largely left to private enterprise. However, the state intervened in the supply of certain essential products. The \*Praefectus Urbi and the Praefectus \*Annonae were in charge of this system, which was run by organizations of traders (*corpora*) hired by the state. Different *corpora* collected fiscal \*grain and \*olive oil in \*Africa, and transported them to \*Ostia and Rome, where the grain was milled and baked. Free \*bread and olive oil were distributed every day at special establishments called *gradus* and *mensae oleariae* (\*Symmachus, *Relatio*, 35). Fiscal \*wine and \*meat came largely from \*Italy. The wine was sold for a low price at the \*Temple of the \*Sun (*CTh* XI, 2, 2; *CIL* VI, 1785), while the meat (largely pork) was freely distributed for five months a year (*CTh* XIV, 4, 10, 1–5). From the 5th century onwards, the Church also intervened in the public supply of food for the Roman \*plebs (\*Gregory, I *ep.* 10, 8). Despite the \*Vandal conquest of Africa, the system continued into the 6th century under \*Ostrogothic rule (\*Cassiodorus, *Variae*, 11–12). DN

Sirks, *Food for Rome*.

P. D. A. Garnsey, *Famine and Food Supply in the Graeco-Roman World* (1989).

**Rome, history and politics of** No longer the sole imperial capital, Late Antique Rome was still an important political centre, the *communis patria* of all Roman citizens. The \*city did not have the same status or influence over policy-making that it had held in

previous centuries, but its history and prestige guaranteed its place as a symbol of the empire.

### *Scholarship and sources*

The focus of earlier generations of scholars on imperial politics resulted in Late Antique Rome being represented as a city in decline, and its political and social privileges as anachronisms. More recently, interest in the city, its secular aristocracy, and its religious leaders has led to a revision of this picture. Scholars now show more interest in the city's social and cultural history, without overlooking either its relationship with the imperial court or the part played by the Church in daily life.

The history of the city of Rome is better documented in Late Antiquity than in earlier or later periods. The *Theodosian Code*, *Cassiodorus' Variae*, the *Relationes* of *Symmachus* written when he was *Praefectus Urbi*, and the letters in the *Collectio Avellana* document different aspects of the city's political life. Further evidence is provided by other literary sources, such as letters, histories (ecclesiastical and secular), and panegyrics, such as that of *Pacatus*. Renewed interest from archaeologists and epigraphers has also contributed to a more subtle understanding of the city, its history and institutions.

### *Emperors and Rome*

With the exception of *Maxentius* (306–12), 4th-century emperors spent little time in Rome. After *Diocletian* and *Maximian's* short visit in 303, the only securely established visits were those of *Constantine I* (in 312, 315, and 326), *Constantius II* (357), *Valentinian II* (388), and *Theodosius I* (in 389, possibly also in 394). This situation changed in the 5th century, when *Honorius* visited the city a number of times and *Valentinian III* and most of his short-lived successors resided there. *Theoderic the Ostrogoth* visited Rome in 500, but following the *Byzantine* invasion, Rome would have to wait until *Constans II* (667) to see an emperor again.

Even when residing elsewhere, emperors continued to bestow benefits and privileges on Rome. *Diocletian*, *Maxentius*, and *Constantine* rebuilt the monumental centre, also constructing two bathhouses. The largest project carried out was the wall started by *Aurelian* (in 271), which was doubled in height and reinforced by *Honorius* in the early 5th century (*CIL* VI, 1188–90). However, most public works carried out after the *Constantinian* dynasty consisted of embellishment and restoration. *Constantine* began the building of a series of Christian basilicas, and the *Liber Pontificalis* records continued imperial patronage of these buildings.

The interest of the central government was also expressed through legislation regulating the administrative and financial life of the city. The *annona*

was preserved, and different imperial officials were responsible for its management. Visiting emperors like *Constantius II* were celebrated through impressive parades (*Ammianus*, XVI, 10), and, as the *Codex-calendar of 354* indicates, even in the absence of the emperors the city's festive calendar was punctuated throughout the year by imperial festivals. *Theoderic* continued to show interest in the city, sponsoring public works and celebrations and maintaining close contact with leading members of the Senate. Later, *Justinian I's* *Pragmatic Sanction of 554* (*NovJust* App. VII) reorganized the administration of the city. By the *Byzantine* period, however, Rome was markedly provincial.

### *Local government and politics*

Rome was one of the largest cities in the Empire, and as such its government required constant imperial attention. The highest-ranking civil authority was the *Praefectus Urbi*, who was directly appointed by the emperor. Emperors had a certain degree of control over the city administration, and it is possible to identify in the *fasti* which list them the names of prefects closely connected with the court. However, most prefects were members of the senatorial aristocracy, residing in Rome and acting as patrons of Roman corporate bodies.

Much of Rome's significance derived from the presence of the Senate, which retained its symbolic power from the Senate House in the Roman Forum and could still exert some influence in policy-making (as in religious controversies, for example). Emperors joined the Senate in honouring local notables with statues in the Forum of Trajan, addressed letters and legislation to that institution, and visited and publicly addressed it when in Rome.

As a local council, the Senate was still involved in the city's political life. However, its importance was mainly due to its members, the wealthiest and most powerful aristocrats in the West. Aristocratic houses were important political places in Late Antiquity, due to their owners' personal power and networks of patronage. This is indicated by the fact that the promulgation of the *Theodosian Code* in 438 took place in a senator's house, and not in a public building.

There is no evidence for formal popular assemblies, but the people could take part in city politics in informal ways. Corporations seeking privileges advocated specific policies through their powerful patrons in office; honorific statues were set up in the semi-public areas of aristocratic houses as a reward (e.g. *CIL* VI, 1682 and 1759). The people voiced their opinion about imperial policies in the *Circus Maximus*, for instance during the visit of *Constantius II* (*Theodoret*, *HE* II, 14); they met in informal gatherings to confront public authorities (*Ammianus*, XV, 7, 3); and carried out attacks against

the houses of prefects in times of crises (Ammianus, XIX, 10, 1–3; XXVII, 3, 3–4; XXVII, 3, 8). Members of the *populus* were directly involved in the troubles that followed the election of \*bishops, occupying the public spaces of the city to demonstrate their allegiances (as in the case of Pope Zosimus in 418 (*Collectio Avellana*, 29, 3). According to \*Lactantius, Diocletian left Rome before the inauguration of his consulship at the start of 304 because he could not stand the free and easy demeanour of the Roman *populus* (*Mort.* 17, 2).

The Church also played an important role in local political life. Papal elections mobilized different aristocratic and popular groups. From the 5th century onwards, bishops increased their authority over different aspects of city life, including organizing distributions to the \*poor and taking part in embassies to the court and to enemy generals.

### Civil and military conflicts

The most concrete reason for Rome's continued importance lay in the size of its population and the wealth amassed within its walls. In political terms, Rome was a base of power that could not be neglected by any Roman ruler (or invader), and the history of the city was marked by this fact. Maxentius was successful in adopting it as a base against his enemies, until his defeat by Constantine at the Battle of the \*Milvian Bridge in 312. Proclaimed emperor in Rome during the usurpation of \*Magnentius (in June 350), \*Nepotianus controlled the city for less than a month. Roman \*senators supported the usurpation of \*Magnus Maximus in 388; they also supported a \*usurper in 409, when Priscus \*Attalus was appointed emperor. The continued presence of emperors in the 5th century increased the involvement of the city in imperial politics, and different emperors met their fate in the old capital, \*Valentinian III in 455 and \*Anthemius in 472, among others.

Rome experienced a military and political crisis between 408 and 410, culminating with the sack of the city by \*Alaric. The city was sacked again by the \*Vandals in 455, when according to \*Procopius even the \*Palace was looted (*Vandalic*, III, 5, 1–3). The civil war between Anthemius and \*Ricimer in 472 brought further destruction to the old capital. It was in the 6th century, however, that the \*Byzantine invasion threw Rome into its most serious crisis. The city was besieged and taken by the \*Ostrogoths and the Byzantines on four different occasions, leading to the execution of a number of senatorial families, while others fled to \*Ravenna and \*Constantinople. Hunger and \*plague further damaged the city's social and political fabric.

By the end of the 6th century, the city's traditional structures of power barely survived. A Praefectus Urbi is last attested in 597–9. The ancient Roman Senate is last mentioned at the beginning of the 7th century,

and in its later incarnations was a very different social and political group. When \*Gregory I the Great, a former Praefectus Urbi, was made bishop in 590 the main civil authority of the city was its religious leader.

**Rome, idea of** From the early 3rd century onwards, the city of \*Rome ceased to be the normal residence of \*emperors (except for \*Gallienus, who preferred it, and \*Maxentius who had no choice). It remained, though, the geographical centre of the habitable world, what \*Ammianus called the temple of the whole world (*templum mundi totius*: Ammianus, XVII, 4). As late as the early 6th century a visitor could write that 'no one ought to complain about being detained in Rome, which is everyone's country, the fruitful mother of eloquence, the wide temple of all virtues' (\*Cassiodorus, *Variae*, I, 39 of 507/11).

To add to these geographical facts, legal minds ever since Cicero (*De Legibus*, II, 5) had conceived of the city as the *communis patria*, the common fatherland (e.g. Callistratus (c. AD 200) in *Digest*, XL, 222, 18; Modestinus (a pupil of Ulpian) in *Digest*, L, 1, 33). The legal concept had particular application in provincial \*cities, numerous in \*Africa and the West, which enjoyed the rank of *colonia*, and therefore had the same civic constitution and set of public monuments as the city of Rome itself—a provincial town might easily feel a closer affinity with the city of Rome than it did with the \*emperor fighting on a distant frontier. The legal concept acquired additional force when Caracalla by the Constitutio Antoniniana of 211 gave the Roman citizenship to all free male residents of the Empire.

Geographical and legal considerations were fuelled by affective loyalties. *Romanitas* (Tertullian, *De Pallio*, 4, 1) had different meanings for different Romans. An African with a profound regard for the city of Rome

might express disdain for a \*Balkan emperor whose Roman ideals were a Dacian militarism (\*Lactantius, *Mort.* 27, 7–8). A retired Greek staff officer who admired the heroes of the Roman Republic might be disappointed when he came to Rome and met the sybaritic \*senators of his own time (Ammianus, XIV, 6). But for senators resident at Rome in the late 4th and early 5th century, regard for the city was a religious ideal. \*Rutillius Namatianus, a senator sailing home to \*Gaul in the autumn of 417, expressed his sadness at leaving the city (I, 49–51):

Hearken, Mother of Men and Mother of Gods also  
hearken;  
Through your temples we are not far away from the  
heaven.  
You we sing and will always sing while the Fates will  
permit it.

\*Symmachus asserted in the *Third Relatio*, which as \*Praefectus Urbi he sent to the emperor in 384, that it was essential to sustain Roman public religion because it was thanks to the time-tested rites of the city of Rome that the gods maintained and defended the Roman Empire (8–9, 15–17).

There was more to this religious ideal than romantic \*rhetoric. When \*Alaric and the \*Visigoths sacked the city in 410, such pagans were not slow to turn on Christians and blame the disaster on their irresponsible neglect for the customary ancient rites. It was in the first place to counter such criticism that \*Augustine wrote the *City of God*, in which he contrasted two cities formed by two loves, the earthly city growing from love of self even to the extent of contempt for God, the heavenly city from the love of God even to the extent of contempt for self (*City of God*, XIV, 28). It is characteristic that such fundamental loyalties should be expressed in terms of affection not for a kingdom or \*family but for a city. OPN

**Rome, *Regionary Catalogues* of** The *Regionary Catalogues* of \*Rome, the two main versions of which are the closely related \**Curiosum* and \**Notitia*, date from around the second half of the 4th century and inventory the major buildings and monuments of Rome, listed by each of the fourteen Augustan *Regiones*. The *Regionary Catalogues* have generally been assumed to be official documents, originating from the office of the \*Praefectus Urbi. However, some oddities and inconsistencies of the documents have proved puzzling, most strikingly the very large number of *insulae* (city blocks) listed (over 44,000). More recent assessments reject any official provenance, and suggest instead, variously, that the *Regionary Catalogues* should be understood as ideological, \*panegyric texts, or indeed as tourist guides. They remain essential sources for the study of the archaeology, topography, and population of Rome. LHCG

**Rome, sack of** (410) On 24 August 410, troops commanded by the \*Visigothic leader \*Alaric entered the \*city of \*Rome, sacking it for three days. The sack was the culmination of a long political and military crisis. The events leading to it are well documented by the sources, especially \*Olympiodorus. Other authors refer to its impact or describe specific aspects of the crisis.

Alaric invaded \*Italy for the second time in 408. The imperial government of \*Honorius was incapable of negotiating peace, and the \*Visigoth besieged Rome. The city suffered starvation and pestilence, and an embassy from the \*Senate was met with harsh demands: in exchange for a ransom and \*hostages only their lives would be spared (\*Zosimus, V, 40, 4). No settlement was reached, and Rome was besieged for the second time in 409, when Alaric had the senator Priscus \*Attalus proclaimed \*emperor. A government based in

Rome was formed, which began negotiations with Honorius but failed to secure its position. The sources unanimously portray Alaric as trying to negotiate, reducing his demands, and seeking a compromise. Failure to reach an agreement led to a final siege of Rome in August 410, when the city was eventually captured.

The reasons for the actual sack and its nature are not clear. Scholars debate whether it should be called a 'barbarian' attack, since previously Alaric and his troops had been associated with the defence of the Empire. The actual extent of destruction is the subject of intense debate. Archaeological evidence, when it exists, is difficult to date and interpret, whereas written references are often vague or contradictory.

The sack of Rome had a powerful impact on contemporary and later writers. \*Jerome lamented vigorously that 'in one city the whole world perished' (*Commentary on Ezekiel*, I, praef.; cf. *ep.* 127, 12–13). The more subtle development of \*Augustine's immediate reaction may be traced in his \*sermons, especially in *De Excidio Urbis*; and his more considered response in his *City of God*. The *History Against the Pagans* completed in 417 by Augustine's protégé \*Orosius, but not mentioned in the *City of God*, is optimistically, indeed ideologically, naïve: Orosius (VII, 39–40) represents the sack as a divine judgement on the unrighteous (though not on pious Christians), and in any case it was nothing like as destructive as the fire under Nero; indeed, he wrote, less than ten years afterwards, you might think 'nothing had happened' (VII, 40, 1). **Rome, sack of** (455) \*Geiseric, King of the \*Vandals in \*Africa, and his troops sacked Rome for fourteen days in June 455. Some sources say that the \*Empress \*Eudoxia invited the Vandals, having been forced to marry the \*Emperor \*Petronius Maximus, who had killed \*Valentinian III on 16 March 455 (\*Hydatius, *Chron.* 162). Petronius Maximus was himself killed by the Roman people when attempting to flee the \*city on 31 May 455 (\*Jordanes, *Getica*, 235). \*Bishop \*Leo I is said to have convinced Geiseric to limit the destruction (\*Prosper, *Chron.* ad ann. 455); other sources record widespread looting (\*Procopius, *Vandalic*, III, 5, 1–6). Eudoxia and her daughters \*Eudocia and \*Placidia were taken as \*hostages to \*Carthage. CARM

Merrills and Miles, *Vandals*, ch. 5.

**Rome, schools at** By the late 4th century, professorships in \*rhetoric, \*grammar, \*philosophy, and \*law existed at \*Rome. Candidates were appointed by the \*Senate and received \*annona through the \*Praefectus Praetorio (\*Symmachus, *ep.* 1, 79). Private teachers, such as \*Augustine in 383–4, might recruit students through word of mouth and sometimes had difficulty getting them to pay (*Confessions*, 5, 12). The Magister Census was responsible for registering arrivals and departures of students, notifying their home \*provinces, and regulating student behaviour (*CTh* XIV, 9, 1). Official appointments in grammar, rhetoric, and law continued under the \*Ostrogothic kingdom (\*Cassiodorus, *Variae*, 9, 21) and after the \*Byzantine invasions under Justinian I (\*Pragmatic Sanction = *AppJust* 7, 22). ## Rome, secular buildings and topography of

The venerable infrastructure of \*Rome largely survived throughout Late Antiquity, an era when many \*emperors resided elsewhere except for periodic visits to the traditional capital to reclaim the city's lasting traditions. With resources for new building sparse, the often-distant rulers sought lasting fame by conserving ancient architecture, while \*senators supported repairs to gain \*praise.

### Under Aurelian

When imperial funds were available, large-scale construction earned rulers lasting acclaim. The Emperor \*Aurelian in 271 boldly expanded Rome's walls to a new circuit of almost 19 km (11.8 miles). Major \*roads entering Rome from the countryside led toward the monumental \*city gates passing through the Aurelian walls. This transport network brought \*olive oil, pork, and \*wine into the city for distribution to citizens as part of the food dole (\*annona). Citizens also received \*bread made from \*grain which had been unloaded on the banks of the Tiber, carried over the Pons Probi, a \*bridge initiated in the 270s, and delivered to the \*aqueduct-powered mills on the Janiculum hill for grinding into flour. Aurelian also created a new distribution point for the annona in the Campus Martius near Montecitorio. The consistent maintenance required by the Aurelian walls created opportunities for skilled labourers to repair the circuit as well as other public structures. Aurelian further guaranteed that the proceeds from cheap wine (*arca vinaria*) were destined for restoring buildings.

### Tetrarchic restorations

The restoration of damaged structures offered opportunities for emperors keen to demonstrate their largesse, even when these rulers lived outside Rome. A fire during the reign of \*Carinus in 283 damaged

the Graecostadium, the Basilica Julia, the \*Senate House, the Roman Forum, and the Forum of Caesar; the path of destruction extended along the Via Sacra. In 303 \*Diocletian and \*Maximian together rebuilt the Basilica Julia and the Senate House in the Roman Forum and also conserved the Forum of Caesar. The comprehensive rehabilitation of central Rome by Diocletian and Maximian served to demonstrate the stability and *concordia* achieved under the \*Tetrarchy. At a critical position along the Via Lata, the Tetrarchs installed the now-dismantled Arcus Novus, a triumphal \*arch that celebrated the tenth \*anniversary (*decennalia*) of rule by the two \*Augusti Diocletian and Maximian in 293. Likewise, a dedicatory \*inscription credited the towering vaults of the \*Baths of Diocletian to that emperor's collaboration with Maximian (*CIL* VI, 1130). The Rostra at the western end of the Roman Forum featured a five-column monument capped by statues of the four Tetrarchs flanking an image of a protective deity. The one surviving plinth, the Decennalia Base, celebrates the joint Decennalia of the two \*Caesars \*Constantius I and \*Galerius in 303 (*CIL* VI, 1203) and another now-lost plinth celebrated the Vice-nnalia of the Augusti that same year (*CIL* VI, 1204). This five-column monument demonstrating the unity of the Tetrarchy was matched by a nearly identical display on the facing tribune across the Roman Forum. In addition, seven massive free-standing columns capped by statues aligned with the southern edge of the Roman Forum incorporated \*bricks with brick-stamps dated after 305, the year when Diocletian and Maximian abdicated together. The two Augusti made a triumphal visit to Rome in 303. This was not an unqualified success. They had ordered repairs to the \*Circus Maximus, but part of the structure collapsed imperilling 13,000 spectators; outspoken Romans blamed the emperors.

#### Under Maxentius

The \*usurper \*Maxentius resided in Rome as an emperor from 306 to 312, and sought individual credit for enhancing the city. He restored the Lapis Niger, the legendary site of the burial of Romulus in front of the Senate House, by installing statues. A fire seriously harming the Temple of Venus and Roma prompted Maxentius to rebuild this complex on the Velian Hill. Maxentius also sponsored additional impressive public structures nearby along the Via Sacra to the east of the Roman Forum. In this neighbourhood he inserted a rotunda, frequently misidentified as the Temple of Romulus, that functioned as a pivot between the Via Sacra and the Forum of Peace. He founded the adjacent \*Basilica Nova (also called the Basilica of Maxentius and the Basilica of Constantine) which accommodated assemblies of judges in its towering cross-vaulted

interior. Maxentius' attempts to use construction projects to consolidate his position ended with his defeat by \*Constantine I at the Battle of the \*Milvian Bridge in October 312.

#### Under Constantine

Constantine claimed to be the liberator of Rome and discredited Maxentius as a \*usurper, yet deemed his condemned predecessor's architecture worthy of appropriation. The Senate as the local governing body inscribed Constantine's name on many of Maxentius' buildings. The Via Sacra rotunda received a new façade to complement the new \*inscription naming Constantine. In addition, a colossal portrait statue of Constantine in the vaulted interior of the Basilica Nova was installed along with an apse on its north side; both changes announced the structure's new identity as the Basilica of Constantine. Constantine also sponsored new baths on the Quirinal Hill with steps leading toward the Campus Martius. The Janus Quadrifons, an arch Constantine introduced into the Forum Boarium, supplied grandeur to a route used for public \*ceremony. For Constantine's Decennalia in 315, the Senate set up the Arch of Constantine at an important \*street junction next to the Colosseum. This triumphal arch was adorned with reused sculptures (\*spolia) legally excised from monuments of Constantine's favoured imperial predecessors and assembled together with new carvings to celebrate his military victories and public acts in Rome.

Constantine also destroyed the barracks of the \*Equites Singulares near the Aurelian walls and built there the Lateran \*Basilica and a residence for the \*bishop. Most Constantinian Christian churches were situated outside the walls near \*martyria or imperial \*tombs and mausoleums.

#### Fourth century monuments

Imperial monuments in the heart of Rome recorded the glorious visits of non-resident emperors to celebrate triumphs or imperial jubilees. A granite \*obelisk destined for Rome on the orders of Constantine finally arrived when his son \*Constantius II saw to its installation on the central barrier of the Circus Maximus to commemorate his triumphant \*adventus in 357. Constantius II claimed a dynastic legacy as Constantine's son with a bronze equestrian statue located across the Via Sacra from his father's image, and was honoured near the Senate House with three identical colossal \*bronze portrait statues whose size emphasized his imperial authority.

Rome's loyalty to the emperor, however far off he might be, was marked by lasting memorials. In 364 \*Valentinian I issued a law to Avianus \*Symmachus the \*Praefectus Urbi ordering that there should be no

official sponsorship for new construction but permitting the restoration of old buildings (*CTh* XV, 1, 11). Symmachus accordingly repaired the Pons Aurelius bridging the Tiber in 367; an arched gateway adorned with statues and inscriptions at one end of the renovated bridge together with further inscriptions on the \*marble railing were dedicated to Valentinian I and to his brother and joint emperor \*Valens (*CIL* VI, 31402–12). The Pons Aurelius, renamed the Pons Valentinianus, thus gave lasting prominence to Valentinian I's munificence even though he never visited Rome in person.

Monuments with inscribed dedications to rulers lined routes used for imperial \*processions. The Tiber crossing at the Pons Neronianus was decommissioned in the 270s due to its unprotected position and a nearby bridge, the Pons Aelius, began to carry its traffic thanks to the fortifications provided by the nearby Mausoleum of Hadrian. New streets lavishly equipped with rows of columns led from the Via Triumphalis in the Campus Martius to the Pons Aelius, and from there a path proceeded across the Tiber, joining up with porticoes lining the route leading towards the \*Vatican. An inscribed archway marking the entrance to the Pons Aelius was erected to commemorate the Emperor \*Honorius' procession of 404 (*CIL* VI, 1196). After nearly doubling the height of the Aurelian walls, Honorius was praised by the court poet \*Claudian, who saw such rebuilding as the revival of Rome's mythic past (*De VI Consulatu Honorii*, 531–2). The Senate proceeded to set up a victory arch in the Roman Forum honouring Honorius and his brother the Emperor \*Arcadius.

#### *Private building, imperial and senatorial*

Public buildings were imitated in private estates. A circus situated within Maxentius' villa on the Via Appia outside the walls attracted crowds to chariot races. Maxentius also added a bath complex to the imperial \*palace on the Palatine Hill. Constantine ordered a nymphaeum, an impressive domed rotunda now called the Temple of Minerva Medica, to be added to the pre-existing palace complex known as the Palatium Licinianum on the Esquiline Hill. A grand \*house on the Caelian Hill also featured a beautifully painted nymphaeum that was eventually concealed under the church of Ss. Giovanni e Paolo. \*Helena, the mother of Constantine I, created the Sessorian Palace by adding a domed reception hall, a large church, and a bath complex for public use on the grounds of an old villa. Civic architecture inspired the construction of a new secular basilica decorated lavishly with inlaid marbles by \*Junius Bassus the elder (\*consul 331) on his Esquiline estate.

#### *Senatorial initiatives*

During the 4th century senators preserved some prominent \*temples by treating them as public monuments. When \*Praetextatus as Praefectus Urbi in 367 restored the Porticus Deorum Consentium, he shifted the cult statues from the tainted interior to outdoor display spots on a trapezoidal podium (*CIL* VI, 102). The Senate House survived from time to time without the \*Altar of Victory. In the 380s the Senate restored the Temple of Saturn not to restart pagan activities but to sustain its dignity, since imperial legislation had already barred visitors from entering temples (*CTh* XVI, 10, 4). Imperial laws prohibited \*sacrifice, but they also displayed a persistent parallel concern to prevent wanton damage to public monuments (*CTh* XVI, 10). In the 6th century Romans attempted to reopen the \*bronze \*doors of the Temple of Janus near the Senate House to indicate in the traditional way that Rome was at war.

By maintaining customs of civic \*portraiture, senators contributed to the dignity of the city while promoting the \*honour of individual notables. Statues erected in the Forum of Trajan included an image of \*Nicomachus Flavianus the elder, put up by imperial command when his reputation was rehabilitated in 431 (*CIL* VI, 1783), and portraits of literary figures including \*Marius Victorinus, \*Claudian, Flavius \*Merobaudes, and \*Sidonius Apollinaris. By contrast, the highest honour, that of being commemorated in the Roman Forum, was usually conferred only on emperors, with a select few senators or military officers receiving portraits near the Senate House or the Rostra.

The fires which destroyed some emblems of senatorial power at the Senate House and the Basilica Aemilia during the Sack of \*Rome by the \*Visigoths in 410 somewhat diminished Rome's capacity to reinstate its architectural heritage. \*Shops aligned with the façade of the Basilica Aemilia were refurbished so as to hide the interior, terribly damaged in 410. Other public buildings sustained damage from looters. After the sack of \*Rome by the \*Vandals in 455 the Emperor \*Majorian countered such opportunism by issuing a law in 458 forbidding private individuals to appropriate architectural elements (*NovMaj* 4, 1). Further damage however occurred around the Senate House during \*Ricimer's attack in 472.

Senatorial sponsorship of repairs to the Senate House symbolized aspirations by the senatorial \*aristocracy for local control. After the Sack of \*Rome in 410, the refurbished senatorial hall glistened once again 'on account of the \*gold' as one senatorial sponsor asserted in a restoration inscription (*CIL* VI, 41378). The surroundings of the Senate House were also maintained. The \*Secretarium Senatus, the place where aristocrats judged their peers accused of capital crimes, was

inserted during the 4th century into a pre-existing hall, and fire damage to it was repaired in 414. In a nearby courtyard statues were set up after 491 in the rehabilitated Atrium Libertatis, a relocated \*archive (*CIL* VI, 1794). A senator restored the statue of Minerva in 472 for display next to the Senate House in the repaired Atrium of Minerva, probably within the Forum of Caesar, so as to celebrate 'the happiness of our times' (*CIL* VI, 526). The Senate continued to meet in the Senate House well into the 6th century; in the year 500 \*Theoderic the Ostrogothic king arrived in Rome like an emperor to greet aristocrats at the senatorial hall and later requested that the Praefectus Urbi pay for repairs for the Senate House (\*Cassiodorus, *Variae*, 9, 7). The Senate House remained well maintained up to its transformation into the Church of S. Adriano in 630.

Repairs to the Colosseum allowed senators to make effective contributions after \*earthquakes and, more importantly, to contribute to public \*entertainments. A senator in the 440s repaired earthquake damage, replaced Vespasian's foundation inscription, and proclaimed a rededication to \*Valentinian III, who was further honoured in monumental inscriptions circling the Colosseum's upper balustrade (*CIL* VI, 1763; 32096). \*Odoacer, ruler of \*Italy after the last Western emperor had been deposed in 476, assigned permanent seats to senators inscribed with their names; 195 of these inscriptions still survive. Theoderic the Ostrogoth made sweeping claims about reviving animal combats in the Colosseum, but the physical evidence reveals that even before the last known spectacle in 537 Theoderic secretly permitted the quarrying of travertine stone from the Colosseum.

### *Under the Ostrogoths*

The Ostrogoths promoted adaptation of old structures for fresh purposes in order to safeguard them. Theoderic encouraged the senator \*Albinus to repair a public portico in the Roman Forum, sanctioning its reuse as a commercial workshop (Cassiodorus, *Variae*, 4, 30). In this way, they encouraged the trend toward the private use of public architecture to promote both commerce and preservation. Markets, \*glass manufacturing, and craft production had all moved into the \*Crypta Balbi even earlier. There is little doubt that the Ostrogothic royal family handed over a hall in the Forum of Peace to Pope Felix IV in 530 for reuse as the first church located in the vicinity of the imperial fora.

Theoderic's apparent concern for Rome's buildings masked the frequently aggressive Ostrogothic policies of the early 6th century. Theoderic explicitly revived Augustan-era benefactions and public entertainments at the Theatre of Pompey by appointing a Roman senator, who claimed descent from the original founder,

as its restorer (Cassiodorus, *Variae*, 4, 51). Theoderic identified himself as the protector of public utility by repairing aqueducts, dockyards, sewers, statues, and walls, appointing a Curator to maintain the imperial palace on the Palatine Hill. Despite his attention to the public good, Theoderic's reputation was marred in Rome after he jailed the \*philosopher \*Boethius and his father-in-law together with Pope \*John I, all of whom perished in \*prison.

### *Rome in the 6th and 7th centuries*

Sieges and assaults during the \*Byzantine invasion of Italy compelled many to flee Rome before the general \*Belisarius protected the city between 536 and 546. After a devastating Ostrogothic siege and the reported abandonment of the city for more than a month, \*Narses, a former chamberlain at the court of \*Justinian I, returned Rome to imperial rule in 552. Narses supervised repairs to the damaged circuit of walls, built up the palace, erected a statue of himself on the Palatine, and repaired two bridges, the Ponte Nomentana and the Ponte Salario. Reports from the 6th century describe \*bronze sculptural masterpieces attributed to Lysippus, Myron, and Pheidias surviving in the Forum of Peace, as well as another marvel, the boat of Aeneas, carved from a single tree-trunk, on the bank of the Tiber. According to the \*Pragmatic Sanction of 554 (*NovJust* app. 7) Justinian ordered officials to maintain the \*harbour of Rome, the aqueducts, the Roman Forum, the imperial fora, and the imperial palace on the Palatine Hill.

\*Phocas was unusual among Byzantine emperors for gaining the affection of Romans after donating the \*Pantheon to the \*bishop for its transformation into the Church of S. Maria ad Martyras. In 608 a Byzantine \*exarch placed a gilded statue of Phocas on top of a pre-existing monumental column in the Roman Forum as the last imperial monument of Rome.

Pope \*Gregory I (590–604) supervised Rome's infrastructure by shifting some oversight from the emperor to the bishop, who particularly urged imperial officials to care for the derelict aqueducts. Gregory's own aristocratic *domus* on the Caelian Hill was transformed into a \*monastery. Despite the growing local authority of church officials in Rome, Byzantine emperors retained oversight of the palace and appointed a Curator to supervise the Palatine Hill. In the 660s the last known Curator, Plato, repaired the stairs leading from the Atrium Vestae to the north-west corner of the Palatine Hill (*ICUR* II, 442). \*Constans II was the last emperor to visit Rome, choosing to reside at the palace for twelve days in 663 but depriving the Pantheon of its gilded bronze roofing tiles as valuable assets shipped out of Rome, an act that earned him the disdain of Romans

(\**Liber Pontificalis*, 78, 3). The continued fascination of visitors to Rome with the city's antiquities and its prominent ancient inscriptions is apparent from lists of monuments preserved in a mid-8th-century text from Einsiedeln recounting a pilgrim's itineraries throughout the city. GK

Harris, *Transformations of Urbs Roma*.

**Rome, See of** The 300 years from the mid-3rd to the mid-6th century witnessed an astonishing transfiguration in the See of \*Rome. It grew from humble beginnings. By 251 the Church at Rome had 46 presbyters, seven \*deacons and seven \*subdeacons, 42 acolytes, 52 \*exorcists, \*readers, and doorkeepers, and over 1,500 \*widows and poor \*dependants (\*Dionysius of \*Alexandria in \*Eusebius, *HE* VI, 43, 11). Its \*bishops were frequently martyred or died in \*exile during \*persecutions: Fabian, victim of \*Decius, was beheaded in 250; Cornelius died in exile in 253 at Centumcellae; Sixtus (Xystus) II was beheaded in 258; and Marcellinus seems to have been martyred in 304 during the Great Persecution. It was not until \*Sylvester's pontificate (314–35) that a turning point was reached, with the \*Emperor \*Constantine I's adoption of Christianity.

#### Fourth and fifth centuries AD

Constantine's gifts of buildings, land, and precious objects to the Church at Rome are itemized in the \**Liber Pontificalis* life of Sylvester. The *Liber Pontificalis* attributes to Constantine the endowment of the \*Lateran \*Basilica (which it calls the Constantinian Basilica) and \*baptistry, probably Constantine's first Christian foundations anywhere, and also the basilica at the Vatican over the shrine of S. Peter, though actual building at the Vatican was carried out under Constantine's sons. He is also credited with endowing the Sessorian Basilica (\*S. Croce in Gerusalemme) and \*S. Paolo fuori le mura, though the Basilica of S. Paolo which burnt

down in 1823 dated from the later 4th century. A substantial mythology developed concerning Constantine and Sylvester, culminating in the Carolingian forgery of the Donation of Constantine.

Julius I (337–52) brought greater organization to the business affairs of the Church of Rome. He founded \*archives and an office of \*notaries headed by a first secretary (\*Primicerius Notariorum) on the imperial model. Church records at this time included bonds, deeds for its substantial properties, notices of donations and exchanges, transfers and \*wills, declarations and \*manumissions of church slaves.

When Constantine's son, the \*Homoean (\*Arian) \*Constantius II, came to control the Western half of the Empire, the See of Rome learnt that imperial favour came with a price. In 355 \*Bishop \*Liberius was sent into exile for refusing to condemn \*Athanasius. His replacement Felix II was then martyred for proclaiming Constantius a heretic, and Liberius returned, having capitulated to Constantius; he remained until 366, having founded the Liberian Basilica on the site of the present S. Maria Maggiore.

Rome was accorded a primacy of \*honour among bishoprics at the \*Council of \*Constantinople in 381 (with the \*Patriarch of \*Constantinople 'New Rome', following a close second). In spite of the increasing wealth of the see, its bishops continued to be selected from a broad range of social backgrounds through the 4th and 5th centuries. Felix III (483–92), great-great-grandfather of \*Gregory the Great, is the first demonstrably aristocratic Bishop of Rome. By the 6th century nine out of fourteen bishops were from noble families of either the Roman or provincial \*aristocracy, including a father-son pair, \*Hormisdas (514–23) and Silverius (June–November 536).

The term *papa* ('pope') began to be used in the 5th century to indicate the close relationship between the bishop and his people. At the same time the Roman See came to exercise increasing influence on the wider Church. \*Damasus (366–84) and Siricius (384–99) initiated special relations with the bishops of \*Thessalonica which gave Rome a defined ecclesiastical standing in much of the \*Balkans which lasted until 732. Letters of \*Innocent I (402–17) on a number of disciplinary questions survive. His successors Boniface I (418–22), Celestine I (422–32), and \*Leo I (440–61) also produced letters which they treated as 'decretals' for the universal Church, although in practice it was up to the leading bishops of particular regions, notably \*Arles and \*Vienne in \*Gaul and \*Carthage in North \*Africa, whether or not they implemented the advice that they received from Rome. Much of this material was preserved in \*canon law collections from the end of the 5th or beginning of the 6th century, including the \**Collectio*

*Avellana*, a collection assembled in the 6th century probably to present a distinctive view of papal authority. \*Leo I (440–61) was particularly active in promoting Rome's broader influence and in making its voice heard among the five patriarchal sees (\*Alexandria, \*Antioch, Constantinople, \*Jerusalem, Rome). He resolved a long-running dispute between the bishops of \*Arles and Vienne over episcopal primacy in \*Gaul and in the *Tome of Leo* of 449 outlined a Christological position which was acclaimed at the Council of \*Chalcedon: 'Peter has spoken through Leo'.

Leo I also consolidated the position of Christianity as a civic religion which could function as the \*pagan cults had formerly done to guarantee the city's safety and prosperity. When \*Attila the \*Hun invaded \*Italy, Leo and city officials negotiated his withdrawal (\*Prosper, *Chron.* ad ann. 452), though Leo could not forestall the \*sack of Rome by the \*Vandals in 455. An ambitious civic building programme by popes Sixtus III (432–40), Leo I, and Hilary (461–8), funded largely by imperial benefactions, contributed to the public profile of the Roman Church.

#### Sixth century

Rome sustained adamant advocacy of the Christology of the Council of Chalcedon throughout the 6th century. The \*Acacian schism (484–519) began when Pope Felix III (483–92) excommunicated Acacius, Patriarch of Constantinople, over his acceptance of \*Miaphysites at Alexandria. Pope \*Gelasius I (492–6) wrote a treatise on the Two Natures of Christ *Against Eutyches and Nestorius*. The accession of \*Justin I as \*emperor, followed by his nephew \*Justinian I, aligned the East Roman government with Chalcedonian doctrine. But political entanglements troubled successive popes for much of the 6th century. Pope \*Symmachus (498–514) welcomed \*Theoderic the \*Ostrogoth to Rome in 500 (\**Chronicon Theoderici*, 65–7), but in the closing years of Theoderic's reign relations between Rome and \*Italy's Ostrogothic rulers became strained and \*John I (523–6) died in a \*Ravenna prison, having been accused of plotting with the emperor against Theoderic. Pope \*Agapetus (535–6) died at Constantinople while carrying out a diplomatic mission in Constantinople for King \*Theodahad, Theoderic's successor, and Pope Silverius (536–7) was deposed and exiled, on a suspicion fabricated by the \*Empress \*Theodora that he was plotting with the Ostrogoths. \*Vigilius (537–55) died in exile after failing to negotiate a settlement between Justinian and the bishops of north Italy over the \*Three Chapters Controversy. However, despite the wholesale destruction, \*famine, and \*plague that attended the \*Byzantine invasion of Italy, the city of Rome benefited from imperial largesse.

The domination of Italy by the \*Lombards between their arrival in 568 and the \*Frankish conquest in 774 set up a fresh set of tensions involving the papacy, the invaders, and the emperors and their agents the \*exarchs of \*Ravenna. \*Pelagius II (579–90) was consecrated without the imperial *mandatum*. When the Lombards threatened Rome he was obliged to negotiate with them without help from the imperial authorities. His successor \*Gregory I the Great (590–604), a nobleman turned monk, also had to act independently of the exarchate in order to protect Rome and its territories. He demonstrated the principles of public service set out in his *Pastoral Care* by feeding the people of Rome from church lands, and was inspired by the sight of \*Anglo-Saxon slaves for sale in the forum to send his monastic *confrère* S. \*Augustine to \*Canterbury to spread the gospel (\*Bede, *HE* II, 1). The Emperor \*Phocas was keen to cultivate good relations with Rome and gave permission to Pope Boniface IV (608–15) for the \*Pantheon to be turned into the Church of S. Maria ad Martyras, the first former pagan \*temple in the city to be transformed for Christian worship.

#### Seventh and eighth centuries

In 640, when much of the Eastern Empire was being overrun by the \*Arab conquests, the exarch was so short of money that he confiscated by force the contents of the Lateran sacristy. Throughout this period, Rome demonstrated steady opposition to attempts by emperors from \*Heraclius onwards to achieve ecclesiastical peace and unity among their Eastern subjects by promoting the doctrines of \*Monotheletism (the belief that Christ had Two Natures but One Will). Pope \*Martin I (649–55), animated by Eastern dissidents, in particular \*Maximus the Confessor, convoked the \*Lateran Council of 649 which condemned both the \**Echthesis* of Heraclius (638) and the \**Typos* of \*Constans II (648) and was arrested by the imperial authorities and exiled to \*Cherson where he died.

Constans II in 663 was the last emperor to visit the city of Rome. He was received hospitably by Pope \*Vitalian (656–72), and before he left ordered that the \*bronze be removed from the roof of the Pantheon and be sent to Constantinople. The late 7th century, however, saw a rapprochement between Rome and Constantinople. Pope Agatho (678–81) was represented by legates at the Third \*Council of Constantinople in 680, when Monotheletism was finally condemned, and under his successor, Leo II (682–3), the Emperor \*Constantine IV ordered that future \*bishops of \*Ravenna should go to Rome for their consecration. The last pope to visit Constantinople (till 1967) was Pope Constantine (708–15) in 710. Thereafter relations with the East cooled. In 731 a council at Rome

condemned the new imperial policy of \*Iconoclasm. Constantinople retaliated by confiscating papal territories in southern Italy and placing \*Thessalonica and other \*Balkan bishoprics, formerly under papal jurisdiction, under the aegis of the Patriarch of Constantinople.

The 7th and 8th centuries saw numerous pilgrims and refugees from the East visit and settle in Rome, not least \*Theodore of \*Tarsus (d. 690) who was sent on to England to be Archbishop of Canterbury, taking with him skilled exponents of Roman \*chant. Pilgrims came also from the West, including \*Frankish and \*Anglo-Saxon kings.

Through all these years the papal chancery sustained a constant diplomatic correspondence. Tensions with the Lombards continued; many Lombards remained stolidly \*Homoean (\*Arian') throughout the 7th century. The diplomatic skill of Pope Zacharias (741–52) maintained a balance, but in 751 the exarchate of Ravenna finally disappeared and Zacharias' successors often needed to seek protection from Frankish forces. Late in the year 800, Charlemagne came to Rome, where at the request of Leo III (795–816), he donned a \*chlamys and imperial buskins and at the Vatican on Christmas Day, allegedly to his surprise, he was crowned *Imperator Romanorum* by the pope (Einhard 28 and 23; *Liber Pontificalis*, 98, 23–4).

**Rome, sieges of** During the \*Byzantine invasion of \*Italy \*Rome was besieged three times, in 536–7, in 546, and in 549/50. \*Procopius provides a detailed narrative of all three sieges in his *Gothic Wars*. However, it is impossible to estimate precisely the destruction caused. The \*aqueducts were partly blocked by \*Belisarius before being cut by \*Vitigis during the first siege. The \*water supply was maintained through wells, and the damage was repaired after the war (*Gothic*, V, 19).

Rome was sacked after the second siege, and \*Totila destroyed large parts of the wall. Procopius reports that Belisarius rebuilt it in a hurried fashion in 25 days (*Gothic*, VII, 20, 22–24, 7), but the restorations datable to this period are rather limited. The Romans themselves, subject to hunger and diseases, seem to have been the main victims of the conflict.

**Rome, surroundings of** The \*suburbs of \*Rome are usually understood as starting at the Aurelian walls, but this is a post-Antique definition. \*Ostia and \*Portus were closely connected with the \*city, and they were controlled by the \*Praefectus of the \*annona. The \*Praefectus Urbi had judicial powers over an area of 100 miles around the \*city, and \*Italia Suburbicaria was economically and politically connected to it, so that the economic, political, and religious connections reached into a vast area of \*Italy of indeterminate size.

The suburbs of Rome were occupied by imperial and aristocratic \*estates, although the \*Liber Pontificalis documents the gradual transference of many of them to the Church. Large properties like the \*villas of the Gordiani and of \*Maxentius continued being refurbished in Late Antiquity. The \*aristocracy used villas as a retreat from life in the city (e.g. \*Symmachus, *ep.* VI, 47). Many of these properties remained productive, surrounded by smaller farms (\*Procopius, *Gothic*, VII, 13, 1). \*Aqueducts and \*roads were also conspicuous features of the suburban landscape, and continued being repaired into the Middle Ages. \*Martyr cult gained importance in the suburbs, with the building of \*martyr shrines near the \*Catacombs, notably during \*Damasus' tenure of the See of \*Rome.

Controlled by the \*Vicarius Urbis Romae, Italia Suburbicaria was important for the supply of pork, \*grain, and \*wine to Rome. This is attested by a series of \*laws, which created a complex network of local producers, corporations, and officials. Roman aristocrats owned large properties in this area, where they frequently occupied governorships. Their links with provincial communities are demonstrated by the large number of honorific statues dedicated locally, a practice that continued until the 5th century. The \*Byzantine invasion and occupation, followed by the \*Lombard invasion in 568, affected, but did not destroy, the relationship between Rome and its surroundings.

**Romula** Mother of \*Galerius, born north of the Danube. \*Lactantius claims her hillbilly pagan enthusiasms animated the Great \*Persecution (*Mort.* 11, 1–2). Galerius named \*Gamzigrad after her. OPN PLRE I, Romula.

**Romulianum** See GAMZIGRAD.

**Romulus Augustulus** Last Western \*emperor 475–6. He was made emperor by his father, the general \*Orestes (October 475), and, being young was known by the diminutive Augustulus. His father exercised real power. He was not recognized in \*Constantinople, where \*Julius Nepos was preferred. \*Odoacer then overthrew Orestes (August 476), Romulus was deposed, and Odoacer ruled as \*king. Because of his youth, Romulus was spared and allowed to live on a family \*estate in \*Campania, with a generous pension. He may have survived into the early 6th century. ADL PLRE II, Romulus Augustus 4.

**roofs** The commonest roof coverings of Late Roman buildings were roof tiles (Gk. *keramis*, Lat. *tegula*), made of coarse ceramic (cf. \*amphorae). These were durable and reusable, and are common in archaeological contexts. Pan tiles covered most of a roof, while Laconian or Corinthian cover and ridge tiles protected its seams. Tiles are widely recorded being used as projectiles in times of public \*disorder (e.g. \*Ammianus, XXVII, 3, 8). In rare cases roofs were made from \*marble or gilded. The \*bronze tiles of the Pantheon (S. Mary ad Martyras) at \*Rome were sufficiently precious for \*Constantine IV to have them carried off to \*Constantinople (\**Liber Pontificalis*, 78). Representations of Roman \*cities in art, such as those on \*sarcophagi, the \*Madaba Map, and the \*apse \*mosaic of S. Pudenziana, Rome, often depict them as a mass of roofs rising above the surrounding \*city gates and walls. Great buildings surrounded by lesser structures (such as the Church of the \*Holy Wisdom) might be visible from outside mostly as their roofs and (as with the \*Basilica at \*Trier) their \*façade. **Rossano Gospels** A 6th-century illustrated Greek Gospel book (= Z), found at Rossano in Calabria in 1879. It consists of 188 leaves bearing the whole Gospel

of S. Matthew and most of S. Mark, written in large silver uncial \*script, on \*purple-dyed parchment. A cycle of miniatures and full-page scenic illustrations, perhaps inspired by monumental art, is gathered at the beginning of the book. The manuscript is one of a family of \*purple codices, and ascribed to the end of \*Justinian I's reign. Its provenance is unknown, but it may indicate continued relations between \*Italy and the Greek world in the 8th century. NAS

P. Sevrugian, *Der Rossano-Codex und die Sinope-Fragmente. Miniaturen und Theologie* (1990).

**Rothari** \*Lombard King of \*Italy (r. 636–52), best known in three main ways: his expansion of Lombard territory, his *Edict* or Law Code, and his strong \*Homo-ean (\*Arian) Christology. His military campaigns, wholly unrecorded by the \**Liber Pontificalis* at \*Rome, concentrated on pushing eastwards against the \*exarchate, capturing Modena (Mutina) and destroying Oderzo, and culminating in the Battle of Scultenna (AD 643) at which the \*Exarch \*Isaac was killed, along with 8,000 Byzantine soldiers. He also expanded westwards against Byzantine coastal \*Liguria, sacking towns and forts from Ventimiglia to \*Luna. The latter campaigns are best attested by \*Fredegar (*Chron.* IV, 71), reporting \*cities razed or reduced to mere \*villages, and populations enslaved. Archaeology shows a relative decay of many sites, but a loss also of fortresses.

Rothari's *Edict* of AD 643 codified and brought up to date ancient \*law and practice to promote national cohesion; it provides valuable insights into Lombard social structures and customs, such as \**wergeld* or blood \*feud (this now commuted to monetary values). It shows a strongly land-oriented society. The \**Origo Gentis Langobardorum* attached to it, probably compiled under Rothari, offers an abbreviated history-cum-genealogy of the people and its rulers.

\*Paul the \*Deacon (IV, 42–7) stresses Rothari's devout 'Arianism' and the high visibility in the kingdom's \*cities of Arian \*bishops (though naming only Anastasius of \*Pavia). This seemingly did not cause religious conflict within the kingdom. NJC

**Rouen** (*civitas Rotomagensium*: dép. Seine-Maritime, France) Roman port-city on the Seine, which under the \*Tetrarchy became capital of the \*province of \*Lugdunensis II, and in time a \*metropolitan see. Its Late Antique wall-circuit enclosed over 20 ha (c.50 acres). Its first attested \*bishop attended the \*Council of \*Arles in 314, and recent excavations have found elements of a cathedral complex of the Constantinian era, to which Bishop \*Victricius added a second church c.395. Rouen and its \*harbour remained important under the \*Merovingians, and served as the main base for the regime of \*Fredegund and \*Chlothar II in the late 6th century. Later \*bishops included \*Praetextatus and \*Audoin.

**Rufinus of Aquileia** (c.345–c.410) Presbyter and translator into \*Latin of \*Greek texts, particularly of

\*Eusebius' *Church History*, which he continued. Born in Iulia \*Concordia, in \*Venetia et Histria, Rufinus joined the ascetic community in \*Aquilaia c. 370 after completing his education in \*Rome, where he had become close friends with \*Jerome.

He spent most of c. 372–80 in \*Egypt studying under \*Didymus the Blind, who introduced him to the works of \*Origen. Around 380 he joined Antonia \*Melania in the \*monastery she had founded in \*Jerusalem, returning to \*Italy in 397 after the \*Origenist controversy disrupted his relationship with Jerome.

Much of the rest of his life was spent in translating \*Greek Christian works into \*Latin, beginning with \*Pamphilus' *Vindication of Origen*, to which he added his own *The Falsification of Origen's Works*. Then in 398 came \*Basil's *Rules* and his fateful translation of Origen's *On First Principles*, in the preface to which he repeated his contention that the heterodox elements in Origen's text were the falsifications and interpolations of his enemies; he had, he explained, altered or replaced them with sounder statements taken from elsewhere in Origen. Jerome thought otherwise, and the final break in their relationship came in 402 with Jerome's ferocious *Apology against Rufinus* in reply to Rufinus' *Apology against Jerome* (which contain considerable biographical information, pejoratively expressed).

Rufinus meanwhile continued his translation work after returning to Aquileia: Basil's homilies and \*Gregory's discourses, the \**Sentences of Sextus*, Adamantius' *De Recta in Deum Fide*, Origen on Joshua, Judges, and Psalms 36–8, and (perhaps before his return to Aquileia) the letter to S. James attributed to Clement of Rome. His own *Commentary on the Apostles' Creed* is usually dated c. 401.

In 402 or 403 Rufinus published an expurgated translation of Eusebius of \*Caesarea's *Church History* at the request of \*Chromatius of Aquileia, who wanted something to read to his people to divert their attention from the threat posed by \*Alaric's siege of \*Milan. Amplified by Rufinus' own continuation (which carried the narrative forward from 325 to 395), it was the first Latin church history and proved immensely popular and influential during the millennium when ignorance of Greek in the West made Eusebius' original practically inaccessible to the Church there. \*Socrates made critical use of Rufinus' *Church History* (II, 1).

In 403–6 Rufinus produced more translations: Origen's commentaries on Genesis, Exodus, Leviticus, and Romans (the last of which particularly influenced \*Pelagius), the \**Historia Monachorum in Aegypto*, and the pseudo-Clementine *Recognitiones*. Back in \*Rome before 406 (as seems probable), he was forced in 408 to flee to \*Sicily with other Romans before a fresh \*Gothic invasion. There he died in 410 or 411 while still at work,

translating Origen on the Song of Songs, Samuel, Numbers, and perhaps Deuteronomy. PRA

**Rugians** Germanic people prominent in provincial politics of the Danube \*frontier region during the last half of the 5th century. Rugians probably moved east of the Carpathians into the Danube basin in the late 4th century. They later figure among various peoples integrated with \*Attila's \*Huns and challenged Gothic control of the Danubian region after the death of Attila. The \*Emperor \*Marcian settled a group of Rugians in Thrace while others sought military service in \*Italy under \*Ricimer (d. 472). The *Life of S. \*Severinus* describes contacts with Rugian \*foederati under their King Feletheus. These Rugians initially settled north of the Danube. When Feletheus claimed towns on the Roman side of \*Noricum, \*Odoacer launched a campaign (487–8), bringing Feletheus and others captive to

Italy. Other Rugians under Fredericus (son of Feltheus) settled at Novae and later accompanied the Ostrogothic invasion of Italy of \*Theoderic the \*Ostrogoth. In 541, during \*Justinian's \*Gothic War, Rugians in Italy acclaimed \*Erarich as king, but he was soon murdered.

**Rule of the Master (*Regula Magistri*)** \*Latin monastic text from early 6th-century \*Italy, basis for the *Rule of S. \*Benedict*. There is no internal identification of author or \*monastery; liturgical details suggest a central Italian provenance. The title was suggested by the format, in which answers to topical questions begin 'The Lord replied through the Master', i.e. the abbot. The spirituality is derived from \*John Cassian and other Latin monastic sources, with many idiosyncratic features.

ET P. Eberle, *The Rule of the Master* (CSS 6, 1977).

**Rules of the Fathers** Modern name for six brief \*Latin monastic rules, placed chronologically between \*John Cassian and the \**Rule of the Master*. All emphasize the joyful singlemindedness (*unianimitas*) of communities under their abbot.

The *Rule of the Four Fathers*, the *Second Rule of the Fathers*, and the *Rule of Macarius* come from 5th- and 6th-century \*Lérins. The *Oriental Rule* (c.515) and the *Rule of Macarius* (c.535) also come from \*Gaul. A south Italian revision of the *Rule of the Four Fathers* (535/40) survives in one manuscript. All are anonymous, but the *Rule of the Four Fathers* and the *Rule of Macarius* explicitly evoke the spirit of great Egyptian ascetics.

**Runder Berg** A steep-sided cone-shaped hill near Bad Urach in south-west Germany. Its top is 250 m (820 feet) above the valley below, and it is visible from all directions. Excavations have revealed settlement activity on the top, in an area measuring about 300 by 50 m (1,000 by 160 feet). There was activity during the Neolithic period, the Bronze Age, and the Iron Age, but the most extensive settlement was established in the second half of the 4th century AD. Extensive systematic

excavations between 1967 and 1979 revealed the settlement of elite groups from the latter half of the 4th into the 6th century. There is considerable evidence of manufacturing activity; workshops produced weapons, personal ornaments, and other items, worked in \*iron, \*bronze, \*gold, and antler. Luxury imports associated with \*feasting, including wheelmade \*pottery and \*glass vessels, came from Roman \*Gaul, as did \*arms.

Partly artificial terraces on the slope of the hill were also occupied, indicating the density of settlement and economic activity at the site.

The site is considered a 'princely seat' (*Fürstensitz*) of the \*Alamanni, a king's residence where a ruler lived surrounded by his band of warriors and specialized craft workers. The Runder Berg is the most thoroughly studied \*hillfort of this category and for scholars serves as a model for the interpretation of other sites. The specialized workshops, numerous pieces of military equipment, and imported Roman luxury feasting vessels underscore the aristocratic character of the site and its special function as a political and military centre of an \*Alamannic ruler.

The site has been published extensively, with numerous volumes presenting the materials and analyses of many different categories of finds.

**runes and runic alphabet** The runic alphabet was a writing system used by early Germanic peoples on the North Sea coast. Runes were primarily used for short \*inscriptions on valuable items to mark ownership or manufacture, or on stones as memorials, though ephemeral messages have also been found on sticks and bones.

The oldest runic alphabet, called the Futhark, consisted of 24 runes. The earliest inscriptions are from Denmark c. AD 150. In Scandinavian runes from the Viking Age, the alphabet was reduced to 16 runes, many standing for multiple phonemes. This reflected linguistic changes which occurred between c.500 and 700. Most surviving inscriptions from the Viking Age are on stone, the largest on the 9th-century stone at Rök in Östergötland in Sweden which includes a short poem about \*Theodoric the \*Ostrogoth. Later in the Viking Age, a tradition developed in Scandinavia for runestones with memorial messages, many of them clearly Christian, in serpentine outline. In medieval Scandinavia (c.1100–1500), the Viking Age Futhark was expanded

again and used to carve religious or memorial messages onto church buildings and everyday objects.

The \*Anglo-Saxons and \*Frisians also used a runic alphabet also altered to reflect linguistic differences. This system, known as the Futhorc, contained 28 runes. Most famous are the runic inscriptions on the \*Ruthwell Cross with a portion of the poem *The Dream of the Rood* in the \*Anglo-Saxon language, and on the whale-bone Franks Casket. MVDH

**Ruthwell Cross** Stone cross of the early 8th century, now standing inside Ruthwell church on the Solway Firth in south-west Scotland, about 47 km (30 miles) from \*Bewcastle. It bears a complex carved scheme of decoration and inscriptions. The two broad faces have \*Latin \*inscriptions bordering carved scenes from Christ's life, including the Crucifixion, whilst the lower portions of the narrower sides have inhabited plant scroll decoration bordered by \*runic verses from the Old English poem the *Dream of the Rood*. SCT E. Ó Carragáin, *Ritual and the Rood: Liturgical Images and the Old English Poems of the Dream of the Rood Tradition* (2005).

F. Orton, I. Wood, and C. Lees, *Fragments of History: Rethinking the Ruthwell and Bewcastle Monuments* (2007).

**Rutilius Namatianus** (c.370–after 417) Rutilius Claudius Namatianus, of Gallic birth and the son of a distinguished office-holder, rose to occupy the positions of \*Magister Officiorum (412) and \*Praefectus

Urbi at \*Rome (414). His elegiac poem, conventionally entitled *De Reditu Suo*, describes his voyage back to his native \*Gaul from Rome, perhaps in 417 (the date is disputed). Only Book 1 and the first 68 lines of Book 2 survive in the manuscript tradition, though further fragments from Book 2 were discovered in 1973. The work is in the form of an *itinerarium*, describing Rutilius' progress from day to day as he travels up the coast of western \*Italy, making frequent landfall. Rutilius is a Roman patriot, and probably a \*pagan—he describes a seaside festival of the goddess \*Isis. The most famous passage in the poem is the \*hymn addressed to Rome as he leaves the \*city, asking for her protection on his journey. He \*praises Rome's monuments and the extent and justice of her Empire and celebrates her ability to recover from reverses. (Rome had been sacked in 410.) Rutilius is the voice of the conservative landowning and office-holding \*aristocracy. Like-minded aristocrats figure largely in his poem; he has waspish things to say about monks and \*Jews. But despite the overt optimism of Rutilius' hymn to Rome, there is an undercurrent of melancholy that runs through his poem—destroyed \*cities, displaced landowners, young nobles betraying their ancestry and becoming monks—that lends a tone of disquiet to the poem. # S

**Saba** See SABAEANS.

**Saba, S., and monastery of Mar Saba** Monk (439–532) and founder of \*monasteries in \*Palestine. His *Life* was written by \*Cyril of \*Scythopolis. After a childhood spent in a rural monastery in his native \*Cappadocia, Saba came to \*Palestine aged 18, and begged admittance into the \*lavra of S. \*Euthymius. Euthymius refused to admit a beardless youth and sent him to the monastery of S. Theoctistus. Here Saba spent seventeen years, first in the \**coenobium* (457–69) and later (469–73) in a nearby hermitage. In 473 he left the community and roamed the desert until 478, when he discovered the cave that became the core of his lavra. In 483 Saba began receiving disciples and building up the establishment with cells, an oratory, a cave-church, and a \*hostel. A spring provided water to the community, now counting 150 members. In 492–502 Saba founded two new monasteries (Castellion and 'The Small Coenobium' for training adults to be hermits), built another church, and bought \*hostels in Jericho and \*Jerusalem. Opposition to his leadership caused him to go into exile, first near \*Gadara and then near \*Nicompolis (Emmaus); in both areas he founded *coenobia*. On his return, in 507 Saba founded the New Lavra for his rebellious disciples, then another lavra (Heptastomos), and three *coenobia* (Spelaion and those named after Scholarius and Zannus). Shortly before his death he built another lavra for his disciple Jeremiah. To all he gave a written *Rule*. Saba's \*Typikon was adopted also in Byzantium.

Saba's 'Megiste Lavra', known in Palestinian Aramaic as Mar Saba, continued to flourish after his death, in spite of attacks by \*Saracens during the \*Persian invasion (614) and after the \*Arab conquest (twenty monks killed in 797), which caused some of the monks to leave, and the others to retire within the core of the monastery. However, Mar Saba remained one of the most influential cultural centres in the Byzantine Empire, especially in the 8th–9th centuries. It is still active. LDS

*Rule*: ed. P. de Meester, *Règlement des bienheureux et saints pères Sabas-le-Grand et Théodose-le-Cénobiarque pour la vie des moines cénobites et kelliotes: document d'ascèse orientale (d'après le cod. Paris. Coislin. 295)* (1937).

Patrich, *Saba*.

J. Patrich, ed., *The Sabaite Heritage in the Orthodox Church from the Fifth Century to the Present* (OLA 98, 2001).

**Sabaeans** (Gk. *Sabaioi*, Lat. *Sabaei*) Name of a people settled in the lowlands of inner \*Yemen in southern \*Arabia, deriving from Saba', a tribal confederation which evolved into the Sabaeen kingdom in the 1st millennium BC. Their capital \*Marib was surrounded by an oasis 10,000 ha (250,000 acres) in extent. The Sabaeans spoke Sabaic, a Semitic language written in the South Semitic alphabet, and they worshipped Almaqah, tutelary deity of their pantheon.

Sabaeans gained ascendancy over the competing south Arabian kingdoms in the late 8th and early 7th centuries BC and thereafter were a prominent part of the caravan trade, supplying \*incense and myrrh to \*Mesopotamia and the southern Levant (Jer. 6: 20, Isa. 60: 6). After half a millennium of shrinking power and the Roman siege of \*Marib in 25 BC (Strabo, XVI, 4, 22–4), the 2nd–3rd centuries saw the beginning of a Sabaeen renaissance. The city of \*Sana'a, the counterpart of Marib, was elevated to the rank of a second capital on the highlands with the increasing influence of highland peoples.

After the the kingdom of \*Himyar was annexed by the kingdom of Saba' in the late 3rd century, Saba' became merely the tribe of the inhabitants of Marib, but the name of Saba' lived on until the mid-6th century in the Himyarite royal title (King of Saba', dhu-Raydān, \*Haḍramawt, and Yamanat).

The \*Qur'an mentions Saba' twice: implicitly in sura 27 relating the visit to King Solomon of a queen—deemed to be the Queen of Saba' by drawing a parallel with the Old Testament; and explicitly in sura 34 (entitled Saba'), alluding to the prosperity of the oasis of Marib and referring to the breach of its great dam, here described as a divine retribution.

The Sabaeans of southern \*Arabia are not to be confused with the religious communities of the Sabians of southern Iraq or with the Sabians of \*Harran, a transcription of the Arabic *sābi'ūn* which derives from *sabā* ('to turn towards') and has nothing to do with *Saba'*. JS Ch. Robin, 'Sheba', in *Supplément au Dictionnaire de la Bible* (1996), 1043–254.

A. Jamme, *Sabean and Hasaeen Inscriptions from Saudi Arabia* (1966).

**Sabas the Goth, S.** A Gothic Christian of low status, Sabas was martyred north of the Danube \*frontier on 12 April 372. His \*relics were secured by Junius Soranus, \*Dux \*Scythiae, and sent to \*Basil of \*Caesarea in \*Cappadocia. Roman \*emperors had previously interfered in Gothic territory in favour of Gothic Christians (see ULFILAS), and S. Sabas's *Passion* (BHG 1607) describes a Gothic Christian \*priest moving easily across the frontier. Athanaric, Judge of the \*Tervingi, was able to order the \*persecution after 369, when a new treaty detached his Goths from tight Roman hegemony. Nonetheless, Sabas had to demand martyrdom as, first, his fellow villagers protected him, and, second, the persecutors initially regarded him as too unimportant.

J. Leemans, 'The Martyrdom of Sabas the Goth: History Hagiography and Identity', in Gemeinhardt and Leemans, *Christian Martyrdom in Late Antiquity* (300–450 AD), 201–24.

**Sabirs (Suwar)** A group of \*Huns who, after being attacked by the \*Avars (\*Theophylact, VII, 8, 3), attacked the \*Saraghurs, \*Oghurs, and \*Onoghurs (c.463) somewhere on the western steppe, according to \*Priscus (fr. 40 Blockley—30 Müller FHG). They were probably Turkic-speaking; their name may come from Turkic *sap-* 'to wander' and is likely to be connected with the toponym Siberia, from whence they probably originated. Arriving in the north Caucasus and the lower Volga in 506 (\*Procopius, *Gothic*, VIII, 3, 5), they subsequently raided south into the Roman and \*Persian Empires in 515 (\*John Malalas, XVI, 17; \*Theophanes, AM 6008) and 531/2 (Procopius, *Persian*, I, 21, 11–16; John Malalas, XVIII, 70; cf. \*Zacharias Rhetor, IX, 6c and VIII, 5f), events recorded by \*Syriac and \*Greek historians. Their military expertise

extended to constructing \*siege machines (Procopius, *Gothic*, VIII, 11, 26–34). They were, of course, no match for the \*prayers and powers of a \*holy man (\*John of Ephesus, *Lives of the Eastern Saints*, II, 18–20, IV, 78–83; VI, 115–16; XVI, 245).

In general, the Sabirs remained pro-East Roman in their political allegiance. They served with the Romans (Procopius, *Persian*, II, 30, 28; cf. II, 29, 15 and *Gothic*, VIII, 3, 5; \*Agathias, III, 17–18). Sometimes, though, they formed alliances with the Persians (e.g. Procopius, *Gothic*, VIII, 16, 8 and 17, 10; Agathias, IV, 13, 7–9; \*Menander Protector, fr. 18, 5–6) when, for instance, 3,000 Sabiri with a Persian army attacked Roman \*Armenia (Procopius, *Persian*, I, 15) or when 12,000 Sabiri volunteered to help Persia but were sent away due to doubts about their loyalty (Procopius, *Gothic*, VIII, 13, 6–7).

Several Sabir rulers are mentioned in East Roman sources. Queen Boa (*PLRE* III, Boa) was an ally of \*Justinian I in 528 against Hun (\*Hephthalite) allies of the Persians (John Malalas, XVIII, 13; \*Theophanes, AM 6020). King Zilgibis (*PLRE* II, Zilgibis) was a Roman ally, c.520 (John Malalas, XVII, 10; \**Chronicon Paschale* s.a. AD 522–3; \*Theophanes, AM 6013). King Grod or Gordas (*PLRE* III, Grod) was baptized in \*Constantinople in 527/8 (John Malalas, XVIII, 14; Theophanes, AM 6020). Zilgibis and King Grod are referred to merely as Huns. The Christianized Huns in the 530s mentioned by Zacharias Rhetor (IX, 3: Sunicas; XII, 7) c.535 may also have been Sabirs.

Conquered by the Avars in 558, the Sabirs were probably subsequently absorbed into the \*Khazar union.

**Sabrisho'** (d. 604) \*Catholicus of the \*Church of the East. Born in Bet Garmai, Sabrisho' studied theology at the School of \*Nisibis. He lived as an ascetic and became \*Bishop of Lashom (south of mod. \*Kirkuk). He was instrumental in the conversion of \*Nu'man, King of \*Hira. Shah \*Khosrow II appointed him Catholicus in 596. Soon thereafter, Sabrisho' called a \*council that reaffirmed the Dyophysite Christology of \*Theodore of \*Mopsuestia. The *Acts* of the council contain polemics against Chalcedonians and \*Miaphysites and a \*letter from Sabrisho' to the monks in the region of \*Singara (\**Synodicon Orientale*, 196–207). Peter the Solitary wrote his *Vita* (*BHO* 1032) and further information is recorded in the *Chronicle of Séert* (154–78). JNSL

**Sacellarius** (Lat. 'pouch-keeper') A chamberlain in the Sacrum \*Cubiculum of the Late Roman \*court, in charge of the \*emperor's private purse, first attested under \*Zeno. \*Narses, the \*eunuch general, was Sacellarius early in the reign of \*Justinian I. Theodorus Trithyrius, a general killed at the Battle of the \*Yarmuk, was Sacellarius under \*Heraclius. From the 8th/9th centuries onwards the term was applied to the chief financial officer of the East Roman state. PS

Jones, *LRE* 425, 567–8.

*PLRE* III, p. 1486.

**sacramentaries** In the \*Latin-speaking Christian Church, a compilation of \*prayer formulae required by a \*bishop or \*priest for liturgical celebrations, primarily for the \*Eucharist, but also containing liturgical texts for \*baptism, confirmation, ordination, various blessings, and consecrations. They omit rubrics and the liturgical texts for other ministers.

Although there is evidence from the 5th century that some bishops outside \*Rome made such compilations for their own use, the precursor to the sacramentary was the *libellus missarum*, a booklet containing the texts for a particular Mass. None of these survive, but the 6th-century Veronese or Leonine Sacramentary (*CPL* 1897) was compiled from *libelli* of different authors and dates, with the formulae arranged according to the civil calendar. The attribution to \*Leo is erroneous.

Erroneous also are the attributions to \*Gelasius I and \*Gregory I of the most important prototype sacramentaries (*CPL* 1899 and 1902 respectively). These have Roman provenance, with the former preserving the

presbyteral formulae for the *tituli* churches of the city of \*Rome, and the latter the \*liturgy performed by the Bishop of Rome.

The original Gelasian Sacramentary was used in Rome in the 7th and 8th centuries, although the sole manuscript was copied in \*Paris c. AD 750. It testifies to Roman influence on the liturgy of the \*Frankish kingdoms even before the reforms of \*Pepin III and Charlemagne.

The Gregorian Sacramentary was for papal celebrations in the Lateran \*Basilica and in the \*city churches. It was probably compiled under Pope \*Honorius I but was subject to later additions. A Gregorian-type sacramentary was sent to Charlemagne by Pope Hadrian as an authoritative model for Charlemagne's liturgical reforms, and thus greatly influenced the development of Western medieval Christian liturgy. **Sacra Moneta (SM)** 'Sacred Money or Sacred Mint', often marked SM on coins, denoting association with the imperial \*Comitatus of the \*Tetrarchy. Generally SM/Sacra Moneta marked the inviolability of \*coinage produced directly under the imperial aegis. On \*gold and \*silver it probably indicated coins struck using bullion from the Comitatus Treasury. Mints might simultaneously strike coins with and without the SM mark, presumably from different bullion, or perhaps produced for different purposes. On \*bronze coinage, the Sacra Moneta inscription may have been linked to the Tetrarchic \*Prices Edict. The mint at \*Rome designated itself Sacra Moneta (*RIC* VI, 90) without issuing coins marked SM. RRD

*RIC* VI.

**sacred geography** The notion of space and \*landscape as sacralized by association with or consecration to the divine or holy. \*Pagan notions of a sacral landscape derived from a sense that certain places were particularly numinous (for instance the entry point to the Underworld at \*Hierapolis of \*Phrygia), and developed the hope that dedicating shrines and \*temples in particular places would attract divine favour and even presence. Pagan sacred geography thus involved setting and

observing certain sacred limits, such as those between city and countryside, and maintaining the sacrality of particular spots, whether urban temples or rural shrines, by making offerings and performing rituals.

The process of \*Christianization in Late Antiquity transformed both the appearance of rural and urban landscapes, and notions of sacred geography. The sacralization of the natural and built landscape was achieved through the destruction of pagan sacred sites, and through the dedication and construction of new Christian sites and buildings, especially churches, from the reign of \*Constantine I onwards. Many pagans (such as \*Libanius in his *Oration 30 Pro Templis*) feared that this 'conversion' of the landscape was displeasing to the gods, and resisted such change, sometimes fiercely. The appearance of \*cities was transformed by the building of impressive, lavishly decorated, purpose-built churches, and the focus of urban religious life was shifted by the building of extra-urban shrines at or near the attested burial places of \*martyrs. The contours of the sacred landscape within the largest cities were also shaped and expressed by \*stational liturgy, wherein the \*bishop celebrated services at different churches over the course of the liturgical year, marking in space the unfolding of sacred time (cf. \*Prudentius, *Peristephanon*, XII).

From the 4th century AD onwards, the practice and idea of \*pilgrimage became popular. Christians journeyed within, between, and beyond cities to encounter living \*holy men and women, and to visit shrines associated with or containing \*relics of the holy dead, often in search of healing, physical and spiritual. Pilgrims like the \*Bordeaux Pilgrim of 333 and \*Egeria also travelled to the \*Holy Land to make physical contact with the places where Christ lived on earth; their records form a commentary on the sacred landscape. The formation of a new sacred geography was thus variously imaginative, experiential, liturgical, visual, and literary. SJL-R

**sacrifice** \*Pagan religion was centred not on philosophical propositions and beliefs but on the correct performance of prayerful acts, which is why Christians said it 'had to do only with the fingers' (\*Lactantius, *Inst.* V, 19, 29). Sacrifice was the most important of these acts; it was at the heart of \*festivals, which were the only times when many people got to eat \*meat. Philosophical pagans might disdain blood sacrifice; \*Porphyry (drawing on Theophrastus) claimed that the earliest Greek heroes had sacrificed not animals but only the fruits of the earth (e.g. *De Abstinencia*, IV, 22). But for practical citizens, such as the pagans who opposed \*Arnobius in early 4th-century \*Africa (*Adv. Gent.* I), sacrifice honouring the Gods was the only technology available to ensure the cooperation of the forces of Nature, to forestall \*natural disasters and obtain favourable conditions for \*farming. \*Iamblichus expresses the matter philosophically in Book V of his *De Mysteriis*: 'Prayers without sacrifice are mere words, whereas if sacrifice is added the words gain life.'

It was precisely because they refused to cooperate in the communal activity of sacrifice and spoke out against it that Christians were subjected to \*persecution. Christians who could be persuaded to sacrifice were released; obliging Christians to sacrifice was not a 'test' applied to assess some other matter, it was precisely the issue at stake in the persecutions. It is scarcely surprising then, though some scholars deny it, that \*Constantine I, in a law now lost but recited by his son \*Constans I in a constitution of 341, made sacrifice illegal (*CTh* XVI, 10, 2). Supplementary legislation by Constantine specifically forbade sacrifice by imperial officials (\*Eusebius, *VCon* II, 44). Surviving laws issued throughout the 4th century, except during the brief pagan revival under \*Julian the Apostate (361–3), make specific stipulations. \*Constantius II made sacrifice a capital offence (*CTh* XVI, 10, 6 of 356). In 391 \*governors with the rank of \*Consularis were to be fined six pounds of \*gold and those with the rank of \*Praeses four pounds of gold if they should enter a \*temple to perform 'profane rites', and the staff in their \*officium was to be fined the same amount unless they had taken steps to restrain their chief.

As always with legal sources, the very fact of their being repeated may suggest that their provisions were

being ignored. Certainly the followers of Magna Mater in \*Rome were still sacrificing in the late 4th century (*CIL* VI, 503). Nevertheless \*Libanius' eloquent plea to the \*emperor in his *Oration* 38 *For the Temples* forcefully disavows animal sacrifice: 'If people assemble in some beauty spot, slaughter a calf or a sheep, or both, and boil or roast it, and then lie down on the ground and eat it, I do not see that they have broken the laws at all' (16–17). Accusations of pagan sacrifice, however, were still being made in the time of \*Justinian I (\*Procopius, *Anecdota*, 11, 32). OPN; CARM *CAH* XIII (1998): P. Brown, 'Christianization and Religious Conflict', 632–64.

**Sagalassus** Principal \*city of the \*province of \*Pisidia, Sagalassus is about 100 km (60 miles) north of \*Attaleia (mod. Antalya) in south-west \*Anatolia. Its fertile territory produced a surplus of \*grain and \*olives for export. It was a manufacturing centre of \*pottery for use at table, Sagalassus Red Slip Ware, also exported though not in large quantities. Testament to the prosperity of its citizens is the largest known domestic courtyard in Asia Minor. A \*martyrium inside the stadium may mark an execution site. A fortification wall was constructed around the city early in the 5th century, and a Christian \*basilica was built inside the \*Temple of Apollo Clarius in the mid-5th century though Christianity was not completely dominant by then. The Odeon was renovated in the 6th century to hold \*gladatorial combats. Having recovered from the serious \*earthquake of 518, the population was then severely depleted by \*plague in the middle of the 6th century. Its inhabitants abandoned civic structures following another earthquake in the mid-7th century, instead occupying isolated hamlets across the city site and its former territory for several more centuries.

**Sahabah** See COMPANIONS OF THE PROPHET.

**Sahak I Part'ew** (338–439) \*Catholicus of \*Armenia (387–428). Son of the Catholicus \*Nerses I and the \*Mamikonian princess Sanduxt, Sahak was appointed catholicus a few years after the murder of his father by King \*Pap. His long career spanned the final years of the \*Arshakuni royal dynasty, during which time he and King Vramshapuh charged Bishop \*Mashtots with the creation of an alphabet for the \*Armenian language. In 428 the majority of the Armenian nobility turned against the last Arshakuni King Artashir and pressed the Persian king for his deposition; Sahak opposed this move. The king was however deposed, bringing the dynasty to an end. Sahak was deposed as catholicus shortly thereafter and replaced by Surmak, an Armenian who was in turn quickly replaced by the Syrian Bishop Brkisho. He retained a few privileges of his office, but refused to return in 437 upon the death of the Catholicus Samuel, another Syrian who had succeeded Brkisho. Sahak was therefore the last catholicus directly descended from \*Gregory the Illuminator, although future catholici would often claim a relation to the Gregorid family. He is usually regarded as having had pro-\*Constantinople sympathies, prompting his defence of King Artashir as well as his refusal to return as catholicus in 437. A number of \*canons in the *\*Book of Canons* are attributed to him, and his correspondence with \*Proclus of Constantinople and Acacius of Melitene is preserved in the *\*Book of Letters*. TLA  
Maksoudian, *Koriwn: Vark' Mashtots'i*.

**Sahdona (Martyrius)** (7th cent.) East Syriac \*bishop and monastic writer. He was a monk of Bet 'Abe (a daughter \*monastery of the Great Monastery of \*Abraham of Kashkar on Mount \*Izla) and wrote a (lost) life of its founder Jacob. In 635/40 he became \*Bishop of Mahoze d-Arewan in Bet Garmai. Shortly after that he began to cause controversy by expounding a Christology of one *qnoma* ('hypostasis'), a Chalcedonian-like position similar to that upheld at the \*Council of \*Chalcedon but unacceptable in the \*Church of the East. (This was probably not a result of his seduction by Henophysites, as later stories had it.) He was condemned by two councils under the \*Catholicus Mareme and finally, soon after 649, by the Catholicus \*Isho'yab III (whose letters are the primary sources for the controversy). He retired westwards, probably to \*Edessa. Sahdona's main work, the *Book of Perfection*, is a treatise on the monastic life of which only one chapter (part 2 ch. 2) is concerned with Christology.

**saints' Lives** Texts that provide, with edifying intent, a chronological narrative of the life of a \*holy man or woman. Loosely related to ancient \*biography, saints' Lives became hugely popular across the Late Antique world beginning in the 4th century. They were written and read in various contexts, monastic, liturgical, private, and bridged socio-economic boundaries. In formal terms, Lives are one particular genre of hagiography, a broad designation encompassing a variety of literary forms in both prose and verse that take the life and/or the actions of a holy person as their subject. Other subgenres of hagiography include \*miracle collections, which often circulated alongside Lives, sayings collections such as the *\*Apophthegmata Patrum*, beneficial tales, acts of apostles, and \*passions of \*martyrs. The present entry is concerned with biographical narratives of holy people in prose, the genre of text referred to in \*Latin as the *vita* and in \*Greek as the *bios* of a saint.

#### Origins and related genres

Lives were written for entertainment, edification, and as an act of veneration, reflecting their development from several classical and early Christian literary traditions. The obvious precursor to the genre of saint's Life is the Gospels, as the purpose of a saint's Life was to demonstrate how the holy person resembled Christ in his holiness. *Acts* of the Apostles, both the Biblical Acts of the Apostles and the many apocryphal Acts (such as the *Acts of \*Thomas*) that circulated in the early Christian centuries, also provided literary models and motifs for later Lives. Likewise, \*passions of \*martyrs, which describe, in literary forms which range from \*letters to \*reports of proceedings, the trials and deaths of Christians executed during persecutions, began to circulate in the mid-2nd century and introduced conventions adopted in later Lives. In the 4th century, when the saint's Life as a distinct category began to take shape, educated Christian authors experimented by fusing Christian notions of holiness with such classical literary forms as biography, \*historiography, epideictic oratory, and the romance, in order to craft Lives of \*holy men and women. An example is \*Eusebius of \*Caesarea's *Life of Constantine* of c.339 (*VCon*), a quasi-hagiographical

\*panegyric of the first Christian \*emperor. A similar spirit of innovation is displayed in the \*funeral orations of \*Gregory of \*Nazianzus, especially his *Oration* 43 on \*Basil of \*Caesarea (c.381). These texts creatively adapt a standard form of epideictic rhetoric in order to present Gregory's \*family and friends as ideal Christians. Similarly, \*Gregory of \*Nyssa's *Life of S. \*Macrina* (c.380), crafted as a *bios* contained within a letter, is a biographical account of the author's sister as an ideal holy woman.

### Greek and Latin Lives

The *Life of S. \*Antony* by \*Athanasius of \*Alexandria, the classic example of 4th-century hagiographical writing, established the saint's Life as a genre in its own right. Composed shortly after the subject's death in c.356, it became the standard model of the monastic *bios*, was rapidly translated into several languages, and seems to have been responsible for an explosion of interest in recording the lives of holy people, especially \*ascetics. Thereafter, the monastic biography became a popular genre in both \*Greek and \*Latin literature. Jerome's novelistic *Life of S. \*Paul of Thebes* (c.375) and his later Lives of the monks S. \*Hilarion and S. Malchus can be read as a Latin response to Athanasius' *Life of S. \*Antony*, while \*Sulpicius Severus' *Life of S. \*Martin of Tours* (late 4th/early 5th cent.) adapts the ascetic Life to a Western setting. From the early 5th century, compendia of brief Lives also appear. Examples include the anonymous *\*Historia Monachorum in Aegypto* (c.400), the *Lausiac History* by \*Palladius of \*Helenopolis (c.420), the *Religious History* by \*Theodoret of \*Cyrrhus (c.440), and the *Lives of the Fathers* written by \*Gregory of \*Tours in the 6th century. As the Life developed as a genre in its own right in the 5th and 6th centuries, subgenres of Lives begin to emerge, corpora of texts devoted to specific hagiographical types, such as Lives of founders of \*monasteries, of \*bishops, of \*stylites, of \*fools for Christ, and of nuns who lived as men, such as S. \*Mary of Egypt. Lives of saints continued to be widely popular throughout the Middle Ages, but Late Antiquity, between the 4th and 8th centuries, was the most significant period of development and innovation in a genre which was able to generate works of such literary quality as the poems of \*Romanus and \*Bede's *Prose Life of S. \*Cuthbert*.

### Coptic, Syriac, and Arabic Lives

Though Greek and Latin Lives have enjoyed the most scholarly attention, flourishing hagiographical traditions developed in \*Coptic, \*Syriac, and later also in \*Arabic. In all these languages, new texts were composed and there was also a widespread culture of \*translation of Lives, especially from Greek but also between the three language groups, and in particular from Greek

and Syriac into Arabic beginning in the 8th century. In \*Egypt, Coptic Lives took their cue initially from Greek exempla such as Athanasius' *Life of S. Antony*, which was quickly translated into Coptic, while various Lives of \*Pachomius, \*Shenoute, and other Egyptian ascetics, monastic founders, and bishops were composed originally in Coptic. Syriac boasted a hugely creative and productive hagiographical tradition in both prose and verse, contemporaneous to the development of Greek and Latin Lives. Classic Syriac works include the *Life of S. Abraham of Qidun and his niece Maria* (c.400), the 5th-century *Syriac Life of S. \*Symeon Stylites the Older*, and hagiographical compendia such as the mid-6th-century *Lives of the Eastern Saints* by \*John of \*Ephesus. Syriac literature is classified in three main groups according to the divisions in Syriac Christianity between the \*Syriac Orthodox in the West, the \*Church of the East, and the \*Melkites who accept the Christology of the \*Council of \*Chalcedon. Syriac saints' Lives from the 5th century onwards frequently have a polemical dimension as a result of these complex theological developments and ecclesiastical loyalties.

SEI

The editors of the 68 volumes of the *Acta Sanctorum (AASS)*, the Bollandist Fathers, intended it to be a comprehensive collection of saints' Lives, arranged by their feast days; the first volume appeared in 1643, the most recent (Novembris IV) in 1925. The Bollandists also produced *BHG*, *BHL*, *BHO*, and are responsible for the journal *Analecta Bollandiana* (1882–) and the monograph series *Subsidia Hagiographica* (1886–). The Bollandist H. Delehaye enunciated principles for the scientific study of hagiography in a series of works, in particular:

- H. Delehaye, *L'ancienne hagiographie byzantine* (SubsHag 73, 1991), with his full bibliography (xxi–xxvii).
  - H. Delehaye, *Les Légendes hagiographiques* (SubsHag 18, 1955; ET by D. Attwater, *The Legends of the Saints*, 1962).
  - H. Delehaye, *Cinq leçons sur la méthode hagiographique* (SubsHag 21, 1934).
- Delehaye's principles have been combined with the prosopographical methods of Roman historians in Barnes, *Hagiography*.

**saints' Lives, Egyptian** The \*Coptic language has two words for 'saint', *hagios* and *petouaab*, apparently used interchangeably. The \*Arabic word is *mari*. Saints may be classified as \*martyrs, confessors, monastic leaders and \*desert fathers, church leaders, and reformed characters. The Early Church had no formal procedure for canonizing saints. In addition to \*martyr passions and the Lives, \*miracles and encomia of saints (recorded mostly in books belonging to monastic \*libraries), there is also a Synaxary in \*Arabic, where the notices on the saints are arranged by month; the term 'menology' is also used for this. Some \*martyrs became so popular that a shrine, a \*martyrium, was built over their graves, such as that of S. \*Menas near \*Alexandria.

The most important monastic figures were Ss. \*Antony (c.251–356), \*Pachomius, and \*Shenoute, while the most notable church leaders were \*Athanasius and \*Cyril. Various collections of stories about desert fathers include anonymous *\*Apophthegmata Patrum*, probably compiled in Coptic and translated into \*Greek, the *Lausiac History* of \*Palladius and the *\*Historia Monachorum in Aegypto* in Greek, and a history written in Coptic by Papnoute. Reformed characters include Moses the Robber and \*Mary of Egypt.

The *Life of Antony* written soon after Antony's death was translated into many languages and became the template for many Christian \*saints' Lives, Eastern and Western, during the Middle Ages. The *Bibliotheca Hagiographica Orientalis* (*BHO*) lists editions of saints' Lives in Near Eastern languages up to 1910. AAL *CoptEnc* vol. 4 s.v. hagiography, Coptic, cols. 1191A–1197b (T. Orlandi).

**saiones** Military agents of the \*Ostrogothic kings of \*Italy employed in many tasks, e.g. as messengers, tax-collectors, and \*spies. Despite resembling Roman \*agentes in rebus, they were more powerful and carried direct royal authority. The word derives from *sagum*, their characteristic dress. JND

Wolfram, *Goths*, 294.

Burns, *Ostrogoths*, 177–9.

**Sajah** Prophetess and leader in southern \*Arabia (Yamama) of parts of the \*Tamim and \*Taghlib \*tribes in opposition to the \*Caliph \*Abu Bakr during the \*Ridda Wars. After defeat by another fraction of Tamim, she sought to form an alliance with \*Musaylima. Variant accounts of their meeting include ribald verses regarding their 'marriage'. After Musaylima's death, she accepted \*Islam and died, at an uncertain date, in \*Basra. GRH

*EI* 2 vol. 8 (1993) s.v. Sadjah, 738–9 (Vacca).

E. H. Shoufani, *Al-Riddah and the Muslim Conquest of Arabia* (1972).

**Sakaon, Aurelius** (c.265–c.343) Small landholder (*georgos*) and \*village leader from \*Theadelphia in the \*Arsinoite \*nome of the Egyptian Fayyum. Sakaon served as village head (*komarch*) and official in charge of the local granary (*sitologos*) for several years, and was an active farmer with numerous holdings (similar to Aurelius \*Isidorus). He is associated with the eponymous \*archive of roughly 75 \*papyrus documents, which include declarations of people and land, \*leases, receipts, \*reports of court proceedings, \*petitions, etc. Besides documenting the financial and agricultural affairs of Sakaon and his \*family, his papers offer a glimpse into rural life and the increasing hardship experienced during the 4th century by villages in the Fayyum's outer areas due to difficulties in \*irrigation. The period witnessed a substantial contraction of cultivable land and the subsequent abandonment of villages such as Theadelphia by villagers unable to produce enough to meet the demands of the fisc. RA

XXIII, 1978). *Trismegistos Archives*: 'Aurelius Sakaon'. <<http://www.trismegistos.org/arch/archives/pdf/206.pdf>> (accessed 20 October 2017).

R. S. Bagnall, 'The Population of Theadelphia in the Fourth Century', *BullSocArchCopte* XXIV (1979–82), 35–57.

**Salama, Abba** Name given to the first \*Bishop of \*Aksum in \*Ethiopian tradition. See FRUMENTIUS.

**Salamis** \*Harbour \*city on the east coast of \*Cyprus, renamed Salamis-Constantia by \*Constantius II (\*John Malalas, XIII, 48). It probably became the seat of the \*governor around the same time and was regarded as the senior diocesan see of Cyprus by the late 4th century. \*Earthquakes in the mid-4th century destroyed the colonnaded Gymnasium. The \*Piacenza Pilgrim (1) admired the palm trees and the tomb of S. \*Epiphanius. The nearby Great \*Baths, rebuilt several times, has an \*inscription to 'the Holy Emperors', perhaps \*Heraclius and \*Constantine III (613–41). The Neronian \*aqueduct from Chytroi/Kythrea was rebuilt in 619/31; its completion was credited to Heraclius.

The \*Temple of Zeus Olympios is not mentioned after the earthquake; its porticoes became \*shops. The huge seven-aisled \*basilica built c.400 incorporated the tomb of the \*Bishop \*Epiphanius (c.368–408). Other churches were built over the east portico of the Temple of Zeus and in the north portico of the Gymnasium. Two important late 5th-century basilicas, S. \*Barnabas and Campanopetra, are possible alternative sites for the burial place of the saint.

A large two-storeyed, \*stucco-decorated complex, of the 5th century, known as the Huilerie, may be the episcopal residence. In the early 7th century it was occupied by shops and working quarters.

\*Arab raids occurred under \*Mu'awiya in 649 and the Church of S. Epiphanius was burnt. A new church was built in the east court and a new building at the Huilerie included an \*olive press; the area was enclosed in new defensive walls. Urban life continued through the 8th century; silting of the harbour probably caused the move to Famagusta. RKL

A. H. S. Megaw, 'The Campanopetra Reconsidered: The Pilgrimage Church of the Apostle Barnabas?' in E. Jeffreys, ed., *Byzantine Style, Religion and Civilization* (2006), 394–404.

**St. Albans and S. Alban** (Roman Verulamium) Roman \*city in south-east England. Urban life continued well into the 4th century with clear evidence of buildings being maintained in the town centre of Verulamium, although some peripheral areas did fall into disuse. A complex sequence near the forum appears to show successive construction and repair that takes urban activity well into the 5th century.

St. Albans is renowned as the site of the \*martyrdom of S. Alban. The date is debated. \*Gildas is the first to place the martyrdom at St. Albans (IX, 10, 2–11), although \*Victricius of \*Rouen in the late 4th century possibly refers to it (XII, 104–5) and S. \*Germanus

visited the shrine in AD 429 (*VGermani* 16, cf. 18). There is an epic \*martyr passion (*BHL* 210d), known to \*Bede (*HE* I, 8) and written by someone familiar with the geography of the place. There is good evidence that the medieval Abbey of S. Alban, which lies in a position similar to that described in this *Passion* as the site of his execution, had its origins in a Late Roman \*cemetery. It is probable that the Late Antique \*martyrium of S. Alban was replaced by a later \*Anglo-Saxon \*monastery at this site. DAP

**Sallustius** Flavius Sallustius, \*Consul 363 and \*Praefectus Praetorio in \*Gaul 361–3. He had been a \*Vicar in three times before \*Julian appointed him to the Gallic Prefecture. \*Ammianus (XXIII, 5, 4) mentions among adverse portents associated with Julian's Persian expedition that Sallustius wrote to Julian from Gaul urging him not to attack precipitately without having prayed first for the protection of the (\*pagan) gods. Sallustius is sometimes confused with another pagan friend of Julian, Saturninius Secundus \*Salutius, and it is probably the latter who is the \*Sallustius Neoplatonicus who wrote the pagan handbook *On the Gods and the Universe*. SFT

*PLRE* I, Sallustius 5.

**Sallustius Neoplatonicus** Author of a \*Neoplatonic treatise *On the Gods and the Universe*, written in \*Greek in the reign of \*Julian (361–3), to support the

\*emperor's project to restore \*paganism. Named Sallustius in some of the manuscripts of the work including the earliest surviving manuscript (of the 13th cent.), the author is commonly thought to be the emperor's friend Secundus \*Salutius, \*Praefectus Praetorio in \*Oriens under Julian, rather than his friend \*Sallustius, \*Praefectus Praetorio in Gaul under Julian, and \*consul in 363. It is the closeness of Salutius to Julian which makes him more likely to be the author. He was an adviser to Julian when he was \*Caesar in \*Gaul and Julian wrote a \*consolation to himself on his departure. In addition, Julian dedicated to him his \*hymn to the \*Sun, which exhorts him to read \*Iamblichus' *On the Gods* (157C).

*On the Gods and the Universe* is an introductory guide to \*Neoplatonism and is indebted to Iamblichus and Julian himself, but also demonstrates independence of thinking. It covers such topics as the First Cause; the orders of the gods; the nature of the universe; mind, being, and soul; Providence and Fortune; and virtue and evil. Particularly arresting is the discussion of the interpretation and function of \*myths which addresses the story of Attis and the Mother of the Gods, as Julian also did, and the insistence on the necessity of animal \*sacrifice to achieve union with the gods. **Salona** (mod. Solin, Croatia) \*City, *colonia*, and \*harbour. Under \*Diocletian (born nearby) Martia Iulia Valeria Salona Felix was the capital of the \*province of \*Dalmatia. It was the headquarters of the Praepositus of the Thesaurus Dalmatiae, a regional office of the Sacrae \*Largitiones. There were also imperial workshops for \*arms and armour, for \*textile \*dyeing (*ba-fum*), and, by 428, weaving—moved from Bassiana in \*Pannonia (\**Notitia Dignitatum* [occ.] IX, 22; XI, 23, and 46 and 66).

In the 460s and 470s, Salona was fought over by warlords and \*usurpers. Between 461 and 468 the \*patricius \*Marcellinus ruled Dalmatia from Salona. His nephew \*Julius Nepos became \*emperor in 474 after deposing \*Glycerius, whom he appointed \*Bishop of Salona. Overthrown by \*Romulus Augustulus in 475, Nepos escaped to Salona and was killed there in 480.

During the \*Ostrogoth period (481–535), Salona was the administrative and ecclesiastical centre for Dalmatia and Pannonia \*Savia, and the site of a mint in 476–80. At the start of \*Justinian I's war with the Ostrogoths (535–54) it was a significant centre of

operations; it was recaptured by the Byzantines in 537 and its ruinous fortifications were repaired (\*Procopius, *Gothic*, V, 7, 31). It was also briefly an imperial mint under Justinian. The latest coins of \*Heraclius (610–41) and a \*letter of Pope John IV (640–2), a native of Dalmatia, directing Abbot Martin to collect \*relics of the Salonitan martyrs and to ransom captives in \*Histria and Dalmatia (\**Liber Pontificalis*, 74) suggest that the raids by \*Avars and \*Slavs eventually caused Salona's abandonment c.636–8. The inhabitants and arch-bishopric moved to \*Split.

Excavation started early in the 19th century and still continues. Salona enjoyed urban amenities—\*forum, curia, \*theatre, amphitheatre, \*city gates, and walls. It also furnishes copious evidence for the urban and funerary development of early Christianity. The relics of nine Salona \*martyrs were taken to \*Rome by John IV's emissaries in 640/2; one of these, the \*Bishop Domnio, is named in the Syriac \**Martyrology of 411* and the names of several are recorded on Salona \*inscriptions. Three large cemeteries and \*basilicas developed around martyrs' burials, today called Kapljuč, Manastirine, and Marusinac. In the 4th–6th centuries the episcopal complex evolved through increasingly monumental structures: two oratories in an elite residence, a public church, a three-aisled \*basilica with octagonal \*baptistery, to which a cross-shaped basilica was attached. Seven urban churches of the 5th and 6th centuries have been confirmed archaeologically. The metropolis held regional synods in 530 and 533 with twelve suffragan bishops. IDS; RRD

**Salsovia** Roman fortress in \*Scythia Minor (Dobruja) situated on the southern bank of the S. Gheorghe branch in the delta of the Danube River (mod. Romania). The \**Notitia Dignitatum* (or. 39, 26) places the Milites Quinti Constantiani at Salsovia. An \*inscription records the annual performance by the garrison of worship of the \*Sun ordered by \*Licinius (*ILS* 8940). Current fieldwork has suggested that the Late Roman camp was eventually burnt. The destruction must have been severe, for no signs of subsequent settlements have been found. Newcastle University, EcoMuseum and the British Academy have been engaged in fieldwork at the site since 2004. ABA

(Consulted 30 October 2017).  
L. Vagalinski, *The Lower Danube in Antiquity* (2007).

**salt** (Grk. *hals*, Lat. *sal*) Salt is differentiated in accordance with its origin as either sea salt (Gk. *hals thalassios*, Lat. *sal maritimus/marinus*) or land salt (Gk. *hals oruktos*, Lat. *sal fossicius/fossilis*). Salt was gained from salt pans or as rock salt from mines. In 417 the poet \*Rutilius Namatianus saw salt evaporation ponds on the Italian coast near Volaterrae (I, 475–84). Other pans were noted on the eastern coast and \*Apulia (*Tabula Peuteringiana*, cf. *Salinae*: \**Anonymi Cosmographia*, IV, 31; V, 1; Guido of Pisa, *Geographia*, XXII, 70). The place name *Salinae* indicates salt production; \*Mauretania is called *patria salinarum* (*Anonymi Cosmographia*, I, 2; III, 8; V, 28). Evidence of salt extraction from the 3rd–4th centuries has been found at Huntspill on the Somerset Levels in \*Britain. \*Sidonius Apollinaris knew of salt being mined in hills near \*Tarragona (*ep.* IX, 12, 1; Solinus, XXIII, 4). \*Synesius (*ep.* 148) notes the production of Ammon's salt, salt derived from an underground bed in \*Cyrene, which \*Isidore assumed grew during the waxing of the moon (*Etymologiae*, XVI, 2, 3, 7). Ammianus relates that \*Alamans and \*Burgundians were at war over salt sources in the late 4th century (XXVIII, 5, 11), and the *Armenian History* of \*Sebeos (132) notes salt mines at Kołb in \*Armenia in AD 631.

Salt pans were leased out to *manicipes salinarum* who held a salt monopoly. They were freed from taxation but in return they were obliged to supply Rome's \*baths with firewood (*CTh* XI, 20, 3; XIV, 5, 1; *CJust* IV, 61, 11; \*Symmachus, *ep.* IX, 130; X, 44); this monopoly was upheld by Pope \*Leo I in 473 (*CJust* IV, 59, 1). The Tetrarchic \*Prices Edict notes different prices for plain and spiced salts (3, 8). AMH  
*RE* I A/2 (1920) s.v. 'Salz', cols. 2075–99 (H. Blümner).

**saltus** \*Latin term for uncultivated lands. It was used in a more technical sense to denote \*estate lands used for pasturage and animal breeding. In Late Antiquity *saltus* indicated large aristocratic and \*imperial estates, especially in \*Africa. See also ESTATE MANAGEMENT.

RM

G. Soricelli, 'saltus', in A. Storch Marino, ed., *Economia, amministrazione e fiscalità nel mondo romano: ricerche lessicali* (2004), 97–123.

**Salutius** Saturninius Secundus Salutius, \*Praefectus Praetorio in \*Oriens 361–5 and again 365–7, a close friend and supporter of the \*Emperor \*Julian and probably author of the \*pagan handbook *On the Gods and the Universe* ascribed in the earliest manuscript to \*Sallustius Neoplatonicus.

Salutius had enjoyed a distinguished career in the imperial \*administration which had included being \*Magister Memoriae and Proconsul \*Africae when he was sent to \*Gaul by \*Constantius II as an adviser to the \*Caesar Julian. The two men shared a commitment to classical literature and became friends, but in 357/8 Constantius recalled Salutius; Julian in consequence wrote his *Consolation to Himself* (*Oration*, VIII) in which he compared their relationship with that of the Republican heroes Scipio and Laelius.

After Constantius died in 361, Julian appointed Salutius Praetorian Prefect of Oriens, charging him with heading the trials at \*Chalcedon of those guilty of maladministration in the previous reign. Julian dedicated to Salutius his *Hymn to the Sun*, and he read Julian's *Caesars*, but in spite of his pagan convictions, even \*Gregory of \*Nazianzus considered that Salutius was fair-minded towards Christians.

Salutius had considerable responsibility for organizing the logistics of Julian's Persian expedition, he fought in the battle when Julian was fatally wounded and was with his friend when he died. He declined the imperial office after the death of Julian on grounds of age and ill health, but was sent by \*Jovian with a cavalry general called Arinthaëus to negotiate peace terms with the Persians. He continued to serve as Praefectus Praetorio under \*Jovian and \*Valens (with a brief gap caused by \*court intrigue) and finally retired in 367. \*Libanius, a frequent correspondent, admired him and \*Himerius addressed an oration to him (possibly the fragments of *Oration* 42). He is not to be confused with Flavius \*Sallustius, Praefectus Praetorio of Gaul 361–3. SFT  
*PLRE* I, Secundus 3.

J.-L. Desnier, 'Salutius—Salustius', *REAnc* 85/1 (1983), 53–65.

**Salvian** (c.400–after c.468) \*Priest and author in \*Gaul. Salvian came from the Rhineland and saw \*Trier being sacked by \*barbarians, c.421. After agreeing with his wife that they should pursue \*asceticism, he moved to southern Gaul and joined the monastic community at \*Lérins under its founder \*Honoratus (mid-420s); at an unknown date he became a priest at \*Marseilles. He was the author of numerous literary works, of which two treatises and nine \*letters are extant.

The earlier treatise, *Ad Ecclesiam* (*To the Church*, mid-to late 430s), is a work on wealth and \*almsgiving, notable for its vehement denunciation of those who keep what Salvian regards as an excessive amount of property for themselves or their families. *De Gubernatione Dei* (*On the Government of God*), written in the early 440s, in the aftermath of the fall of \*Carthage to the \*Vandals in 439, is a much more ambitious work, which attempts to explain barbarian successes as punishments by God for the sins of the Romans. Salvian portrays the Christian Roman Empire as having a relationship to

God analogous to that of Jewish kingdoms in the Old Testament, so that God punishes them in much the same way that he permitted the conquest of \*Jerusalem by the Babylonians. In order to demonstrate that the Romans deserve such punishment, he devotes much of *De Gubernatione* to descriptions of the sinful behaviour he claims is endemic in Roman society, ranging from mundane dishonesty and ill-will, through attendance at the games and the theatre, to oppression of the \*poor by landowners and officials. Salvian pays an unusual degree of attention to the latter issue, focusing on the oppressiveness of the \*taxation system, exploitation of peasants by landlords, the rebellion of the \*Bacaudae, and the treatment of slaves. He includes enough detail about these topics to make him a significant historical source for the working of contemporary social institutions.

Salvian's condemnation of the Romans is accompanied by an idealized portrait of their barbarian conquerors, especially the Christian \*Goths and \*Vandals. His first lengthy discussion of barbarians argues merely that their sins anger God less than those of the Romans because they are committed in ignorance. However, by the end of *De Gubernatione* he asserts that the Goths and Vandals are morally superior to the Romans, portraying their victories as signs of divine favour.

*De Gubernatione* is important as an attempt to explain contemporary history in religious terms. It is also a significant source for the impact of the barbarian invasions on society and on people's view of the world, and for conditions in the 5th-century Western Empire, though its highly polemical nature means that it has to be used with caution. Salvian was alive but elderly when \*Gennadius was writing *De Viris Illustribus* (68). DRL

**Samaria and Samaritans** In both biblical and post-biblical texts, Samaria is used in reference to both the

city of Samaria, Roman \*Sebaste, and the central upland region west of the Jordan River. In Late Antiquity, settlement in the agriculturally productive region—outside of the cities of Flavia \*Neapolis (Shechem) and Sebaste (Samaria)—was characterized by a preponderance of \*villages and \*estates. The heartland and principal centre of the Samaritan religion, in the late 4th century the region was incorporated into the Roman \*province of \*Palaestina Prima, following the division of Syria Palaestina.

Followers of an Israelite religion, Samaritans (or Samaritan-Israelites) diverged progressively from Judaism, from at least the period of the Second Temple onwards. Rabbinic sources, with some internal variation, suggest a hardening of the sectarian divide during the Amoraic period (the seven or eight generations from the early 3rd cent. to the end of the 5th cent. AD). Central to the sectarian identity of the Samaritan community was the veneration of Mount \*Gerizim, near Neapolis (Shechem), as the site designated by Moses for the worship of God in the land of Israel, a belief codified in the Samaritan Pentateuch and well reflected—and polemicalized—in patristic accounts.

The 3rd and 4th centuries AD marked a period of geographic and apparent demographic expansion for the community in Palaestina—to \*Scythopolis (Beth Shean) in the east, the coastal plain in the west, including the cities of \*Caesarea Maritima and \*Gaza, as well as numerous rural sites. Outside of Palaestina, a Samaritan diaspora is attested already during the Hellenistic period. In Late Antiquity, diasporic populations are well evidenced in \*Rome, \*Sicily, \*Thessalonica, and \*Egypt, while a community may also have existed in \*Tarsus and \*Africa. Throughout the period, both archaeological and literary evidence attests to construction of synagogues and *miqva'ot* (ritual baths), in both Palaestina and perhaps also the diaspora, as well as a renewed cultic occupation of Mount Gerizim, during the 4th century.

The 3rd and 4th centuries were also a period of apparent prosperity for the community. It witnessed a flourishing of Samaritan exegetic and liturgical literature in Aramaic, through the works of the literary family of 'Amram Dare, Marqe, and Ninna. By contrast, the late 5th and 6th centuries are generally regarded as a period of protracted dislocation and inter-communal conflict. In 484, a Samaritan insurrection led by \*Justasas resulted in the expropriation of Mount Gerizim by the \*Emperor \*Zeno—this was followed by major revolts in 529 (under \*Julian, son of Sabarus), 556, and 572, with more local violence recorded during the reign of \*Anastasius I (491–518). Between the early 5th and mid-6th century, Samaritans were the object of legislation barring them from acting as lawyers or holding posts in the \*army and imperial \*administration,

limiting their ability to bequeath and inherit property, and prohibiting them from owning Christian slaves. In 527/9, \*Justinian I issued a law (*CJust* I, 5, 17) requiring the demolition of existing Samaritan \*synagogues and forbidding the construction of new ones. Despite a relaxation of the restrictions on testimonies in 551 by Justinian (*NovJust* 129), \*Justin II renewed and expanded much of the earlier statutory regime in 572 (*NovJustmin* 144). Under the emperors \*Maurice (582–602) and \*Heraclius (610–41), Samaritans were subjected to forced conversion to Christianity. SSF

**Samarkand (Afrasiab, Maracanda, Samarqand, Qand)** \*City (in mod. Uzbekistan) located on the Zarafshan River, in a fertile part of ancient \*Sogdiana. Originating during Achaemenid times and called Maracanda in accounts of Alexander's conquests, it was subsequently ruled by the Seleucid Empire, the Graeco-Bactrian kingdom, the Kushan Empire, and various smaller local \*Sogdian dynasties (Markwart, *Catalogue*, 8–10). Afrasiab, the site of Samarkand prior to the Mongols, has been extensively excavated. Samarkand's strategic location on the \*Silk Road was recognized by all who sought to control the region. The \*Buddhist traveller \*Xuanzang (I, 32–3) describes it as a populous and fertile commercial centre with a strong army, a model to surrounding states.

Captured initially by the \*Arabs in 712, it was subject to various rebellions by the local Sogdian and \*Türk population before Arab rule was consolidated (al-\*Baladhuri, *Futūh al-Buldān*, II, 173, 188–90). Prior to the \*Arab conquest, most residents were \*Zoroastrians, with Buddhists, \*Manichaeans, and Christians also present. Due to resistance, the process of Islamization in this multi-religious environment took several centuries. Arab geographers to give an account include al-\*Yaqubi (110–11, 246) and Ibn al-Faqih (386–7).

**Samnium** \*Province in the \*Dioecesis \*Italiae created under the \*Tetrarchy but missing from the \*Verona List. The \**Notitia Dignitatum* lists the \*governor as a \*Praeses (*occ.* I, 94) under the jurisdiction of the \*Vicarius Urbis Romae (*occ.* XIX, 11, cf. II, 24), meaning that the province lay in \*Italia Suburbicaria. \*Inscriptions also give the titles \*Rector and \*Consularis. Samnium lay between the Adriatic Sea, the Pescara, Aeternus, and Silaro rivers; its capital was probably Beneventum.

**Samo** (fl. 630s) Leader of a group of Frankish \*merchants who traded with the \*Slavic Wends. He was made their king after participating bravely in their successful revolt against the \*Avars, and according to \*Fredeggar (IV, 48, 68, 75), our sole source, he ruled them for 35 years, resisting and raiding \*Dagobert I's \*Franks. EJ

PLRE IIIB, Samo.

*LexMA* 7 'Samo', 1342–3 (W. Pohl).

**Samos** Island 1.8 km (1 mile) off the west coast of \*Anatolia in the \*Verona List \*province of \*Insulae. Many early churches are known; a three-aisled \*basilica with \*mosaics, similar in size to the cathedral has been located under the present small chapel of Panagitsa near the western wall of the city. \*John Moschus had heard stories about the monks of Samos (*Pratum*, 108, 185). A coin hoard was buried in or soon after 623 perhaps in connection with the \*Persian invasion which led to the siege of \*Constantinople. The \*Theme of Samos was formed in the 8th century. PA

**Samosata** (mod. Samsat, Turkey) Large Roman \*city in the \*province of \*Euphratensis, overlooking an important crossing of the Euphrates, with a long Hellenistic and neo-Hittite history, and today lying under the lake formed by the Atatürk Dam. The medieval \*city wall rests on its Roman predecessor. A \*bath and a \*basilica have been excavated. Samosata was the

## Samson of Dol

hometown of the 2nd-century \*Greek essayist Lucian, and at the same time the base for Legio XVI Flavia Firma. Paul of Samosata (\*Eusebius, *HE* VII, 27–30) was \*Patriarch of \*Antioch in the mid-3rd century, and in the mid-4th century \*Eusebius, \*Bishop of \*Samosata, was a close confidant of \*Basil of \*Caesarea; healings occurred at his tomb. It was with the assistance of a scribe from the Greek school at Samosata that \*Mashtots devised the \*Armenian alphabet (\*Koriwn, *Life of Mashtots*, 7–8). \*Daniel the \*Stylite was born in the territory of Samosata (*VDanStyl* 2). \*Theophanes mentions the city's use as a Roman base in the campaigns against \*Qobad I in 503 (AM 5997) and of \*Heraclius against \*Shahrwaraz in 626 (AM 6116). ACFC; OPN

Sinclair, *Eastern Turkey*, vol. 4, 144–8.  
Millar, *RNE* 453–6.

**Samson of Dol** (possibly attested 556–573) British monastic founder and \*bishop. His earliest Life was probably written in \*Brittany in the 7th century using information from his relatives. It had a decisive influence on later Breton hagiography. Samson, it claims, was nobly born in south-east Wales, joined the community of S. Illtud at Llantwit, and then founded \*monasteries in Wales, \*Ireland, and Cornwall and finally at Dol and Pental in Brittany and Normandy; he interceded successfully with the Frankish King \*Childebert on behalf of a Breton prince, Judual, against a usurper, Conomorus. He may have been the 'Samson' who signed the decrees of the Council of Paris in 556–573. His relatively well-attested career illustrates the progress of monasticism in 6th-century \*Britain and the early connections among the \*'Celtic' Christians. CJB

**Samuel of Kalamoun** (c.597–695) Monk at \*Scetis until 631, when he left after a violent confrontation involving doctrines intended to reconcile the \*Miaphysite Egyptian Church to \*Constantinople. After captivity among \*Berbers, he returned to \*Egypt, where he established a \*monastery at \*Kalamun (south-west Fayyum). His biography (in \*Coptic, \*Arabic, and \*Ethiopic) probably mentions indirectly the \*Arab

conquest. Other texts connected with him include a so-called apocalypse (Arabic) and doxologies (Coptic and Arabic). Samuel's feast day is 8 Khoiak. AAL

**San'a (Sana'a)** See ZAFÂR.

**Sancta Sanctorum Reliquary** Red wooden box, resembling an ancient medicine chest, formerly kept in the Sancta Sanctorum chapel at the Lateran Palace. It measures 24 × 18.5 × 4 cm (9 × 7 × 1.5 inches), has a sliding lid, is convenient for carrying, and contains labelled packets of earth, wood, and cloth, *eulogiae* obtained from \*pilgrimage to the \*Holy Land. The outside of the lid is painted with a brown \*cross emitting rays of blueish light into a dark green mandorla. The inside of the lid presents five scenes, the Nativity and Baptism of Christ below and the Women at the Tomb (Myrophoroi) and Ascension above. In the Crucifixion scene, across the middle, Christ wears a \*colobium and has his eyes open. The \*dome of the Holy Sepulchre at \*Jerusalem is visible in the background of the Women at the Tomb. The subjects do not correspond exactly to the items contained in the box, but they recall those depicted on \*pilgrimage flasks, while the rendering of the figures resembles that on 6th/7th-century \*Sinai \*icons. Wendel, *Karasura III* (2005), 158, 349.

**Sandilkh** Ruler of the \*Utrigur \*Huns (r. 551–9) and ally of the Romans. \*Justinian I urged Sandilkh and the Utrigurs to attack the \*Kutrigurs three times: in 551, after the latter had invaded Roman territory (\*Procopius, *Gothic*, VIII, 18–19), in 557/8, to thwart Kutrigur plans to attack the Romans, and in 559, after the Kutrigur ruler \*Zabergan attacked \*Constantinople. Justinian used the reminder of past gifts and the promise of more rewards to motivate Sandilkh. \*Menander Protector (fr. 2) portrays Sandilkh as reluctant to attack the culturally similar Kutrigurs in 557/8, while \*Agathias (V, 12, 4–7; V, 24, 2–25, 6) describes him willingly accepting Justinian's invitation in 559, thus setting in motion internecine warfare that weakened both Hunnic groups. MLD *PLRE* III, Sandilchus.

**St. Andrews** A church settlement in eastern Scotland. The site is first mentioned, under its Gaelic name Cennrìgmonaid, in the *Annals of Ulster* s.a. 747 when the death of an 'abbot Túathalán' is noted. The 12th-century origin legend suggests that the church was founded by the \*Pictish King Unust son of Wrguist (729–61). Much ecclesiastical sculpture dating to the 8th and 9th centuries survives on the site but the later medieval cathedral complex has obliterated any indications of site morphology, though a long cist cemetery dating to the 7th or 8th century has been excavated on the promontory to the north of the cathedral and another, about a mile (1.6 km) inland, at the site known as Hallow Hill. There is no suggestion of the S. Andrew cult being present before the 11th century. AW ed. S. M. Foster, *The St Andrews Sarcophagus* (1998).

**Sangarius Bridge** \*Road \*bridge, over a quarter of a mile long, on the \*Pilgrims' Road in \*Bithynia, at modern Beşköprü (near Adapazarı, Turkey). \*Procopius (*Aed.* V, 3, 8–11) describes repairs to it. \*Theophanes dates work on the bridge to AM 6052 (AD 559/60), which might suggest a late date for composition of Procopius' *Buildings*. An \*epigram by \*Agathias once inscribed on the bridge survives in the \*Greek Anthology (IX, 641). GBG [L.] M. Whitby, 'The Sangarius Bridge and Procopius', *JHS* 105 (1985), 129–48.

Mango, *Byzantine Architecture*, 70 and figs. 96–7.

**sanitation and hygiene** By the 8th century AD at the latest, and probably very much earlier in the western

Mediterranean and north-western Europe, almost all the great \*aqueducts supplying \*water to the major \*cities of the Roman world had fallen into disuse. So too had the large public \*baths that they fed. So also the public fountains, similarly supplied, that helped to clean the drains. The rows of communal latrines indelibly associated with classical civic life were presumably not refurbished or replaced. Put these various indices of decline together with the advent of a Christianized empire where a \*holy man, saints in \*monasteries or \*styrites on a pillar, could consider uncleanness next to godliness, and it is tempting to suppose that Late Antiquity was relatively unhygienic.

That would be a mistake. Granted the various problems of water supply, storage, and dispersal, most people in cities avoided the odour of sanctity and washed as often as their predecessors had done in classical times. Far from entirely decrying hygiene, churches established baths of their own. The \*font was after all a bath of regeneration, even if the public bath might be a setting for immorality. At Basilica B in \*Philippi the 5th-century \*baptistery connected directly to a bathhouse and public latrine. Some of the \*miracle stories of Late Antique saints have scenes set in public bathing facilities. Monastic houses of the less rigorous type permitted regular bathing. One bathhouse at \*Scythopolis, the largest in Late Antique \*Palestine, included a latrine with 75 seats. Especially in the Eastern Roman Empire, ancient habits persisted, constrained but not destroyed by Christianity. Elsewhere of course, such public amenities had never been prominent, or indeed available at all. Almost everywhere private squalor reigned: cesspits were needed for the disposal of some human waste (where simple dung heaps were not tolerated) and washing with water was an unnecessary luxury. Moreover, by modern standards, public baths and latrines were potent sources of infection, so on a biological yardstick Late Antiquity saw no general decline from classical salubrity. PHO

**San Pedro de la Mata** See SPAIN, CHURCHES OF, SAN PEDRO DE LA MATA.

**S. Antonino di Perti** Byzantine \*frontier *castrum* of c.AD 550–650 connected to the defence of the Provincia Maritima Italicorum (mod. west \*Liguria, north-west \*Italy). Although the earliest document mentioning a *Castrum Pertice* and its Church of S. Antonino is from 1162, excavations there in 1982–98 revealed a late 6th/early 7th-century \*fortification. Finds provide insights into fortress design, manpower, supply, and living conditions. The fortress occupied a steep hill (c.270 m/890 feet above sea level), overlooking the Perti and Aquila valleys, running down to the coast. Besides some worn 4th- and 5th-century issues, ten \*coins run from AD 537 to 641. The well-preserved, two-phased curtain wall did not gird the whole hilltop but was articulated to control westerly access. Towers included one of three storeys, extant to 5 m (16 feet) high; internal pilasters denote a wall-walk. Internal \*houses (\*timber-built on stone footings) yielded ceramic refuse, some weaponry, and \*dress, craft, and leisure items—including gaming pieces and two flutes. There was imported \*pottery, especially from \*Africa. Local trade is evident in soapstone vessels from Po Valley regions. The *castrum*'s end coincides with the \*Lombard conquest of Liguria under \*Rothari, although a lack of destruction deposits suggests withdrawal by the garrison. NJC

T. Mannoni and G. Murialdo, eds., *S. Antonino: un insediamento fortificato nella Liguria bizantina* (Istituto Internazionale di Studi Liguri, Collezione di Monografie Preistoriche ed Archeologiche, XII, 2001); summarized in N. Christie, *From Constantine to Charlemagne: An Archaeology of Italy, AD 300–800* (2006), 374–78.

**Sapaudia** The name given in Late Antiquity to a region of western Switzerland, north of Lake Geneva. According to the *Gallia \*Chronicle of 511*, the \*Burgundians were settled in Sapaudia (by \*Aëtius) in 443. The word 'Savoy' derives from Sapaudia. EJ  
*New Pauly: Antiquity* vol. 12 s.n. Sapaudia, 958–9 (F. Schön).

**Saqqara** Ancient burial ground of Memphis (\*Egypt). Despite \*Ammianus Marcellinus' account of a search for a new Apis bull (XXII, 4, 6), most of the \*temples in the necropolis of Saqqara had fallen out of use by Late Antiquity. Many of the settlements which arose on and between the \*temples and mausoleums in parts of the necropolis were probably monastic. A \*papyrus letter from the 4th/5th century (P.Bingen 121) is addressed to an Apa Antonios, probably the founder of the \*monastery of that name in the Sacred Animal Necropolis in north Saqqara.

In the south of the necropolis, near the pyramid of Unas, the large Monastery of Apa Jeremias was occupied from the 5th to 9th/10th centuries. This coenobitic settlement contained monastic cells, refectories,

workrooms, chapels, and a main church, and is the source of many \*Coptic \*inscriptions and a number of Coptic biblical codices now among the \*Chester Beatty manuscripts. Wall paintings and important architectural \*sculpture have also been found. MCH

*CoptEnc* vol. 3 s.n. Dayr Apa Jeremias, cols. 772b–779a (R.-G. Coquin, M. Martin, P. Grossmann, H. G. Severin, M. Rassart-Debergh).

**Saracens** (Lat. *Saraceni*, Gk. *Sarakenoi*) Term used in \*Latin and \*Greek for inhabitants of the \*Arabian Peninsula and Syrian Desert. The etymology is uncertain; it may be a tribal name. Saracens first appear under that name in the 2nd century AD, supplanting the word 'Arabs', ubiquitous in earlier writing. PAW

M. C. A. MacDonald, 'On Saracens, the Rawwāfah Inscription and the Roman Army', in his *Literacy and Identity in Pre-Islamic Arabia* (2009), VIII, 1–26.

J. Restö, *The Arabs in Antiquity* (2003).

**Saraghurs** Turkic group that, along with the \*Oghurs and \*Onoghurs, was originally part of the Turkic Tiele (T'ieh-le) tribal confederation in \*Central Asia (\*Zacharias Rhetor, *HE* XII, 7k, ix). They spoke Oghur-Bulghar Turkic and moved into the western Siberian steppe after the \*Huns left for Europe. \*Priscus (fr. 40 Blockley = fr. 30 Müller *FHG*) describes how c.463 they were attacked by the Sabirs, who had themselves been attacked by the \*Avars. The Oghurs, Onoghurs, and Saraghurs eventually settled on the Pontic–Caspian steppe. After their arrival, the Saraghurs clashed with and ultimately defeated the Akatzir Huns; in 466, they attacked the \*Persian Empire through the \*Caucasus Passes (Priscus, fr. 47 Blockley = fr. 37 Müller *FHG*). The Saraghurs—whose name means 'yellow (white) oghur' (*oghur* meaning 'grouping of tribes')—probably evolved into the later \*Utrighur and \*Kutrigur tribes and the related Bulgars probably contained Oghuric elements. **sarcophagus** A receptacle (coffin) for a dead body. The Romans abandoned cremation in favour of inhumation in the 2nd century, in both the Greek East and Latin West. The reasons for this change remain obscure. Some \*inscriptions and literary testimonies (Statius, *Silvae*, V, 1) stress a wish to keep the \*dead body unscathed. Hope for resurrection explains the preference for inhumation among Christians, and possibly other religious sects. Imperial funerals retained the tradition of cremation until the Constantinian period; however, sarcophagi are attested for some 3rd-century \*emperors (Balbinus; \*Diocletian).

Sarcophagi were of various materials, wood, lead, terracotta, imported or local stone, or, as in most cases, \*marble. Many sarcophagi have relief decoration, usually on the front and lateral faces in the Western tradition, but on all faces in the East. Various centres of production are identifiable which developed characteristic forms and decorations. Changes in \*iconography (imagery) are observable at times. Most dating is based on stylistic and/or iconographic considerations; sometimes portraits of the deceased, \*inscriptions, or archaeological evidence help.

Most sarcophagi were probably set up in mausolea (funerary buildings) where their decoration was visible. Marble sarcophagi were an expensive product available only to the wealthy; some inscriptions inform us that they were commissioned by high-ranking members of the imperial \*aristocracy (Januarinus, probably the \*consul of 328, \*Arles = *Repertorium*, 3, 37; sarcophagi of Catervius = *Repertorium*, 2, 148, and of Gorgonius, *Repertorium*, 2, 149, both \*Praefectus Praetorio in the late 4th century).

### Centres of production

\*Rome, \*Anatolia (\*Docimium), and \*Athens were the main centres of production in the 3rd century. Sarcophagi from Docimium with rich architectural articulation, the so-called Sidamara sarcophagi, were widely distributed in

the mid- and later 3rd century. Production came to a sudden halt in Anatolia and Attica apparently in the late 3rd century, and Rome remained the single super-regional centre in the 4th century.

Rome exported many sarcophagi into \*Italy, south \*Gaul, and \*Africa and perhaps \*Spain. About half the c.2,500 sarcophagi known from between 270 and 600 are from Rome. Production there ceased almost completely in the early 5th century. Roman sarcophagi have flat lids with a vertical panel at the front, which carries images and inscriptions. \*Portraits of the dead are often in a shell or a tondo in the centre of the front. Local workshops in southern Gaul remained active after production in Rome ceased in the early 5th century. A flourishing production with regional distribution is observable in south-west Gaul (\*Aquitaine) in the later 5th century. Most sarcophagi from these workshops have floral and ornamental decoration; striking is the variety of flutings. The reliefs are flat even when they have figural representations.

It is a widely assumed that \*Constantinople absorbed much skill from the abandoned centres of the East (Psamathia relief, Berlin) and became an important centre of production in the 4th century. However, evidence is sparse and scattered. In contrast to other centres of production where the bulk of the evidence has been known for centuries, new finds are still changing our understanding of production in Constantinople. The ten \*porphyry sarcophagi in Constantinople (of which one is now lost) were certainly for imperial burials. There are about fifteen items made of marble or coloured stone. About 30 limestone plaques with figural decorations survive from Constantinople; these striking plaques once covered the front of burials. There are a few export pieces, but fragments testify to a once larger stock.

\*Ravenna has yielded only some 40 Late Antique sarcophagi; many of them, however, are spectacular in terms of size, quality, and state of preservation. Ravenna sarcophagi display features of the regional tradition of north Italy (gabled roofs with acroteria and other features), but also elements of Eastern traditions (vaulted roofs: the Rinaldo-sarcophagus, and others). Production probably began with the relocation of the Western imperial \*court to Ravenna in the early 5th century; it continued into the 7th or even 8th century.

Scattered evidence is known from other \*provinces. A workshop on the island of Brattia (\*Dalmatia) exported troughs with simple \*cross decoration to the Adriatic coasts in the 6th century; another one in \*Carthage exported fluted limestone sarcophagi as far as Tarraco in the early 5th century. The \*porphyry sarcophagi now in \*Milan, Rome, and Constantinople are probably from workshops in \*Alexandria. Remarkable

if small in number is a set of lead sarcophagi in the Near East.

### Iconography

The imagery of Roman relief sarcophagi abandoned mythological representations in the mid-3rd century. Other motifs became prevalent, including \*lion \*hunting, sea beings, \*Dionysiac scenes, the *vita humana*, philosophical life, and, above all, \*pastoral scenes. As early as in the late 3rd century Christian motifs entered sarcophagus iconography. These were initially few (Jonah; Christ's \*baptism), and they were combined with 'neutral' images which might or might not be understood in a Christian sense, such as the \*Good Shepherd, the \*orans figure, \*vintage scenes, Orpheus, and others. Christian imagery became more common in the early 4th century. Scenes from the Bible and such NT apocrypha as the Acts of Peter appear repeatedly on earlier 4th-century sarcophagi and give an impression of uniformity; though no sarcophagus exactly copies another.

A change in iconography, together with a decline in numbers, occurred in the mid-4th century. Sarcophagi faces come to be divided up by columns or trees; a famous example is the sarcophagus of \*Junius Bassus the younger who died in 359. A remarkable group of sarcophagi with elaborate architectural decoration ('City-Gate Sarcophagi') is datable to the late 4th/early 5th century (sarcophagi of Gorgonius and Caterius, mentioned above). The Crossing of the Red Sea (an antetype of \*baptism) is elaborated to an extension formerly unknown. Christ's majesty (*Majestas Domini*) is represented in ways familiar from imperial iconography: Christ is shown frontally in the centre, standing on a mound, or enthroned in a circle of apostles. The apostles display courtly gestures (\*acclamation, veiled \*hands, kneeling, offerings of palm twigs and wreaths). A common motif is that of the *Traditio Legis* (handing down of the law), where S. Peter is shown receiving a scroll. The \*Cross, carried by S. Peter or replacing the person of Christ, is decorated with inlay and precious \*stones, and as a *crux gemmata* is a symbol of triumph and \*victory.

Non-Christian imagery is visible in Rome, particularly on hunt sarcophagi which were produced into the late 4th century.

The porphyry sarcophagi at \*Constantinople lack decoration, except for a fragment with a floral relief similar to the sarcophagus of \*Constantia in Rome; any association it might have with \*Constantine I is beyond proof. Some marble plaques which show the classicizing features of the late 4th century (Ambarliköy relief; Barletta relief) depict a congregation of apostles, a motif familiar from Western sarcophagi of the same period. Sarcophagi representing Christ with S. Peter are absent from Constantinople, but some topics

known from the Roman stock occur on limestone plaques in Constantinople. The woodcut style of these plaques is hardly comparable to marble works; a *terminus post quem* for them in the 5th century is given by the hypogeum at Silivri Kapı at Constantinople, built later than the Theodosian Walls of 408/13. A striking feature of Constantinopolitan iconography is the winged \*angel. Figural representations are gradually replaced by symbols (cross, chrism) in the 5th century. This also happened at Ravenna.

Ravenna sarcophagi are striking for their sparse representation of figures, which contrasts with the dense frieze sarcophagi from Rome. Their iconography is also peculiar; the Rinaldi sarcophagus, for instance, shows the first Annunciation scene in Christian art. The *Traditio Legis* in Ravenna is usually to S. Paul, not to S. Peter. \*Animals grouped around a symbol feature on back faces and lids already in the earlier 5th century.

**Sardinia** Mediterranean island and Roman \*province, separated from \*Corsica (with which it had formed a single province since 227 BC) by the time of the \*Verona List. It was governed by a \*Praeses under the authority of the \*Vicarius Urbis Romae. An official (an Exactor and then a \*Rationalis) administered the \*imperial estates. The provincial capital was Caralis (mod. Cagliari). Sardinia sent \*grain to \*Rome after the wheat of \*Egypt was diverted to \*Constantinople

in the reign of \*Constantine I. The mineral resources of the island are well documented in literature (\*gold: *CTh* X, 19, 6; \*iron: \*Rutilius Namatianus, I, 354; \*silver: \*Sidonius Apollinaris, *Carmen*, V, 43) as well as from archaeology.

\*Lucifer, \*Bishop of Cagliari, vigorously opposed the theology of \*Constantius II and was exiled from 355 to 361. After incursions in 437 or 438, Sardinia was conquered by the \*Vandals around 455. Reconquered in 466–7 by the \*Patricius \*Marcellinus, it was again taken over by the Vandals who ruled up to 482. Under \*Hilderic the island was handed over to Gordas, a slave of \*Gothic origin (\*Procopius, *Vandalic*, III, 20). Sardinia was reconquered at the time of the \*Byzantine invasion of \*Africa and \*Justinian I made it a \*province under the \*Praefectus Praetorio Africae and later the \*Exarch of \*Carthage.

\*Constantine I gave the \*Basilica of Ss. Marcellino e Pietro at \*Rome property on the island yielding 1024 *solidi* (\**Liber Pontificalis*, 34, 27) The many \*letters of \*Gregory the Great contain much information about the Church and Sardinian society in the 6th and early 7th centuries.

A small number of gold coins from \*Leontius (695–8) to \*Anastasius II (713–15) of Carthaginian fabric, marked S, were probably struck on Sardinia by moneyers from Carthage after the \*Arab conquest of that city. Slightly earlier \*copper issues are less certainly attributed to the island. CS; RRD

**Sardis** \*City and metropolis of \*Lydia, located in the Hermus River valley c.90 km (c.56 miles) inland from \*Smyrna. For most of Late Antiquity, Sardis was the seat of the provincial \*governor and \*metropolitan \*bishop, location of an imperial \*weapons factory, and the regional economic centre. Notable residents included the \*Neoplatonist \*Chrysanthius, teacher of the \*Emperor \*Julian, and his pupil \*Eunapius.

Despite Sardis being named as one of the Seven Churches of Asia (Rev. 3: 1–6) and the early prominence of Melito, Bishop of Sardis (fl. 180), physical evidence for Christianity makes its first surviving appearance in the shape of two small churches built amid earlier burials outside the city.

The prominence of the local \*Jewish community is apparent from the \*synagogue, work on which began

in the western \*bath–gymnasium complex in the later 4th or 5th century. The large building consisted of a porticoed forecourt and apsidal hall, which had \*mosaic floors and \*marble-revetted walls. Two aedicular shrines, votive \*inscriptions in \*Greek and Hebrew, and several \*menorahs establish the identity of the building, which remained in use into the early 7th century.

By AD 400 the urban site with its high acropolis was enclosed by a 4 km (2.5 mile) long fortification wall that included public spaces, entertainment buildings, administrative structures, and residential quarters within an area of nearly 130 ha (320 acres). Earlier \*baths, \*temples, and civic monuments were selectively adapted to new purposes or quarried for building material. Colonnaded \*streets with flanking \*shops and \*houses remained essential elements in the urban façade. By the later 6th or early 7th century much of the site had been abandoned in favour of limited occupation of isolated buildings and the newly fortified acropolis, which remained a strategic outpost into late Byzantine times. **Sarjun (Sergius, or Ibn Mansur)** (fl. c.660–700)

Influential Christian secretary to the \*Umayyad \*caliphs from \*Mu'awiya to \*Abd al-Malik. Reported to have significant standing with 'Abd al-Malik, whom he is said to have prevented from moving to \*Mecca the pillars of the church in Gethsemane. Sarjun is usually said to have been \*John of \*Damascus' father, but may in fact have been his grandfather. RJL

**Šarkamen** An unfinished enclosure with massive defensive walls, located in \*Dacia Ripensis, 109 km (68 miles) north of \*Niš and 40 km (25 miles) north-east of \*Gamzigrad, which it resembles in its layout and construction. The enclosure contained a fortified \*palace and several other incomplete buildings. The only complete building, 250 m (820 feet) from the palace, is a domed mausoleum which contained cremated human remains, elaborate \*jewellery, and \*gold votive plaques impressed with the obverses of \*Tetrarchic coins. A neighbouring tumulus contained burials. Fragments of a \*porphyry

statue of an enthroned \*emperor (*LSA* 1118) were found nearby. The place has been associated with the Emperor \*Maximinus Daza (305–13). OPN

**Sar Mashhad** Site of a \*Sasanian period settlement (largely unexcavated), located c.55 km (35 miles) south of the Sasanian city of \*Bishapur. Nearby is a \*rock relief of \*Bahram II (276–93) and an \*inscription of the \*Zoroastrian priest \*Kerdir (c. late 3rd cent.). The relief was carved into a rocky spur through which passed one of the Sasanian \*roads from Bishapur to the Persian Gulf. The relief portrays the King of Kings in profile and on foot slaying two \*lions with a sword and protecting his queen and sons. MPC

**Sarmatians (Sauromatians)** Iranian-speaking nomadic tribal confederation, eastern neighbours of the \*Scythians, who flourished on the Pontic–Caspian steppe north of the Roman and \*Persian empires after their invasion of the area (c.500 BC), which forced the Scythians south-westward. The Sarmatian name was applied to several subsequent Iranian nomadic peoples (especially the Roxalani, who defeated the Scythians c.200 BC), but the ethnic relations between them all are uncertain. The Aorsi (\*Alans) were an important constituent of the Sarmatian confederation that later dominated the Pontic–Caspian steppe, before the 3rd- and 4th-century invasions of the \*Goths and \*Huns, respectively. Subsequently, only the Alans survived as an independent group; the remaining Sarmatians were absorbed by the Huns and surrounding \*Slavs.

Like the Scythians, the Sarmatians were excellent mounted warriors and pastoral \*nomads who lived in wagons, but unlike the Scythians, they rarely sacrificed horses or humans and had female warriors and priestesses, perhaps an indication of matriarchal roots. The Sarmatians' most important contribution to warfare was the introduction of heavy \*cavalry armour. After Marcus Aurelius defeated them in AD 175, many Sarmatian troops were incorporated into the Roman \*army, and Sarmatian cavalry was stationed by the time of the \**Notitia Dignitatum* in \*Italy and \*Gaul (occ. XLII, 45–70) and at Ribchester in \*Britain (occ. XL, 54).

However \*Diocletian, \*Galerius, \*Constantine I (in 323: \*Zosimus, II, 21, and in 334) \*Constans I (probably in 338), and \*Constantius II (in 337, possibly in 352, and in 358: \*Ammianus, XVII, 12, 4–6) all campaigned against them on the Danube \*frontier, though the victory title Sarmaticus Maximus was not borne by any \*emperor after the death of \*Julian in 363. **Sarug** See BATNAE.

**Sarvestan** Domed structure c.65 km (39 miles) from Shiraz. North and west entrance \**ayvans* led to the structure's central domed \**chahar taq*. An interior courtyard (east), two subsidiary *chahar taqs*, and two barrel-vaulted halls with colonnades supporting semi-domes flanked this space (north and south). Often called a \*palace in older scholarship, its ground plan corresponds instead to those of known \*Sasanian \*fire temples and more likely accommodated religious activity. L. Bier argued it was early Islamic simply because of the complexity of its architectural features like the vaulting; however, advances in our understanding of Sasanian architecture and recent excavations at the site suggest that it was late Sasanian. **Sasanian dynasty** (224–651) Rulers of the last Iranian empire before the coming of \*Islam. With roots in the province of \*Fars, they established an empire encompassing the Iranian Plateau, \*Mesopotamia, and \*Central Asia in the 3rd century AD when \*Ardashir I, the founder of the dynasty, defeated Artabanus VI, the last Arsacid king of kings, at the Battle of Hormozgan in 224 AD. In the 3rd century AD the Sasanian Empire expanded and conducted several campaigns against the Roman Empire. In the early 4th century the Romans under \*Constantine the Great and the Sasanians under \*Shapur II recognized each other as equal powers. In the 5th century the nomadic movement of the \*Hephthalites brought several defeats

and weakness to the Sasanian empire. With the reforms of \*Qobad I and \*Khosrow I, the empire was reinvigorated and was able to secure its borders. In the 7th century AD, \*Khosrow II fought the last great war of antiquity with the Roman Emperor \*Heraclius which caused the defeat of the Sasanian empire. The Sasanian empire came to an end with the \*Arab conquest in the 7th century AD, during the reign of \*Yazdegerd III.

More than 40 kings and queens ruled the empire, mainly from \*Ctesiphon in \*Mesopotamia. They were responsible for establishing a narrative for Iranian national history, the \**Xwaday Namag* which in the 11th century became the basis of Ferdowsi's epic poem the *Shahnameh* (*Book of Kings*). Iran was first conceived of as \*Eranshahr, a distinctive territory and culture, by the Sasanians. The \*Avesta, the sacred text of \*Zoroastrianism, was first written down in the 4th century AD during the rule of Shapur II and was last codified during the rule of Khosrow I in the 6th century AD. TD Canepa, *Two Eyes*.

Daryaei, *Sasanian Persia*.

**Sasima** (mod. Hasanköy) Station (*mansio*) on the \*Pilgrims' Road, and small bishopric in \*Cappadocia Secunda, 'waterless, barren . . . a wretched little village full of dust and noise' (\*Gregory of \*Nazianzus, *Vita* [*Carmen* II, 1, 11], 439–46). Gregory was appointed \*bishop against his will in 372, but never took up his post. PJT

TIB 2 *Kappadokien* (1981), 272–3.

**Satala (Sadak)** One of a series of legionary fortresses established in the 1st century AD between the Black Sea and north \*Syria at a major junction between the \*frontier road leading north–south and the routes from north \*Anatolia into \*Armenia. The early 5th-century list in the \**Notitia Dignitatum* (or. 38, 18) attests the Legio XV Apollinaris here, but there is no later reference to that unit. Satala remained an important fortress into the 7th century, although the garrison is likely to have been reduced. The site remains well preserved and it is possible to discern the perimeter wall and also the arches of a \*basilica. Recent survey and geophysical prospection has indicated a reduced enclosure within the circuit. JCr

**Satrapies, Armenian** See ARMENIA QUARTA.

**Satrius Arrianus** \*Praeses of the \*Thebaid 305/306–7, known through various \*Greek \*papyrus

documents and \*martyr \*passions, such as that of S. \*Stephanos of Lenaïos; in the more legendary Coptic martyr passions, he is often called A(r)rianus and described as a brutal persecutor and torturer of Christians. GS

PLRE I, Adrianus.

Barnes, *NEDC* 148.

Reymond and Barns, *Four Martyrdoms*, 7.

**Saturnalia (Gk. Kronia)** Festival in honour of Saturn, originally on 17 December but observed, at various times, for three, five, or seven days. It was a time of relaxed celebration, when gifts were exchanged and slaves were allowed to dine before their masters. Much lore on the Saturnalia is found in \*Macrobius' \*dialogue set on the holiday and named *Saturnalia* after it (especially 1, 7). RAK

ed. (with ET) R. A. Kaster, *Saturnalia*, 3 vols. (LCL 510–12, 2011).

**Saturn in Africa** Evidence of devotion to Saturn as a Roman interpretation of the Punic god Baal is apparent from over 3,000 votive stelae known from all over \*Africa Proconsularis and \*Numidia. Saturn was especially associated with fertility and \*grain; stelae depict farm carts bringing home the harvest; \*Arnobius calls him 'the guardian of the countryside with his curved sickle, like someone who cuts back luxuriant boughs' (VI, 12). The latest datable dedication (from Vaga near \*Sicca) was erected on 8 November 323. Stelae from Djemila (\*Cuicul) were later reused as paving-stones. OPN

M. Leglay, *Saturne Africain*, 2 vols. (BEFAR), vol. 1: *Afrique Proconsulaire* (1961); vol. 2: *Numidie–Mauretanie* (1966).

A. Beschtaouch, 'Une stèle consacrée à Saturne le 8 Novembre 323', *BACTH* 4 NS (1968), 253–68.

**Saturninus** Governor of \*Syria who rebelled against \*Probus (\*Zosimus, I, 66) and minted coins at \*Alexandria, but was killed by his own troops, apparently at \*Apamea (\*Jerome, *Chron.* 224c Helm). OPN

PLRE I, Saturninus 12.

CAH XII (2005), 55.

**Saurmag (Sauromaces)** Succeeded Mirian (Meribanes) as King of \*Iberia (361–3) and as a \*client of Rome. Expelled by \*Shapur II (364/8), he was replaced by his cousin \*Varaz-Bakur (Aspagur) but then restored by \*Valens. In c.370, the cousins agreed to partition Iberia. Saurmag received the territory adjacent to \*Armenia and \*Lazica (\*Ammianus, XXVII, 12), but in 377/8 Shapur deposed him (Ammianus, XXX, 2, 4–8), bringing all Iberia under Persian patronage. MO PLRE I, Sauromaces.

## S. Autonomus

C. Toumanoff, 'Chronology of the Early Kings of Iberia', *Traditio* 25 (1969), 24–6.

D. Muskhelishvili, *Sakartvelo 4–8 saukuneebsi* (Georgia in the 4th–8th centuries) (2003), 54–61.

**S. Autonomus** Shrine at ancient Soreoi (mod. Tepeköy, formerly Ereğli-i Bala, Turkey) near Praenetus (mod. Karamürsel) overlooking the south coast of the Gulf of \*Nicomedia in \*Bithynia. The eventful but fictional *Passion* of the eponymous \*martyr (*BHG* 198; *AASS* Septembris IV, 16–19) provides details of its buildings and pleasant location. The \*monastery named after him was visited by S. \*Theodore of \*Sykeon, one of whose disciples became its abbot (*VTheodSyk* 49). The \*Emperor \*Maurice was captured here by forces loyal to \*Phocas (*ChronPasch* s.a. AD 602; \*Theophylact Simocatta, VIII, 9, 9). OPN

Janin, *Grandscentres*, 86–7.

Delehay, *Origines*, 154.

C. Foss, 'St. Autonomus and his Church in Bithynia', *DOP* 41 (1987), 187–98.

**Savaria** (mod. Szombathely, western Hungary) Capital of \*Pannonia Prima. The epic \*martyr passion of S. Quirinus, \*Bishop of \*Siscia, locates his cult at Savaria (*BHL* 7035–7), though the poet \*Prudentius (*Peristephanon*, 7, 1–4) places it at Siscia. S. \*Martin of \*Tours was born at Savaria in 316. According to \*Ammianus, \*Valentinian I found the place dilapidated in 375 (XXX, 5, 14–18). Tradition claims that some inhabitants fled \*Attila's \*Huns to help found Venice. Despite a serious \*earthquake in 456, the Carolingian revival of Savaria implies some early medieval continuity. Parts of the imperial cult centre, the Late Roman \*governor's \*palace, and the \*street system have been excavated. NJC

Z. Visy, ed., *Hungarian Archaeology at the Turn of the Millennium* (2003), 224–6, 312.

**Savaric** \*Bishop of Auxerre (c.715–c.720). According to tradition, Savaric neglected the dignity of his office to raise an army, subjecting several towns including \*Orléans to his authority. He died marching on \*Lyons and was buried in the Church of S. \*Germanus at Auxerre. JTP

*Gesta pontificum Autissiodorensium*, ch. 26: ed. M. Sot, *Les Gestes des évêques d'Auxerre*, vol. 1 (2006), 126–7.

**Savia** \*Balkan \*province in modern Croatia, created by the time of the \*Verona List (where it is called Favensis) from that part of the pre-\*Tetrarchic \*Pannonia Superior lying south of the River Drava, and placed in the \*Dioecesis \*Pannoniae. In the *\*Notitia Dignitatum* (occ. I, 82) Savia is in the Dioecesis of \*Illyricum and governed by a \*Corrector. The capital was \*Siscia. \*Valentinian III settled \*Huns in Savia. In the late 5th century it came under \*Theoderic the \*Ostrogoth (\*Cassiodorus, *Variae*, 4, 49), and then \*Justinian I, who in 547/8 bestowed on the \*Lombards the 'fortresses of Pannonia' (\*Procopius, *Gothic*, VII, 33). IDS; OPN

*NEDC* 223.

*TIR* L-33 (1966).

Mócsy, *Pannonia and Upper Moesia*.

**Saxons** A Germanic people located primarily in modern north-west Germany, probably first attested in \*Ptolemy's *Geography* as a \*tribe north of the lower Elbe River in the area of modern Schleswig-Holstein. They appear more often in written sources only from the mid-4th century onwards, either as an ethnic unit beyond the Rhine adjacent to the \*Franks, or as \*pirates whose raiding along the Gallic and British coasts in the 4th and early 5th centuries was sufficiently serious to merit the creation of a special Roman defensive command in eastern \*Britain and northern \*Gaul under the \*Comes of the \*Saxon Shore (\**Notitia Dignitatum* [occ.] XXVIII). A handful of excavated settlements of this period along the North Sea coast in Lower Saxony have been associated by archaeologists with the continental Saxons.

From the 5th century onwards, Saxons were heavily involved in the colonization of eastern Britain, and also settled in lastingly distinct pockets along the Gallic coast, such as the area around Bayeux. The history and social organization of those Saxons who remained east of the Rhine remain obscure, since they are visible only sporadically, and largely through the prism of the \*Frankish sources which report their alliances with and against neighbours such as the \*Thuringians. These show that the Saxons came under the hegemony of the Franks in the 6th century, but repeatedly rose up in revolt, and were relieved by \*Dagobert I of an obligation imposed by \*Chlothar I to pay an annual tribute of 500 cows in exchange for a promise to defend the Frankish frontier against the Wends (\*Fredegar IV, 74).

By the late 7th century, however, the Saxons appear increasingly assertive and independent of Frankish control, and proved resistant to initial attempts by \*Anglo-Saxon missionaries such as the two \*Hewalds to bring

about their conversion to Christianity. From 718 onwards \*Charles Martel campaigned against the Saxons with some success, but this, and the parallel aspirations of S. \*Boniface and others to expand the \*Anglo-Saxon mission-field into Saxony, had to await the protracted and bloody campaigns of Charlemagne in the 770s and 780s to come to fruition and finally bring the Saxons into the Frankish Christian orbit.

**Saxon Shore** The \**Notitia Dignitatum* (occ. XXVIII) lists nine coastal garrisons arranged around the south and east coast of \*Britain, from the Wash to the Solent, commanded by the \*Comes Litoris Saxonici per Britanniam (occ. I, 36; V, 132).

It has been suggested that forts on the opposite side of the English Channel also formed part of a wider coastal command. In fact eleven coastal forts are known in south-east Britain located close to estuaries or overlooking \*harbours. An early group of forts at Brancaster and Caistor-by-Norwich, and Reculver, were constructed from the early to mid-3rd century and conform to the earlier pattern of forts. Another larger group, built from the later 3rd century onwards, includes Burgh Castle, Bradwell-on-Sea, Pevensey, Portchester, and Lympne. They were equipped with more massive walls and projecting towers, and form the clearest example in Britain of the new \*fortifications found along the continental \*frontiers and around Gallic \*cities, but not found on \*Hadrian's Wall.

The function of these forts remains controversial as some scholars have claimed that the threat from \*Saxons and other peoples across the North Sea did not justify this level of defence and that the forts formed part of a supply network. The term *Litus Saxonicum* (Saxon Shore) is however comparable to the phrase *Gothica ripa* (Gothic Shore) used in the \**Origo Constantini Imperatoris* (6.35) used to define the command of Constantine's nephew Dalmatius along the lower Danube \*frontier, and on the Danube there was most certainly a real barbarian threat.

At a number of sites there is evidence for late occupation in the 5th and 6th centuries. The \*Lindisfarne monk S. Cedd founded a \*monastery in the remains of the fort at Bradwell-on-Sea (Othona, Ythancaestir) in c.654 as a base for evangelizing Essex (\*Bede, *HE* III, 22).

**sayings** Words of wisdom had been extracted from authoritative thinkers and gathered in collections since the late classical period. \*John Stobaeus' four-book anthology (5th cent.) represents the acme of classical compilations, excerpting writers from Homer to \*Themistius on the subjects of logic, physics, ethics, politics, and economics. \*Porphyry drew on \*Plotinus for his *Sentences Leading to the Intelligibles*, a basic summary of \*Neoplatonism, while the more diffuse \**Sentences of Sextus* contained a more popular and ecumenical brand of philosophy.

The \**Apophthegmata Patrum*, sayings of \*desert fathers dating from S. \*Antony to the 6th century, assembled for the edification of monks in \*Egypt, \*Syria, and \*Palestine, are different in that they were originally oral. In committing them to writing in the languages of the Early Church, scribes made their own selections and combinations, resulting in a particularly diverse corpus.

JLL

**Sayings of the Fathers** See *APOPTHHEGMATA PATRUM*.

**S. Bertrand-de-Comminges** (civitas Convenarum: dép. Haute-Garonne, France) A minor \*city in the foothills of the Pyrenees, known primarily from its material remains. Successive excavations since the 1920s have revealed sundry public and private buildings in the lower town, while the fortification of the directly adjacent hilltop, substantial elements of which survive in elevation, is now well dated to c.400. The erection of a substantial church in the lower town in the second quarter of the 5th century and its subsequent modifications coincide with other indications to suggest that the earlier city was not immediately abandoned, but the focus of settlement appears gradually to have shifted to the defended hilltop, where in 585 the \*Merovingian pretender \*Gundovald made his last stand, vividly described by \*Gregory of \*Tours (*HF* VII, 34–8).

**scales and weights** Roman and Byzantine authorities usually employed commodity and \*coinage weights. The weights in question were commonly manufactured in \*bronze, \*glass, and lead. In very rare instances, \*gold and \*silver were also used. Among the

## Scanda

most common \*copper-alloy weights the square type appears to have been dominant until the latter half of the 6th century, decorated with imperial figures, or more commonly with a prominent Latin \*cross or wreath within cross, both flanked by the denominational mark ( $\beta$  = 2 ounce,  $\gamma$  = 3 ounce,  $\sigma$  = 6 ounce). A few weights have survived in the shape of bronze statuettes of an \*emperor. A discoid type became pre-dominant from the 7th to early 9th centuries.

Islamic weights also included a discoid type, although octagonal, not round, and combined with barrel and cubo-octaedric shapes. The Islamic impressions contained usually the ruler's name, a short protocol, or a word of guarantee. *See also* WEIGHTS AND MEASURES.

**Scanda** (mod. Skande in Imereti, \*Georgia) Hilltop fort in eastern Colchis, where \*Iberia met \*Lazica. \*Justinian I replaced the Laz garrison with Roman forces in c.527/8. They were defeated, and abandoned Scanda due to difficulties with provisioning. The Persians then occupied it, the Laz razed it, and the Persians rebuilt it (\*Procopius, *Gothic*, VIII, 13, 18; cf. *Persian*, I, 12, 14–19). Archaeology under a medieval fortress has revealed earlier remains and a tunnel running downhill towards a stream.

MO

**sceattas** The word *sceat* indicated in the Anglo-Saxon monetary system a unit of accountancy corresponding to one-twentieth of one shilling. In numismatics the term often denotes small Anglo-Saxon \*silver coins, minted to very diverse weight standards. This latter use of the word is inappropriate, since the term *sceat* is used in the laws of \*Ethelbert of Kent before the first appearance of the silver coins, which were probably known as pennies.

FC

I. Stewart, 'Anglo-Saxon Gold Coins', in R. A. G. Carson and C. M. Kraay, eds., *Scripta Nummaria Romana: Essays Presented to H. Sutherland* (1978), 143–72.

**Scetis** Important centre of Egyptian monasticism in the Wadi an-Natrun settled by S. \*Macarius the Egyptian (c.300–90) in c.330 and rapidly attracting a substantial semi-eremitic ascetic population. Many of the elders represented in the \**Apophthegmata Patrum* were associated with Scetis: Macarius of Egypt, Arsenius, Moses the Black, \*John Colobus, Poemen, Paphnutius, \*Isidore of Pelusium, Silvanus, and Amma Syncletica.

Four distinct monastic communities had emerged by the end of the 4th century. These were later named after Macarius of Egypt, John Colobus, Baramûs (lit. 'of the Romans'), and Bishoi. In the late 4th century Scetis was a centre of controversy between Melchizedekians and Anthropomorphites, and was devastated by barbarians in 407–8, 434, and 444. After the \*Council of \*Chalcedon (451), it emerged as a centre of vigorously anti-Chalcedonian \*Miaphysite Coptic \*monasticism. Scetis benefited from the patronage of the \*Emperor \*Zeno (474–91). It became a centre of Aphthartodocetism (belief in the incorruptibility of Christ's flesh) in the 6th century. Scetis endured further devastation in c.570. The Emperor \*Heraclius (610–41) pressed the monks to accept the Christological compromise of \*Monotheletism, without success. The Monastery of S. Macarius became the seat of the Miaphysite Coptic Orthodox Patriarchate of \*Alexandria in the Late Roman period. Early experience of the \*Arab conquest (after 640) and Islamic rule was relatively benign, with the situation deteriorating (and \*taxation increasing) over the 8th century.

**Schola** Unit of organization, civil and military (cf. *scrinia*, *vexillatio*, *auxilium*, *legio*). A wide range of personnel associated with the \*palace—and in particular with the \*Magister Officiorum—was organized in Scholae. The \*Scholae Palatinae (imperial guard) comprised ten Scholae (in the 6th cent., of 500 men each); the \**protectores domestici*; \**notarii*; \**silentiarii*; \**stratores*; viz. \**agentes in rebus*; \**decani*; \**mensores*; \**lampadarii*, and other palace functionaries.

In the central civil \*administration, the staff of the \*Praefectus Praetorio was variously organized by \**scrinium* or *schola* (*CJust* I, 27, 1). In 6th-century \*Constantinople, administrative officials (\**exceptores*) were divided into fifteen Scholae (\*John Lydus, *Mag.* 3, 6). Promotion (principally by seniority) and ranks in the military *scholae* (modelled on \**vexillationes* and \**auxilia*) were mirrored in the civil \*administration: members of the *schola agentum in rebus* were graded as *equites*, *circitores*, *biarchi*, *centenarii*, and *ducenarii* (*CJust* XII, 20, 3).

Teitler, *Notarii*, 75–80.

**schola cantorum** The papal choir at \*Rome. The term is also used for the \*solea, the enclosed space

before the \*altar where the choir sang. During the entrance rites of papal masses, the choir formed two lines along the processional route to the altar (\**Ordines Romani*, 1, 49).

Despite claims by his 9th-century biographer John the Deacon, it is not likely that \*Gregory I (r. 590–604) founded the papal choir and instituted its \*chant. Singers from among the minor clergy existed before and during Gregory's pontificate, and boy singers from the mid-7th century (\**Liber Pontificalis*, 86). A highly organized choral institution called the Schola Cantorum is mentioned in *Ordines Romani*, I. It disseminated its own distinctive Roman chant, especially in the Frankish kingdoms, and through \*Canterbury as far as Northumbria (\*Bede, *HE* II, 20: James the Deacon; *HE* IV, 2: Eddius Stephanus), especially to Benedict Biscop's \*monasteries of \*Wearmouth-Jarrow (*HE* IV, 16[18] and Bede, *Historia Abbatum*, 6: John, archchanter of S. Peter's Rome). JJD; OPN *New Grove Music s.v.* Schola Cantorum (i) (J. Dyer).

**Scholae Palatinae** Imperial escort regiments which began to supplement the \**equites singulares Augusti* and Praetorian Guard under the \*Tetrarchy, and replaced them under \*Constantine I. The earliest clear attestation of them is around AD 330 (*CTh* XIV, 17, 9–10). *Scholae* are listed in the \**Notitia Dignitatum* under each \*Magister Officiorum, seven in the East, five in the West (*Not. Dig. or.* 11, 4–10; *occ.* 9, 4–8). They were all \*cavalry formations, led by \*tribuni, and each unit was 500 strong (\*Procopius, *Anecd.* 24, 15). These regiments were the most senior in the Roman \*armies with the highest pay, quite distinct from the \*field and frontier forces (*CTh* VII, 4, 23). *Scholae* were not under the direct command of the military \*magistri, presumably for political security reasons, as much as for facility of financial \*administration. An inner group of 40(?) \**candidati* fulfilled bodyguard duties. However, the *scholae* were battlefield regiments, not merely ornamental guardsmen, up until the last quarter of the 5th century. Unit titlature included \**clibanarii*, \**scutarii*, \**armaturae*, and \**gentiles*, providing some indication of armament and recruitment. Officers of the *scholae* were detached for special duties, including the command of other formations. Such was their importance that officers occasionally became imperial candidates (\*Ammianus, XXV, 10, 9; XXVI, 1, 4). From the reign of \*Zeno positions were sold off to raise revenue, so by the time of \*Justinian I the *scholae* had become purely ceremonial and militarily useless (Procopius, *Anecd.* 24, 17–21). **Scholia Sinaitica** Fragments of a late 5th-century (AD 439/529) commentary on Ulpian's *Libri ad Sabinum* for \*Greek speakers. The *Scholia Sinaitica*, like the \**Syro-Roman Law Book*, are an important witness to the study of law between \*Theodosius II and \*Justinian I. JND ed. in Riccobono, *FIRA* II, 635–52.

P. E. Pieler, "Byzantinische Rechtsliteratur", in Hunger, *Literatur*, vol. 2, 391–93.

**schools, philosophical** See *PHILOSOPHERS AND PHILOSOPHY*.

**schuldahis (sculdahis)** \*Lombard official subordinate to the \*Dux or the \*gastald. The *schuldahis* undertook a low-level judicial function. It is not known how many *schuldahis* there were in any given territory nor their position in the office hierarchy vis-à-vis \**decani* and \**centenarii*. CTH

Wickham, *Early Medieval Italy*, 42.

**scientia** \*Latin term for 'knowledge' which acquired a semantic range particular to the varied cultural

settings of Late Antiquity. Classical writing demonstrates a preference for using *scientia* to denote expert knowledge of a discipline or field with particular precepts, such as religion (Cicero, *De Divinatione*), natural philosophy (\*Pliny, *Historia Naturalis*), or the study of letters (Quintillian, *Institutiones*). Early Christian authors such as Tertullian could associate *scientia* negatively with profane knowledge. With the importation of secular literary habits into Christian thinking, *scientia* also became positively associated with exegesis and moral discernment (\*Augustine, *De Doctrina Christiana*, III, 29, 40 and *De Trinitate*, XV, 15, 25; \*Cassiodorus, *Expositio Psalmorum*, 50, 9 and *De Anima*, 5). Secular philosophical thinking inherited Aristotle's criteria for possessing *scientia* in the sensible and intelligible sense (\*Porphyry, *Isagoge*; \*Boethius, *Categories*). Other writers (\*Macrobius, *Saturnalia*, II, 10; Cassiodorus, *Institutiones*, II, 3, 6; \*Isidore, *Etymologiae*, II, 24) continued to use *scientia* in reference to a diverse array of specific fields of knowledge. MSB

### scientific texts, transmission and translation of

Many \*Greek writings available in Late Antiquity were later translated into \*Syriac and \*Arabic, and subsequently formed the core from which science, \*medicine, philosophy, and other disciplines developed in the medieval Islamic world.

Scholars such as \*Sergius of \*Resaina (d. 536) translated Greek philosophical and medical texts into Syriac, and there had been a long tradition of rendering Greek religious and theological texts into Syriac. A second wave of Graeco-Syriac translations occurred in 9th-century Baghdad, where interest in Greek learning was at a peak, especially in the workshop of \*Ibn Ishaq (d. c.873). Although tremendously influential, most of these Syriac translations are now lost, with the exception of \*Galen's *On Simple Drugs* (translated by Sergius) and the Hippocratic *Aphorisms* (translated by Ibn Ishaq).

An important route for transmitting Greek thought was undoubtedly the massive translation movement from Greek into \*Arabic that took place from the 8th to the 10th centuries. Hunayn b. Ishaq's workshop is mainly associated with the rendering of medical texts, whereas it was in the circle around the polymath Yaquub al-Kindi (d. 873) that many Aristotelian and \*Neoplatonic texts were first translated into Arabic. Some translations dating to the late 8th century also survive. These earlier translations and those produced in al-Kindi's circle often simplified and sometimes paraphrased, adding new information, but the renderings by Hunayn b. Ishaq and his workshop display greater sophistication and maturity.

Although most of the 9th-century translators belonged to Christian denominations (notably the \*Church of the East), the patrons of the Graeco-Arabic

translation movement were mostly Muslims linked to the \*Abbāsid elite (e.g. al-Kindi and Banū Mūsā). Their interest was not limited to 'useful' texts, but included some literature (e.g. the \**Alexander Romance*) and even verse (e.g. single lines in the \*metre called iambic distichs attributed to Menander). As a result, not only philosophy, \*medicine, pure and applied sciences, and \*grammar, and but also theology, jurisprudence, and \*poetry in Arabic were profoundly influenced by the Graeco-Arabic translation movement. The Arabic language itself, in the classical period and in modern times, bears witness to the enduring influence of Greek thought. PEP

**scipio** Eagle-topped sceptre, originally an attribute of \*senators; it appears on the \*coinage of \*Maurice, \*Tiberius II, and \*Phocas. RRD

Grierson, *DOC* II/1.

**Sciri** Germanic-speaking group attested around the Carpathians in c.380, when they raided the Roman Empire in alliance with some \*Huns. In 408/9, large numbers of them were then distributed as \**coloni* across \*Anatolia when the Hunnic leader Uldin was defeated. After \*Attila died in 453 the Sciri re-emerged as an independent power under Edeco, formerly one of Attila's inner circle, and they participated in the struggles for mastery in the Middle Danube, involving \*Goths, \*Gepids, and \*Suebes amongst others. The group defeated and killed the Gothic leader Valamer, but the remainder of the Pannonian Goths (led by the dynasty of the \*Amali) then killed Edeco and destroyed Scirian independence. This prompted Edeco's son \*Odoacer to leave for \*Italy where from 476 he would emerge as its first post-Roman ruler. PHe

W. Pohl, 'Die Gepiden und die *Gentes* an der mittleren Donau nach dem Zerfall des Attillareiches', in H. Wolfram and

F. Daim, eds., *Die Völker an der mittleren und unteren Donau im fünften und sechsten Jahrhundert* (Denkschr. Wien 145, 1980), 239–305.

**Scone** A \*monastery on the River Tay on the east coast of Scotland, of uncertain early medieval date, which was superseded by an Augustinian convent, founded c.1120, which went on to host several royal inaugurations at its associated 'moot-hill' in a ritual involving the so-called 'Stone of Destiny'. By the 12th century it was maintained that the last \*Pictish king had been killed at Scone, and that subsequently the beliefs and practices of the Pictish Church had been declared obsolete there by royal decree. Perhaps these details retroject something of the reform-mindedness and royal affinities of the Augustinian convent onto its forerunner house, but there is reason to suppose that the latter enjoyed close links with the Scottish royal dynasty descended from Cinaed mac Alpín. It is doubtful whether Pictish or early Scottish kings were inaugurated at Scone. JEF

S. T. Driscoll, 'The Archaeological Context of Assembly in Early Medieval Scotland: Scone and its Comparanda', in A. Pantos and S. Semple, eds., *Assembly Places and Practices in Medieval Europe* (2004), 73–94.

R. Welander, D. J. Breeze, and T. O. Clancy, eds., *The Stone of Destiny: Artefact and Icon* (Society of Antiquaries of Scotland monograph series 22, 2003).

**Scotti** By the 6th century, in the native Hiberno-Latin of Gaelic writers, an ethnonym that denoted both the inhabitants of \*Ireland and Gaelic-speaking groups in northern \*Britain. It is convenient to translate the name as 'Gael', save where the geographical and national overtones of 'Irish' or 'Scots' do not seem unhelpful. The surviving earlier instances lack sufficient geographical specificity to be certain whether *Scotti* carried the same meaning to whichever non-natives coined the name in the 3rd or 4th century from obscure origins. From the introduction of \*Latin \*literacy in Ireland, *Scotti* appears to have enjoyed a complex coexistence with alternative ethnonyms based on the more ancient Latin name *Hibernia*. \*Adomnán of \*Iona, for example, termed his native Ireland both *Scotia* and *Ebernia* (with variants) at the end of the 7th century, referring to the Gaels of northern \*Britain as *Scoti Britanniae*. Earlier, the 5th-century British missionary S. \*Patrick had apparently used *Hiberionaci* to signify Irish Christians in his writings, reserving *Scotti* for those who remained \*pagan. In the course of the early Middle Ages the Irish ultimately settled on terming themselves *Hibernenses* in Latin, whereas the Scottish Gaels settled on *Scotti*, through a process that remains doubtful. An important factor in confining *Scotti* to northern Britain could have been its tendency to appear

coupled with *Picti* (\*Picts) in particularly influential accounts of British history in the 4th and 5th centuries.

By the time of the foundation of the \*monastery of Iona (563), the West Highlands of Scotland and the adjacent islands were part of the Gaelic province of Dál Riata, part of which also lay in north Antrim in Ireland. Although for centuries the Gaels in Britain shared a Latin ethnonym with the Irish, whether (and when) the British areas of Dál Riata were colonized from Ireland, or whether (and when) their inhabitants were gaelicized (and indeed 'scotticized') by more complex processes, are difficult matters to resolve on the basis of the available evidence. Certainly among the different origin stories in circulation by the early 8th century, it was thought that the Gaels of northern Britain were Irish colonists in origin, but the historical value of these stories is doubtful. The leading families of Dál Riata being British-based by then, their espousal of Irish heritage was doubtless politically convenient. The archaeological record is undiagnostic in relation to the possible movement of settlers, and the mass-migration model envisaged by the origin stories probably vastly underestimates the complexity of the circumstances which resulted in the presence of *Scotti* on both sides of the North Channel by the 6th century. **scramasax** This term refers to a knife or to a short, single-edged sword, fancifully attributed by etymology to the \*Anglo-Saxons but in fact widely attested in the \*Frankish panoply from the 5th century onwards. EM *RGA2* s.v. Sax, XXVI (2004), 538–46 (S. Näsli, H. Westphal). D. A. Gale, 'The *Seax*', in S. C. Hawkes, ed., *Weapons and Warfare in Anglo-Saxon England* (1989), 71–83.

**screen** Divider which typically separated the sanctuary from the nave in a church ('chancel screen') in order to isolate spaces reserved for the clergy. It was typically made from panels slotted into short \*marble pillars or taller columns, supporting an architrave/epistyle, as in many churches in \*Constantinople and \*Syria. Screens also fenced in upper galleries or separated the \*bema from the nave or the nave from the aisles, especially in Eastern churches, including the 6th-century Church of S. John the Evangelist at \*Ephesus. From the

4th-century, screens were made of different materials, including wood, as in the church at \*Tyre described by \*Eusebius (*HE* X, 4, 44), marble, or \*brick, and were often decorated with carving or painting, while more expensive examples, such as the screen in the Great Church of the \*Holy Wisdom described by \*Paul the \*Silentiary, were covered in \*silver revetment. Early chancel screens were either of low height or of lattice-work, allowing the congregation to see into the sanctuary, but by the mid-5th century the screen was often of greater height, as in the church at Qirqbize on the \*Limestone Massif of northern Syria. After the 9th century, the screen developed into the taller Byzantine iconostasis on which \*icons were hung. SVL

**scribo** High-ranking officer drawn originally from the \**excubitores* or \**domestici* and employed in a variety of sensitive imperial missions, such as the arrest of popes, payment of troops, collection of recruits, diplomatic contacts, or official inquiries. The *scribon*es are first attested under \*Justinian I. JCNC

Jones, *LRE* 401, 658–9, 675.

**Scrinia, Sacra** A group of palatine departments, overseen from \*Constantine I onwards by the \*Magister Officiorum. The three main departments were the Scrinium Memoriae (see *MEMORIALES*; *MAGISTER MEMORIAE*), the Scrinium Epistularum (see *EPISTULARES*; *MAGISTER EPISTULARUM*), the Scrinium Libellorum (see *LIBELLENS*; *MAGISTER LIBELLORUM*). Less eminent was the Scrinium Dispositionum.

The three principal Scrinia were responsible for a wide range of legal and administrative tasks, including the handling of embassies and \*petitions, and the drafting of imperial replies, issuing documents of appointment (\**probatoria*e) for many officials; and handling various government reports and judicial records. The Scrinium Dispositionum was perhaps responsible for the \*court's schedule.

Staff needed excellent literacy and, more broadly, were expected to be men of literary culture. A rhetorical education was therefore essential. In addition, a legal education was useful for some duties. Recruitment was thus reliant on the provincial aristocracies (see *ARISTOCRACY*, *CIVIC*) who had access to the requisite education.

To obtain employment in these departments required an entry fee. In the 5th century (*CJust* XII, 19, 7, 2 and XII, 19, 11), a new junior entrant had to pay 250 \**solidi* either to the \*Proximus, the head of the relevant branch, if the vacancy became available due to the latter's retirement, or to the family of the deceased in a case of death in service—while a further fee of 15 or 20 *solidi* was owed to the \*Melloproximus (deputy head).

Salaries were modest and no pension accrued. But staff were permitted to collect \**sportulae* (fees), typically several *solidi* per instance, for services to outside parties, for instance in litigation (e.g. *CJust* XII, 35, 18, 2–2a). Sustained service also secured permanent exemption from membership of local \*city councils and from other compulsory public \*services and conferred the high honours enjoyed by an \**honoratus*.

Vacancies were few. The \*Emperor \*Leo I regulated numbers in 470: 62 *memoriales*; 34 *epistulares*; 34 *libellenses* (*CJust* XII, 19, 10). In the East, provision had been made in 396 for the option to retire after twenty years with the rank of \**consularis* (*CTh* VI, 26, 7; *CTh* VI, 26, XII, 19, 3). In the West in 410, staff graded as *exceptores* or higher qualified for the senatorial rank of \**clarissimus* (*CTh* VI, 26, 16). Some staff will have left the service earlier for one reason or another, while others will have chosen to remain, progressing to yet higher grades and honours. The Proximus of each of the Sacra Scrinia qualified on retirement for the rank of \**Vicarius* from 381 in the West and 386 in the East (*CTh* VI, 26, 2; VI, 26, 4). Progression was accelerated when the term of service for a Proximus was reduced from three years to two in the East in 396 (*CTh* VI, 26, 6), and then to one year in both the West in 397 (*CTh* VI, 26, 11) and the East in 416 (*CTh* VI, 26, 17 = *CJust* XII, 19, 6). Promotion was intended to be by 'regular order and merit' (*ibid.*) rather than by \*patronage or purchase. Various delinquencies, such as non-attendance or plurality of office, were prohibited. AGS

Jones, *LRE* 575–8.

C. Kelly, *Ruling the Later Roman Empire* (2004), 39–40, 66–7.

**scriniarii** Administrative staff on the financial side of the \**officium* of a \**Praefectus*, \**Vicarius*, or provincial \*governor. These positions offered prospects of internal promotion and were attractive to families whose members belonged to \*city councils (\**decurio* meaning 1).

See also *CIVIL SERVICE*, *IMPERIAL*; *SHORTHAND AND SHORTHAND WRITERS*. AGS

Jones, *LRE* 589.

Kelly, *Ruling the Later Roman Empire*, 30–1.

**scripts** See *WRITING*, *GREEK AND COPTIC*; *WRITING, LATIN*.

**scripulum** Originally a Roman measure of weight (1/24 of an \*ounce) and the basis for the earliest issue of the \*denarius. Most Late Roman denominations apparently represented multiples or fractions of the ounce or \*siliqua but \*Constantine I issued a short-lived \*gold denomination weighing one and a half scripula corresponding to c.1.7 grams (0.06 ounces). RRD RIC VII.

R. A. G. Carson, 'Rare Coins of the Late Roman Empire', *BMQ* 21/2 (1957), 44–6.

**sculpture** Both free-standing sculpture and relief sculpture continued to be produced in Late Antiquity, in \*marble and other stone, in wood and in clay. The production of \*portraiture for commemorative and honorific purposes continued, for instance in \*cities such as \*Aphrodisias, even if the recarving of older portraits and the reuse of older statues also played an important part. Unlike earlier classical free-standing sculpture which could be viewed from any angle, Late Antique free-standing statues were meant to be seen only from a certain point of view and were worked using techniques characteristic of relief carving.

Ancient sculpture had various fates. It might be incorporated as \*spolia into fresh works of \*art or architecture, as happened on the Arch of \*Constantine at \*Rome. It might be destroyed or recycled as building material or it might be buried carefully. Some statues were 'Christianized' by having \*crosses engraved on them, others were damaged and destroyed completely, in order to overcome the \*demons which might be associated with them. Numerous masterpieces were imported by \*Constantine I as works of art to decorate the public areas of \*Constantinople, 'stripping almost every city bare' (\*Jerome, *Chron.* 232g Helm). Sculpture also decorated \*bathhouses and the houses of important people, such as \*Lausus, the \*Primicerius Sacri Cubiculi. Here older and new sculptures were used side by side in the same context.

Characteristic of Late Antiquity was the production of \*sarcophagi with Christian images. Rome was the most important centre. Such production started in the late 3rd century, and the number of Christian examples came to exceed the number of pagan examples under Constantine I. Production ceased probably in the early 5th century. Sarcophagi and church furnishings were also shipped in a part-finished condition from the quarries on the island of \*Proconnesus in the Sea of \*Marmara, as is apparent from the Church Wreck at \*Marzamemi. From the end of the 3rd century onwards, the demand for \*marble became greater than the \*quarries could satisfy; this led to older material being reused. Specific techniques were developed to put together single slabs in order to form sarcophagi; in free-standing sculpture, marble pieces were patched.

Important collections of sarcophagi survive at \*Arles and \*Ravenna. Also typical of Late Antiquity was the production of elaborately decorated \*silver and \*ivory.

**sculpture, architectural** Sculpture intended to decorate, emphasize, or accentuate inner spaces or outer façades of buildings survives from the Later Roman Empire in \*marble and other stone, and sometimes in \*stucco (\*Baptistry of the Orthodox, \*Ravenna). It can best be studied in Christian religious buildings which emerged in large numbers from the early 4th century.

The often plain exterior of churches contrasted with lavish interior designs. The importance of two-dimensional media (\*mosaic, painting, \*opus sectile) expanded; sculpture was concentrated on columns (\*capitals, shafts, bases), archivolt, or architraves, and on \*liturgical furniture (parapet slabs, \*ambos, \*altars).

Column capitals are the key witness for the dissolution of the tangible 'naturalism' of Antiquity into an abstract Late Antique style. In the 4th and 5th centuries, the Corinthian capital and other motifs from the Graeco-Roman tradition prevail; however, the execution is often stylized, the relief flat, the elements of the acanthus reduced. New forms developed in the 5th century, like the fine-toothed acanthus, the 'basket capital' with convex curves, or the 'folded capital' ('Faltkapitell'). In the 5th century, sculptors included a tapering block between capital and arch (impost) into their decorative systems. Impost and capital fused into the 'impost capital'; this conspicuous new form of Late Antique architectural sculpture prevailed in the

6th century (e.g. at \*S. Polyeuctus, \*Constantinople). Newly carved 6th-century architectural sculpture is striking for its innovative character, variety, abundance, and technical skill. The Christian \*Cross became a major motif; sculptors displayed skill and imagination in a huge variety of abstract \*geometrical patterns or classical \*foliage motifs; the relief is often detached from the background, covering the surface in a lacework effect.

A striking feature of the period is the contemporary use of a variety of elements from traditional architectural orders (Ionic, Corinthian, Composite), both freshly carved and reused, and of newly developed forms, often within the same building. Differences in the form and elaboration of capitals were used to differentiate parts of a building (nave, choir, upper galleries).

\*Spolia (reused architectural pieces) were already extensively used in the earliest Constantinian churches (\*Lateran Basilica, \*Rome); they remained more common in the West, particularly in Rome, than in the East. It is much debated whether, and how far, their use was a claim of the triumph of the new religion, or followed \*aesthetic, or pragmatic, and economic necessities.

Figural sculpture, which had been important in classical architecture, largely lost its importance. A frieze of lambs from the monumental entrance of the Theodosian Church of the \*Holy Wisdom in Constantinople, dedicated in 414, is a row of identical figures, with no spatial illusion. Relief panels from S. Polyeuctus showing Christ, the Virgin \*Mary, and apostles, were possibly parts of a sanctuary \*screen.

**sculpture, Egyptian** What is sometimes called Coptic sculpture comprised two- or three-dimensional honorific, cult, funerary, and/or building carvings in stone and, more rarely, wood. Production of large-scale stone sculpture in the round probably ended in the 4th century with the last imperial \*portraits—and probably also the last honorific and funerary portraits.

The hard \*purple granite called \*porphyry, especially favoured by the \*Tetrarchy and their successors, ceased to be mined by the mid-5th century, when \*quarrying of other hard stones may also have ceased in favour of imported (e.g. \*Proconnesian) \*marble, local limestone, and sandstone.

Regional workshops produced deep-relief limestone portrait stelae depicting the deceased in niches at

\*Oxyrhynchus (mod. Behnesa; c.2nd/3rd–4th cent.) and architectural \*sculpture depicting both Classical and Christian scenes at \*Heracleopolis Magna (mod. Ihnasiya; c.4th cent.). Vine-scroll and geometric pattern reliefs dominate the corpus of stone building sculpture from Oxyrhynchus (c.4th–6th cent.) and from the \*monasteries at \*Bawit and \*Saqqara (c.5th–6th cent.). Large corpora of Christian funerary stelae are known from e.g. \*Esna, Armant, \*Panopolis (mod. Akhmim), \*Saqqara, and the Fayum (\*Arsinoite Nome), although their original contexts are poorly documented. In the 1950s–1970s, forged and recut sculpture entered the art market and, subsequently, the academic literature.

**sculpture, figure** From the time of \*Constantine I onwards, civic \*portraiture and imperial \*portraiture developed in different directions, and it is not possible to identify a characteristic 'Zeitgesicht', the contemporary look which in earlier centuries arose from the way other portraits were assimilated to the imperial image. Civic \*portraiture in Late Antiquity displays an innovative and widely diverging variety of iconographic possibilities. Portraits continued to be made until the 6th century.

In the later 4th century, the production of mythological sculpture showing gods and heroes, both small and 'life size', is resumed, reaching a climax in the age of \*Theodosius I. The workmen probably came from \*Aphrodisias (mod. Turkey) with a workshop in \*Rome. Free-standing decorative sculpture was used to furnish entrance halls, \*triclina, \*baths, and \*nymphaea.

Christian themes occur only rarely; there is a group of Jonah and \*Good Shepherd statues now in \*Cleveland (Ohio) and a famous statue of Christ now in the Palazzo Massimo in Rome. \*Eusebius (*HE* VII, 18) mentions a \*bronze statue of Christ healing the Woman with an Issue of Blood at Paneas (mod. Baniyas).

This interest in figure sculpture fed an interest in the collection of antique statuary. Contemporary and ancient statues were placed side by side in the vast new palaces of Roman notables. Probably the most important collection of antique sculpture was amassed by \*Lausus, in \*Constantinople under \*Theodosius II. Ancient sculpture from all over the Empire filled public places at Constantinople such as the \*circus, the \*Senate House, and the \*Baths of Zeuxippus, while Eusebius (*VCon* III, 49) praises metal statues of the Good Shepherd and of the prophet Daniel at a fountain in the marketplace of Constantinople. \*Ecphrasis of images both public and private images survives in the \*epigrams of the *\*Greek Anthology*. **sculpture, relief** Generally, in Late Antiquity relief sculpture is more important than figure \*sculpture. The most important category of relief sculpture, \*sarcophagi, continued to be produced in \*Rome until the beginning of the 5th century. From the time of \*Constantine I, Christian themes predominated and illustrate the interest of the elites in this 'modern' form of the traditional type of sepulchre. Christian sarcophagi are the most important medium for the creation of a new, Christian iconography. They were exported to \*Italy, \*Gaul, \*Spain, and \*Africa. Local production can be found about AD 300 and again after the end of production at Rome.

In \*Constantinople, local production both in \*marble and in limestone of sarcophagi and other relief sculpture starts towards the end of the 4th century. New types of relief sculpture are invented, for instance decorated marble table tops with figural representations, both \*pagan and conventional and Christian. These are produced in the late 4th and early 5th centuries in different workshops and served various functions in grand \*houses and in churches. An innovation is the revival of the *tondo*, a form of relief going back to Hellenistic times, showing heads of gods and heroes in a circular surround, used in Late Antiquity for the decoration of

entrance halls. The apogee of this fashion is in the late 4th and early 5th centuries.

For the decoration of churches, reliefs with Christian themes were used, for example the sumptuous reliefs found at \*Carthage and the 6th-century ciborium columns now at S. Marco in Venice. More frequently, marble barriers are decorated with figural and ornamental reliefs, often arranged in a two-dimensional decoration. The \*champlevé technique, where a figural or decorative motif is isolated by chiselling away the surrounding surface and filling it with coloured materials, is technically relief, but in fact a step towards a two-dimensional decoration which continues in the Middle Ages. Th. Weigel, *Die Reliefsäulen des Hauptaltarciboriums von San Marco in Venedig* (1997).

**Scupi** Roman and Late Antique \*city on the north-west periphery of modern Skopje (FYROM). Scupi stood at an intersection of major \*roads between \*Niš and \*Thessalonica and was the capital of \*Dardania. It was probably destroyed by the \*Heruli in 269. A \*bishop is recorded under \*Constantine I. \*Theodosius I promulgated \*edicts at Scupi in 379 and 388. Scupi was attacked by the \*Huns in the mid-5th century. \*Marcellinus Comes records its complete destruction by an \*earthquake in 518, although \*Procopius (*Aed.* IV, 4) lists it as restored by \*Justinian I.

Excavated buildings include a theatre, a stone-paved \*street with brick-paved colonnaded pavements, a civil \*basilica, two Christian \*basilicas, an urban \*villa, and a \*bath complex. Most unusual is the 4th-century civil basilica, probably \*Tetrarchic in date; only partly excavated, it displays a rare circiform plan and geometric floor \*mosaics. A three-aisled Christian basilica with an atrium and three eastern \*apses, discovered in 2008, dates from the 6th century. CSS

## Scythia

**Scythia** Term used by Greek and Roman historians for a large area stretching from the Danube Delta north-east into modern Ukraine and Russia. \*Scythia Minor was by the time of the \*Verona List a province within the \*Diocesis \*Thraciae. ECD

*Barrington Atlas.*

*TIR* L 35 (1969).

**Scythia Minor** \*Province named on the \*Verona List, corresponding to the Dobruja, the region on the Danube \*frontier, enclosed by the final bends and delta of the Danube and the Black Sea, now divided between Romania and Bulgaria. Initially part of \*Moesia Inferior, \*Diocletian made it a separate province. The \**Notitia Dignitatum* (or.) places it in the \*Diocesis \*Thraciae (II, 58; XXVI, 8 and 15), gives the governor's title as \*Praeses (I, 116), records a \*Comes Commerciorum shared with \*Moesia and \*Pontus (XIII, 8) and lists considerable troops commanded by the \*Dux Scythiae (XXXIX), stationed mainly at riparian forts and towns and including Legions I Iovia and II Herculea. By the 5th century many of the troops were barbarian \**foederati* of Germanic, Turkic (\*Huns and \*Bulgars), and, perhaps, \*Slavic origins. External incursions, rebellions, and tensions between locals and foreign troops frequently troubled the region. \*Anastasius I and \*Justinian I restored \*cities and forts and granted fiscal immunity. Justinian subjected it to the administrative and military command of the \*Quaestura Exercitus. \*Asparukh's Bulgars conquered the region in 680.

The remains of several cities, forts, and settlements have been archaeologically investigated (e.g. \*Tomis, Callatis, Acrae, Tropaeum, \*Histria, Carsium, Capi-dava, \*Troesmis, \*Dinogetia, \*Noviodunum, Ibida, Zaldapa, Axiopolis, and Arubium). Most have strong fortifications mainly of Tetrarchic or Constantinian construction with later phases of repair. There are several Christian churches and necropolises. Cults of \*martyrs appeared in the 4th century (e.g. at Niculițel, near Noviodunum). \*Relic crypts were usual in churches during the 5th and 6th centuries (e.g. at Histria, Tomis, Tropaeum). ER

**Scythians (Saka)** Iranian-speaking nomads, called Saka by the Persians. They lived in the steppe areas north of the Roman and \*Persian empires, extending from \*Central Asia to Eastern Europe. The western Scythian civilization flourished between their defeat of the Cimmerians (630s BC) and the \*Sarmatian invasion of the Pontic–Caspian steppe (c.500 BC), after which the Scythians were restricted to the Lower Danube, Lower Dnieper, and \*Crimea. The Sarmatian Roxalani invasion (c.200 BC) pushed the Scythians into the Crimea Peninsula and the \*Gothic invasion of Crimea (mid-3rd cent. AD) ended Scythian political independence completely.

Eastern Scythian civilization was centred in \*Central Asia, later extending southward into Persia and \*India. The Massagetae, who defeated Cyrus the Great (530 BC, Herodotus I, 204–16), were considered Saka, as were the \*Khotanese in the \*Tarim basin. The role of the Saka in Persian history is commemorated by numerous references to them in Herodotus, Strabo, and other classical authors, where they are mentioned in conflict with the Achaemenid Persians, Macedonians, and Parthians. Mentioned as the Scythians who lived east of the Caspian Sea or beyond the \*Jaxartes, they were neighbours of the \*Sogdians and \*Bactrians. The eastern Iranian province of Sakastan (\*Sagastan, mod. Sistan) commemorates a branch of the Saka who established the Indo-Scythian kingdom (1st century BC–1st century AD), extending from eastern Iran to northern India.

The Scythians were superb horsemen and archers who lived on wagons and in cities, practised pastoral \*nomadism, agriculture, and trade, sacrificed \*horses and humans at royal funerals, and wore \*gold ornaments characterized by the artistic depictions of \*animals. They also fostered a trade network connecting the Graeco-Roman and Persian worlds.

The Scythians were the first steppe nomads to be described in classical literature (Herodotus, IV, 1–83; Strabo, XI, 2, 1; XI, 6, 2; XI, 8, 2; \*Ptolemy, VI, 13–15). Later classicizing \*Greek authors therefore frequently applied the name Scythians to later nomadic groups who had no relation whatever to the original Scythians. These included the \*Huns (\*Priscus, fr. 5

Blockley; \*Theophanes, AM 5942), the \*Goths and \*Ostrogoths (Priscus, fr. 28 Blockley; \*Procopius, *Gothic*, VIII, 5, 5–6; \*Strategicon, 53–4; Theophanes, AM 5870), the Türks (Menander Protector, fr. 10, 3 and 19, 1 Blockley; *Strategicon*, 116–18; \*Theophylact Simocatta, I, 8; IV, 10; V, 10; VII, 7), the \*Avars (Menander Protector, fr. 15, 1–3 Blockley; *Strategicon*, 116–18; Theophylact Simocatta, VII, 8), the \*Khazars (Theophanes, AM 6224), and unnamed or generic steppe nomads (\*Cosmas Indicopleustes, 74, 120–1; \*John Malalas, XVI, 16; XVIII, 26; *Strategicon*, 24, 52–3, 61, 65, 68).

In the Roman Empire, \*Scythia Minor was that part of the Severan \*province of \*Moesia Inferior corresponding to the Dobruja at the mouth of the Danube made into a separate province under the \*Tetrarchy. Several Roman military officers were of unspecified 'Scythian' origin, including \*John Scythia in the 5th century and \*Hermogenes in the 6th century. MLD *BT II*, Σκύθαι.

**Scythopolis** (biblical Beth Shean, Hellenistic Nysa-Scythopolis) Capital of \*Palaestina Secunda, and in Late Antiquity a prominent centre of the \*textile industry, with a mixed population of Christians, \*Jews, and \*Samaritans. Extensive excavations have revealed \*temples, a Roman theatre, an amphitheatre, a nymphaeum, colonnaded \*streets, shops, \*bathhouses, \*synagogues, churches, remains of the Late Antique \*city wall, and a \*monastery. Several \*inscriptions attest to continued building activity in the 6th century,

A medical student from Scythopolis was a student of \*Plotinus (*VPlot* 7). Scythopolis was chosen as a suitably out of the way place midway between \*Antioch and \*Alexandria for \*Paul 'the Chain' to hold \*treason trials in 359 (\*Ammianus, XIX, 12, 8).

S. Procopius, the first \*martyr of the Great \*Persecution recorded in \*Eusebius, *Martyrs of Palestine*, died at \*Caesarea but was a \*reader in the church of Scythopolis, a \*Greek–\*Syriac interpreter and an enthusiast for natural science. A martyr called Basil was remembered at Scythopolis in the 6th century (\*Theodosius, 2). The city was on a \*pilgrimage route to \*Jerusalem; the \*Bordeaux Pilgrim passed through in 333 and the \*Piacenza Pilgrim (7) in 570. The city was also the home of \*Cyril of Scythopolis who joined the desert monks and chronicled many of their lives (e.g. Ss. \*Euthymius and \*Saba).

Scythopolis continued to flourish after the \*Arab conquest of 636, until its destruction by an \*earthquake

in 749. The later scanty settlement reverted to the Semitic name, Beysan in \*Arabic. LDS; OPN

**S. Denis** (dép. Seine-Saint-Denis, France) \*Monastery near \*Paris, housing the \*martyrium of S. Denis. The earliest *Passion* of S. Denis (Dionysius) dates from the early 6th century and describes how a pious woman buried the \*martyr (supposedly a \*bishop of Paris, and martyr under \*Decius) in her field, 10 km (6 miles) from Paris. When the persecutions were over, she built a mausoleum over his \*tomb, replaced in due course by a fine \*basilica (*BHL* 2171). The *Life* of S. \*Genovefa, of similar date, reports how she regularly venerated the tomb of the saint, and obtained permission to build a church over it.

In the 7th century, \*Dagobert I undertook the lavish re-embellishment of the church, possibly directed by S. \*Eligius, to whom was attributed the large \*gold altar \*cross, decorated with precious \*stones, preserved at S. Denis until 1793; Dagobert and his son \*Clovis II endowed its monastic community with considerable lands and privileges, and both were buried there. The royal connections of the abbey were enhanced under the early Carolingians, and \*Pippin III was crowned there by Pope Stephen II in 754.

Archaeological investigations have revealed various structures which antedate the 12th-century reconstruction of the abbey and have been associated with the late 5th- and mid-7th-century building phases. They have also located the foundations of the church reconstructed by Abbot \*Fulrad from 768 onwards. Aristocratic burials from the early 6th century onwards, including that of \*Aregund, have also been excavated within the basilica, while other churches and monastic buildings are known to have existed within what became the *vicus* of S. Denis. PPé; STL

**Seal of Faith** (Arm. *Knik' Harwatoy*) \*Armenian *florilegium* of the 7th century defending the theological position of the Armenian Church after its rejection of the Christology of the Council of \*Chalcedon. Since the work of Tēr Mkrtč'ean (1914) ascription of its inception to the \*Catholicus Komitas (615–28) is generally accepted. Its author may come from circles around Yovhannes Mayragomets', an admirer of the Aphthartodocetist \*Julian of Halicarnassus (Cowe). Adducing Syrian, \*Greek, and Armenian authorities, *Knik' Harwatoy* presents in ten tenets a \*Miaphysite Christology. With \*Philoxenus of Mabbug it asserts that Christ possesses one nature and one hypostatis, consubstantial with the Father both in \*miracles and in human passions. Christ did not fear death or sweat blood.

The *Knik' Harwatoy* builds on two earlier works, the *Refutation* of Chalcedon by the Patriarch of \*Alexandria \*Timothy II Aelurus, and an early version of the correspondence of the Armenian Church, the \**Book of Letters* (*Girk' t'ht'oc*). It inspired later apologetic *florilegia*, e.g. Anania Sanahnets'i's *Hakačarut'iwn* (*Refutation*) on Christ's incorruptibility (11th cent.), and *Armat Hamatoy* (*The Root of Faith*), compiled by Vardan Aygekts'i (1175–1235). **seals, Roman** The use of lead seals to secure and authenticate documents became widespread in the Eastern Roman Empire during the 6th century. To attach his seal, the sender threaded a cord from the document through the channel of a small lead disk; he then pressed the heat-softened blank with a pliers-like instrument (*boulloterion*) to imprint the words or images engraved into the facing dies of the *boulloterion* onto the lead. \*Inscriptions (mainly in \*Greek, but also in \*Latin) rendered in linear form or as a \*monogram identified the sender, and often his title or office, making the seals an indispensable source for the prosopography and \*administration of the Eastern Roman Empire (cf. *PLRE* III, 1556–73). Of particular importance are the seals of the officials who supervised the imperial \*silk trade (*commercarii*). Their seals, bearing the likeness of the \*emperor, guaranteed the quality of the merchandise and the legality of the transactions conducted in this lucrative state

monopoly. Cruciform monograms invoking divine aid, and tutelary images of the \*Theotokos or saints, appear as expressions of personal piety on seals during the 6th and 7th centuries, although depiction of holy figures ceased temporarily during the \*Iconoclast controversy (726–87, 815–43). The abandonment of Latin by this time, however, and of non-cruciform monograms proved to be lasting changes. EM

**seals and sealings, Persian** Sealings were employed throughout the \*Sasanian period, both on documents and on the fastenings attached to bales of goods. Numerous clay sealings (*bullae*) have been recovered, for instance in the excavations at \*Takht-e Solayman, \*Siraf, Ak-Depe, and Mount \*Mugh.

Numerous seals also survive, made of \*glass or semi-precious or precious \*stones including \*lapis lazuli and garnets. They come both from archaeological excavations (e.g. at \*Qasr-e Abu Nasr) and from the activities of collectors. Such seal-stones bear images of people and animals, both real and mythical, depictions of ritual scenes and \*hunting, of flowers and \*altars (with and without fire), and legends and names in Middle \*Persian, including the names of important figures known from written sources such as King \*Peroz. Similar stamp-seals have been found as far afield as \*Mantai in Ceylon and \*Panjikent in \*Sogdia. A post-Sasanian Persian lapidary text, chapter 46 of the Pahlavi Ribayat accompanying the \**Dadistan-e Denig*, catalogues the different forms of good fortune enjoyed by those who wear particular stones. **sea scenes** Marine images were popular as decoration in Late Roman houses, \*villas, and \*baths. Marine scenes reflected the bounty of the sea and its creatures, as well as celebrating \*fishing and those that go down to the sea in \*ships. They also often incorporated mythological characters such as Erotes, Neptune, mythological creatures (e.g. Nereids) performing a *thiasos*, and \*personifications of Ocean and Tethys/Thetis. Originating in \*Italy in the Roman period, \*mosaics of sea scenes continued to be used in Late Antiquity to decorate grand \*houses, as in the cold room (*frigidarium*) of the 4th-century \*villa at \*Piazza Armerina which featured a mosaic of Nereids and sea monsters. They were even more popular in \*Africa, where at Althiburus a mosaic has been found uniquely illustrating \*Homer's Catalogue of Ships. Churches occasionally featured such scenes: for example, the 4th-century \*Basilica of \*Bishop Theodore at \*Aquila included a marine floor mosaic into which the story of Jonah was inserted. SVL

**Seasons** Personified and venerated as goddesses in the Roman period, the four Seasons (Gk. *Horai*, Lat. *Horae*) of the year—Winter, Spring, Summer, and Autumn—continued to be considered as crucial to agricultural success in Late Antiquity, and were symbols of the cyclical nature of the year (and of time generally) and of death and life. Appropriately, \*personifications of the Seasons frequently decorated \*sarcophagi, including the \*Seasons Sarcophagus now at Dumbarton Oaks, on which the Seasons are represented as four young men. However, the Seasons more frequently appear as bust-length portraits of women who are clad in costumes befitting their place in the year (e.g. Winter typically wears a heavy cloak) and who hold attributes alluding to agricultural or other civic events which occur during their time of year: for example, Summer is associated with the wheat harvest and holds hot weather implements such as a fan, while Autumn often holds grapes or a pruning knife of the sort seen in \*vintage scenes. From the 3rd century onwards, the busts of the Seasons were popular motifs in domestic floor \*mosaics, particularly of \*villas in \*Antioch and \*Africa. The Seasons were also important figures in larger \*cosmological scenes, including the ceiling paintings at \*Brigetio and in the winter \*baths at Gaza, described by the rhetorician \*John of Gaza (*Ekdhrasis tou kosmiku pinakos*). **Seasons Sarcophagus** Large, lidless \*sarcophagus, mid-3rd to mid-4th century, of greyish-white \*marble now at Dumbarton Oaks in Washington D.C.

Decorated only on the front, it shows a central \*Zodiac ring containing busts of the deceased couple flanked on either side by two winged male youths representing the four \*Seasons. JB

G. M. A. Hanfmann, *The Seasons Sarcophagus in Dumbarton Oaks* (DOS 2, 1951).

**Sebaste (Samaria)** \*City of \*Palaestina Prima, formerly Samaria, renamed in honour of the \*Emperor Augustus and rebuilt by Septimius Severus. By c.300 it had shrunk to a small town (\*Eusebius, *Onomasticon*, 154, 22). It was revered as the burial site of S. John the Baptist and the prophets Elisha and Obadiah; the \*Emperor \*Julian is said to have had the bodies burnt, but they were rescued by monks (\*Philostorgius, VII, 4; \*Rufinus, *HE* II, 28) and were seen by \*Paula in 404 (\*Jerome, *ep.* 108, 13, 4; cf. \*Theodosius the pilgrim, 2). It was a \*bishop's seat in Late Antiquity, and had a \*monastery. \*John Rufus, writing in 512, describes the \*lamps always burning in front of the tombs of Elisha and John the Baptist in a chapel of the church. The \*Piacenza Pilgrim (6), passing through, also noted the tomb of Elisha. Sebaste declined yet again after the \*Arab conquest, and the church had collapsed by 808. RP; OPN

J. W. Crowfoot, G. M. Crowfoot, and K. M. Kenyon, *The Objects from Samaria* (1957).

**Sebasteia** (mod. Sivas, Turkey) \*City and \*metropolitan diocese of Armenia Minor, then, from \*Theodosius I onwards, of \*Armenia Prima (Armenian P'ok'r Hayk). Sebasteia was located around an acropolis in the flood-plain of the River Halys (Arm. Aghis, mod. Kızıl Irmak). The city was named Sebasteia under Augustus. The Late Antique city lies under the large modern city, but monuments of the Seljuk period, especially the Gök Medrese and Bürüciye Medrese, contain Late Antique \*spolia.

Sebasteia was the most northerly city captured by the \*army of \*Shapur I in the Persian invasion of 260 (\**Res Gestae Divi Saporis*, 32). \*Justinian I rebuilt the city walls (\*Procopius, *Aed.* III, 4, 11) and made it capital of Armenia Secunda, but the Persians burned Sebasteia in 575/6 (\*John of \*Ephesus, *HE* VI, 8; \*Eustratius, *Life of Eutychius*, 1719). \*Heraclius used Sebasteia as a base when he hit back against \*Khosrow II in 623/4 (\*Theophanes, AM 6116). After the \*Arab invasions, Sebasteia was often threatened, and in the mid-7th century it became part of the large \*Armeniac Theme.

One of the three surviving \*sermons preached by \*Gregory of Nyssa about the \*Forty \*Martyrs of Sebasteia, Roman soldiers who allegedly suffered for their faith by exposure on the ice of a lake during an Armenia winter, describes the city vividly (*BHG* 1208 PG 46,

773–88). On another occasion Gregory was the visiting preacher for the evening and morning of the \*festival of the Forty in their \*Martyrium at Sebasteia itself (*BHG* 1206–7, PG 46, 749–72). Other alleged martyrs were honoured at Sebasteia. The Five Martyrs of Sebasteia, Eustratius and his comrades, were venerated in a shrine north of the city. The colourful pre-Metaphrastic \*Passion (*BHG* 276; PG 116, 817–30) of the \*Bishop S. Blasius has much in common with that of S. Irenarchus whose shrine was to the west of the lake where the Forty froze (G. Garitte, 'La Passion de S. Irénarque de Sébastée et la Passion de S. Biaise', *AnalBoll* 73 (1955), 18–54). The lake is no more to be seen. TMvL; OPN

**Sebeos** (d. after 661) Name conventionally given to the author of an \*Armenian history covering events from c.572 to c.655, with notices appended subsequently up to 661. Prior to the 10th century, the only attested figure named Sebeos was a \*bishop of the \*Bagratuni who was a signatory to the \*canons of the \*Council of \*Dvin held in 645. The first surviving reference to a historian called Sebeos comes from the *History* of Step'anos Asolik, writing c.1004; Asolik and later authors name this Sebeos as the author of a work called the *History of Heraclius*. The identification of the history now known as the *History of Sebēos* with the *History of Heraclius* and the identification of its author as the Bagratuni bishop were both made in 1833 by the scholar Y. Shahxat'anean, and the text was first published in 1851 by T. Mihrdatean under this identity. Neither the identification of the text nor its attribution to Sebeos the Bagratuni bishop is accepted today, although the text continues to be known as the 'History attributed to Sebeos'. T. Greenwood argues that the author was a senior cleric, probably with ties to the \*Mamikonean family, and possibly the bishop who refused communion with \*Constans II and the \*Catholicus Nerses III in an episode described within the text.

The *History* is best known as the earliest surviving substantive account of the rise of \*Islam and the \*Arab conquest. An aim of the author was to illustrate how the folly of \*Khosrow II Aparwez brought about the overthrow of the \*Sasanian \*Persian Empire, and how \*Armenia came to be subject to the \*caliphate. The author was conscious of his place in a chain of Armenian \*historiography, but rather than beginning in the late 5th century where his immediate predecessor \*Lazar Parp'ets'i left off, he began his account nearly a century later with the revolt of \*Vardan II Mamikonean in 572.

The text can be divided roughly into three sections. The first describes the transition of power from \*Khosrow I Anushirvan, and the Persian civil war that ended when his grandson Khosrow II gained the throne with the help of the Roman \*Emperor \*Maurice, inaugurating peace between the two empires. The author focuses on the careers of Armenians in the service of both empires, most notably Smbat Bagratuni. The second section describes the 'Last Great War of Antiquity' waged against the Roman Empire by Khosrow II; although the author describes the consequences of the war for Armenia, he has little to say about the activities of individual Armenians during this period. The third section begins after \*Heraclius' victory over the Persians, and here the author focuses once more on the careers of Armenian princes. Amid these accounts he gives a synopsis of the career of \*Muhammad and describes the rise of Arab power and the overthrow of the Sasanians, the alliances between the Romans and various Armenian princes, and the eventual treaty between \*Theodore

Rstuni and the future Caliph \*Mu'awiya that led to Armenia's subjugation to the Arabs and the collapse of Roman influence in the region. The *History* gives a vivid account of the fluidity of allegiances among Armenian princes throughout the period. TLA

**Sebuxt (Gk. Sebochthes; MP Sēbuxt)** (d. after 572) Ambassador of \*Khosrow I to \*Justin II. He was presumably a Christian, and was sent to appeal to Justin after Khosrow's successful campaigns against the \*Hephthalites (\*Menander Protector, fr.13, 5). He arrived in \*Constantinople in 572, asking for the gold \*tribute of 500 pounds of \*gold promised to the Sasanians in the \*Fifty Years Peace concluded in 562. However, Justin II dismissed the ambassador and sent the general Marcian to the East, thus starting a new phase of the \*Persian-Roman wars (Menander Protector, 16, 1 \*John of Epiphania, fr. 203). KR

PLRE III, Sebochthes.

Greatrex and Lieu, 139-41.

**Second Sophistic** The name given by \*Philostratus in his *Lives of the Sophists* to the intellectual ambience of the 2nd and early 3rd centuries. Philostratus' Sophists were virtuoso rhetorical performers who gave demonstrations of \*declamation, often improvised, and of epideictic oratory. They also taught \*rhetoric. Their written and oral output was characterized by Atticism, the use of the Athenian dialect of the Classical period and the strict avoidance of later vocabulary and syntax. Prominent representatives of the Second Sophistic, which Philostratus traces back to Aeschines, included Polemo, \*Aelius Aristides, \*Hermogenes, and Herodes Atticus (Dio Chrysostom is mentioned by Philostratus as one of a group of more marginal figures). Their performances in \*cities such as \*Antioch, \*Smyrna, \*Ephesus, \*Pergamum, and \*Athens drew large audiences and Philostratus vividly evokes rivalries between the leading Sophists. Usually from prominent families, these Sophists played important social and political roles within their communities, notably as ambassadors. The most eminent of Philostratus' Sophists enjoyed direct access to Roman officials and even to \*emperors.

Philostratus' account of the Second Sophistic is undeniably partial in its selection of individuals: he makes no mention of authors considered central by modern scholars such as Lucian or of \*Latin authors

such as Fronto and Apuleius whose output was very similar, although he does mention Westerners who wrote and performed in \*Greek such as Favorinus of \*Arles and Aelian. Philostratus omits other important aspects of the intellectual life of the period such as the many competitions in oratory at local \*festivals and the dual competence in rhetoric and \*philosophy shown by some individuals who practised and taught both. The impact of the Second Sophistic can also be seen in productions other than the rhetorical displays described in the *Lives*. The novels by Longus, Achilles Tatius, and \*Heliodorus are recognizably products of the Second Sophistic in their language, in their use of rhetorical techniques, and, more broadly, in their exploration of fiction.

Several of the defining characteristics of the Second Sophistic were not unique to the imperial period: declamation and the use of classical Attic orators and poets as models were characteristic of Hellenistic schools; the stylistic imitation of Attic Greek had been proposed by the Augustan critic Dionysius of Halicarnassus. However, these practices were carried out with a new intensity as evidenced by the development of declamation in particular into a competitive performance art in its own right, the rigour with which linguistic Atticism was practised, the sheer number of professional Sophists and educated individuals willing to listen to their displays and able to evaluate them. Most importantly, the period at which these Sophists flourished was one of peace and prosperity in the \*cities of the Greek East that provided the background for a redefinition of Hellenism and its relationship to Roman power. The educated culture (*paideia*) of the Sophists was a sign of social distinction within Greek cities, confirming the status of the elites but also allowing some degree of social mobility. The public display of *paideia* was also a means of fostering Hellenic cultural confidence in the face of Roman power, making use of the past for the needs of the present.

There was thus a distinct continuity between the Second Sophistic and the literary and rhetorical production of later centuries. The rhetorical output of orators such as \*Libanius, \*Himerius, \*Proaeresius, and the members of the 'School of \*Gaza' was very similar in form to that of the Sophists. \*Menander Rhetor's precepts for the production of epideictic speeches, written in the late 3rd century, drew directly on the speeches of Aelius Aristides (117-c.180 AD). Declamation remained a mainstay of \*education and continued to be a subject of study and debate, as is clear from the profusion of competing methods, including that of Hermogenes whose treatises were the subject of commentaries by \*Syrianus, among others. These similarities have led to the use of the term 'Third Sophistic' to designate the flourishing rhetorical culture

of Late Antiquity. Most importantly, Christian members of the elite received this same rhetorical and linguistic training as is clear from the writings of the \*Cappadocian Fathers, \*John Chrysostom, \*Synesius, and the orators of Gaza. Acquisition of this traditional *paideia* was a prerequisite for careers in the Church, city, and Empire and, as in the earlier period, its public display remained an art essential to the lives of notable men. Eloquent \*bishops also used their rhetorical skills to represent their cities and congregations. RW

**secretarium** Private room in a Roman \*court, often closed off by a \*curtain (*velum*), where trials could take place out of the public eye (e.g. *Passio \*Cypriani*, 1). The word later denoted a side room of a church (cf. \*diakonicon) alongside the \*apse (e.g. \*Paulinus of \*Nola, *ep.* 32, 16). EL

R. Hanslik, 'Secretarium und Tribunal in den *Acta Martyrum Scillitanorum*', in *Mélanges C. Mohrmann* (1963), 165–8.

**Secular Games (*Ludi Saeculares*)** Theatrical games in \*Rome closing an age (*saeculum*) of 100 or 110 years, held following Augustus' calculation in 17 BC, AD 88, and 204, but also for Rome's eighth, ninth, and tenth centenaries in AD 48, 148, and 248. Traditionalists lamented their absence in 313 (\*Zosimus, II, 7, 2) and 348 (Aurelius \*Victor, *De Caesaribus*, 28, 2). GAJK  
Zosimus II, 1–7, with the comm. ad loc. of F. Paschoud (2000).

**Secundus of Non** (d. 612) Abbot who composed a now (fundamentally) lost *Historiola*, which \*Paul the Deacon subsequently used for his *History of the Lombards* (esp. III, 29). Paul records that Secundus baptized the son of the Lombard King \*Agilulf and \*Theudelinda in 603. Secundus also probably wrote to \*Gregory I concerning the protracted \*Three Chapters Controversy. CTH

PCBE II/2, Secundus 3.

Chazelle and Cubitt, *Crisis of the Oikoumene*.

**security** Locks ensured security for unguarded valuables. Specialist lock makers (Lat. *claustrarius*) in the Roman Empire made fixed locks and padlocks which were in common use in Late Antiquity (\**Digest*, XXIV, 9, 1). Examples in \*bronze and \*iron have been found at \*Delos, and \*Corinth (Davidson, 139) and keys and lock plates are common finds, for instance at \*Anamur (Russell, 136).

Pin-tumbler locks, one of the oldest technologies, continued in use: a bolt moving on the horizontal was blocked by vertical pins held in place with a spring which could be lifted by a key whose tines matched the pins. Warded locks used obstructions (wards) to prevent movement of the bolt unless one used the proper key, whose cuttings matched the wards and allowed the key to move freely within the lock, thereby striking and moving the bolt directly or via a lever and spring mechanism. Spring and lever padlocks were made of metal, usually \*bronze, and consist of a body, shackle, and locking device. The shackle is usually a U-shaped metal piece that allows the lock to be affixed to a hasp. Roman spring padlocks are double chambered, the locking mechanism being a spring residing in the upper chamber with a narrow opening at its base. An angled key, inserted through the plate of the lock and through the base opening, accessed the spring and allowed the lock to be opened. Fine steel examples are known from the \*Persian Empire in the \*Sasanian era (Tanavoli, 52). MD

**Sedulius poeta** (fl. 425/450) Sedulius is the author of a biblical \*epic on the life of Christ, the *Carmen Paschale*, a later prose version of the same work, *Opus Paschale*, and a pair of influential \*hymns, *Cantemus, Socii, Domino*, in epanaleptic elegiac couplets, and *A Solis Ortus Cardine*, an abecedarius in iambic dimeters. The *Carmen Paschale* was the most widely read of the Late Antique biblical \*epics, but despite its success little is known of the poet's biography. He was probably Italian, perhaps a \*priest. The poem is in five books: Book 1 is introductory in nature, with an extensive section of Old Testament \*miracles; the rest of the poem traces Christ's life, from birth to ascension, with an emphasis on the miraculous and the theme of salvation. Sedulius shows himself theologically and exegetically aware. He is careful in his formulation of doctrinally difficult passages and exploits the multiple interpretative levels of the biblical texts. In poetic idiom his main debt is to \*Vergil, but the Christian poets \*Juvenius and \*Prudentius also exerted an influence. Somewhat like Lucan, Sedulius often voices strong emotional reaction to the events he is narrating. In Sedulius' hands the biblical epic becomes a work of edification, instruction, and meditation. **Sefer ha-Razim** (*Book of Secrets/Mysteries*) \*Jewish \*magical text of the 2nd–3rd century AD which claims to have been revealed to Noah by the Angel Raziel and transmitted to Solomon. It contains seven sections, each describing one celestial firmament and listing names of its \*angelic overseers. While its \*cosmology resembles Jewish \*apocalypses of Enoch and the \*Talmud, the text's substance is an array of magic spells with close affinities to Aramaic \*incantation bowls and \*Greek magical \*papyri. Different angels are associated with different spells and cures: *Sefer ha-Razim* reveals the magical practices used in summoning their assistance. Associating affliction and relief with \*demons and angels was widespread in Late Antiquity, and the figure of Solomon was central in this literature (Duling). *Sefer ha-Razim* reveals crossovers between Jewish, Egyptian, Babylonian, and Greek cultures through magic. No complete manuscript survives; the oldest fragments were found in \*Egypt, though this does not imply solely Egyptian origin. It spread widely: Hebrew and \*Arabic fragments have been found in the Geniza documents and quotations appear in medieval European magical texts. The first modern reconstruction was edited by M. Margoliouth, while the most recent edition is by B. Rebiger and P. Schäfer. PAW

**segmenta** Term conventionally (but not necessarily correctly) applied to the decorative roundels and square panels incorporated into Roman and Persian \*dress and soft furnishings. Rare in earlier Roman times (Ovid, *Ars Amatoria*, 3, 169; Juvenal, 2, 124), they became standard in Late Antiquity under the influence of Persian fashion. *Segmenta* were integral to the \*textiles they embellished, being tapestry-woven (*ars plumaria*) on the loom, free-hand, from coloured wool yarns (often dyed with true \*murex or an imitation vegetable \*purple \*dyestuff) and occasionally spirally spun \*gold thread. Detail was sometimes supplied by extra flax wrapping threads which floated over the weft ('flying needle'). *Segmenta* appear on the shoulders and at knee level on tunics, and in the corners of cloaks, bedspreads, and cushions. They are complementary to the linear tapestry-woven \*clavi of tunics. Designs, transmitted by cartoons on \*papyrus, encompass geometric motifs, stock devices, and classical mythological (later biblical) figures. The broadly accepted dating scheme, covering developments over a span of at least eight centuries, has been based on iconography. It is now being reassessed in the light of radiocarbon dating, with more consideration being given to the possibility that workshop traditions may be contemporary but different. JPW

**Seleucia ad Belum** Hellenistic \*city, listed by \*Pliny the Elder as in \*Syria Coele. Its exact location is unknown; it is associated with Jisr al-Shugur, an important bridgehead across the Orontes River east of \*Antioch. A \*bishop is attested in 363 (\*Socrates, III, 25) and Seleukobolos is listed in \*Syria Secunda by \*Hierocles (712, 9). \*Theophanes, probably following \*Theophilus of \*Edessa, records that in 663/5 'Abd al-Rahman son of \*Khalid b. al-Walid settled 5,000 of his \*Slav allies at Seleukobolos, near \*Apamea.

Cohen, *Hellenistic Settlements*, 135–6.

**Seleucia ad Calycadnum** (mod. Silifke, Turkey) \*City near the south coast of \*Anatolia founded by Seleucus I in the 3rd century BC and from the \*Tetrarchy onwards \*metropolis of the \*province of \*Isauria. The Calycadnus River valley, cutting through the western Taurus, links the Anatolian plateau to the sea, making the site strategically valuable.

## Seleucia ad Tigrim

The \*bishop attended the \*Council of Nicaea, and a church \*council was held at Seleucia in 359. From the 4th century, pilgrims, including \*Egeria (23, 1–6), frequented the \*martyrium of S. \*Thecla nearby at Meriamlik, also mentioned by \*Gregory of Nazianzus. The *Life and Miracles of S. Thecla* (BHG 1718, CPG 6675) provides considerable information about the supplanting of \*pagan \*temples at Seleucia. During the \*Persian invasion of the early 7th century, \*Heraclius established a mint here (615–18). SGB

**Seleucia ad Tigrim** The Parthian city of Seleucia on the right bank of the Tigris opposite \*Ctesiphon was a ruin in \*Sasanian times, but its name was often used alone or as Seleucia-Ctesiphon to refer both to the Sasanian royal residence at Ctesiphon and to the conurbation called in \*Syriac \*Mahoze and later in \*Arabic al-\*Mada'in. See also \*KOKHE; AL-MADA'IN. OPN

**Seleucia-Ctesiphon, Councils of** See COUNCILS OF THE CHURCH, PERSIAN EMPIRE.

**Seleucia-Ctesiphon, See of** See CATHOLICUS.

**Seleucia Pieria** (nr. mod. Samandağ, Turkey) Fortified port of \*Antioch on the Orontes, one of the Tetrapolis founded by Seleucus Nicator, made a *colonia* under the Severans, and a *metropolis* under Alexander Severus. Its artificial \*harbour was the base for the Roman Classis Syriaca. S. Paul sailed from Seleucia (Acts 13: 4). Vespasian and \*Constantius II both conducted harbour works. A bishopric by 359, in the 5th/6th century a \*tetraconch church was built with biblical reliefs and animal \*mosaics. The city was damaged by the Antioch \*earthquake in 526 (but not in 528). \*Khosrow I sacrificed and symbolically bathed in the sea here in 540 after sacking Antioch (\*Procopius, *Persian*, II, 11, 1). The \*Umayyad \*caliph al-\*Walid I built a fortress, but the port moved to nearby al-Mina (later S. Symeon). \*Michael the Elder records that it remained a bishopric of the \*Syriac Orthodox Church until the 9th century. ACFC

**semantron** A suspended wooden or metal sounding board struck rhythmically with a wooden or iron hammer to call monks to the \*liturgical offices. Wooden boards were called 'xylon', and those of iron 'sideroun'. Byzantine *typica* suggest a 4th-century origin, but they are clearly attested only from the 6th century (e.g. \*Thomas of \*Marga I, 10 on 594/5). \*Monasteries might possess a large and small semantron used for different services or seasons. Literary sources connect the sound to the sonorous tones of liturgical \*chant and with power to ward off \*demons. \*Bells replaced them in Western monasteries from the 7th century. JJD  
*DACL* 3/2 (1914) s.v. cloche, clochette XVI, cols. 1970–7 (Leclercq).

**semissis** Roman \*gold denomination worth half a \*solidus, weighing c.2.25 g (0.08 ounces). Issued from the 330s until the reign of \*Leo III, the *semissis* also became the prototype for various barbarian \*coinages (especially \*Visigothic) in the medieval West. RRD

**Senate of Constantinople** \*Constantine I formed a 'senate of the second rank' for his new \*city (\**Origo Constantini Imperatoris*, 6, 30) and, says \*Sozomen, assigned it the same honours and the same \*festivals that were traditional in \*Rome (II, 3, 6). It was, however, \*Constantius II who provided \*Constantinople with a lasting system of local government. An official called the \*Proconsul of Constantinople is first attested in 342 and on 11 December 359 Constantius appointed the first \*Praefectus Urbi for the city, an office conceived of as parallel to the \*Praefectus Urbi at Rome (\*Socrates, II, 41; Sozomen, IV, 23, 3). In 361 he gave the Praefectus the right to hear appeals from neighbouring \*provinces (*CTh* I, 6, 1).

Constantius also put the \*Senate of Constantinople on a formal footing. Most of the surviving evidence dates from the latter part of his reign. In 340 he ordered the establishment of three offices of \*praetor whose holders were to give games (*CTh* VI, 4, 5–6) and hear legal cases (*CTh* VI, 4, addressed to the Senate in 359) and be elected by the Senate (*CTh* VI, 4, 15 of 359). In an \*edict of 361 (*CTh* VI, 4, 12–132) he indicated that membership of the Senate should comprise \*consuls and prefects, \*proconsuls, \*Themistius the \*Philosopher (specifically named) and all praetors (VI, 4, 12, cf. VI, 4, 13–16). He had previously expressed the hope that at least 50 senators would join the Senate of Constantinople (*CTh* VI, 4, 9 of 356) and indeed ordered that senators resident in the \*Balkan provinces who had been shirking their responsibilities at Rome should be obliged to join it (*CTh* VI, 4, 11). Even so, according to Themistius the body numbered no more than 300 (*Oration* 34, 13).

Unlike a traditional \*city council, the Senate of Constantinople was not composed simply of local landowners who met a certain property qualification, nor was it composed of the senatorial \*aristocracy, men from old landed families, like the \*Senate of Rome. Especially after the imperial \*court settled permanently at Constantinople in the reign of \*Arcadius, it was composed of the imperial \*aristocracy, those who held, or as \**honorati* had held, official positions in the imperial \*administration. Within a century it had grown to about 2,000; numbers tending to grow because senatorial rank was hereditary and because of the prestige and financial privileges that went with it. Only a small proportion of the members would have attended sessions in the Senate House and by the mid-5th century, only those who held the higher \*title of *illustris* were permitted to attend. In practice, the Senate rarely debated important issues. It was often convened simply to give moral support for a decision already taken. When \*Anastasius wished to abolish the \**collatio lustralis* in 498, he convened the Senate in order to announce his decision, not to discuss it.

In the 5th century there had been occasions when the Constantinople Senate could have a direct political influence in deciding who the next emperor might be. In 476, after \*Zeno had been ousted from Constantinople by the \*usurper \*Basiliscus, the Senate contacted two of Basiliscus' followers to encourage them to change sides and thus helped to engineer Zeno's return to power. During the later 5th and early 6th centuries, the Senate seems to have played a part behind the scenes in ensuring a peaceful transfer of power when the previous emperor had left no designated successor. In 457, following the death of \*Marcian, the \**Chronicon Paschale* asserts that his successor \*Leo I was chosen by the \*army but \*John

Malalas says that he was crowned by the Senate. The most detailed account of the process of \*accession is given by the 6th-century writer \*Peter the Patrician who recounts that the Senate initially wanted to give the crown to \*Aspar, a powerful barbarian general. Aspar declined and proposed Leo, one of his lieutenants, who was then duly acclaimed emperor by senate, army, and people at a formal inauguration ceremony.

The Senate played a prominent part in the \*ceremonies through which the people of the city expressed their loyalty and their consent to being governed. It was customary for the Senate to assemble and to provide a welcome for the emperor when he made a ceremonial \**adventus* to Constantinople as it did for \*Julian in December 361. It formed a part of important religious \*processions such as that in May 406 when Arcadius accompanied the relics of the Prophet Samuel from \*Chalcedon to the Church of the \*Holy Wisdom. In 457, the Senate was responsible for the coronation ceremony of Marcian, the designated successor of \*Theodosius II. On the accession of Anastasius I in 491 and \*Justin I in 518 the Senate participated in the \*acclamation of the new emperors, and the poem in \*praise of \*Justin II by \*Corippus suggests that it was equally important in securing the accession of Justin II in 565. In a city whose principal activity was the business of imperial government, the Senate articulated by its ceremonial activities the loyalty of the upper echelons of the imperial workforce. When \*Procopius complained that in the time of \*Justinian I the Senate had lost its influence and that its sittings had become merely a matter of form his concern was not with the disappearance of democracy but with the emperor's increasingly authoritarian treatment of the *noblesse de robe* who worked under him. **Senate of Rome** (Lat. *senatus, ordo, curia*) In the later Empire, the Roman Senate was an advisory body, but as the \*emperor was seldom in \*Rome he relied for regular counsel on his \*Consistorium. The Roman Senate concerned itself heavily with the affairs of \*Italy and the city of Rome, though its members retained significant informal influence.

In the 3rd century the Roman Senate consisted of men from the great \*families of the senatorial \*aristocracy, in

the narrow sense, possessed of broad hereditary lands and powerful \*patronage. The \*letters of \*Symmachus from the late 4th century illustrate well the tentacular connections of an old-world nobleman. At Rome, though not at \*Constantinople, the regular business of the Senate appears to have continued to be dominated by these 'Romans of Rome' throughout Late Antiquity.

Ever since the 1st century emperors had also had the right to adlect additional individuals to the Senate. \*Constantine I adlected considerable numbers of senators from among men working in the imperial \*administration. Many of these men had a primary loyalty to the Senate of Constantinople, which subsequently under \*Constantius II became the \*Senate of \*Constantinople. To be adlected to the Senate an imperial official had to achieve a position in the \*administration which bore the \*title of *vir clarissimus*. With inflation of titles, however, by the late 5th century adlection was open only to those who held a position that gave them the higher title of *vir illustris*.

The Senate traditionally held a daybreak session beginning on the morning of the \*Kalends of January. Thereafter the Senate usually met twice a month in the Curia (senate house) in the Roman Forum, where the Statue and \*Altar of Victory were located, or elsewhere. The only Senate meeting of which a set of minutes survives, that which accepted with \*acclamation the \**Theodosian Code*, was held in a private \*house.

Just as \*city councillors took on civic duties, senators were expected to take on the expense of the civic offices of \*quaestor and \*praetor in order to qualify for entrance into the Senate. Quaestors and praetors were required to put on games and perform certain *munera*, as laid down in \*Constantius II's senatorial reform and legislative reminders in 354 (e.g. *CTh* VI, 4, 4; VII, 13). Colossal sums of money were spent on these \*entertainments. Constantius II also established that in order to conduct public business (e.g. appointing praetors), a quorum of 50 was needed at a meeting (*CTh* VI, 4, 9). \*Marcian would later excuse provincial *virī spectabiles* and *virī clarissimi* from the burden of the praetorship, effectively making a further distinction within the Senate between Romans of Rome and senators living in the \*provinces (Jones, *LRE* 529).

Service in the Senate was a way of qualifying for other significant offices in the city of Rome. The most important position filled by senators in the city of Rome was that of \*Praefectus Urbi. On occasion, senators might serve as \*Consul Ordinarius for the year. By the late 5th century the oldest living former Consul Ordinarius in the Senate was designated the Caput Senatus, a title held by men such as Festus (*PLRE* II, Festus 5).

Although a second \*Senate was created in \*Constantinople by Constantine I (\*Sozomen, II, 3), the Roman Senate generally counted antiquity, pedigree, and the

extreme wealth of its members as marks in its favour. The emperor was seldom present in the city of Rome itself during the 4th century, which reduced the Senate's immediate influence on him. The absence of the emperor also gave senators increased influence in the administration of the city and of parts of \*Italy. However, the Roman Senate was in contact with the emperor. Embassies could be sent to the imperial \*court, along with written enquiries and reports (like the *Relationes* of Symmachus, Praefectus Urbi in 384). Conversely, imperial *orationes* on legislative matters were passed down from the emperor to the Senate. The Senate used dedications of monuments as a form of communication. It also continued to serve as a legitimizing body where imperial legislation could be promulgated. This is exemplified by the meeting of the Senate on 25 December 438, which acclaimed the recently completed *Theodosian Code* sent to it by \*Theodosius II (Harries, *Law and Empire*, 64–5).

In addition to performing political functions, the Senate had long been integral to the performance of public \*pagan cult. Senators had responsibility for selecting, systematizing, and allocating funds for public cults in the city, and so exercised influence in the \*provinces, as in pagan times the rites of Rome were imitated in many provincial cities, in particular in those which had the rank of *colonia* (Salzman, 65–6). In the 4th century, senators continue to practise pagan cult within the limitations of laws made by Christian emperors, they selected \*Vestal Virgins, and were visible participants in \*festivals and games. Symmachus' famous *Third Relatio* to the Emperor \*Valentinian II, asking for the restoration to the Senate House of the \*Altar of Victory, emphasized the importance of pagan cults celebrated at Rome in the life of the Empire at large. It was because the gods were honoured in the way that had been so successful for so long that Roman armies won their battles and protected the Empire from barbarians. Christianization within the senatorial order increased in the 380s and 390s, with little evidence for any 'pagan revival' in the years 392–4 (Cameron, *Pagans*, 4, 173–205). M. Salzman considers that by 392, Christians predominated among the senatorial order (67, 118); T. D. Barnes has argued that a Christian predominance had occurred already much earlier in the 4th century.

The importance of the Senate in \*diplomacy increased in the 5th and 6th centuries. In the midst of political turmoil or upheaval, with imperial claimants following one another rapidly during the mid-5th century onwards and then the dominance of the barbarian warlords \*Odoacer and \*Theodoric the \*Ostrogoth, the Senate could be taken to represent a fount of legitimacy and a channel of communication with the Eastern Roman Empire, although \*Boethius' *Consolation of Philosophy*

attests to the moral depravity of some senators and Theodoric's unease with others.

The \*Byzantine invasion of Italy imperilled the institution and drove out many wealthy senators, but in the late 6th century, the Senate still met, under markedly increasing duress from the \*Lombards (Lançon, 53). The Senate is last mentioned in an account of the reception of the images of the usurping Emperor \*Phocas and his consort Leontia on 25 April 603, images which the Senate approved with their traditional acclamations of support (\*Gregory the Great, *Registrum*, App. 8; Humphries, 21). M. A. Wes, *Das Ende des Kaisertums im Westen des Römischen Reichs* (1967).

**senator** In 376, \*Symmachus described senators as the 'better part of the human race' (*ep.* I, 52). Up till the time of \*Constantine the Senate had been heavily composed of members of the senatorial \*aristocracy, men from great families associated with the city of \*Rome itself who had undertaken the necessary duty of holding the civic \*entertainment required of those appointed to the civic office of \*quaestor. \*Emperors since Augustus had always had the right to add to the Senate individuals they deemed worthy; the emperor issued \**codicilli* which were passed to the \*Praefectus Urbi along with testaments from other senators as to the individual's character, and a vote was finally taken. Senators bore the \*title *vir clarissimus*.

Constantine expanded the size of the Senate by adding to it those many who held office in the imperial \*administration. Admittedly many of these men had a

primary loyalty to the Senate of Constantine, which under \*Constantius II became the \*Senate of \*Constantinople. This was a different body from the \*Senate of Rome, consisting not of hereditary grandees, but generally of men who held offices of profit under the crown. When he organized it, Constantius required those holding senatorial rank who never went near Rome and resided in the \*Balkan provinces to transfer their allegiance from the older body to the new (*CTh* VI, 4, 11 of 357). Its members continued to be mandarins like \*John Lydus in the 6th century or the sort of people who appear in the pages of the late 5th-century *Life* of S. \*Daniel the Stylite. In its early years, it numbered only about 300, but inflation in titles meant that in time numerous imperial officials acquired the status *vir clarissimus*, and in the later 5th century, membership of the Senate was confined to those who held the higher title of *vir illustris*.

In the meantime, the senatorial \*aristocracy continued to dominate the city of \*Rome, exercising \*patronage, caring for their estates, and being consulted from time to time in a formal fashion. In the \*Ostrogothic period, senators like Q. Aurelius Memmius \*Symmachus, great-grandson of the 4th-century orator, and his son-in-law \*Boethius were able to mediate between the barbarian king, his Italian subjects, and the court at \*Constantinople. **Sentences of Sextus** An influential collection of maxims first mentioned by \*Origen (*Contra Celsum*, VIII, 30), who provides the *terminus ante quem* and indicates its early popularity with Christian readers. Its \*translation from \*Greek into \*Latin by \*Rufinus, c.400, disseminated it in the West, and \*Armenian and \*Syriac versions also exist. Rufinus notes an attribution to Xystus (Sextus), \*Bishop of \*Rome (martyred 258), thereby equipping the text with a Christian pedigree; but the alternative attribution to 'Sixtus the philosopher' eventually convinced \*Augustine (*Retractationes*, II, 68 [42]), and \*Jerome too noted the absence of specifically Christian features. The maxims mostly inhabit a middle ground which pagan \*philosophy (occasionally Cynic, but also \*Pythagorean in the vague contours that \*school had taken on in Late Antiquity) and Christianity might share, with a general orientation towards a philosophical religiosity stressing continence and god-fearingness. The text seems to have circulated in various versions, partly overlapping with collections ('The Pythagorean Sentences', 'The Epitome of Cleitarchus') which may or may not represent its pagan substrate. It is an important witness to the continuities and discontinuities in pagan and early Christian ethics, analogous to pseudo-Phocylides in \*Judaism.

ET R. A. Edwards and R. A. Wild (1981).

**Sepphoris** (Diocaesarea, Eirenopolis) \*City in the Central \*Galilee, 6 km (3.5 miles) north-north-west of \*Nazareth.

First mentioned in the Hasmonean era by Josephus (*Jewish Antiquities*, 13, 338), Sepphoris was the main urban centre in the Galilee, retaining that distinction until the founding of \*Tiberias (AD 19–20). With the transfer of Tiberias to Agrippa II c. AD 55–60, Sepphoris regained its primacy as the central Galilean city.

The pro-Roman policy of the city's inhabitants during the First Revolt (Josephus, *Jewish War*, 3, 30) brought peace to the city and is reflected in the legend 'Eirenopolis (City of Peace) Neronias Sepphoris' on its

coins. Numismatic evidence also attests to the continuation of this pro-Roman stance over the next century and a half. Hadrian renamed the city Diocaesarea, and its alliance with Rome was proudly proclaimed on its coins from the Severan era. The city's political and social prominence was undoubtedly a major factor in \*Rabbi Judah I's move there; his presence at the height of his career enhanced the city's reputation and status, at least among \*Jews.

Eighteen \*synagogues were associated with Sepphoris, and in 1993 a well-preserved synagogue was unearthed. The seven bands or registers of its floor \*mosaic include depictions of the Binding of Isaac (the 'Aqedah'), the \*Zodiac, Aaron, and the Tabernacle–Temple appurtenances. While this floor's motifs are not unique to this site, many of its features may be best explained by positing a significant degree of priestly influence, whether direct or indirect, as priestly interests are decidedly prominent here.

The discovery of several churches and epigraphical evidence attests to a flourishing Christian community in Late Antiquity, with some \*bishops contributing to civic causes. The pilgrim \*Theodosius (4) notes that Sepphoris was the home of Simon Magus. The \*Piacenza Pilgrim (4) passed through and venerated various secondary \*relics of the Virgin \*Mary, including the seat in which she was sitting at the time of the Annunciation.

**Septem Provinciae** \**Dioecesis* covering southern \*Gaul. In the \*Verona List (only) it is called Viennensis, and comprises the \*provinces of \*Viennensis, \*Narbonensis Prima and Secunda, Novempopuli (\*Novempopulana), Aquitanica (\*Aquitania) Prima and Secunda, and \*Alpes Maritimae. An \*inscription of 364 names it as Quinque Provinciae (CIL VI, 1729 = ILS 1254). In the \*Notitia Dignitatum Septem Provinciae is placed under the \*Praefectus Praetorio of \*Gaul (occ. III, 3) and the lists of provinces are augmented by the following: \*Lugdunensis Prima, \*Germania Prima and Secunda, \*Belgica Prima and Secunda, \*Alpes Poeninae et Graiae, \*Maxima Sequanorum, and Lugdunensis Secunda, Tertia, and Senonia (occ. III, 13–41 and XXII, 3–19). In 418 \*Honorius and \*Theodosius II ordered that the council of the *dioecesis* should meet annually in \*Arles (Ep. Arl. 8).

CD

A. Chastagnol, 'Le Diocèse d'Aquitaine au Bas-Empire', *BSNAP* (1970), 272–92.

**Septimania** Term of obscure Roman origin, first attested in \*Sidonius (ep. III, 1, 4), and subsequently

employed by non-Hispanic sources to refer to the region of south-west \*Gaul, approximating to the later Languedoc, which remained, despite occasional \*Frankish attacks, under \*Visigothic control after the Franks expanded into other Visigothic territory in the early 6th century. Hispanic sources such as \*John of Biclár or \*Julian of Toledo refer to it as Gallia (\*Narbonensis I), and assign the frontier province a distinct, rebellious identity within the Visigothic kingdom. It fell to the \*Arabs in the 720s, before being brought under Frankish control by \*Pippin III in the 750s. STL; CD

E. James, 'Septimania and its Frontier: An Archaeological Approach', in E. James, *Visigothic Spain: New Approaches* (1980), 223–41.

**Serapeum of Alexandria** Sanctuary dedicated to Serapis, consisting of a \*temple surrounded by a colonnade with a famous \*library. It dominated the acropolis, and was embellished with a monumental column dedicated to \*Diocletian in 298. This grand sanctuary, with the statue of the god, was admired by the author of the *\*Expositio Totius Mundi* (35), by Libanius (*Oratio* 30 *Pro Templis*, 44), and by \*Ammianus (XXII, 16, 12–13). It was destroyed during a conflict between pagans and Christians (led by the \*Patriarch \*Theophilus), in 391/2. Christians like \*Rufinus (*HE* XI, 22–5) and \*pagans like \*Eunapius (*Lives of the Philosophers*, 471–2) offer contrasting accounts of the event and its causes, while recognizing its symbolic importance. Soon afterwards, churches and a \*martyrium (of S. John the Baptist) occupied the area. CARM

J. Hahn, 'The Conversion of the Cult Statues: The Destruction of the Serapeum in 392 A.D. and the Transformation of Alexandria into a "Christ-Loving" City', in Hahn et al., eds., *From Temple to Church*, 335–65.

**Serapion of Thmuis** \*Bishop of Thmuis in the \*Nile Delta from before 339 to 359, when another bishop is attested there, though Serapion may have lived beyond this. \*Jerome (*Vir. Ill.* 99), who praises his learning, attributed to him a work *Against the Manichaeans*, which has survived, as well as a (lost) commentary on the \*Psalms, and several \*letters, mostly now lost. A *Euchologium* of 30 \*prayers is also attributed to him. He was a close ally of \*Athanasius of \*Alexandria, who sent him four \*letters on the nature of the Holy Spirit and a letter on the death of \*Arius. The *Life of Antony* records that S. \*Antony left his two sheepskin tunics to Serapion and Athanasius. MCh

**Serbs** A Slavicized people, part of whom presumably migrated from Lusatia (Central Europe) into Roman territory. The \*Emperor \*Constantine VII Porphyrogenitus (r. 913–59) claimed that \*Heraclius (r. 610–41) allowed some of them to settle near \*Thessalonica (*De Administrando Imperio*, ch. 32). Subsequently, they moved north-west to where \*Avars and \*Slavs had undermined Roman authority. According to Constantine Porphyrogenitus, they accepted \*baptism and Roman supremacy. He derived their name from *servi* (slaves). The reliability of Constantine's account is disputed. ABA

Curta, *Making of the Slavs*.

Fine, *Early Medieval Balkans*.

**Serdica** (mod. Sofia, Bulgaria) Capital of the \*province of \*Dacia Mediterranea where the \*Via Militaris crossed with \*roads leading to the Aegean and the Danube \*frontier. \*Constantine I at one point claimed, 'My Rome is Serdica' (*\*Anonymous post Dionem*, fr. 15, 1) and was a frequent resident. It was the site of the eponymous ecclesiastical council of 343, and possibly the episcopal see of the heretic Bonosus. Although sacked by \*Attila in 440–1 and assaulted several times, it remained in Roman hands until its fall to the \*Bulgars in 809.

Originally a small town (17.5 ha, about 43 acres) founded under Trajan and fortified under Marcus Aurelius, Serdica became a monumental \*city with a forum, council house, praetorium, orthogonal \*street plan, public \*baths, an \*aqueduct, and cemeteries. Its walls, built originally under Marcus Aurelius, were rebuilt in the late 3rd/early 4th century. At the same time, a new separately fortified quarter (Serdica II) of substantial size (c.60 ha, nearly 150 acres) was built directly north of the old city (Serdica I) in the period between \*Aurelian and Constantine. It is unclear why such a large fortification was built and if it was ever finished. It may be associated with the settlement in the city of refugees from the former province of Dacia north of the Danube (cf. \*Lactantius, *Mort.* 9, 2) or with its reorganization as a provincial or prospective imperial capital. In the late 5th or 6th century only the walls of the old city (Serdica I) were repaired and strengthened

with an additional layer of masonry and with triangular and polygonal \*towers. Serdica minted coins from c.272, sometimes sporadically. The mint was reopened and enlarged in 303/4, possibly by a temporary personnel transfer from \*Thessalonica (Hendy, *Studies*, 385), which from 309 entirely superseded it.

In the early 4th century, a group of eight \*barns (*horrea*) was built along the south-west wall of the old city (Serdica I), while a quarter of sumptuous buildings including a \*palace and \*bathhouses appeared south-east of the forum. The palace included sumptuous halls and peristyle courts with \*mosaic pavements. An Early Roman theatre outside the walled city was rebuilt as an amphitheatre in roughly the same period. A 4th-century fortified \*villa has been excavated in Orlandovtsi, and a 4th-century mausoleum with \*sarcophagi in Lozenets.

One of the three known intramural churches was a converted early 4th-century bath (S. George Rotunda) and another probably occupied a site where \*Mithraism had previously been practised. Three extramural \*basilicas are currently known, including the cathedral of the Holy Wisdom, which was built between the late 6th and 8th centuries, taking over earlier churches of the early 4th to 5th centuries. The cemeteries included Christian \*tombs and \*inscriptions. A vaulted tomb with Christian wall paintings has been found near the Church of the Holy Wisdom.

An \*inscription commemorates the building of an aqueduct and several buildings under the supervision of Archbishop Leontius, with funds sent by the \*Emperor \*Tiberius II through the Candidatus Julian.

**Serena** (c.370–408) Niece of the \*Emperor \*Theodosius I, born in \*Spain, she moved to \*Constantinople

when Theodosius adopted her in 379 (\*Claudian, *Carmina minora*, 30 (29) *Laus Serenae*, 4–5). She married \*Stilicho in 384 and gave birth to one son, Eucherius, and two daughters, Maria (d. 408) and Thermantia (d. 415), who were successively married to the Emperor \*Honorius. On a visit to \*Rome she removed a necklace from the image in the \*Temple of Magna Mater, put it on herself, and cursed a \*Vestal Virgin who objected. Following the execution of Stilicho, the \*Senate and Galla \*Placidia also found Serena guilty of complicity with \*Alaric and she was executed in 408 (\*Zosimus, V, 29, 8).

ed. J. L. Heiberg (with LT, 1896).

**Sergiopolis-Rusafa** Frontier *castellum* and town 25 km (15 miles) south of the Euphrates in the Late Roman \*province of \*Euphratensis and the assumed location of the martyrdom of S. \*Sergius. The fortress, which was part of the Late Roman Limes Arabicus, dates back to the 1st century AD; the settlement, however, only became important with the growing veneration of S. Sergius from the mid-4th century onwards. It was renamed 'Sergiopolis', and became a \*bishop's see at the beginning of the 5th century, and thereafter attracted many pilgrims ranging from local nomads to Roman and Persian dignitaries. In the early 6th century, five large churches, including four \*basilicas, were erected in Sergiopolis-Rusafa, and the place also enjoyed donations from \*Ghassanid leaders, particularly from the \*phylarch al-\*Mundhir who had an audience hall built outside the walls. Their lavish ornaments place the churches among the most important ecclesiastical buildings of the later Roman Empire. The walls of the settlement were repaired during the military build-up of \*Justinian I, and withstood the \*Persian invasion of the early 7th century. Numerous sinkholes and several \*earthquakes have caused severe damage to the buildings.

After the \*Arab conquest, the town continued to be visited by Christian and Muslim pilgrims alike. The \*Umayyad prince \*Hisham made the city one of his favourite residences and erected palaces south of the town. The Great \*Mosque of Rusafa, sharing a wall

with one of the \*basilicas, demonstrates the importance of S. Sergius to both religions. After Hisham became \*caliph in 724, the town was renamed Rusafat Hisham, and remained an important settlement until it was deserted in the 13th century. KMK

**Sergius** \*Dux of \*Tripolitania (543–4), where he provoked \*Moorish unrest. He succeeded his uncle, \*Solomon, as \*Praefectus Praetorio in \*Africa (544–5), where \*Procopius thought him a disaster (*Vandalic*, IV, 22). \*Theodora, however, thwarted efforts to punish him for misgovernment. He was later posted to \*Italy (547), and was \*patricius by 559. PNB  
PLRE III, Sergius 4.

**Sergius** \*Strategos of \*Sicily who rebelled during the \*Arab siege of \*Constantinople of 717. When news came that the siege was over, Sergius fled to the \*Lombards. His co-conspirators' heads were sent to the \*Emperor \*Leo III pickled in vinegar, but Sergius was pardoned and cooperated with his successor (\*Theophanes, AM 6210). OPN

PBE, Sergios 3.

Brubaker and Haldon, *Iconoclast: History*, 77–8.

**Sergius and Bacchus, Ss.** A pair of Christians widely venerated as \*martyrs and \*military saints, particularly in the Roman eastern \*frontier zone. A \*Sinai \*icon of c. AD 600 (now in Kiev) shows them as two fresh-faced young men.

Their *Passion*, a confection which must pre-date \*Severus of Antioch's *Cathedral Homily* 57 of 514 (BHO 1055) and a verse sermon (BHO 1054) by \*Jacob of Sarug, place S. Bacchus' execution at Barbalissus on the Euphrates and S. Sergius' execution at the strategically significant desert settlement of \*Sergiopolis-Rusafa.

The earliest evidence of a shrine at Sergiopolis is from the early 5th century. During the 6th century the place acquired elaborate churches and fortifications (\*Procopius, *Aed.* II, 9), as it became a centre for the \*Jafnid dynasty who ruled the Christian \*Ghassanid \*Arabs of the Syrian plain. \*Khosrow II twice sent

thank-offerings to S. Sergius (\*Theophylact Simocatta, V, 13–14; \*Evagrius, VI, 21).

Ss. Sergius and Bacchus were honoured far beyond Sergiopolis. \*Justinian I built a church at \*Constantinople. Mar \*Ahudemmeh, \*Miaphysite \*Bishop of \*Beth 'Arabaye (d. 559), built a replica shrine east of the frontier at \*Qasr-e Serij. There was a church at \*Ravenna (\*Agnellus, 86), a \*monastery of S. Sergius near \*Bethlehem (\*John Moschus, 182), \*relics at \*Bordeaux (\*Gregory of Tours, HF VII, 31) and \*Tours (HF X, 31, cf. *Glory of the Martyrs*, 96), and a shrine between \*Dara and \*Nisibis, at precisely the most sensitive point on the Persian frontier (*Georgian Life of S. \*Golinduch*, 20, 2).

**Sergius of Resaina** Physician and translator (d. 536) from \*Resaina-Theodosiopolis (Syr. Resh'aina) in the Roman \*province of \*Mesopotamia. He went to \*Antioch to lay accusations against Ascolius, \*Bishop of Resaina, in front of \*Ephrem of \*Amida, the Chalcedonian \*Patriarch of Antioch, but was sent by Ephrem to \*Rome to Pope \*Agapetus, whom he brought back to \*Constantinople, where both he and Agapetus died in 536 (\*Zacharias Rhetor, HE IX, 19 c and e).

Sergius studied in \*Alexandria, and was expert in \*Syriac and in \*medicine. Among his \*translations into Syriac were at least 25 treatises of \*Galen, Pseudo-Aristotle's *De Mundo*, the *Corpus Dionysiacum*, and a treatise of Alexander of Aphrodisias *On the Principles of the Universe*, in the case of the latter two with significant adaptations. While he did not, as far as is known, translate any works of Aristotle, he held him in esteem as the fount of all knowledge for physicians and \*philosophers, and intended to comment in Syriac on the entire Aristotelian curriculum of the \*School of Alexandria. His commentary on the *Categories* is extant, as are several smaller works in philosophy and a short treatise on spirituality. As the first commentator on Aristotle in Syriac and translator of Galen and \*Dionysius the Pseudo-Areopagite, he had a profound influence on the subsequent intellectual history of the Near East. **sermo humilis** Informal, low, or ordinary speech. Cicero used *humilis* to describe the lowest of three rhetorical styles both positively and negatively. The term was adopted by Latin Christians to refer positively to the plain language of the \*Bible, also described as *sermo piscatorius* (the language of fishermen), and to the unpretentious style of their own writings. This unadorned, straightforward style was patterned on everyday speech and was arguably more accessible to the mass of ordinary Christians in a preacher's audience than the kinds of elevated speech taught in \*schools of \*rhetoric. It was also a style with its own moral authority, embodying something of the humility of Christ himself. *Sermo humilis* did not, however, eclipse more high-flown rhetoric; as \*Augustine counselled (*Doctr. Chr.* 4.), levels of rhetoric were to be selected according to the subject and purpose of a work. It was sometimes a cause of embarrassment for learned Christians, whose pagan peers mocked the unpolished style of Christian scripture and writings.

**sermons** (Gk. *homilia*; Lat. *sermo*; Syr. *mēmra*) Preaching was integral to the initial spread of Christianity during Late Antiquity, not least because training in \*rhetoric was at the core of classical \*education, and listening to public speakers was a popular pleasure in

the Graeco-Roman world. \*Augustine was not the only connoisseur of public speaking who went to church simply to enjoy a famous preacher's technique and found himself moved by the message (*Conf.* VI, 13–14, 23–4). Of course, as professor of rhetoric at the imperial \*court, Augustine could listen to \*Ambrose as a fellow professional, but even those not able to perform for themselves could be affected by what they heard. It is even possible in some surviving sermons for the modern reader to be aware of the presence of the congregation, as when \*Gregory of \*Nyssa started to suggest to the people of \*Sebasteia that their \*Forty Martyrs, whose \*festival he had been asked to help them celebrate, were not their \*city's unique and peculiar property, and suddenly found himself obliged to break off his discourse because of noise in the crowd.

Very large numbers of sermons survive, of many different sorts. Some were clearly composed in advance as works of art, like the elaborate *Homily on the Pasch* of Melito, Bishop of \*Sardis, in the 2nd century or the teaching songs (\**madrāshē*) of \*Ephrem the Syrian in the 4th. But many were extemporized, as is apparent from the sermon which Augustine preached on an unexpected text after the \*lector had chanted the wrong passage from the \*Bible by mistake. Such sermons survive because \*shorthand writers took them down on writing \*tablets as they were delivered. Sermons were widely distributed, and sometimes (especially in the case of \*John Chrysostom) falsely attributed to famous preachers.

Some preachers employed the training they had received in formal \*rhetoric. The sermons of \*Basil of \*Caesarea and his brother Gregory of Nyssa, and of John Chrysostom on individual \*martyrs, make elegant use of the techniques of classical \*panegyric. \*Proclus, Patriarch of \*Constantinople between 434 and 446, adopted a highly lyrical style full of parallelism and metaphor similar to that of the Syriac Ephrem. In some Greek homilies of the 5th and 6th centuries, dramatic dialogues were introduced, pushing the boundaries between church and theatre. Some adopted more narrative methods of hagiography; the account Theodore of Trimitus in the 7th century gave of John Chrysostom is really a \*saint's life equipped with a homiletic opening and a closing doxology (*BHG* 872; ed. F. Halkin, *SubsHag* 60 (1977), 7–68).

Others self-consciously adopted \**sermo humilis*, plain speaking, which eschewed the fancy stratagems of what Augustine (who knew them all too well) called the Schools of Pride. Augustine, in fact, seems to have found the composition of his treatise on how to do Christian teaching (*De Doctrina Christiana*) a perplexing task. It was straightforward enough to commend to future preachers the equivalent of classical *inventio*. They could find things to talk about by studying the Bible, and presentation should be suited to the audience

addressed. But how to learn the art of presentation was another matter, and in the final book of his treatise Augustine fell back on the optimistic notion that learning the arts of rhetoric was otiose for those who were guided by the Spirit.

The substance of most preaching was scripture. Some preachers subsequently put their sermons together to make entire commentaries on books of the \*Bible. Impressive also is the relation built up between bishop and congregation. As Augustine sat at the centre of the \**synthronon* at \*Hippo he looked across at his people at eye level and thought 'one deep calling unto another' (Psalm 42 (41): 7). The relationship was not always a comfortable one. \*Leo the Great in 5th-century \*Rome rebuked his congregation for turning to honour the rising \*Sun before coming into church on \*Christmas Day. \*Caesarius of \*Arles was capable of locking his congregation into the church and telling them that when they came to the Last Judgement they would not be able to slip out quietly if they did not like what they heard. Sermons were dramatic, but they were drama concerned with matters which were of serious concern to those who heard them, and to those who preached. WEM; OPN

**services, compulsory public** Across the Roman Empire, each *civitas* (a city and its territory) was reliant on the time and money of individuals (see CITY COUNCILS AND COUNCILLORS) for the effective functioning of public services. In the 3rd and 4th centuries, while the imperial bureaucracy (see CIVIL SERVICE, IMPERIAL) developed substantially, the prestige attaching to many aspects of local service declined. As a result, there was an increasing element of compulsion in the allocation of tasks—and a concomitant rise of legitimate exemptions and attempts at avoidance.

The range of compulsory public services (civic liturgies, Lat. *munus*; plur. *munera*) was outlined during the reign of \*Diocletian by the jurists \*Arcadius Charisius (*De Muneribus Civilibus*) and \*Hermogenian (*Epitomes*). They can also be reconstructed from legal and documentary evidence. These services were broadly categorized into demands on people's time (*munera personalia*) and demands on their personal means (*munera patrimonalia*). The distinction was in some cases illusory. Major obligations included the maintenance of law and order (assisted by club-wielding constables), market regulation, particularly over \*weights and measures, prices, and the professional conduct of \*guilds, oversight of bakeries to ensure \*bread supply, oversight of \*water supply, including routine maintenance of such facilities as \*aqueducts, the management of public \*baths, especially the fuel-intensive and therefore costly matter of heating them, and the maintenance of public \*roads and an array of public buildings. In addition, there were public \*entertainments to be financed and administered, and potentially salaries to be provided for public doctors and professors holding civic teaching \*chairs.

By the 290s, legitimate exemptions from service to the \*city were being claimed through formal channels by claiming that service at a certain rank had been performed in the imperial administration, irrespective of whether that service was ongoing or had ended (P.Oxy. 1204). The notion of permanent exemption from *munera* for \**honorati*, as a consequence of distinguished service in the imperial \*administration, took root in the 4th century. Others who held titular grants of rank but who had not held substantive posts also sought exemption on more ambiguous grounds; while others again sought illegally to acquire \*titles of rank through \*patronage or purchase. Illegitimate avoidance schemes were vigorously combated in legislation (e.g. *CTh* XII, 1, 24; XII, 1, 27) with what appears to have been mixed success. AGS

**Servius** (b. c.380, d. before c.430; additional names—'Honoratus' and 'Maurus/Marius'—are of doubtful authenticity) A \**grammaticus* in \*Rome: his appearance in \*Macrobius' *Saturnalia* (dramatic date c.383) is one of the anachronisms to which Macrobius confesses (1.1.5). One minor work, dedicated (Keil, *Gramm. Lat.* IV, 456, 3–4) to an aristocratic pupil (very likely Caecina Decius Aginatus Albinus, \*Praefectus Urbi at Rome 414), cannot post-date the first years of the 5th century. His commentary on \*Vergil might antedate the Sack of Rome in 410 (C. Murgia, *CP* 98 (2003), 61–4). Like the interlocutors in the *Saturnalia* whose dates of death are known, he was probably dead when Macrobius wrote sometime after 430.

Besides the commentary on Vergil (below), Servius' authentic surviving works include several brief technical treatises—*On One Hundred Meters* (dedicated to Albinus), *On Final Syllables*, *On Horace's Meters* (Keil, *Gramm. Lat.* IV, 449–72), and a commentary, now extant only in abridged form, on the *Ars* of Aelius \*Donatus (Keil, *Gramm. Lat.* IV, 405–48); the unabridged commentary was cited by \*Priscian (Keil, *Gramm. Lat.* II, 8, 15) and extensively used by the grammarian Pompeius in his own commentary on Donatus (Keil, *Gramm. Lat.* V, 95–312). Other works attributed to 'Servius' or 'Ser(e)gius' in the manuscripts are not his (Keil, *Gramm. Lat.* IV, 475–584, cf. VI, 240–2, VIII, 143–58).

Servius' commentary on Vergil's three poems—the only commentary on a \*Latin author to survive intact from Antiquity—has been transmitted in two versions. The shorter ('vulgate') version is the work of the historical Servius, who drew on the variorum commentary of Aelius Donatus and other sources to produce a teaching instrument for his \*school. The longer version—'Servius Auctus' or, more commonly, 'Servius Danielis' (DServ.), after its first publisher, Pierre Daniel (1600)—began as the work of a compiler (6th or 7th cent., perhaps in \*Ireland) who supplemented his copy of Servius with lore derived from other sources,

including chiefly the same commentary of Donatus on which Servius himself had drawn (Marinone). As this compiler's work was transmitted, users or copyists felt free to add or subtract, so that any given manuscript is best conceived as revealing one phase of a work in progress.

Servius' version of the commentary is intended for the *grammaticus*' school; but despite its often elementary character and lack of interest in many questions that engage Vergil's modern readers, the commentary is invaluable testimony to the ways of Late Antique schools and to the often sensible views of an ancient teacher.

**settlement patterns** Settlement patterns in Late Antiquity varied widely. In the broadest terms, overall settlement numbers seem to have remained high in \*Britain in the 3rd and 4th centuries, particularly in the South-West and in the Midlands.

In northern \*Gaul, more than half of the rural sites around \*Trier persisted into the late 4th or early 5th century. Around \*Paris there was general stability of settlement in the 4th century and settlement abatement in the 5th. While there are regional variations which can be severe, the overall trend seems to have been toward more autochthonous forms of rural organization, a \*village society (rather than one dominated by \*villas), and a gradual decline in the density of rural occupation. In central and southern Gaul, the trend in the countryside was toward the increased prominence of the villa, the aggregation of settlement, and a reorientation toward major \*cities. After a drop in site numbers and overall occupied land area in the 2nd and early 3rd centuries, southern Gaul witnessed a similarly durable and robust pattern of settlement from the 3rd to the 6th century.

In \*Spain, as elsewhere in the Roman West, many villas were restructured and expanded in the course of the 4th century. In the Guadalquivir Valley of \*Baetica,

however, settlement patterns indicate a marked decline in the number and overall density of dwellings and farms as well as a marked drop in \*olive oil production.

In \*Italy, the regional settlement picture is complicated, but a general trend was in the decline of medium-sized and small towns. In southern Italy rural centres of agricultural production and management of *vicus* type were common along major \*roads. The *vici* or villages comprised clusters of domestic and agricultural buildings and were incorporated into administrative and ecclesiastical networks. Settlement over much of the peninsula suffered following the \*Byzantine invasion of the 6th century.

Similarly in \*Africa, \*Carthage and the cities of the Dorsal seem to have done relatively well at least until the \*Byzantine invasion of Africa. In the northern \*Balkans villa sites were generally abandoned in the 5th century, probably due to the invasions of the \*Huns.

Over much of the East, archaeological evidence suggests that rural landscapes were densely populated and well integrated within the Mediterranean \*trade nexus into the late 6th century, with significant shifts and the decline of cities in \*Anatolia and the northern Levant from the mid-7th century onwards, though regional exceptions such as \*Euchaïta and \*Amorium caution us to avoid simple generalizations of 'decline' or 'transformation'.

Further survey will illuminate patterns of settlement in more detail. There is controversy regarding the value of survey and archaeology generally in determining levels of settlement, and further debate about how settlement patterns may relate to ancient populations. While absolute numbers of sites can provide useful information in a given landscape, quantification of sites is not itself sufficient to understand and compare changing demographic and land use patterns. Such precision is rarely available from many places within the Roman and post-Roman world. MD

**Seven Sleepers of Ephesus** A legendary group of seven Christians enclosed, according to legend, in a cave near \*Ephesus during the \*persecution under \*Decius (\*emperor 249–51), only to awaken from a miraculous sleep under \*Theodosius II (sole emperor 408–50).

The earliest Greek version of the tale (PG 115, 428–48) may have been produced in Ephesus shortly after the Robber \*Council of Ephesus (449). Portions of a complex dedicated to the Seven Sleepers at Panayır Dağı outside Ephesus are dated to the mid-5th century.

The \*miracle story fits well within the context of various doctrinal controversies of the 5th century. Various early \*Syriac versions survive, including a \**memra* by \*Jacob of Sarug. The Sleepers (and their puppy Viricanus) are named (c.518–30) by the \*Latin pilgrim \*Theodosius (26). The tale survived in many places, from the \*Qur'ān (18: 7–26) to \*Anglo-Saxon England and Jacob of Voragine's *Golden Legend*. SEI

**Severinus of Noricum, S.** (d. 8 Jan. 482) Prominent \*holy man in the region of the upper Danube during the last half of the 5th century. \*Eugippius presided over the cult of S. Severinus at Castellum Lucullanum and composed the *Vita* of S. Severinus (BHL 7655) in 510/11, although it is not certain that he knew S. Severinus personally. Eugippius notes only that Severinus came to \*Noricum Ripense from the East soon after \*Attila's death (*VSeverini* 1, 1). Despite his leadership in the administrative and ecclesiastical affairs of the region, Severinus was a lay \*ascetic. He declined the position of \*Bishop of Favianis (*VSeverini*, 9, 4), instead founding \*monasteries there and at Batavis (*VSeverini* 4, 6 and 19, 1). The *Vita* ascribes to him \*miracles relating primarily to foresight, and he frequently steered communities away from disaster by organizing ritual observances. Urban communities along the \*frontier and leaders of \**foederati* recognized his importance. Severinus organized \*liturgical \*prayer, food relief, the

care of the \*poor, the defence of towns, and evacuations in advance of enemy attacks. He managed relations with local \*Rugian *foederati* and negotiated the release of captives across the frontier. He also exchanged \*letters with \*Odoacer and the \*aristocracy of \*Italy. Buried at Favianis, in 488 his \*relics were moved to a fort in northern Italy when Odoacer evacuated Noricum. Between 492 and 496, Pope \*Gelasius arranged his translation to Eugippius, a monastic community in \*Campania. MSB Eugippius, *Vita Severini* (BHL 7655–7), ed. H. Sauppe (MGH Auct. Ant. 1/2, 1877).

**Severus, Patriarch of Antioch** (d. 538) Born a \*pagan c.456 in Sozopolis of \*Pisidia, Severus studied in \*Alexandria and \*Beirut before being baptized by Christians opposed to the Christological doctrines of the \*Council of \*Chalcedon and embracing monastic life in \*Gaza (c.490). Ordained \*priest before 500, Severus was attacked by the Chalcedonian agitator Nephalius and forced to leave \*Palestine for \*Constantinople, just missing the stay of the militantly anti-Chalcedonian \*Philoxenus of Mabbug. Philoxenus had ambitions to supplant Flavian, the Chalcedonian \*Patriarch of \*Antioch. Eventually Flavian was deposed by the \*Emperor \*Anastasius I and replaced by Severus in 512.

As the new patriarch, Severus was a leader of resistance to partisans of the Council of Chalcedon. He remained in his see until his own deposition in 518 during the Chalcedonian restoration under the Emperor \*Justin I, delivering \*sermons, composing \*hymns and \*letters, and writing dogmatic works. After his deposition he spent a long period in \*exile in \*Egypt (518–38), and although forever on the run, remained active in administering and caring for the Church of Antioch.

\*Justinian I considered Severus a lynchpin in his negotiations for ecclesiastical peace, and invited Severus to Constantinople. Severus declined until 534/5, when he attended unsuccessful discussions that ended with his condemnation in 536. He was declared exiled and his works condemned to the flames. Many of them however survived, some in more or less contemporary \*Syriac translations. Severus died on 8 February 538 in Sakha (east of \*Alexandria).

We have 125 \*sermons from the time he was patriarch (a valuable source for liturgical development), nearly 300 letters from four decades, \*prayers, liturgical rites, and hymns on liturgical occasions. The sermons mostly survive in \*Syriac \*translations by \*Paul of \*Callinicum and \*Jacob of \*Edessa. There also survive remains of Severus' dogmatic disputes with the neo-Chalcedonians

Nephalius and John the Grammarian, and with the extreme advocates of One Nature Christology, Sergius the Grammarian and \*Julian of Halicarnassus. Many fragments are preserved in \*catenae.

For Severus, as in general for \*Miaphysites and those opposed to the Christology of the Council of Chalcedon, the terms *physis*, *hypostasis*, and *prosopon* were synonymous. Severus clearly states that the terms *ousia*, *physis*, *hypostasis*, and *hyparxis* do not differ. Thus when applied to the Nature of Christ, the term *physis* (nature) denotes one concrete individual, the incarnate Word. The definition of Chalcedon predicated two natures (*physeis*), divine and human, coexisting in Christ. For Severus this implied logically that Christ had two *hypostaseis* and two persons (*prosopa*). Severus preferred to describe the act of incarnation as a thorough uniting (*henosis*) of natures or a uniting of *hypostaseis*, a hypostatic union, which produced one wholly new nature, that of the God-Man. For Severus a confusion or mixture (*mixis*) of natures or *hypostaseis* is an impossibility. As there is only one *prosopon* (person) of Christ, so there is only one *hypostasis* and one nature, that of the God-Man, united, not mixed. Severus adopted Cyril's term *synthesis* and its cognates precisely so as to exclude the term *mixis*. For Severus the humanity in Christ has no independent status and Christ's one nature is that of the Word. With respect to Christ's activity Severus characterizes the union as 'a single activity of the God-human', an expression adapted from \*Dionysius the Pseudo-Areopagite that was later important in the Monoenergist and \*Monothelete controversies of the 7th century. Severus understood the union of the two natures in Christ strictly numerically, and rejected the formula 'a single double nature', a formula which had been used by some theologians prior to the Council of Chalcedon, but which was dropped because it might be misunderstood in a sense which seemed to endorse \*Nestorianism, the belief that Christ's two natures were radically separate. For Severus the union of two natures is intrinsically redemptive, in that mankind is saved through Christ, but in his theology the divine nature does seem to dominate the process, so that for him the interplay of divine and human, the *communio idiomatum*, can seem one-sided. Given his systematization of Cyril's thought to exclude ambiguities that supported the Chalcedonian position, the lasting significance of Severus as a theologian lies in his organic one-nature doctrine, a doctrine which continued to be influential after his death. **Severus b. al-Muqaffa** See HISTORY OF THE PATRIARCHS OF THE COPTIC CHURCH OF ALEXANDRIA.

**Severus of Malaga** (d. before 602) Author of an *Epistula ad Epiphanium* with Licinianus of \*Cartagena and lost treatises against \*Arianism and on virginity. Portions of a twelve-book Gospel \*epic discovered in 1967, containing the end of Book 8, all of Book 9, and the beginning of Book 10, have been identified as the work of Severus. According to a 9th-century Lorsch catalogue, Severus also wrote ten Eclogues and four books of Georgics, in combination with a twelve-book *Metrum in Evangelia*, evidently in imitation of \*Vergil. The surviving portion of the text begins with the raising of Lazarus and Christ's curse of the fig-tree (Matt. 21: 17) and breaks off

just after Christ's denunciation in \*Jerusalem of the scribes and Pharisees (Matt. 24: 1).

MJR  
ed. B. Bischoff, W. Schetter, et al., *Severi Episcopi <Malacitani (?)> in Evangelia Libri XII: Das Trierer Fragment der Bücher VIII–X* (1994).

**Severus of Minorca** (fl. early 5th cent.) \*Bishop and author of an encyclical \*letter (*Epistula Severi*) describing the \*conversion to Christianity of Minorca's \*Jews in February 418 following the arrival on the island of the \*relics of S. Stephen the first \*martyr. Fundamentally an anti-Jewish text, the work offers a vivid narrative of religious coercion leading to the alleged mass conversion of all 540 Jews on the island. It circulated with a tract (now lost) containing anti-Jewish arguments for public \*dispute. The *Epistula* preserves precise information about Minorca's Jewish community. Although long thought to be a forgery, it is clearly authentic, but tendentious, and its historicity remains problematic.

ed. (with ET) S. Bradbury, *Severus of Minorca: Letter on the Conversion of the Jews* (1996).

R. S. Kraemer, 'Jewish Women's Resistance to Christianity in the Early Fifth Century', *J ECS* 17 (2009), 635–65.

**Severus Sebokht** Noted 7th-century \*Syriac Orthodox polymath and teacher. Referred to in the sources as 'Bishop of Qenneshrin', it is unclear whether this refers to the famous \*monastery and intellectual centre of \*Qenneshre, or whether it refers to the northern Syrian city of \*Chalcis (Syr. Qenneshrin), though the former is more likely, given that Severus was the teacher of Athanasius of Balad (d. 686), who is known to have studied and learned \*Greek at the Monastery of Qenneshre.

Severus is also referred to as *mlila* (Syr. 'eloquent' but possibly also 'logician' or 'rhetor'), and was celebrated for his mathematical and philosophical knowledge. His surviving works include a treatise on the \*astrolabe, one on lunar \*eclipses, another on the phases of the moon, and another on constellations. We also possess fragments of geographical works by Severus.

'Sebokht' means 'the three have redeemed' in Middle \*Persian and Severus himself knew Pahlavi in addition to \*Greek and \*Syriac. He was responsible for the \*translation of a commentary by \*Paul the Persian on Aristotle's *On Interpretation* from Middle \*Persian into Syriac. He was also probably the translator of a logical compendium written in Middle Persian by Paul the Persian for \*Khosrow I. In his surviving \*letters, Severus takes up a number of other topics which point to his engagement with secular learning: he deals with, among other things, Aristotle's *Prior Analytics* and *On Interpretation*, displays a familiarity with most of the works of \*Ptolemy, and takes up questions of history, \*mathematics, and \*geography.

## Severus the Tetrarch

In 659, Severus, along with the Syrian Orthodox Patriarch Theodore, engaged in a \*dispute with \*Maronite theologians in the presence of the \*Caliph \*Mu'awiya. According to the *Maronite \*Chronicle*, the \*Miaphysites were defeated. Severus' earliest dated work was a treatise on syllogisms written in 638. He died c.667. JT

*NEDC* 38–9, 65, 137, 197.

Barnes, *Constantine*, 59, 66–9.

**Séviac** (dép. Gers, France) A \*villa in \*Novempopulana, near Montréal-du-Gers, with a sequence of occupation from the 2nd to 7th centuries emblematic of the rich villa culture of Late Antique \*Aquitaine. It was given a new monumental layout in the later 4th century, incorporating vast \*baths and a wealth of \*marble and \*mosaic decoration. The reception rooms were further enhanced around the mid-5th century and a \*baptistery added c.500. A church and \*cemetery subsequently developed adjacent to the site, which remained in occupation well into the 7th century, while steadily losing its monumental character. The Late Antique phases incorporated over 30 mosaic pavements, primarily with geometrical and floral patterns in vibrant colours. ACR; STL

Balmelle, *Demeures aristocratiques*, no. 38, 386–90.

**Seville** Roman Hispalis, capital of the \*province of \*Baetica. The \*city is mostly unexcavated, though the ancient \*harbour has yielded an anchor and boat of controversial date and origin. Seville was conquered in 428 by the \*Vandals, and in 441 by the \*Suebes under Rechila (king 438–48). It was autonomous during early \*Visigothic rule, the site of the revolt of \*Athanagild (king 551/5–68) against \*Agila (king 549–5), and capital of the rebel \*Hermenigild (579–84). Under \*bishops \*Leander (c.579–600) and his brother \*Isidore (c.600–636), Seville was the intellectual centre of \*Spain. Church \*councils were held here in 590 and 619. The city was taken in 712 during the \*Arab conquest and was the seat of the first Muslim governors. GDB

*New Pauly: Antiquity*, vol. 6 (2005) s.n. Hispal(is), Spalis), col. 384 (P. Barceló).

**Sevso Treasure** (buried c.450) A hoard of fourteen pieces of \*silver plate (total weight, c.69 kg, c.11 stone) and a \*copper alloy cauldron, apparently used as the hoard container. The hoard takes its name from a \*Latin \*inscription on the Hunting Plate (decorated with \*hunting scenes and an outdoor banquet scene) that translates as: 'May these small vessels, O Sevso, yours for many ages be, fit to serve your descendants worthily.' Other items are the Meleager Plate, with \*Meleager, Atalanta, and the hunters of the Calydonian Boar on the central medallion, and other Greek heroes, including Paris, Perseus, and Hippolytus, on the flat rim; the Achilles Plate, bearing scenes from the hero's life; a platter with geometric, niello-inlaid central medallion; an \*amphora with panther handles, and a ewer, both with \*Dionysiac relief decoration; a ewer with hexagonal panels decorated with people, animals, and geometric motifs; a ewer and a pair of situlas ('buckets'), decorated with scenes from the life of Hippolytus; a pair of ewers with geometric motifs, for use with a fluted basin; and a casket with domed lid with repoussé relief of toilet scenes. With regard to function, a number of vessels (the platters, amphora, and ewers) were probably used to serve food and \*wine during banquets; other vessels, such as the geometric ewers, basin, and casket, for ablutions and beautification.

The treasure's provenance is officially unknown, with claims to ownership, submitted by Croatia and Hungary, rejected by the New York Supreme Court in 1993. Hungary has continued to make the most persistent provenance claims, citing as evidence the reference to 'Pelso' (the ancient name for Lake Balaton) on the Hunting Plate, stylistic similarities with a silver-stand

found at Polgardi, and a police investigation concerning the death of the alleged finder. The treasure is currently in the possession of the Trustee of the Marquess of Northampton 1987 settlement. Many experts regret the hoard's lack of provenance, negating the possibility of investigating the find-spot. RHob

Mango and Bennett, *Seuso Treasure*.

**SFB (Sunken-Featured Building)** (Fr. *fonds de cabane*, Germ. *Grubenhaus*) A structure recognized in archaeological excavation by an oval or oblong feature cut into the ground surface, with two, four, or six post-holes in the short sides providing evidence for a \*timber \*roof structure. SCT

Hamerow, *Early Medieval Settlements*.

Heather and Matthews, *Goths in the Fourth Century*, 52–4.

**S. Giovanni di Ruoti** A \*villa complex in \*Lucania (\*Italy). Recent excavations reveal three villas occupying the site in succession: a first villa constructed in the 1st century and abandoned in the 3rd; a second larger villa, appearing in c.350 when the site was reoccupied; and a third dating to c.400, whose owners made drastic changes to the pre-existing structures and plan. They destroyed all ramshackle structures and built on a larger scale with a coherent plan and features characteristic of Late Roman villas, e.g. an apsidal hall and \*bath complex with hot and cold rooms. Following the collapse of several buildings in c.460 (including the apsidal hall), the owners rebuilt the hall (now on an upper storey) and expanded, adding a tower and \*mosaic floors.

The third villa bears signs of its owners' wealth, probably derived from pig production. Lucania was renowned for its \*swine farms, which became especially profitable during Late Antiquity when pork rations were added to the \*annona. By c.500, the villa showed signs of deterioration (e.g. \*roofs remained unrepaired; refuse was regularly dumped into rooms), though most parts remained occupied until the second quarter of the 6th century. In c.550 the main north range, including the apsidal hall, burned down and the remaining buildings were abandoned, damage perhaps connected to the \*Byzantine Invasion. KMS

**S. Giusto in Apulia** \*Villa and ecclesiastical complex in \*Apulia, \*Italy (territory of Lucera), in the river valley of the Celone. In 1995–99 emergency excavations revealed a large and prosperous 4th/5th-century Roman villa (c.12,000 m<sup>2</sup> or 3 acres), with rooms used for agricultural storage and processing as well as more monumental spaces, including an apsidal hall and polychrome

\*mosaic floors. At various times the villa stored \*grain, produced \*wine and common-ware ceramics, and processed wool and pelts (suggested by the remains of a runnel network). In the mid-5th century, a tri-nave church ('Church A') with an \*apse and polychrome floor mosaics was built alongside the villa; a circular \*baptistry was erected nearby. In the late 5th/early 6th century, a second church of similar dimensions ('Church B') was built parallel to Church A. The remains of 67 Late Antique \*burials within Church B suggest that it was a funerary space. Scholars hypothesize that the villa of S. Giusto was imperial property and that the church was the episcopal seat of a rural \*diocese. A fire destroyed Church A in the mid-6th century, but Church B continued to be used for liturgical and burial purposes along with the villa. The entire complex was gradually abandoned in the 7th and 8th centuries. KMS

**Shahi** (c.420–1000?) Name normally given to different dynasties ruling over the Kabul Valley/Kapisa and Zabulistan in modern Afghanistan. The confusing state of sources for long prevented a clear identification of the dynasties, resulting in erroneous attributions. Based on fresh numismatic research, we know that the earliest rulers were Alkhan (Alchon) chiefs who later also moved east to Gandhara and Uddiyana/Swat. Another dynasty, known as the Nezak Shahs from their coins, took over sometime in the later 5th/early 6th century and expanded their power partly to Zabulistan. A later Alkhan/Nezak dynasty may have been vassals of the Western Türk Empire, hence the designation of the Turki Shahis. A further push from Gandhara and Kashmir put the region under the suzerainty of Hindu rulers who are known as the Hindu Shahis, but were possibly continuing the previous dynasty's power as local rulers. They only ceased to control the region after the Ghaznavid conquest of the Kabul Valley in the late 9th/early 10th century. KR

**shahr (English satrapy, MP štry)** Term denoting a province of the \*Persian Empire (\*Eranshahr) under the \*Sasanian dynasty, used as early as the \**Res Gestae Divi Saporis*.

The catalogue of provincial capitals called the *Shabrestaniha i Eransahr* lists the four regions (*kusts*) of Eranshahr, one for each point of the compass, and the \*cities (*shabrestan*) of each *shahr*. Though in its present form it dates from the \*Abbasid \*caliphate, the list in its original form was likely to have reflected conditions in the 6th century. It enumerates the principal \*cities; in the province of \*Fars, for instance, four *shabrestans* are named: \*Staxr (Istakhr), \*Darabgerd, \*Bishapur, and Gor-Ardashir-xwarrah (\*Firuzabad). Some of the places named (such as \*Edessa) lay well beyond the territory of the Sasanians.

Each *shahr* was administered by a governor (*shabrab*, English satrap), with the aid of a financial officer (*amargar*). The term *shabrdar*, correctly used of a royal noble, but in later times also applied to other senior members of the \*aristocracy, is also sometimes confused with the term *shabrab*. In militarized areas there was a \*marzban (governor of the marches). There was a parallel religious administration headed by a \*Zoroastrian priest (\**mowbed*) who was concerned with both religious and judicial matters. Each *shahr* was divided into districts (*rustag*) and these comprised individual \*villages (*deh*) headed by a \**dehqan* (also *shabrig*). OPN

**shahrdar** See ARISTOCRACY, PERSIAN; SHAHR.

**Shahrwaraz** (d. 630) \*Sasanian general of the wars with the Eastern Roman Empire under \*Khosrow II,

and briefly in 630 Shahanshah of the \*Persian Empire. The name, meaning Boar of the Empire, was both a title and a name. \*Sebeos refers to him as Khoream.

Shahrwaraz was the victor of the Battle of \*Antioch against \*Phocas (613) and conquered \*Jerusalem and \*Egypt, carrying off from the former the \*Relic of the True \*Cross. In 626, he commanded the Persian \*army at the siege of \*Constantinople, coordinated with the \*Avar forces. At the time of the counter-attack on Persia by \*Heraclius in 628, he joined a conspiracy against \*Khosrow II and was instrumental in deposing him. He briefly usurped the Sasanian throne for a few months in 630 and arranged to restore to the Romans both the True Cross and the territories which had been occupied by the Persians under Khosrow II (\**Chronicle of Khuzestan*—which sometimes gives him his patronymic name Feruhan). He was soon murdered and replaced by Queen \*Boran (\*Tabari, V, 1063). A possible son, Nicetas, was later a Christian officer of the East Roman \*army, leading to speculations about Shahrwaraz's own religious loyalties. KR

PLRE III, Shahrbaraz.

Greatrex and Lieu (where the name is spelled Shahrvaraz).

Pourshariati, *Decline and Fall of the Sasanian Empire*, 176–85.

**Shahryar** (d. 628) Son of \*Khosrow II and \*Shirin (\*Theophanes, 6118 AM) and one of the royal family murdered by his elder half-brother \*Qobad II (Kavadh II, also Shiroe, Shiruye) when he displaced Khosrow as King of Kings (\*Sebeos, 39, 127). Shahryar was the father of \*Yazdegerd III. KR; OPN

Justi, *Iranisches Namenbuch*, 174 s.n. \*Xšathradara 4.

**Shapur I (MP Shabuhr, Lat. Sapor)** Second \*Sasanian King (r. AD 239/42–270/2), son of \*Ardashir I. Shapur I is famous both for consolidating the Sasanian dynasty's rule over the early \*Persian Empire and for the aggressive prosecution of campaigns against the Roman and the \*Kushan empires, even if not all his gains were permanent. His successful campaigns he commemorated in his trilingual \*inscription (\**Res Gestae Divi Saporis*, ŠKZ) on the Ka'ba-ye Zardosht at \*Naqsh-e Rostam, in his \*rock reliefs at \*Bishapur, \*Naqsh-e Rostam, and \*Darabgerd in Iran, and symbolically at Rag-e Bibi in Afghanistan, where he hunts rhinoceroses. His western campaigns appear as catastrophic events in the rather meagre Roman sources.

Presumably his father's co-regent (from 239) and successor (from 240 until Ardashir I's death in AD 242), his first campaign against Rome led to the conquest of Hatra (240/1) and to a most favourable treaty with the Roman \*Emperor Philip the Arab after his victory at Misiche-\*Peroz-Shapur and the death of \*Gordian III. His second campaign (AD 252–7), despite a minor setback at the hands of \*Emesan forces under

the command of the priest Sampsigeramus (Uranus Antoninus), led to the conquest of \*Armenia, \*Dura Europos, and \*Antioch (possibly twice). In his third campaign, Shapur defeated the Emperor \*Valerian near \*Edessa, taking the emperor captive and deporting him and many of his soldiers back to the \*Persian Empire.

Those Roman prisoners of war were responsible for many engineering works (\*bridges, dams, etc.) in \*Khuzestan, including hydraulic works at \*Susa (Sus-hhtar) that function to this day. Finally checked by \*Odaenathus of \*Palmyra, Shapur was not able to drive the Romans from \*Mesopotamia and \*Armenia (if that was his intention) or even to re-establish the Euphrates as the \*frontier.

Calling himself 'King of Kings of Iran and Non-Iran' (MP *Šāhān šāh Ērān ud Anērān*), an expansion of his father's titulature, Shapur, in his *Res Gestae* (ŠKZ) also furnishes information on the members and the genealogy of the royal household, the members of his court and those of his father and grandfather, his religious ('Mazdaean' i.e. \*Zoroastrian) convictions, and his endeavours for his family, the nobles, and the clergy; he also gives details of his endowment of \*fires dedicated 'for the soul' (MP *pad ruwān*) of himself and certain immediate members of his family. Shapur had a reputation for being relatively tolerant to religious minorities including the \*Jews, and, despite the objections of the Zoroastrian priesthood, was even a \*patron of the prophet \*Mani, who dedicated his work the *Shabuhragān* to the king.

**Shapur II** Persian Shah AD 309–79, the longest reigning \*Sasanian King of Kings. Persian tradition states that he was crowned when he was in his mother's womb. The Roman Empire was in a dominant position following the victory of \*Galerius over \*Narseh, and the \*letters sent by \*Constantine I to the young Shapur (preserved in \*Eusebius, *VCon* IV, 8–13) are of a conciliatory character.

In 325, at the age of 16, Shapur II led an \*army and defeated the \*Arab tribes who had crossed the Persian Gulf from Bahrain (al-\*Bahrayn) and pillaged the province of \*Fars (Persis). He dealt harshly with the Arabs and was therefore given the title of 'he who pierces

shoulders', from the unusual way he roped his prisoners together. Some of the defeated Arab tribes were settled in the \*Persian Empire, in \*Kirman in the south-east and in \*Khuzestan in the south-west. A wall was built called the 'Wall of the Arabs' (MP *War ī tāzīgān*), to defend against further nomadic incursions.

Shapur II invaded the Eastern Roman Empire in AD 337, and persisted in his aggression for a quarter of a century; the reaction of the Emperor \*Constantius II, in sole charge of the East from 337 to 361, was essentially defensive. \*Nisibis was besieged repeatedly, but was not taken, and \*Singara, the scene of several battles, was not captured till 360. Shapur did capture other \*cities, including \*Amida in 359; \*Ammianus Marcellinus' eyewitness account of the siege of Amida survives (XIX, 1–11). Shapur II then turned his attention to the East, facing the \*Hunnic tribes. He was able to dominate the Kushans in the East and minted coins in such cities as \*Merv in \*Central Asia.

In AD 361 the Emperor \*Julian invaded the Sasanian Empire through the Euphrates Valley and besieged \*Ctesiphon. Julian was killed in battle and the Roman army retired up the Tigris. \*Jovian was chosen as the new emperor and made peace with Shapur II, ceding the essential border cities of Nisibis and Singara and the *Regiones* \*Transtigritanae which had become Roman in 298 after the victory of \*Galerius. It was during Shapur's reign that the last Middle \*Persian \*inscriptions were carved. Shapur II also invaded \*Armenia, and according to the Armenian historian \*Movses Khorenats'i killed its king, \*Tigran, placing his son \*Arshak II (AD 350–67/8) on the throne. As a result Armenia and \*Georgia came under Sasanian influence.

Under the leadership of the high priest \*Adurbad-i Maharspandan, \*Zoroastrianism was reorganized during Shapur II's reign. According to Middle \*Persian sources, he collected and edited the \*Avesta and went through an ordeal (having molten metal poured onto his chest) to prove the correctness of his interpretation of the sacred text. He set about suppressing the competing Zoroastrian sects. Persecutions of \*Christians in the \*Persian Empire occurred periodically under Shapur II, in part because of the new status of Christianity in the Roman Empire, and the wish of Constantine I and his sons to spread the Christian faith and act as its protector beyond the Empire's borders. A \*rock relief at \*Bishapur depicts him enthroned, as did formerly a relief at \*Naqsh-e Rostam. The relief at \*Taq-e Bostan near Kermanshah of an investiture by the god Mithras may represent Shapur's triumph over the Emperor Julian. TD

**sharakan and sharaknots'** The \*Armenian words for 'hymn' and 'hymnal', respectively. The canon of the Armenian *Sharaknots'* (Hymnal), fixed in about 1350 (see also LITURGY AND LITURGICAL BOOKS, ARMENIAN) contains 1,166 hymns, enumerated under 162 headings as canons, *suites*, and associated \*hymns. The writing of *sharakans*, which constituted the largest branch of Armenian spiritual lyric poetry, began in the 5th century and reached its pinnacle in the 7th, when Step'anos Siwnets'i introduced the form of the canon. *Sharakans* were created to teach and propagate the Christian faith; they included short and concise stories from the Bible and the lives of the saints and particular feasts of the Lord. It is impossible to study the theology and doctrines of the Armenian Orthodox Church without having recourse to the *sharakans*.

**sheep** The most important livestock in ancient agriculture, outnumbering \*goats in all but \*marginal \*landscapes. Sheep remained vital in the post-Roman world. On \*Anglo-Saxon sites in \*Britain, in the 5th and 6th centuries, sheep comprised up to 50% of all domestic animals (Crabtree). Sheep provided wool, milk, and \*meat. They were grazed away from growing crops and \*gardens, generally in marginal areas, though their dung was important for fertilizing arable after the harvest had been gathered.

Wool was the principal product for which sheep were reared. Spinning and weaving were universal pursuits in the \*household economy, but the Tetrarchic \*Prices Edict gives maximum prices for wool from the \*city of \*Laodicea ad Lycum (\*Phrygia), from Asturia and Atrebatan lands (\*Belgica), and from the Italian cities of \*Mutina (Modena), Altinum, and Tarentum (25), though it lists prices for finished clothes and \*carpets for significantly more places (19).

Sheep had a religious dimension, as both \*sacrifices and symbols. Hermes Criophorus 'ram bearer' was the object of apotropaic \*pagan cult at Tanagra of \*Boeotia (Pausanias, IX, 22, 1) and the ram bearer god was frequently represented in ancient \*sculpture. \*Christ is also shown as the \*Good Shepherd, for instance in the \*baptistry of the house church at \*Dura Europus, the \*Catacombs of \*Rome, and in an important passage from \*Augustine's *Confessions* (IX, 10, 24).

In Persian \*Mesopotamia, where flock sizes tended to be small due to the intensively farmed nature of the land, professional shepherds were employed to manage sheep from multiple owners (*Babylonian \*Talmud Baba Mes'ia*, 37.B). Consortiums owning flocks of sheep, divided into shares to spread risk and employing professional shepherds who often grazed flocks in the less-cultivated area of the \*Nile Valley, are common in Egyptian \*papyri (Keenan).

**Shenoute** (c.348–465) Third leader of the \*White \*Monastery federation near modern Sohag, \*Egypt,

and the most prolific author in \*Coptic whose works remain extant. Although Shenoute goes almost entirely unmentioned in \*Latin and \*Greek sources, he was influential in Egypt. His \*letters and \*sermons describe regular interactions with local elites and provincial officials. He also attended the First \*Council of \*Ephesus in 431 as part of \*Cyril of \*Alexandria's entourage. His works, written in sophisticated Sahidic Coptic, indicate that Shenoute had at least some \*rhetorical education and that he was proficient in \*Greek.

Shenoute's writings remain mostly unedited, and include nine volumes of *Canons*, which contain works related to the internal affairs of the federation that were compiled by Shenoute himself. They also incorporate eight volumes of *Discourses*, which consist of letters, sermons, and treatises that were compiled by others after Shenoute's death, in part for liturgical purposes. The *Canons* reveal that Shenoute became leader of the White Monastery after a conflict with his predecessor about sins committed within the community. They also contain monastic rules, letters that Shenoute wrote to address issues such as conflict about \*punishment and the expulsion of disobedient monks, and missives written in response to difficulties with nuns from the convent under Shenoute's care. *Canon* 7 chronicles developments at the White Monastery such as the construction of the monastery's monumental church and the community's care for refugees in response to alleged barbarian incursions into the surrounding countryside. The *Discourses* show that Shenoute entertained visiting public officials and that he was an ordained \*priest who preached to audiences containing visiting monks, clergy, and laypeople. They also include polemical works directed at \*Arians, \*Manichaeans, \*Nestorians, and \*Origenists.

**Shi'a** Shortened form of the \*Arabic *shi'at 'Ali* (the faction of \*'Ali) and, along with the Sunnis, one of the two major branches of \*Islam. They are often called the \*Alids or the proto-Shi'a when referring to the earliest centuries of Islam, before the broad doctrines of the group and its sects came to be solidified.

Among their most important beliefs is the primacy of place of the family of the Prophet \*Muhammad in the political and religious leadership of the Muslims, specifically the descendants of one of Muhammad's sons-in-law 'Ali b. Abi Talib and his daughter \*Fatima. Leaders of their religious communities are referred to as imams; their descent is believed to provide superior religious knowledge and upright standing compared to others.

Important to many sects is their eschatological belief in the Mahdi, who will restore the family of the Prophet and the religion to its rightful place. While many figures in early Islamic history were proclaimed as such, many of the Shi'a subscribe to the belief that the Mahdi has appeared and since entered occultation (*ghayba*)—although sects disagree over his identity before becoming hidden.

The earliest point of division between the Sunnis and the Shi'a came over succession following Muhammad's death: the Shi'a believe Muhammad designated 'Ali as

his heir and successor; the Sunnis recognized no such designation, favouring instead acclamation of \*Abu Bakr.

The Shi'a took diverse approaches to power and in matters of succession. The Zaydis opted for armed rebellion against the rule of the \*Umayyads over the quietist policies of \*Muhammad al-Baqir and \*Ja'far al-Sadiq, while the Isma'ilis diverged from the Twelvers when Ja'far's heir, Isma'il, predeceased him. **Shi'i** See SHI'A.

**Shi'ites** See SHI'A.

**ships and shipbuilding, Mediterranean** In Mediterranean shipbuilding, the classical traditions held strong in Late Antiquity. Though aware of the frame-first method used in northern Europe, hull-first construction continued throughout Late Antiquity, only gradually giving way to the frame-first method. Intermediate examples of this gradual change have been found in the \*Constantinople \*harbours excavations at Yenikapi in Istanbul.

Naval ships decreased in size. In Late Antiquity strategy relied more on speed and mobility, at last forsaking the trireme and quinquireme, and taking the *celetes*, the *\*akatos*, the *\*lembos*, and the *\*liburna* as models for the *\*dromon*, which served as the principal naval vessel. The ram, still relevant in the 4th century for the attacking manoeuvre called in \*Greek *diekplous*, was gradually abandoned in favour of a spur that could more easily destroy oars (but not the enemy ship itself) in the manoeuvre called *periplous*. This may have followed changes in hull construction that made ships less vulnerable to ramming. The *dromon* adopted the lateen sail already known to have been used by small merchant ships.

Despite the widespread move toward smaller and lighter ships for warfare, merchant vessels (*corbita*, *ponto*, *holkas*) did not, for the most part, follow suit. Ships of 100–150 tons were common, and ships of greater displacement (up to perhaps 300 tons) were not uncommon (though generally confined to the trade in

stone, like the \*Marzamemi Wreck. Bringing an \*obelisk from \*Egypt required the building of a special ship.

In Late Antiquity, the painstaking mortice-and-tenon construction of the classical period (where planks were joined at the edge with pinned loose tenons) appears to have become laxer, with the mortices being spaced wider apart. This led to more play in the joints, and thus required the use of substantial caulking. Additionally, planks now began to be edge-joined by \*iron fasteners rather than wooden tenons and pegs. Frames to stiffen the ship were attached with iron nails (as they had not before).

In the same way that the bottoms of later sailing ships were covered in thin sheets of copper, so Late Antique ships' bottoms were clad with lead. Ships might paint their sails and hulls a variety of colours, but an unpainted vessel would have been black from a coating of tar. Naval and pirate vessels might also paint their hulls and sails blue for camouflage, as \*Vegetius observes. An oar had a one-year life expectancy, a galley perhaps fifteen years at most. ALB

**ships and shipbuilding, northern world** Different types of craft were required for different functions. Ships built for the open sea differed from those made for rivers or for coastal trade, their tonnage capacity being their more important feature. As in the Mediterranean world, northern European shipbuilding traditions underwent fundamental changes during Late Antiquity. Starting as extended dugout vessels with few planks, ships in northern waters evolved into the longships of the Vikings, as the clinker tradition of shipbuilding, with its emphasis on heavy, strong, flat-bottomed craft, developed.

Shipbuilding technology differed in certain details in the North Sea and the Baltic, but a general evolution may be observed. The earliest archaeological examples from the 2nd century AD, such as the oak-built Blackfriars I Ship found in the Thames at \*London, show shell-first constructions with early signs of clinker

building where the planks were fixed to each other, overlapping along their edges. However, at that stage the planks were still sewn together. These ships possessed sturdy frames which were lashed to cleats, projecting from the strakes. In contrast to the longships of the late 7th century AD and later, these early ships did not have a true keel but only a plank keel—a single thick, broad plank projecting only slightly into the water. They were therefore long, narrow rowing boats with a shallow and open section amidships and a low raking stem- and sternpost. Around the 6th century AD, the clinker technique seems to have affected Scandinavian ship design, leading to the development of double-ended boats with tightly curved stem- and sternposts fitted almost vertically and a deeper cutwater much more like a true keel. The subsequent development of the keel provided greater longitudinal strength to the hull.

**shipwrecks** Environmental conditions and the circumstances of sinking may affect the condition of a shipwreck. The Mediterranean, shallow and warm, hastens the disintegration of ships, so that often only the ship's bottom survives, having been pressed into the seafloor and covered by mud and sand. The cooler and deeper waters of the Atlantic and the North Sea and the Black Sea's anoxic conditions delay deterioration. Shipwrecks may appear on land as well as under water due to environmental changes, including siltation and changes in sea level and watercourses.

Ancient shipwrecks provide information concerning changes in shipbuilding and trade patterns. The best-known wreck of a ship carrying marble, that off Kizilburun near Claros in western Anatolia, is of the Hellenistic period. At Marzamemi off Sicily, a 6th-century wreck containing marble columns and capitals for a Christian basilica indicates the continuation of the Classical marble trade, as do capitals and columns found in the 5th/6th-century Ekinlik wreck in the Sea of Marmara and in the Punta Scifo A wreck of Severan date and the Capo Bianco wreck of the late 3rd century, both off Crotone in southern Italy.

Among the many wrecks off the south-west coast of Turkey are the 4th- and 7th-century ships found at Yassi Ada off Bodrum (ancient Halicarnassus). These

wrecks, both carrying amphorae, display the gradual shift away from Roman mortice and tenon hull construction. The oldest wreck built without mortice and tenon joints is Tantura A from the late 5th century, found in Tantura Lagoon off the coast of Israel. Excavations since 2004 at Yenikapi, a harbour on the south coast of Constantinople, have yielded dozens of ships, including the first examples of Late Roman warships. These wrecks show several stages in the development of Late Antique hull construction. The 7th-century ship found in the Pantano Longarini marsh in south-east Sicily provides another example of an intermediate stage of hull construction.

**Shirin (Širin)** Favoured wife of Khosrow II of Persia. Shirin was a Christian from Khuzestan; she was proclaimed as Khosrow's queen in 592. The following year Khosrow and Shirin asked for the prayers of S. Sergius so that she should have a child; when she conceived, S. Sergius appeared to Khosrow three times in a dream, and the couple sent a donation of 5,000 silver dirhams, a gold paten, and a circumstantial letter to the saint's shrine at Sergiopolis-Rusafa (Evagrius, VI, 21; Theophylact Simocatta, V, 13–14). She and her doctor Gabriel, a Miaphysite Christian of the Syriac Orthodox Church from Singara, were able to influence Khosrow and for the first decade of the reign the king followed a balanced policy towards Christians in Armenia and the Persian Empire. Khosrow founded a church and a monastery for Shirin

(\**Chronicle of Siirt*, 58; \*Thomas of Marga, I, 23). She and Gabriel were even able to influence the appointment of the \*Catholicus of the \*Church of the East, to the disgust of the anti-Miaphysite author of the \**Chronicle of Khuzestan*. Shirin and her son Mardanshah, whom Khosrow had hoped would succeed him, were both killed during \*Heraclius' invasion in 628, as part of the *coup d'état* by the \*aristocracy and \*Ardashir III (Shiroe) which deposed Khosrow II (\*Theophanes, AM 6118). The love of Khosrow and Shirin became a legend in later Persian poetry. OPN PLRE III, Shirin.

**shops** Places where goods were produced and sold were integral to \*city life and existed also in smaller settlements. \*John Chrysostom commented negatively on the presence of shops and market spaces (*agorai*) in \*Antioch and the \*villages around it (*On the Acts of the Apostles* [PG 60, cols. 141–50], 18, 4). Late antique shops tended to be small, rectangular, and generally had an entrance on a main thoroughfare, as in the city of Munigua of \*Baetica, where they replaced an early imperial \*street. Shops excavated at \*Sardis and \*Corinth are among the best-documented Late Roman examples, typically measuring 5–7 m (16–23 feet) on a side. Spaces below \*houses or structures attached to buildings, as well as independent buildings, might be employed as shops, as in 4th-century additions to the Casa-Basilica in \*Mérida, at \*Caerwent in \*Britain

(Rogers, 101), or at the House of Jove and Ganymede in \*Ostia, which acquired shops when it was rebuilt in the Severan period (DeLaine, 95–6). In the East, private house owners were commonly responsible for half the maintenance and repair of the street porticoes outside their property, which might have shops on the ground floor or the upper storey (\*Julian of Ascalon, §37). The existence of shops, an obvious sign of economic activity, may be taken to indicate that Late Antique cities continued to thrive, even where other signs of classical civic life, such as monumental colonnades and broad streets, were becoming less apparent. Ornate and rather open public shops continued into the \*Umayyad era; in AD 737/8 new colonnaded shops were built at \*Scythopolis (Beth She'an of \*Palestine), complete with \*mosaic \*inscriptions and a monumental entrance. MD

J. DeLaine, 'The Insula of the Paintings at Ostia 1.4–2–4: Paradigm for a City in Flux', in T. J. Cornell and K. Lomas, eds., *Urban Society in Roman Italy* (1996), 83–111.

L. Lavan et al., *Housing*.

A. Rogers, *Late Roman Towns in Britain: Rethinking Change and Decline* (2011).

**shorthand and shorthand writers** Shorthand writers (see *NOTARII, EXCEPTORES*) used a system of writing (also known as stenography or tachygraphy) which, in the interests of speed, employed a system of abbreviated symbols to record the spoken word, generally onto wax writing \*tablets. \*Ausonius (*Ephemeris*, 7), was amazed how fast his secretary could follow his dictation. \*Augustine reassured readers that stenography was a skill permissible to Christians (*De Doctrina Christiana*, II, 26, 40).

Shorthand writers recorded official business in the imperial \*administration and made \*reports of proceedings in \*courts of law (e.g. \*Ammianus, XIV, 9, 2 *notarii*; \*Eunapius, *Lives of the Philosophers*, 489; Themis). \*John Lydus states that 1,000 were enrolled in the imperial service every year. They also worked for private individuals (cf. P.Oxy. III, 724 and XLI, 2988, contracts of apprenticeship; \*Jerome, *ep.* 118, 1: \*letter of \*consolation).

The Church also employed shorthand writers. They were recording Christian \*sermons from the 3rd century onwards (\*Eusebius, *HE* VI, 36, on \*Origen, who employed a team of seven stenographers: *HE*, VI, 23). Their presence is attested at the church \*council of \*Carthage (AD 411).

\*Eusebius (Jerome, *Chron.* 168f Helm) and \*Isidore (*Etymologiae*, I, 22) attribute the origins of \*Latin shorthand to Cicero's secretary M. Tullius Tiro; it probably derived from an earlier \*Greek system (cf. Plutarch, *Cato Minor*, 23) dating perhaps to pre-Hellenistic times (Diogenes Laertius, II, 48 and *IG* II<sup>2</sup> 2783). Isidore stated that Seneca had assembled a collection of

5,000 signs. Seventeen Carolingian manuscripts transmit a collection of over 13,000 signs, and there are also Latin shorthand copies of the Psalter, of complete sermons, and of shorter texts and glosses.

Greek shorthand manuals containing word lists and their corresponding abbreviated entries are transmitted on \*papyrus from the 2nd century AD. Shorthand word lists were probably intended both for teaching and for scholarly use (P.Oxy. XV 1808; P.Westm.Coll. Inv. 19r; P.Brit.Lib. 2561-2). Shorthand also survives on wax tablets such as BL Add. ms. 33,270. Greek shorthand continued in use in the Byzantine Empire until the 11th century.

**Shubhalmāran** (6th/7th cent.) Monk, \*bishop and theologian of the \*Church of the East. Having been appointed \*Metropolitan of \*Kirkuk shortly after 608, he took part in the theological dispute of 612 when his Church was obliged to defend her teachings in front of the Shah \*Khosrow II. Shubhalmāran's writings survived in a collection called *Book of Parts* (the editor's rendering of the title as *Book of Gifts* is misleading). In addition to various counsels on spirituality there is also an \*apocalyptic description of the Final Battle (Book 6). The imagery used in this section is deeply rooted in the East Syrian tradition. It is likely that this part was written in exile after 613. It reflects the depressing conditions East Syrian Christians suffered in the \*Persian Empire of that period. Shubhalmāran probably died before 628.

KP

**shura** In \*Islam consultation among prominent figures, probably a continuation of pre-Islamic tribal practice, epitomized in the decision of \*Umar I b. al-Khattab (r. 634-44) to appoint a council to elect his successor, resulting in the choice of \*Uthman b. 'Affan (r. 644-56). In the \*Qur'an, the term is one of the marks of belief (Q. 42: 38) in the sense of deliberation among communal leaders. The verbal form at Q. 3: 159, where the Prophet is commanded to consult his companions, reflects preparations for the Battle of Uhud (625). The term would come to be used to counter the tendency to

define the \*caliphate in terms of divine appointment rather than communal election. In the later sources, it is put in the mouth of rebel figures during the first century of Islam as a technique for demanding redress of grievances against the ruler.

**Shushanik** (d. c.458) Early \*ascetic and \*martyr of the \*Armenian Church. Also known as Vardeni Mamikonean, Shushanik was the daughter of \*Vardan \*Mamikonean (the hero of the 451 Battle of \*Avarayr) and the wife of Vazgen, Prince of Gugark/Gogarene. She renounced her husband and her royal life when he submitted to the Persian King of Kings and renounced Christianity for \*Zoroastrianism. The story of her torture and imprisonment by Vazgen, her feats of ascetic piety, and her death has been transmitted in several versions in both Armenian and \*Georgian. It probably pre-dates the 7th century, and is one of the most important witnesses to the practice of female \*asceticism in the early Armenian Church.

**Sibyls and Sibylline Oracles** The 1st-century BC Roman antiquarian Varro (cited by \*Lactantius, *Divine Institutes*, I, 6, 6-16) reckoned that there had been twelve legendary pagan prophetesses known as the Sibyls. The utterances of the Cumaean Sibyl were consulted at \*Rome for political purposes and for ritual prescriptions.

The prophetic figure of the Sibyl was appropriated by Hellenistic Jews and then Christians to articulate their

own hopes and expectations. At times she was imagined as a figure whose antiquity pre-dated the bifurcation of \*paganism and the primitive \*monotheism of the earliest humans, at others as a privileged pagan; it was the latter interpretation, given impetus by the Fourth Eclogue of \*Vergil, that prevailed in the early Church, e.g. in Lactantius (*Institutes*, VII, 24), \*Constantine I's *Oratio ad Sanctum Coetum* (18–22), and \*Augustine (e.g. *City of God*, XVIII, 23). A *Theosophy* of Sibylline wisdom, composed by an unknown author during the reign of \*Zeno (474–91) and partly extant in the *Theosophy of Tübingen*, reflects the same outlook.

A corpus of fourteen books of *Sibylline Oracles* (partly overlapping) survives in certain 14th- and 15th-century manuscripts. Although the earliest parts derive from Jewish circles in Hellenistic \*Alexandria, the composition of Sibyllina continued through Late Antiquity and beyond; the 13th Book provides important insights into Roman-Persian relations in the mid-3rd century and the latest strata of text date from the 7th century. Much of the corpus emanates from \*Egypt, certain parts possibly or probably from Asia Minor and \*Syria. The oracles are akin to \*apocalyptic, although lacking the characteristic presence of a mediator; like apocalyptic they are dominated by eschatology, principally cosmic, although the fate of the individual soul concerns some Christian Sibyllists. History is divided into periods across four, five, or ten ages, with references to the successor kings and Roman \*emperors, culminating in the upheavals of the final age; this future orientation is complemented by an interest in practical ethics (especially, condemnations of homosexuality and idolatry).

Another oracle in popular circulation was the Tiburtine Sibyl, now extant in \*Latin and in a \*Greek version as the *Oracle of Baalbek*. Though subject to much updating by later editors, its nucleus seems to have originated in the 4th century, since it prophesies the advent of a final emperor called Constans; history will end with the vanquishing of the Antichrist. **Sicily** The first Roman \*province (from 241 BC). Under the \*Tetrarchy Sicily became a part of the \*Diocesis Italiae aggregated to \*Italia Suburbicaria. It was governed by a \*Corrector and after \*Constantine I by a \*Consularis under the \*Vicarius Urbis Romae (*\*Notitia Dignitatum* [occ.] 19, 6). Syracuse was the provincial capital.

In Late Antiquity Sicily enjoyed a period of economic prosperity. The island became the primary supplier of \*grain to the \*City of \*Rome after \*Constantine I founded \*Constantinople and diverted the grain of \*Egypt to feed the people of his new residence. Between the 4th and 5th centuries Sicily was governed by members of the senatorial \*aristocracy (e.g. \*Ceonii Albini, Postumii Albini, \*Valerii and Aradii, \*Symmachi and Nicomachi). These families had strong economic interests in the island; their holdings formed part of a chain of landed property stretching from Rome to \*Africa. Although there were small and medium-sized \*estates, most of the land was owned by the \*emperors or the senatorial aristocracy and, from the time of Constantine, by the Church. The *\*latifundia* were divided into *\*massae*, aggregates of *\*fundi* not necessarily contiguous and generally managed by *\*conductores*. The *\*Antonine Itinerary* names settlements that correspond to \*estates throughout the hinterland (e.g. Calvisiana, Philosphiana, Petiliana, toponyms which imply the word *prædia*—‘estates’). The growing burden of \*taxation also caused the great landowners to seek new sources of income with greater investment in their estates, a phenomenon associated with the creation of large \*villas such as \*Piazza Armerina, \*Patti Marina, \*Tellaro, and others that have been archaeologically identified, together with farms and \*villages, in many parts of the island.

Valid evidence, literary and archaeological, for the spread of Christianity in Sicily can be found only from the 3rd century onwards. The \*martyr passion of S. \*Euplus contains elements which appear authentic. In the 4th century the development of Christian communities is recorded mainly in urban centres.

The island was attacked by the \*Vandals in 440 in accordance with the strategy of \*Geiseric who aimed at conquering the main Mediterranean centres of \*grain production. \*Theodosius II and \*Valentinian III (*Nov-Val* 1, 2) granted a tax amnesty as compensation to the

inhabitants of Sicily whose property had been destroyed by the Vandals. Vandal attacks continued until 475, and in 476 Sicily was sold to \*Odoacer and subsequently came under the control of the \*Goths. \*Cassiodorus (*Variae*, 10, 2) attests that wheat production was still considerable and that under the government of the \*Ostrogoths the island enjoyed a period of well-being.

In the 6th century Sicily played a strategic part during the \*Byzantine invasion, and in 535 became a Byzantine possession, aggregated to the *Pars Orientis* (\*Procopius, *Gothic*, V, 5, 12). \*Gregory the Great fed Rome with grain from church estates in Sicily. The \*Arab conquest was completed in the 9th century. CS

**Side** \*City on the coast of \*Pamphylia. Its proclamation as *neokoros* ('temple guardian') on \*coinage in 256 indicates the presence of a \*temple of the \*imperial cult. Insurgency by \*Goths under \*Gallienus reached Side. In the 3rd century the city claimed to be 'First City of Pamphylia', but \*Perge became chief city of the \*Tetrarchic \*province. The city \*aqueduct was restored by a private benefactor called Lollian, a rare example of private benefaction in Late Antiquity. Amphilochius, \*Bishop of Side, had problems with \*Messalians in the mid-5th century. \*Justinian I gave the bishopric \*metropolitan status. Large churches survive from this period near the temple ruins. In the 7th century the city walls retracted to incorporate the back wall of the theatre; this possibly helped Side survive the \*Arab conquest. The population had moved to \*Attaleia by the 10th century. ACFC

**Sidon** (mod. Saida, Lebanon) \*City on the Mediterranean coast, about 40 km (c.25 miles) south of \*Beirut in the province of \*Phoenice. It was famous for \*glass manufacturing and the production of \*purple dye from \*murex shells. An ancient shell dump can still be seen 100 m (c.330 feet) high and 50 m (c.165 feet) long. Designated *Colonia Aurelia Pia Sidon* by Elagabalus, the Romans built a theatre and other monuments. A series of Mithraic sculptures from the late 4th (or possibly 2nd) century is now in the Louvre.

The \*bishop attended the \*Council of \*Nicaea. \*Theophanes of Hermopolis passed through in 322/3 as did the \*Bordeaux Pilgrim in 333 (583, 11). \*Severus of \*Antioch called a church \*council at Sidon in 511 (\*Zacharias Rhetor, 7, 10; Severus, *Select Letters*, VI, 4, 2). After the \*earthquake of 551, Beirut's law classes were relocated to Sidon (\*Agathias, II, 15, 1–4). The \*Piacenza Pilgrim (2) in 570 found the place partly ruined and the people displeasing. After the \*Arab conquest the city became part of the \*jund of \*Damascus.

**Sidonius Apollinaris** (c.430–c.489) One of the pivotal figures in the history and literary culture of Roman \*Gaul in the 5th century AD, Sidonius was the son-in-law of an \*emperor, Eparchius \*Avitus (r. 455–6). He was the last Gallo-Roman to be \*Praefectus Urbi at \*Rome (468–9) and was later \*Bishop of \*Clermont-Ferrand, the 'city of the Arverni' (470–c.485). He was also the author of verse \*panegyrics of three emperors (\*Anthemius, \*Majorian, and Avitus), which were included in his book of *Poems (Carmina)*, published in 469, and of nine books of \*Letters (*Epistulae*). His literary work is increasingly appreciated for the sophistication of his literary technique and his use of allusion with reference to historical and quasi-mythical events and to such models as Horace, Lucan, Pliny the Younger, and \*Claudian.

Sidonius was born in \*Lyons, the son and grandson of Gallic \*Praefecti Praetorio; his grandfather Apollinaris served as the \*usurper \*Constantine III's Praefectus in 408. In the early 450s, Sidonius married Papianilla, daughter of Avitus and a member of a family of landowners at Clermont, which became Sidonius' preferred residence. In January 456, aged about 25, he delivered his *Panegyric* of the new emperor, Avitus, before the

\*Senate at Rome, voicing *inter alia* the alienation felt by many Gauls from the Italian centre of empire. After Avitus' overthrow in October 456, Sidonius joined those Gauls who initially refused recognition to Avitus' nemesis, Majorian, but, after Majorian surrendered Lyons late in 458, he delivered a second panegyric, advocating the unity of the West against the 'new Hannibal', \*Geiseric. Welcomed by Majorian into the emperor's circle of 'friends', he was given the title of \*comes.

After Majorian's overthrow in 461, Sidonius occupied himself with Christian concerns in Gaul, attending services at Lyons and sophisticated theological seminars at \*Vienne, reporting on the activities of bishops, and putting his poetic talents at their service. In 467, he undertook an embassy to the new Emperor Anthemius at \*Rome. There he was invited to pen a panegyric to the new ruler, as a consequence of which (he said), he was offered the City Prefecture; in reality Anthemius thus hoped to conciliate opinion among the Gallo-Roman \*aristocracy at large.

Little is known of Sidonius' official tenure at Rome, or the reasons for its termination in 468/9, but there is a probable connection with events in Gaul. Consistently but controversially, Sidonius cultivated good relations with the \*Gothic kings at \*Toulouse, visiting their \*court and celebrating the civilized and almost Roman way of life of \*Theoderic II. In 469, he tried to advise a former Praefectus Praetorio of the Gauls, Arvandus, who was accused of treasonable correspondence with the aggressive new Gothic King, \*Euric. Ignoring Sidonius' advice, \*Arvandus acknowledged that he had advocated that Roman Gaul be partitioned between the \*Goths and the \*Burgundians and was duly convicted of assisting the enemy. Soon after this, Sidonius, who had absented himself from the trial, returned to Gaul and is next heard of, in 470, as the newly consecrated Bishop of Clermont.

Control of Clermont was coveted by both Gothic \*Aquitaine and the Burgundians of the Rhône corridor. From 471 to 475, Clermont was besieged annually by the Goths. Sidonius' letters describe the sufferings of the besieged, and celebrate the help given by his brother-in-law \*Ecdicius and by associates from the clergy at Lyons and elsewhere. In 475, the Emperor \*Julius Nepos and a conclave of bishops ceded Clermont to the Goths in return for guarantees of safety for Provence, soon to be proved worthless. Although Sidonius protested against this 'betrayal' with a passionate eloquence which still resonates, it is likely that his determination to hold out to the last against his former allies was motivated by the hope of brokering a better deal independently.

Dispatched by \*Euric into internal \*exile near Carcassonne, Sidonius used contacts in \*Aquitaine to regain

the king's favour, proffering yet another panegyric, which celebrated Euric as the new protector of Roman security. Reinstated as bishop, Sidonius coexisted peacefully with the conquerors, more troubled, so it seems from \*Gregory of \*Tours, by nagging from his wife over his sale of the family \*silver, and the subversive antics of contumacious clergy. In or soon after 481, he completed the ninth book of his letters. But unlike Pliny, his model, whose correspondence with Trajan was collected in his Book 10, Sidonius left no tenth book; perhaps a tacit reminder that letters could no longer be addressed to an emperor at Rome. **siege warfare** The siege and defence of fixed places demanded huge resources for the construction of fortifications, the supply of internal garrisons and besieging \*armies, the concentration and organization of manpower, and the development of technology. As in most periods, sieges in Late Antiquity far outnumbered encounters in open battle. Theoretical Late Roman siege-craft is known from technical treatises covering assault, defence, and \*artillery design (e.g. \*Vegetius, *De Re Militari*, 4.1–30). Numerous fortifications survive from the Roman and \*Persian Empires, and descriptions of sieges by ancient historians (e.g. \*Ammianus, \*Zosimus, \*Procopius, \*Agathias, \*Theophylact Simocatta) may be compared with the realities revealed through conflict landscape archaeology.

From the 3rd century AD Roman fortifications developed in the direction of greater defensive strength, in contrast to those of the early imperial period. Standing Hellenistic defences provided a basis for fortifications which featured tall curtain walls, sometimes with a fore-wall (Gk. *proteichisma*, as at \*Constantinople). In front of such walls were wider, deeper, sometimes multiple ditches. They had multiple, large, projecting towers, designed primarily for troops firing missiles but

accommodating also artillery. Their \*gateways were narrow and more heavily defended. Pre-existing defences were strengthened and numerous new fortresses constructed in this new style, particularly under the \*Tetrarchy and under \*Constantine I and his sons, with waves of building in the time of \*Theodosius and \*Justinian I, and beyond.

Besieged positions could be worn down by blockade or taken by subterfuge, treachery (as attempted at \*Amida in 359: Ammianus, XIX, 5, 5–8), or incompetence on the part of the defenders (as with the monks of Amida in 503: Procopius, *Persian*, I, 7, 20–9). Assaults on fortifications could go over walls using ladders, wheeled wooden siege-towers, and ramps; they could go through them using rams and mines to cause breaches; and they could go under them, employing mine galleries. Vegetius discussed the use of penthouses, screens, and mantlets to protect besiegers as they worked, and counter-measures to disrupt them. Attackers employed artillery for accurate sniping, breaking in gates, or clearing wall-tops by removing parapets. Defenders sniped at enemy leaders and demolished screens and other wooden structures. Both employed fire-missiles amid a two-way blizzard of arrows, javelins, sling-projectiles, and thrown stones, intended to destroy structures and injure or drive back personnel. Metal components from such weapons have been recovered archaeologically from 3rd- to 5th-century frontier installations. Excavated siege sites of any period often yield numerous inorganic missiles and metal heads. Larger artefacts are less likely to have survived post-conflict collection and recycling, especially if occupation of a site was resumed after the siege. Thus numerous projectiles were found at \*Dura Europus, but abandonment of the city after it was besieged by the Persians and captured in 256/7 makes the substantial finds of \*arms and armour, shields, and other artefacts in the collapsed towers and siege-mines quite extraordinary.

Most of Rome's enemies posed little credible threat to Late Antique fortifications, yet the new defensive designs spread across the whole Empire, becoming characteristic of Roman military culture, from the projecting towers of tiny police posts up to the enclosure of great imperial capitals. Of course successful defence also depended upon the presence of an adequate garrison with determined morale and realistic hope of relief. The \*Goths were not particularly successful in capturing well-garrisoned \*cities after their victory at the Battle of \*Adrianople in AD 378, whereas numerous centres, such as Naissus (\*Niš) and \*Aquileia, were sacked by the \*Huns under \*Attila in the mid-5th century.

Only the Persians really threatened Roman defences with assault, although it is unclear whether or not they generally used artillery. The archaeology at Dura-Europus amply demonstrates their capabilities, and may be

compared with the assault on \*Amida in 359, described by Ammianus Marcellinus (XIX 1–8). The \*Ostrogothic siege of Rome in AD 537–8 did see barbarians employ mobile siege-towers, but without success (Procopius, *Gothic*, V, 18–23). Both Roman and Persian armies organized large numbers of troops or mobilized agricultural populations to move considerable quantities of soil and other material, filling ditches, building ramps, digging mines, or building contravallations and circumvallations (as in the 3rd-century siegeworks at \*Cremna and Hatra). The Syrian–Mesopotamian theatre was the laboratory of fortification design and siege warfare in the Roman period, much as northern Italy and the Netherlands were in the wars of the Renaissance. Such places as Amida, \*Dara, \*Nisibis, and \*Singara changed hands between the two empires over centuries of conflict. The *Chronicle* of \*Joshua the Stylite, which describes in detail the Persian invasion of Roman \*Mesopotamia at the beginning of the 6th century, gives perhaps the most vivid account from Late Antiquity of the effect of such siege warfare upon the civilian population who suffered it. **Siffin, Battle of** A series of minor skirmishes and one battle during the First \*Arab Civil War (\**Fitna*). The fighting took place around Siffin, a ruined Byzantine \*village near al-Raqqā (\*Callinicum), a few hundred yards from the Euphrates River, between \*Ali b. Abi Talib (c. 597–660, r. 656–60) and \*Mu'awiya b. Abi Sufyan (c. 605–80, r. 661–80). The main clash is often said to have begun on 26 July 657 and to have continued for three days and nights, after which the conflict ceased and arbitration commenced. The arbitration failed to resolve the core issues at stake (punishing \*Uthman b. 'Affan's killers and resolving the dispute over leadership) and is seen as a

## Sigibert I

turning point in the fortunes of 'Ali, who was later assassinated by disaffected former supporters. AJD

*EI* 2 vol. 9 (1997), s.v. Siffin, 552–6 (Lecker).

**Sigibert the lame** (fl. late 5th–early 6th cent.) \*Frankish King at \*Cologne, known exclusively from \*Gregory of \*Tours (*HF* II, 37, 40). Apparently a relative of \*Clovis I, he was wounded in the knee in a battle against \*Alamans at \*Zülpich, and later murdered by his son Chloderic, who had assisted Clovis at the Battle of \*Vouillé. After having Chloderic killed, Clovis took over Sigibert's kingdom. RVD

*PLRE* II, Sigibertus 'Clausus'.

*RGA2* s.v. Sigibert von Köln, XXVIII (2005), 393–6 (M. Springer).

**sigillata** General term for Roman wheel-made fine \*pottery, often decorated with images in relief (Lat. *sigilla*—'figurine'). It is characterized by a reddish, smooth, glossy-slipped surface. Decoration was formed using moulds, stamps, rouletting, or slip-applications (Fr. *barbotine*). JV

*Enciclopedia dell'Arte Antica, Atlante delle forme ceramiche romane*, vols. 1–2 (1981, 1985).

**Sigismund** \*Burgundian King (516–23). He succeeded his father \*Gundobad, and also had the Roman title \**patricius* (\*Avitus, *ep.* 8). He was a pious Catholic even while his \*Homoean (\*'Arian') father was alive, and founded the \*Monastery of \*Agaune. In 522, he executed his son Sigiric, and became a monk in remorse. In 523, the \*Franks invaded his kingdom, and he was captured by \*Chlodomer and eventually killed (\*Gregory of \*Tours, *HF* III, 5–6). His remains were removed to Agaune. Gregory of Tours included him in his *Glory of the Martyrs* (74); a \*saint's life was written, probably in the early 8th century. Sigismund was the first medieval royal saint. EJ

*PLRE* II, Sigismundus.

*PCBE* IV/2, Sigismundus.

*Passio S. Sigismundi* (*BHL* 7717), ed. B. Krusch in MGH SS. rer. Meroving. 2 (1888), 329–40.

**signalling, military** \*Ammianus Marcellinus, who served in the \*army in the mid-4th century, suggests that visual signals were taught to officers, while tactical signals were often transmitted by horns. The \**Strategicon* of \*Maurice in the 6th century also mentions the battlefield use of visual signals and musical instruments. There was occasional use of beacons for signalling (also used in the 9th cent. to send information to \*Constantinople from the Arab–Byzantine \*frontier), though these had a very limited range of messages and the Romans preferred to send couriers. HE

P. Pattenden, 'The Byzantine Early Warning System', *Byzantion* 53 (1983), 258–99.

**signa militaria** See STANDARDS, MILITARY.

**silentiarii** Ushers at the imperial \*court, also used as imperial emissaries. They are first attested under \*Constantius II. Legislation in 437 stipulated 30 staff, led by three \**decuriones*. They were not \*eunuchs but came under the overall charge of the \**Praepositus Sacri Cubiculi*. The best known of them was the poet \*Paul the Silentary. AGS

Jones, *LRE* 571–2.

**Silentium** A meeting of the \*Consistorium (hence, the support staff in attendance were called \**silentiarii*). From the 5th century onwards, legal cases on appeal were also heard before the \*emperor at a session (Conventus) of the \*Senate of \*Constantinople (*NovMarc* 5.1.pr). In 537, the two were combined as *Silentium cum Conventu* (*NovJust* LXII, 1, 2). CMK

**siliqua and half-siliqua** Roman unit of weight and Late Roman denomination of \*silver \*coinage. A *siliqua* was 1/24 of a \**solidus*, c.2.7 g (0.09 ounces) (\*Isidore of \*Seville, *Etymologiae*, XX, 16, 25). Numismatists use the term to describe an unnamed Late Roman silver coin, weighing 3.4–2.2 g, and its half-measure. RRD Grierson, *Byzantine Coinage*.

**siliquaticum** Tax on sales, to be paid by both buyer and seller, introduced by \*Valentinian III in 444/5 (*NovVal* 15) corresponding to 1/24 of a \**solidus* (i.e. 1 *siliqua*). Despite difficulties in its collection, the tax was still imposed in 6th-century \*Italy (\*Cassiodorus, *Variae*, IV, 19, 2). RM Jones, *LRE* 205, 351, and 432 (Valentinian III), 254 and 826 (Ostrogoths), 435 (collection). Hendy, *Studies*.

**silk and silk trade** Silk (Lat. *sericum*, Gk. *sericon*) was the most highly prized \*textile fibre of Antiquity. It is extruded as a double filament by a silk moth caterpillar when constructing its cocoon. By Late Antiquity, the 'Coan' industry based on the wild silk moth of the eastern Mediterranean region, *Pachypasa otus*, had ceased to exist; all Roman silk came from the domesticated *Bombyx mori*, reared exclusively in \*China, whence the yarn had to be imported at great cost.

While wild silk is discontinuous and has to be spun, up to 1,300 m (4,260 feet) of *Bombyx* silk can be reeled straight from the cocoon. Roman weavers gave some twist to warp yarn, but they often left weft yarn unspun. Silk's natural sheen made it particularly suitable for complex weaves with overall repeat patterns such as monochrome damask and polychrome weft-faced compound tabby (*taqueté*). After the 4th century, the more advanced compound, twill (samite), dominated. Silk tunics were still woven on a wide vertical loom, but with special arrangements for opening multiple sheds. The Tetrarchic \*Prices Edict of 301 lists not only \*purple dyed silk yarn (Gk. *metaxa*), but shirts and tunics wholly (Lat. *holoserica*) or partly (Lat. *subserica*) of silk.

\*Ivory \*diptychs frequently depict shirts, tunics, cloaks, and \*togas with overall patterns, presumably of silk, as do 6th-century \*mosaics. Archaeological finds confirm the widespread use of silk clothing by the wealthy, decorated with purple wool and spun gold \**segmenta*. \*Emperors, however, made repeated, if

vain, attempts to confine use of the most highly decorative silks to the \*court (*CTh* X, 21, 1; X, 21, 3; XV, 7, 11). They ordained that silk clothing in that category should only be made in their own official \**gynaecae*, ultimately located in the \*palace complex in \*Constantinople: \*Procopius reports on earlier workshops in \*Beirut and \*Tyre (*Anecd.* 25, 14).

The \*Sasanians maintained a monopoly on the silk trade. Their silk textiles were highly prized and ornamental patterns copied both in the Roman Empire and in \*Central Asia. A Roman law of 383/92 (*CJust* IV, 40, 2) empowered the \*Comes Commerciorum per Orientem to buy up all silk yarn brought over the frontier from the \*Persian Empire. In 553–4, however, *Bombyx mori* eggs reached Constantinople, supposedly smuggled by monks (Procopius, *Gothic*, IV, 17), and it was possible to inaugurate sericulture (and cultivation of the white mulberry on which the silkworm necessarily depends) in the Roman Empire. Even after this, the Romans still imported a great deal of silk and the Persians maintained their monopoly despite attempts by Türko-\*Sogdian diplomats, such as \*Maniakh, to trade directly with the Romans. **Silko** Powerful chieftain of the \*Nobades, who records three victories over \*Blemmyes in a \*Greek \*inscription from the \*Temple of Mandulis at \*Kalabsha (*Sammelbuch*, V, 8536) now known to date to the 5th century on the basis of a \*papyrus from \*Qasr Ibrim (*Sammelbuch*, XIV, 11957). JHFD Dijkstra, *Philae*, 160–6.

**Silk Road** Term coined by Ferdinand von Richthofen (1833–1905) to describe the network of trade routes connecting \*China with the Mediterranean via \*Central Asia, reflecting the importance of \*silk in transcontinental trade during Late Antiquity and the Middle Ages. However, many other commodities—carpets, \*textiles, \*horses, slaves, \*glass, jade, \*leather, wool, paper, spices, cast \*iron, and precious \*stones—as well as art, technology, \*philosophy, and religion, travelled along these trade routes. Trade between China and the \*Tarim basin began c.1200 BC and the first Chinese diplomatic

mission to \*Farghana, \*Sogdiana, and \*Bactria, under Zhang Qian (Chang Ch'ien), was in 128–126 BC. Chinese–Parthian trade along the Silk Road started in 106 BC; thereafter, Roman and Chinese goods generally had to pass through Persia before reaching opposite ends of the Silk Road.

The eastern terminus of the Silk Road was Chang'an (Xi'an), from which the route led westward through the Gansu (or Hexi) Corridor to Anxi, where it split into two branches. The northern route led through Hami, \*Turfan, and the Ili Valley to Issyk-Köl, where it branched south to \*Chach (Tashkent) or continued north-westerly into the steppe, eventually passing north of the Caspian Sea. The other branch from Anxi led south-west, dividing again at Yumenguan (the Jade Gate), just past \*Dunhuang. The southern branch skirted the edge of the Taklamakan Desert, through the oases of Miran, Niya, \*Khotan, and Yarkand to \*Kashgar. The middle branch headed west from Yumenguan through Loulan to Korla, in the shadow of the Tien Shan range. There, joined by a connecting route from Turfan and Qarashahr to the north-east, it turned south-west, following the northern edge of the Taklamakan, through the oases of Kucha and Aqsu to Kashgar, where it rejoined the southern branch.

Other branches of the Silk Road connected Central Asia to surrounding regions. Leading south from Yarkand through the Karakorum to \*India was an important route used by traders and \*Buddhist pilgrims. Meanwhile, at Kashgar, two routes led either north-west through the Farghana Valley or south-west to \*Balkh. From Farghana, one could turn north to Chach and the steppe beyond or south to \*Samarkand, \*Bukhara, and \*Merv. From Balkh, routes led west to Merv or south-east into India. Once in Iranian territory, the route headed steadily westward through Meshed, \*Nishapur, \*Rayy, \*Hamadan, and Seleucia-\*Ctesiphon (and later Baghdad). Western termini included \*Damascus, \*Tyre, \*Aleppo, \*Antioch, \*Trebizond, and \*Constantinople.

Initially, most trade between China and Persia was controlled by the \*Sogdians, that between India and Central Asia by the \*Bactrians. After the spread of \*Islam, \*Arabs and Persians became more involved in Silk Road trade. Although the \*Sogdian language was the *lingua franca* throughout much of the network, many other languages were also spoken by traders, pilgrims, and residents of \*cities *en route*, including \*Arabic, \*Bactrian, Chinese, \*Khotanese, \*Persian, Sanskrit, Tibetan, \*Tocharian, and \*Uighur Turkic. Few would have navigated the entire route before Mongol times; traders, pilgrims, and other travellers usually only travelled along certain sections of the network. \*Buddhism, Christianity, \*Manichaeism, and Islam all spread along the Silk Road, as did technology, notably

silk production (after monks from 'Serinda'—probably \*Khotan—told the \*Emperor \*Justinian I the secret c.550) and paper-making (after Chinese paper makers were captured by the Muslims following the Battle of \*Talas in 751). MLD

**Silva Carbonaria** (Lat. Charcoal Forest) Substantial forest extending from the modern forest of Soignes (Brussels) in the north to the vicinity of the \*monastery of Lobbes on the Sambre in the south, forming the boundary between the Roman \*provinces of \*Belgica Secunda and \*Germania Secunda and later between the \*Merovingian kingdoms of \*Neustria and \*Austrasia. \*Lex Salica (47, 1, 3) did not apply east of the forest. It appears in various sources between 388 and the 12th century, particularly in accounts of conflicts between Austrasia and Neustria such as the battles of \*Tertry (687) and \*Vinchy (717). ADier

**Silvan** See MARTYROPOLIS.

**Silvanus** General of \*Frankish descent in Roman service, Silvanus deserted the \*usurper \*Magentius to side with \*Constantius II before the Battle of \*Mursa in 351. In 355, exploiting doubts about his loyalty, the courtiers of Constantius II accused him of plotting usurpation. Tricked by an embassy headed by \*Ursicinus, he fled for sanctuary to a Christian chapel, but was executed soon after (\*Ammianus, XV, 5). JDH

**silver** (Lat. *argentum*, Gk. *ἄργυρος*) Argentiferous lodes were worked south of the Danube in the 3rd century, possibly in \*Thrace (at Mount Pangaion) in the 6th century, and at Thoriskos, where oil \*lamps

attest mining works in the 5th/6th century. At Laurium slag from the older silver \*mines was re-smelted. Further silver mining operations are documented in the Bolkardağ district in \*Anatolia. After the collapse of Roman rule in the West, the \*Visigoths may have exploited silver mines in \*Spain (Sotiel Coronado). As early as the 7th century and during the Carolingian period silver ore was extracted at Melle, Kremnitz, and Schemnitz in German Saxony. Silver was possibly mined by the \*Sasanians in \*Yemen and in \*Najd on the \*Arabian Peninsula, according to al-Hamdānī, a geographer of the 10th century AD.

In the Later Roman Empire, part of the silver mined or collected under the \**collatio lustralis* (until 372; \*Zosimus, II, 38, 2; *CTh* XII, 1, 50; XIII, 1) was handed out to soldiers, high officials, and friends of the \*emperor as \*donatives on special occasions (e.g. imperial \*accession, \*anniversaries, emperor's \**natalis*). Silver was issued as \*coinage, medallions, ingots, or luxurious wares, possibly under the supervision of the \*Comes Sacrarum Largitionum. While some silver ingots were produced in private contexts, the weight (1 Roman pound) and shape of some ingots, along with \*silver stamps and \*inscriptions, indicate a varying degree of state involvement in their production at sites such as \*Niš or \*Trier (often, but not necessarily, imperial \*mints). A few ingots have been discovered outside Roman territory (e.g. Balline and Ballinrees in \*Ireland, Dierstorf in Lower Saxony).

From such ingots, plates and other items were produced by silversmiths, by hammering. Late Roman silverware (plates, bowls, cups, spoons, \*lamps, caskets, etc.) has been discovered in numerous deposits throughout Europe and the eastern Mediterranean (e.g. \*Kaiseraugst in Switzerland, \*Mildenhall in England, \*Kaper Koraon in Syria). Some treasures come from private contexts, assembled perhaps over generations as with the \*Esquiline Treasure, or consisted of cult items given to churches (chalices, censers, \*crosses, etc.). Silverware from the \*Persian Empire is attested for the 4th to 6th centuries, mostly displaying the image of the King of Kings.

Silversmiths (see *ARGENTARIUS*) were exempted from state burdens in 337 (*CTh* XIII, 4, 2) but were barred from honorary office (*CJust* XII, 57, 12 of 436). From \*papyri we learn that silversmiths in Late Roman \*Egypt were obliged to report their \*prices (P.Oxy. 3642 of 359).

**silver, liturgical, Christian** Late Antique \*silver decorated with Christian emblems, scenes, and \*inscriptions survives from hoards deriving from church treasuries. Collections vary in size from the 56 pieces of the \*Kaper Koraon Treasure to the single 7th-century plate whose inscription identifies it as 'treasure of the most holy church of Sarabaon'. Most have come to notice by way of the antiquities market rather than through scholarly excavation, so information about context and the correct grouping of objects is often scarce (see KAPER KORAON TREASURE). The liturgical function of silver pieces in collections is usually confirmed by dedicatory inscriptions and/or the presence of Christian \*iconography or symbolism. Where these are absent a domestic function is assumed, as happened with the \*Canoscio Treasure until a votive inscription was identified.

The principal items of silverware employed in the Christian \*liturgy were the plate called the paten, the chalice (Gk. *poterion*), and the liturgical fan (Lat. *flabellum*, Gk. *rhypidion*). Also commonly found are \*crosses and spoons, and, more rarely, *pyxides* (small boxes), ewers, bowls, strainers, censers, \*lamps, lamp-stands, *polycandela* (chandeliers), \*book-covers, plaques or revetments (see KUMLUCA TREASURE), and \*reliquaries.

The function of these objects in the \*Eucharist is sometimes debated. Patens and chalices held the eucharistic gifts and spoons were used in administering Holy Communion. Silver fans may have repelled flies and \*demons or represented the wings of \*angels (Hunter-Crawley; Safran). Crosses may have been displayed by the \*altar or carried in \*procession and used in blessing. R. Taft has debated the purpose of liturgical spoons, which may have functioned in coordination with ewers, bowls, strainers, and *pyxides* in preparation, distribution, and storage of the Communion Elements. Censers, lamps, and stands fostered appropriate reverence during the liturgy, while plaques and revetments enhanced the appearance of the church interior, particularly around the altar.

Usage may have changed over time; for example, the 6th-century \*Riha and \*Stuma fans are the earliest silver pairs to survive, indicating development from the use of feather or cloth fans. This illustrates the increased use of silver for liturgical purposes from the 5th century onwards. Collections also accumulated over decades or centuries, and objects were recycled from domestic contexts (such as the mirror in the \*Antioch Treasure), or

from other localities (such as the Byzantine Čaginkom cross of c.547 whose inscriptions indicate later Armenian use). The majority of extant liturgical silverware derives from Turkey and \*Syria, or, less commonly, from \*Italy, \*Greece, or northern Europe, and carries strong indication of manufacture in the eastern provinces, which suggests a particular preference for silverware in the eastern liturgy.

**silver, Persian** (MP *asēm*) \*Silver provided the \*Persian Empire's primary currency and was supplied by several productive mines in the empire such as that at Al-Radrad, Yemen. It was also favoured for a wide variety of luxury silver vessels.

Much like \*textiles, Sasanian silver made a deep impact on Eurasia, yet the study of both is problematic. The vast majority of known Sasanian silver vessels have come from clandestine excavations and lack archaeological context, or even a securely identified find spot. Much silver in European and American museum collections reportedly came from the Caucasus, Urals, the northern Black Sea, \*Anatolia, and Iran.

Without archaeological context, past scholarship has classified the vessels according to their shapes, technique of manufacture, and metrology. Criteria for dating often rest entirely on formal analysis and, when kings appear, correspondences with royal portraits on \*coinage and \*rock reliefs.

The most abundant object-types were created for the preparation and consumption of \*wine. Characteristic forms include animal-protome rhyta, teardrop ewers, and oval bowls, often with multiple lobes. The other major class of objects comprises decorative (or 'diplomatic') plates. These served a roughly similar purpose to Roman \**missoria*, that is to say they were given as

\*gifts within and beyond the Empire. These portray \*kings \*hunting or (to a lesser extent), enthroned, or banqueting.

The most elaborate vessels carry elaborate ornamental and figural decoration often created by soldering several components. Many carry short \*inscriptions in Pahlavi pecked into their feet with weight or, less commonly, ownership, or a dedication. Details are often incised and accented with \*gold or niello.

Sasanian silver vessel types, such as the teardrop ewer or multi-lobed dish, were consumed, represented, or copied as far afield as Rome, \*Bactria, \*Sogdiana, north India, Türkic \*Central Asia, Tibet, Silla Korea, Sui-Tang \*China, and Nara Japan. In addition, a sizeable body of post-Sasanian metalwork copying Persian shapes and iconographies flourished in Iran after the \*Arab conquest, as surviving local gentry from the \**dehqān* class cultivated the traditions of the fallen empire. However, without provenance, often little more than stylistic classification has led to an object being deemed 'late Sasanian' or 'post-Sasanian'. MPC M. **silver, secular, Roman** Considerable hoards of Late Antique domestic plate have been found, particularly in \*Britain, \*Italy, France, Germany, \*Cyprus, and southern Russia, sometimes as 'hack silver', dismantled in preparation for the melting pot (e.g. the \*Traprain Law Treasure from Scotland and the Balline Hoard from Co. Limerick, Ireland).

The presence of \*pagan scenes and themes, and the absence of Christian \*iconography, symbols, or \*inscriptions, does not preclude the possibility that silverware was used by Christians. Pagan and Christian motifs are sometimes combined, for example on the spoons of the \*Thetford Treasure, so identification requires caution. In fact, much pagan subject matter

began to lose overt religious significance during Late Antiquity, and came to be regarded as merely secular, while remaining integral to moral and cultural education, or *paideia*, in ways outlined by \*Basil in his *Address to Young Men on the Uses of Classical Literature*. Scenes from classical \*myth (particularly featuring \*Dionysius) and \*hunting scenes (e.g. \*Meleager in the \*Sevso Treasure) were popular, alongside \*foliage, \*animal, and geometric motifs.

Finds of secular silver include such table silver as plates and dishes, ewers, spoons and cutlery, bowls, buckets, cups, and saucepans. The \*Hoxne Hoard preserves rare examples of *piperatoria*, or pepper pots. Other finds include flasks, \*mirrors, cosmetic pots, and other forms of toilet silver, \*jewellery, and very occasionally \*furniture, for instance \*lamps and stands, revetments, and ornaments.

Characteristic of Late Roman table silver was the use of beaded edging, high feet with ball stems, openwork, chasing, gilding, relief work, and niello (silver sulphide) decoration, which had just come into use. Silver drinking cups declined in popularity in Late Antiquity, though they adopted new styles, such as \*glass encased in openwork silver. Saucepans continued to be popular; their handles, elaborately decorated and shaped, often featured pagan deities and motifs. Dishes, like the \*Anastasius I charger from \*Sutton Hoo, became much larger—some were as much as 60 cm (c.2 feet) across. Angular shapes became fashionable from the 4th century, leading to a new style of rectangular tray, the *lanx* (see CORBRIDGE LANX). Framing friezes were popular, combined with central medallions (the \*Sevso Treasure's Hunting Dish is a fine example). Picture dishes are also characteristic of Late Antiquity, featuring large scenes spread across the interior surface (such as the \*Mildenhall Treasure's Oceanus dish, and the David Plates from the \*Cyprus Treasures). From the 3rd century, there developed fluted, scalloped, and flanged bowls which could be used to serve food, or for hand washing. Elongated spoons, and bowls offset from their handles by embellished junctions, became fashionable, and a new type of bowl emerged featuring a short, looped handle modelled as a swan's neck. Jugs and flasks became elongated, with ovoid bodies, and elaborately decorated.

Finds of toilet silver are rare for this period. The large and elaborate Projecta Casket from the \*Esquiline Treasure is a magnificent example, but it is also unique. Mirrors were fitted with grips on the back, rather than stem handles. Cosmetic pots and implements are sometimes found, including *pyxides*, though these were more usually made of \*ivory.

**silver in coinage** In comparison with its role in earlier Roman monetary systems, \*silver lost importance in Late Antiquity. The author of the \*Anonymous, *De Rebus Bellicis* suggested a monetary reform but the illustrations accompanying the work do not include silver.

Nonetheless silver coins were continuously minted throughout the entire period.

\*Diocletian reintroduced in 294 a pure silver coin of 1/96 pounds, with a value of 50 \*denarii, increased from 301 onwards to 100. \*Constantine I added two more denominations (1/60 and 1/72 pounds). In 348 minting was reduced to only one silver coin, weighing 1/144 or 1/156 pounds, which was produced in great amounts. Probably in 387, \*Magnus Maximus again reduced the weight to 1/216 pounds, which in the course of the 5th century (maybe in 411) changed to 1/288.

In a context in which \*gold and divisional coinage circulated separately and did not have a fixed exchange ratio, but the price of gold fluctuated continuously, silver coinage was at different times rated in relation to one of the other two existing systems. Under Diocletian it would appear to have had a nominal over-evaluation and was in a fixed exchange ratio with the divisional coinage, as the Currency \*Edict of \*Aphrodisias shows. At the end of the 4th century on the other hand, maybe starting with \*Valentinian I, silver was exchanged for its intrinsic value and had a fixed exchange ratio with gold (1:14.4), as is attested both by \*papyri from \*Egypt and also by imperial legislation (*CTh* XIII, 2, 1). In the 6th century, however, the introduction of new silver coins marked with their nominal value (250, 125 *nummi*) indicates a new coupling to the divisional system.

**silver stamps** An imperial system for assuring the quality and weight of metal in the manufacture of certain \*silver vessels. It developed in the 5th century, under \*Anastasius I, and continued into the 7th, under \*Constans II. Control stamps were usually applied to the back of a vessel after it was formed but before it was

decorated, as can be seen on two 7th-century plates from Klimova (see PERM TREASURES). The system involved a set of (usually) five stamps, of triangular, hexagonal, square, cruciform, round, or oblong shape, which incorporated imperial portraits and the monograms of \*emperors and officials (the \*Comes Sacrarum Largitionum or subordinates). These enable vessels to be dated, sometimes with precision. The system probably operated in \*Constantinople, although surviving vessels derive from elsewhere (e.g. \*Cyprus, \*Sutton Hoo). Unusual stamps on some vessels suggest competing or imitative systems based elsewhere. HAHC

**Simplicius** (c.490–c.560) \*Neoplatonic \*philosopher from \*Cilicia who studied in \*Alexandria under \*Ammonius and later in \*Athens under \*Damascius. He joined Damascius and other Athenian colleagues when they migrated to the \*Persian Empire in 531 and returned with them in 532. He composed surviving commentaries on Aristotle's *De Caelo*, *Physica*, *De Anima*, and *Categories* as well as one on the *Enchiridion* of Epictetus. The Aristotelian commentaries are notable for their abundant use of quotations from pre-Socratic philosophers. The *Enchiridion* commentary includes a discussion of the appropriate political responses philosophers should have to tyranny. This provides a possible philosophical justification for his own flight to Persia. He was a \*pagan and argued against \*John Philoponus. EW

**Sinai, Monastery of Mount** Fortified monastic complex founded by the \*Emperor \*Justinian I between 548 and 565 (attested by \*Procopius and *in situ* \*inscriptions) at the purported site of the Burning Bush in the valley (Wadi ed-Deir), below the peak associated with the biblical Mount Sinai (Jebel Musa). \*Egeria's travel account attests to the presence of a monastic community and churches at the Burning Bush and mountaintop sites as early as the 380s, and remains of pre-Justinianic structures have been documented at both locations. The \*monastery became an increasingly important spiritual and administrative centre in the late 6th and 7th centuries, with the dramatic expansion of \*pilgrimage to the site, the writing of the influential ascetic guide, the *Ladder of Divine Ascent* by \*John Climacus, abbot of the monastery, and the transfer of the episcopal see of \*Pharan to the monastery. In the 11th or 12th century a building opposite the church entrance was converted to a \*mosque (paralleling the roughly contemporary construction of a new mosque on the mountain peak), and by the late 12th century the \*relics of S. Catherine of \*Alexandria were venerated at the monastery. The monastery remains in the Patriarchate of \*Jerusalem and is today home to an active community of Greek Orthodox monks and local Bedouin. It is visited by thousands of tourists each year, and its holdings have been the subject of recent intensive conservation and digitization campaigns.

#### Architecture and decoration

The massive, extant square fortifications of the 6th century enclose an area of approximately 6,030 square metres (c.1.5 acres). Later construction complicates our knowledge of the monastery's original plan, but it appears that chambers built against the interior of the wall circuit served as monks' quarters, dining halls, storerooms, and pilgrims' \*hostels. At the centre of the enclosure, at the lowest elevation of the complex, stands the 6th-century \*basilica church composed of a nave and two aisles that culminate in two chapels flanking the sanctuary. Sometime after the original

construction, a \*narthex was added, narrow side chambers to either side of the aisles were subdivided into chapels, and the site of the Burning Bush was enclosed in a chapel behind the apse.

Many of the church's 6th- to 7th-century elements remain *in situ*, including the central wooden \*door leading from the narthex, decorated and inscribed wooden ceiling trusses, stone columns and \*capitals, two encaustic paintings on the \*marble wall revetment of the pilasters to either side of the sanctuary (the Sacrifice of Isaac on the left and the Sacrifice of Jephtha's Daughter on the right), and the \*mosaics of the \*apse conch and triumphal arch wall.

The mosaics are especially significant due to their high quality and excellent preservation. They depict within the apse an image of the Transfiguration with a radiant figure of Christ appearing to the apostles Peter, James, and John flanked by the prophets Elijah and Moses. The central scene is framed by a chain of inscribed medallions of prophets and apostles with additional medallions on the vertical axis (a golden \*cross above and King David below) and, at the corners, two contemporary monks thought to be the mosaic's \*donors. On the wall above, on either side of two small \*windows, are two scenes from the story of Moses set within the local \*landscape: to the left Moses before the Burning Bush, and to the right his reception of the Tablets of the Law from the \*Hand of God. In the spandrels below appear two flying \*angels bearing sceptres and orbs to a medallion of the Lamb of God and two uninscribed roundels bearing images thought to depict S. John the Baptist and the Virgin \*Mary.

Significant later decorations include 13th- and 16th-century murals in the refectory, Fatimid-era wooden doors to the basilica's narthex, and the church's 17th-century iconostasis.

### Treasury and library

The monastery also houses a very important collection of over 2,000 \*icons, including two dozen rare examples dated to the 7th century and earlier which escaped destruction during the \*Iconoclast Controversy during which time the monastery was no longer under Byzantine control. In addition, the \*library houses some 3,300 manuscripts, among the most famous of which are the illuminated manuscripts of \*Cosmas Indicopleustes (Sinai 1186) and John Climacus (Sinai 275 and 418), and formerly the 4th-century biblical manuscript known as Codex Sinaiticus, now divided between London, Leipzig, S. Petersburg, and Sinai. The monastery also preserves an important collection of \*papyri, a number of which date from the 6th or beginning of the 7th century and record accounts or concern legal problems from the monastery's early history. Many of the manuscripts and icons entered the monastery as

gifts, and though earlier evidence is not definitive, it appears certain that there was a scriptorium at the monastery from at least the 10th century. AY

**Sinai Peninsula** Triangular desert peninsula that at its northern, Mediterranean end connects \*Egypt to the Negev and the \*Holy Land. It is bordered on the west by the Gulf of Suez, on the east by the Gulf of Aqaba, and on the south by the Red Sea. The peninsula's southern tip is a forbidding mountainous landscape punctuated by holy sites associated with the Israelites' journey out of Egypt and God's revelation to Moses, and so traversed devoutly by such pilgrims as \*Egeria (1–5). In the 5th–7th centuries the region became an important place of \*pilgrimage and the location of many \*monasteries, including \*Raithu and the walled Monastery of Mount \*Sinai, famous for its \*mosaics, its manuscripts, and for its abbot, \*John Climacus, author of the *Ladder of Divine Ascent*. \*John Moschus also spent time in the region visiting monasteries and included ascetic tales from here in his book *The Spiritual Meadow*. Y. Tsafir, 'Monks and Monasteries in Southern Sinai', in Y. Tsafir, ed., *Ancient Churches Revealed* (1993), 315–33.

**Sind** A province (MP *snd*), probably along the lower Indus River, administered in the late \*Sasanian period by a governor (MP *ostandar*) and tax-collector (MP *amargar*) attested in \*seal legends. According to the \**Res Gestae Divi Saporis* (ŠKZ §3, 11), Hindestan was part of \*Shapur I's empire and \*Tabari says that Shapur built cities in Sind and Sistan (\*Sagastan). The absence of the name in \*Kerdir's \*inscriptions suggests that the province had been lost by the reign of \*Bahram II. If this were true, it could explain why \*Bahram V, according to Tabari, made an expedition to \*India where an unnamed king gave him his daughter in marriage along with the port of al-Daybul (\*Banbhor), Makran, and parts of Sind. The Indian King then made certain that the land tax from these regions would be paid to Bahram. Tabari also lists Sind amongst the provinces lost to other kings that were regained by \*Khosrow I. A reference to the Sindis in \*Khosrow II's conversation with a \*Himyarite envoy suggests that Sind was no longer part of the Sasanian empire during his reign. DTP

**Singara** (mod. Sinjar, northern Iraq) Jebel Sinjar is a mountain massif on the Roman–Persian \*frontier, first occupied as a fortified outpost by the Romans in 114–17 (Cassius Dio, LXVIII, 22). The \*city of Singara lay on the southern slope of the mountain. Its remote position, c.90 km (c.56 miles) south-south-east of the border \*city of \*Nisibis, made it a stopping point on the cross-desert road from the Khabur to the Tigris. Remains of the South Gate and some recognizably Roman bastions in the city walls, which were in some places 3 m (10 feet) thick, as well as the remains of a defensive ditch in parts 15 m (50 feet) across and 3 m deep, were still to be seen in the mid-20th century.

\*Shapur I does not list Singara among his conquests on the \**Res Gestae Divi Saporis*, in the 3rd century, but fighting around the city between the armies of \*Shapur II and \*Constantius II included at least three battles (\*Festus, *Breviarium*, 27, cf. \*Ammianus, XIX, 2, 8). A famous battle in 343/4 or 348 turned into a bloody nocturnal pursuit by the Romans (Ammianus, XVIII, 5, 7), described with more artistry than clarity by \*Libanius (*Oratio*, 59, 100–20) and \*Julian the Apostate (*Oratio*, I, 23A–25B). In 360 a Persian battering-ram penetrated the stonework of a tower whose mortar was damp from

recent repairs and Shapur ordered the the city's population into exile in the \*Persian Empire (Ammianus, XX, 6). \*Jovian handed Singara to the Persians in the treaty of 364, and it remained a Persian stronghold, despite occasional Roman raids such as that by the future Emperor \*Maurice in 578, until the \*Arab conquest in c.639 (al-\*Baladhuri, *Futūh al-Buldān*, I, 274).

\*Sozomen (VI, 33) notes that the rugged mountain landscape attracted Christian hermits in the 4th century and \*monasteries of the \*Church of the East around Sinjar were combating \*Messalianism in the late 6th century. The legend (probably of the 6th century) of 'Abd al-Masih, a \*Jewish shepherd boy who became a Christian \*martyr (allegedly in 389/90), suggests a mixed population which included \*Zoroastrians and, at least from the time of \*Qobad I onwards, a people called the Qadishaye. The *Life* of \*John of \*Tella relates how in 536 that energetic \*Miaphysite missionary was craftily captured while taking refuge at Singara and handed over to the Roman authorities. In 563 the Church of the East Bishop of Singara was among those invited by \*Justinian I to discuss Christology at \*Constantinople. However, \*Syriac Orthodox (Miaphysite, Jacobite) influence certainly increased in the area, as elsewhere in Persian \*Mesopotamia, during the reign of \*Khosrow II, whose physician, \*Gabriel of Singara, was a Miaphysite convert. The Syriac *Apocalypse of Ps.-Methodius* was written after the \*Arab conquest apparently by Syriac Orthodox Christians in Singara. It sees the Muslim invasion as a punishment sent by God, but holds out hope for deliverance through the coming of a Christian Roman Emperor. PAW; OPN

**Sion Treasure** See KUMLUCA AND KUMLUCA TREASURE.

**Siraf** (mod. Bandar-e Tahiri) Port on the Persian side of the Gulf, 220 km (132 miles) south-east of Bushehr and at the end of an overland caravan route linking the coast with the interior of \*Fars. Excavations beneath a congregational \*mosque of the early 9th century have found a \*Sasanian fort (62×57 m) with hollow, pear-shaped corner towers and semicircular turrets, two on each side and a pair flanking the entrance. Although the fort's date is uncertain, a number of imports found at the site (e.g. Indian Red Polished ware, Namord ware from south-eastern Iran, 5th-cent. Roman \*glass, and coins of \*Theodosius I (376–94) and \*Constans II (651–9)) suggest it may have been in use for a number of centuries. A general resemblance to a Roman *castellum* has also been noted, though whether this is chronologically significant or not is unclear.

Over 500 rock-cut burial chambers in the ravine behind the site may be \*Zoroastrian *astōdāns*, but their date remains unconfirmed. The fact that the Muslim geographer Yaqut linked Siraf with the legendary pre-Islamic Persian King Kay Ka'us shows that a memory of the site's antiquity survived into the Middle Ages. Before its destruction by an \*earthquake in 977, Siraf was a flourishing port engaged in commerce with

lower \*Mesopotamia (\*Basra), East Africa, \*India, and \*China. DTP

**Sirmio** See DESENZANO.

**Sirmio** (mod. Sirmione) Extensive promontory at the south end of Lake Garda, north \*Italy. Sirmione harboured many grand Roman \*villas. By c. AD 400 the promontory was militarized, with a curtain wall that survives in part; the site probably accommodated a Late Roman \*fleet command. In the \*Lombard period Sirmione was a *castrum* and head of a military district; contemporary \*burials and later religious foundations have been excavated. NJC

G. P. Brogiolo, S. Lusuardi Siena, and P. Sesino, eds., *Ricerche su Sirmione Longobarda* (Ricerche di Archeologia Altomedievale e Medievale 16, 1989).

**Sirmium** (mod. Sremska Mitrovica, Serbia) Flavian *colonia* and from the \*Tetrarchy onwards capital of the \*province of \*Pannonia Secunda and of the \*Dioecesis-Pannoniae (seven \*provinces in the \*Verona List) later \*Illyricum.

In 272, the \*Emperor \*Probus was killed at Sirmium, his birthplace (Aurelius \*Victor 37, 4), and the parents of the future \*Tetrarch \*Maximian were in trade there (*Epitome de Caesaribus* 40, 10). The \*city was a Tetrarchic imperial residence and later headquarters of the \*Praefectus Praetorio of \*Illyricum. There were imperial factories for both \*arms (*fabricae*) and clothing (*gynaeceum*) (*Not. Dig.* [occ.] IX, 14–16; XI, 45), a base for the river \*fleet, and a \*mint, opened briefly between 320 and 326 and again in 351 for approximately fifteen years. It later served sporadically as an \*Ostrogothic mint. In the Middle Ages Sirmium was called Civitas Sancti Demetrii.

An imperial \*palace was built under the \*Tetrarchy and used until \*Theodosius I, who was proclaimed \*Augustus there in 379. Excavations since 1957 have revealed remains of the palace and a \*circus, where \*Ammianus Marcellinus says \*Julian staged chariot races in 361 (XXI, 10, 2). Ammianus (XXIX, 6) also

mentions the rebuilding of the Sirmium fortifications under the Praefectus Praetorio \*Petronius Probus in 373 for defence against the \*Sarmatians and \*Quadi. The palace–hippodrome complex, similar in plan to those of \*Constantinople and \*Thessalonica, covered c.20 ha (about 50 acres), with remains of residential and storage areas and \*baths. Their decorations included floor and wall \*mosaics and sculpture in Carrara and Pentelic \*marble and red Aswan \*porphyry (Jeremić). Only limited and salvage excavation is possible, since the modern city overlies the ancient remains.

Four councils of the \*Church held at Sirmium under \*Constantius II debated the nature of the Trinity; the fourth of these, in 358, endorsed the \*Homoean compromise. Eight \*bishops of Sirmium are reliably attested in church councils and papal letters. Those of the 4th century favoured non-Nicene theologies, but in 376 \*Ambrose of \*Milan visited Sirmium to consecrate the Nicene Anemius (\*Paulinus, *VAmbrosii* 11).

Sirmian \*martyrs are known only from legendary \*passions and \*martyrologies. \*Inscriptions provide evidence for the cults of Ss. Irenaeus (*BHL* 4466; cf. *BHG* 448–51) and Synerotas (*BHL* 7595; *CIL* III, 10232–3). The martyrs Ss. Anastasia (feast day 25 December) and \*Demetrius were also associated with Sirmium (Delehay, *Origines*, 256–7).

The archbishopric was removed to \*Iustiniana Prima in 535. The Empire recovered Sirmium from the \*Gepids in 567, and \*Hierocles still lists it as one of two cities in Pannonia, but the \*Avars captured Sirmium in 581/2 (\*Menander Protector, fr. 60; \*Theophylact Simocatta, I, 3, 3–4). IDS; RRD

### **Sirmondian Constitutions (*Collectio Sirmondiana*)**

A collection of eighteen Roman imperial constitutions passed between AD 333 and 425 dealing with \*bishop's courts (*episcopalis audientia*: 1, 17, 18), \*heresies (4, 6, 12), \*Easter pardons (7, 8), and privileges of the laity (4, 13, 16) and the clergy (2, 3, 6, 9–11, 13–15). The purpose of making the collection seems to have been to strengthen the position of the Church in the Germanic kingdoms. Transmitted in full in only one manuscript, it was first published by the Jesuit scholar Jacques Sirmond (Sirmondius) in 1631. Its

initial compilation occurred probably around the mid-5th century, and certainly somewhere between the publication of the \**Theodosian Code* in 438 and the last half of the 6th century. The core of the collection consists of 16 constitutions, 12 of which are contained in different versions in the *Theodosian Code*, and may pre-date the latter's publication. Since constitutions 17 and 18 are taken directly from the *Theodosian Code*, they may have been added after 438.

**Sisauronon** (mod. Serwan, Turkey) Persian fortress, east of \*Nisibis, located at the edge of the north Syrian plain in \*Beth 'Arabaye. \*Belisarius captured Bleschames and 800 horsemen there in 541 (\*Procopius, *Persian*, II, 19, 24; *Aed.* II, 4, 8–9). It was captured again in 589 by \*Comentiolus. The Roman fortress of \*Rhabdion stands on the escarpment 6.5 km (4 miles) to the north-west.

JCr

Sinclair, *Eastern Turkey*, vol. 3, 350–1.

**Siscia** (mod. Sisak, Croatia) Important \*city of \*Pannonia Superior, commanding crossings of the River Sava, and from the \*Tetrarchy onwards the capital of Pannonia \*Savia. The surrounding area had \*silver and \*iron \*mines. The \*mint of Siscia (\*mint mark usually SISC) was opened during \*Gallienus' sole reign and closed under \*Valentinian II. The \**Notitia Dignitatum* records the presence of a Thesaurus, a government goods depot run by the Sacrae \*Largitiones. Siscia's strategic location involved it in civil wars, including in 388 the initial victory of \*Theodosius I over troops of \*Magnus Maximus (*PanLat* II (XII), 34).

S. Quirinus, \*Bishop of Siscia, was \*martyred by drowning during the Great Persecution (\*Jerome, *Chron.* 313e); \*Prudentius places his cult at Siscia, his epic *Passion* places it at \*Savaria. Later, bishops of Siscia were involved in the 4th-century debates concerning the Nature of Christ. The Councils of \*Salona in 530 and 535 show that the bishop was then subject to the metropolitan authority of Salona.

\*Pottery and \*glass kilns have been found, and metal production is attested. The modern city centre lies over the Roman city, but some excavation has been undertaken.

**Sisebut** \*Visigothic King and astronomical poet (r.612–21).

Few substantive biographical details survive about this extraordinary Visigothic king. He exemplifies a Germanic ruler intent on promoting \*Latin literary culture in \*Spain, considering himself a political and cultural heir of the Roman Empire.

Sisebut nurtured a close relationship with the most celebrated churchman of the Visigothic era, \*Isidore of \*Seville. Isidore dedicated to Sisebut his *De Natura Rerum* and the king reciprocated with a 61-line poetic epistle on \*eclipses. This stylized work reveals considerable knowledge of classical poets such as Lucretius and Manilius, and the ability to compose in a highly polished style. Another work attributed to the learned king is a \*saint's life of S. Desiderius, \*Bishop of \*Vienne, martyred in 607 by two \*Frankish rulers (*BHL* 2148). A number of \*letters bearing his name are also extant (*CPL* 1299) further revealing the sophistication of his writing.

His attempts to dislodge the Byzantines from south-west Spain by military means met with modest success. Under his direction, the future King \*Suinthila conquered the Ruccones. Sisebut attempted to force \*Jews to \*conversion by promulgating harsh laws (\**Book of Judges*, XII, 2, 13–14). The measures were opposed by \*Isidore of \*Seville supported by many \*bishops. AF

**Sistan** See SAGASTAN.

**Sitifis** (mod. Sétif, Algeria) Principal \*city of  
\*Mauretania Sitifensis, 38 km (26 miles) south-west  
of \*Cuicul. The amphitheatre and \*temple of Cybele  
were rebuilt under the \*Tetrarchy. The town expanded  
to the north-west in 355/78. Facilities for baking for  
the \*annona were restored in 383/92. Other 4th-century  
buildings included a large \*circus and \*city walls. Bar-  
barians kidnapped a nun nearby before 409 (\*August-  
ine, *ep.* 111, 7). In 419 Augustine claimed that 2,000  
people sought \*baptism after an \*earthquake at Sitifis  
(*Sermon*, 19, 6 CCSL 41, p. 258). A fort was built over  
the city centre in 539/44. \*Bishops are known in 525  
and into the 9th century. GMS

Lepelley, *Cités*, vol. 2, 497–503.

Mesnage, *Afrique chrétienne*, 367–68.

Pringle, *Byzantine Africa*, 227–9.

**Sittas** Brother-in-law of the \*Empress \*Theodora, he  
served with distinction on the eastern \*frontier. He was  
\*Magister Utriusque Militiae praesentalis from 530 to  
538 when he was killed in action in \*Armenia. PNB  
PLRE III B, Sittas 1.

**Sivec** (FYROM) A white dolomitic \*marble \*quarry  
near Prilep in \*Macedonia Secunda that supplied the best  
local workshops of the \*Balkan Mountains from the  
Roman period onwards. Late Antique carvings, for  
example at the Episcopal \*Basilica in \*Stobi, are similar  
to products from the imperial quarries at \*Docimium and  
\*Proconnesus, and it may be that Sivec at that time func-  
tioned as a \*Balkan branch of the same organization.

**Skedemosse** Wetland on Öland, south Sweden,  
with large deposits of objects and animal and human  
skeletons, dating mainly from the Roman Iron Age into  
the Late Viking Age.

The finds consist of \*gold ornaments, personal adornments, \*weapons and horse \*harness, and a few tools from daily life. The remains of about 40 humans have been found, as well as animal bones—mainly of \*horses, but also of \*sheep, \*goats, \*cattle, \*swine, \*dogs, and wild animal species. \*Cats, hens, \*fish, \*birds of prey, and roe \*deer were also found in smaller quantities.

The horses (of which the greatest concentration comes from AD 200–400) are thought to have been sacrificed to provide ritual meals after ritual races. Such races were called *skeið* and the name Skedemosse may derive from this word. Some of the human bones indicate violent deaths: one complete human skeleton has an iron knife stuck between its ribs.

The Skeireins Project maintains a website with text, translations, and bibliography at <<http://www.gotica.de/skeireins>>.

**Skourta plain** The highest (532 m, 1,755 feet) mountain plateau in the Kithairon-Parnes range that marks the border between Attica and Boeotia in \*Greece. The Skourta plain provided a pastoral landscape for provisioning \*Athens with meat and dairy products, and is traversed by the primary pre-modern route between Athens and \*Thebes of Boeotia. To the south it is divided from the plain of \*Eleusis by a range of low peaks dominated by the commanding Panakton; to the north it is bordered by the Asopos gorge. Archaeology suggests that after it was depopulated in the Roman period, dispersed settlements appeared again in the 4th century, dated by \*coinage. The absence of habitation in the Skourta plain from the late 6th century onwards is ascribed to \*Slav incursions.

**sky** In Late Antiquity the sky was conceived of as an immense sphere rotating around an axis running through the centre of the cosmos which was occupied by a second sphere, the earth. Planetary spheres were arranged outward the stationary earth with the stars fixed to the outer surface. The intersection of the sky rotation axis with the stars defined the celestial poles. The celestial bodies moved attached on an invisible cycle (epicycle), which, in turn, moved along a larger cycle (deferent).

The beauty and regularity of the heavens fascinated Late Antiquity. \*Origen argued that the stars were rational beings who served humanity (PG 98, 3: 81–5). Glittering starry and cloudy skies decorated the \*apses and ceilings of churches, as in S. Pudenziana, \*Rome (c.390) and the building known as the Mausoleum of \*Galla Placidia (c.450), the Chapel of S. Andrew, the Archbishop's Palace (5th/6th cent.) and S. Apollinare in Classe (6th cent.), all at \*Ravenna. The heavens, a garden of delightful reward for followers of \*Islam, was the 'House of Song' for the Persians, the place of heavenly \*liturgies and divine experience for the Christians.

**slave mode of production** The category 'mode of production' is of Marxist derivation and has been influential in the tradition of historical materialism. In Marx's own writings, the term is already ambivalent. It can refer both to the technical aspects of the production process and to the various social systems or time periods characterized by a certain production process. Thus, history could be conceived of as a succession of different modes of production. It was a particularly important conceptual tool which has allowed historicists like Marx to describe the logic of pre-modern economic systems as somehow fundamentally distinct from modern capitalism (conceived as an economic system dominated by wage labour).

For Marx, classical societies were based on the slave mode of production. He conceived of this mode as a form of communal property ownership, which permitted the emergence of \*cities. Warfare was the engine of this system, as the supply of labour depended on the constant influx of new captives. This, for Marx, described an inherent limit on the slave mode, which was always doomed to dissipate because of its own contradictions.

In much Marxist-inspired historiography, Late Antiquity has been considered a transitional phase between slave and \*feudal modes of production. Most

influentially, neo-Marxists have emphasized the mechanisms of surplus extraction to distinguish between plantation \*slavery (equated with the slave mode) and dependent tenancy (considered as feudal or feudalizing), in which labourers are permitted some autonomy over production. For some scholars this has meant that the slave mode of production did not exist in Late Antiquity, despite the presence of legal slaves. KH

**slavery, Arab and Islamic** Slavery would have been familiar to pre-Islamic Arabians of the \*Hijaz, though actual slave ownership would not have been common. While the majority of these slaves came from \*Ethiopia, \*Muhammad's entourage also contained former slaves from the \*Persian Empire and the Roman Empire including \*Egypt. The tribes of the Hijaz could also export captives taken as a result of inter-tribal warfare when they were not ransomed back to their families or married into the captor group.

The \*Qur'an exhorts the good believer to treat his or her slaves with kindness (Q. 4: 36) and indicates that they should be considered as members of the family (e.g. Q. 24: 31). \*Manumission is also seen as a charitable act (Q. 90: 12–20). The \*Arab conquests, described in al-\*Baladhuri's *Futūḥ al-Buldan*, brought the Muslim elites huge numbers of slaves who were typically used to demonstrate wealth, to perform household tasks, or taken as concubines. The children of the concubine unions were treated as free and by the middle of the 8th century were coming to dominate the highest levels of the Muslim polity. There was also limited agricultural slavery. MJRo

*EI* 2 vol. 1 (1960) s.v. 'abd (R. Brunschvig).

**slavery, Roman and post-Roman** The Mediterranean societies of Late Antiquity inherited an extensive and internally complex slave system from the High Roman Empire. Late Roman society was dominated by Roman legal institutions, which drew a clear line between free men and slaves. Although some have argued that these distinctions were blurred by the institution of the status of \**colonus* (peasants with legally restricted movements and economic choices), there are compelling reasons to accept that the legal basis of slave status remained a powerful institutional force throughout Roman territories.

Slavery was most important in \*cities and in rural areas close to Mediterranean markets or sea-lanes. The number of slaves is unknown, but estimates in the order

of 10% of the overall population have been recently defended. Slaves were recruited from across imperial \*frontiers, from within the Empire (through kidnapping, child sale, and child exposure), and from birth to slave mothers. Slave labour was deployed in a range of operations, from domestic service and \*farming to highly skilled business occupations.

Most controversial has been the question of agricultural slavery's significance and extent. It is highly debated whether Late Roman slavery was continuous with the expansive plantation system of the Late Republic and Early Empire; the evidence is ambiguous, allowing for multiple interpretations, but clearly slave labour was of significance in the production of agricultural commodities.

### Experience

Slave experience varied considerably. As in all slave systems, the extraction of slave labour was founded on violence, whether actual or potential. Older arguments that religious change effected milder treatment of slaves fly in the face of extensive evidence for the domination of slaves by physical force. Domestic slaves were subjected to close surveillance, especially in smaller \*households. Agricultural slaves probably experienced a mixture of extreme violence and space to pursue private relationships. Masters had incentives to extract labour in the most efficient way, which meant that positive rewards, such as \*manumission or the ownership of their own property, were used, especially for skilled slaves. Slaves resisted their status in various ways, and they found methods of leverage to make the best of their condition. Slave flight was a common concern, and slaves were an unstable element in the social landscape.

Christians expressed considerable anxiety about the sexual abuse of slaves, a practice which was both widespread and effectively institutionalized in Roman society (e.g. \*Lactantius, *Inst.* VI, 23, 23). Here, if anywhere, religious change may have had social effects. The \*Bible already pointed towards an accommodation with the slave system in general, commanding obedience from slaves, but it is noteworthy that the Christian theologian \*Gregory of \*Nyssa produced one of history's first unequivocal critiques of slavery as inherently unjust.

### Change

Few have contested that the Roman Empire in the 'long 4th century' was, to use M. Finley's terminology, a genuine slave society. Slaves appear in households and on \*estates, in East and West. Even if the evidence for slavery is concentrated in the coastal regions of the Empire, it is apparent that some slavery was practised in more peripheral areas. In the 5th and 6th centuries, however, patterns of enslavement began to change.

In the West, persistent instability undermined the most advanced sectors of the economy, where slavery was most important. The production of commodities for urban markets, and the existence of large numbers of urban consumers, both declined, and with them the slave system. Nevertheless, slavery would never completely disappear in the post-Roman West, nor were slaves simply assimilated with \*tenants to form a class of serfs. The decline of slavery was only partial, but it was significant. In the East, slavery was of some importance in the legal reforms of \*Justinian I, but slaves are rarely mentioned in the \*papyri. Slaves seem to have played a very marginal role in the \*village-based regions which were the economic powerhouse of the Late Roman East. Domestic slavery in the households of the Eastern \*aristocracy may have been the most enduring part of the ancient slave system, acting as a bridge to medieval slavery. The medieval slave systems were confined largely to the exploitation of female domestics, with important exceptions in the Islamic world, which was destined to become the centre of the slave trade. **slave trade** The Late Antique slave trade descended directly from the slave trade of the High Empire, a complex and professionalized operation which connected the supply of slaves with the market demand for slave labour. It was supplied by the offspring of slaves, by the capture or importation of 'barbarian' slaves, and by internal sources such as kidnapping and child exposure. The slave trade drew on all three sources, and the evidence suggests that \*merchants even organized slave raids across Roman \*frontiers. \*Augustine harrowingly evokes the operations of slave traders who attacked a Roman \*province (*ep.* 10\*). Observers regularly assumed that slaves could be

found for sale at auction in Late Antique \*cities, and slave-dealers were a recognizable element of Late Roman society. Although specialized slave merchants certainly existed throughout Late Antiquity in the eastern Mediterranean, by the 6th century there are indications that the slave trade was transformed or radically reduced in the West, which gradually became a net exporter of slaves in the Early Middle Ages. KH

K. Harper, *Slavery in the Late Roman World, AD 275–425* (2011), ch. 2.

**Slavs** An ethnic term applied to several tribes whose origins and mutual relationship are widely disputed. Traditional scholarship depicts the Slavs as sharing a common ancestor and language belonging to the Indo-European family. In Late Antiquity, two independent tribes, the Sclavenes (the term from which scholars have derived 'Slavs') and the \*Antes, are thought to have emerged as the largest and most representative Slavic groups. Scholars, basing their claims largely on the 6th-century historian \*Jordanes, have conventionally placed the Sclavenes in Central Europe with territories presumably extended as far as the Vistula to the north. The Antes therefore lived as neighbours to the Sclavenes, between the rivers Dniester and Dnieper. One dominant scholarly theory has postulated that the Venethi (Venedi), mentioned by \*Pliny the Elder, Tacitus, \*Ptolemy, the Peutinger Map, and also by Jordanes, were the primordial ancestors of the Slavic tribes. The ancient Venethi eventually split, and for reasons much debated in modern scholarship, their 6th- and 7th-century Slavic offspring presumably abandoned their original homeland in Central Europe and moved south into Roman territories. By c.700, various Slavic groups occupied most of the \*Balkans, settling deep into southern \*Greece, as indicated by the \**Chronicle of Monemvasia*.

More recent scholarship has drawn attention to serious contradictions in the textual record and has questioned the previous account of the origin of the Slavs. Largely on the basis of archaeological data, it has re-evaluated the nature of Slavic occupation of Roman territories. Instead of a common ancestry in Antiquity and a massive Slavic migration from Central Europe into imperial \*provinces to the south, the new reconstruction proposes that Slavic group identity emerged in the 6th century as a political and cultural consequence of the grand defence system initiated by the \*Emperor \*Justinian I (r. 527–65) on the Danube \*frontier. This reconstruction points out that no texts earlier than Justinian specifically mention Slavic tribes, and it maintains that the emperor's development of a network of forts (listed in \*Procopius, *Aed.*) in the northern Balkans brought the neighbouring tribes onto the immediate

horizon of Roman writers, who lumped together various tribes, misunderstanding or disregarding their actual origins or mutual relationships and thereby inventing a common identity for Balkan tribes. Thus, the imposed Roman terms 'Sclavenes' and 'Antes' have obscured the actual social and cultural complexity significantly enough to render impossible any large-scale political and social unification of the tribes. The first native source to adopt the ethnonym 'Slavs' is in fact the 12th-century *Russian Primary Chronicle*.

Both traditional and revisionist views derive their arguments primarily from fragmentary evidence found in Roman authors such as \*Menander Protector, the \**Strategicon* of \*Maurice, and \*Theophylact Simocatta. After the Sclavenes' participation together with the \*Avars and the Persians in the important siege of \*Constantinople in 626, \*George of Pisidia, \*Theodore Syncellus, and the author of the \**Chronicon Paschale* also wrote about them. At the same time the Slavs drew the attention of \*Fredegar, who produced the first independent Western account of events involving them. However, it is important to note that Fredegar did not refer to 'Sclavenes' or 'Antes', but called the tribes 'Wends'. There are no sources referring to putative 'Slavs' later than Book II of the *Miracles of S. Demetrius* (c.690).

Given the nature of the extant evidence, the identity of the early Slavs is hard to reconstruct, but the 6th and 7th centuries clearly marked a critical period of both tribal consolidation and Roman cultural identification of various groups in the Balkans. It appears that, like their contemporaries the \*Lombards, \*Gepids, and Avars, the 'Sclavenes' and the 'Antes' had distinct customs and sufficient political organization to merit the Romans giving them a specific cultural designation. The ethnonyms 'Sclavenes', 'Antes', and 'Slavs' are generally used interchangeably and are taken to reflect long-lasting and culturally related tribal groups, yet the actual relationship between them remains nebulous.

Aside from questions concerning the origin and common culture of the Slavs, historians have considered the nature of Slavic settlement and impact in the Balkans between c.600 and c.800. Recent scholarship maintains that there was never a massive and sudden invasion of Slavs or Avars into Balkan territories. Instead, it is believed that local tribes settled there largely due to a demographic contraction in the imperial provinces. It is certain that most of the Balkans were effectively lost to the Empire. In the 610s, a Slavic settlement surrounded \*Thessalonica (whose patron saint was S. \*Demetrius). By the late 7th century, Slavs had occupied \*Thessaly, and Slavic \*pirates in their \**monoxyls* recurrently raided the coast of \*Thrace and reached as far as the island of \*Proconnesus in the Sea of \*Marmara.

Although the Balkans were largely taken over, some important \*cities remained under Roman control. In

662, \*Athens was still part of the Roman state, and the city's \*bishop participated in the Sixth Œcumenical \*Council of the Church (681). \*Justinian II began serious attempts to re-establish control over the \*Via Egnatia and \*Via Militaris. Additionally, the newly created \*Theme of \*Thrace to the north and the creation of the Theme of \*Hellas in the late 7th century indicate attempts at political restoration. Overall imperial control of the Balkans, however, remained minimal and the consequences of Late Antique political changes were long-lasting. ABA

**social distinctions** Late Antique society was formally stratified, its hierarchy grounded in Roman \*law. The all-important distinction between slave and free remained fundamental; slaves were property, deprived of access to social honour. Roman citizenship marked another important distinction, even after the Antonine Constitution of 211 had accorded Roman citizenship to all free adult men. The distinction between \**honestiores* and \**humiliores* became important.

\*Aristocracies were finely graded and fiercely competitive over rank. \*Constantine I accelerated the decline of the equestrian order and the inflation of the senatorial order; over the next generations, new distinctions were created within the senatorial order itself. Civilian and military elements competed for precedence, in a social order where the imperial family was at the pinnacle. In the 4th century, however, social mobility was possible, particularly for the rhetorically educated, as is demonstrated by the career of \*Ausonius and the aspirations of

the young \*Augustine before his \*conversion. Young provincials in the Greek East had similar ambitions in the 5th century, if the intended career of \*John Lydus among the *noblesse de robe* which made up the \*Senate of \*Constantinople is any indication.

Social distinctions were reinforced by \*dress, behaviour, \*ceremony, and other conventions. A \*philosopher continued to be recognizable by his beard and \**pallium*. The Christian clergy developed their own codes. More important, though, were local developments. Individual cities had always had their own hierarchies and their own notables, whether within the \*city council of a small town like \*Thagaste, or among the 'Romans of Rome' who continued to form the core of the \*Senate of \*Rome and for whom \*Symmachus the orator was 'a senator of middling wealth' (\*Olympiodorus, fr. 43, 2 Blockley). Local gradations of lesser wealth may actually be calculated from \*tax and census registers surviving from a few places around the eastern Mediterranean. KH

P. Heather, 'Senators and Senates', in *CAH* XIII (1998), 184–210.

**social mobility** By pre-modern standards, the Roman Empire was characterized by high levels of social mobility. It was long held that social mobility was greatly reduced in Late Antiquity, as the 'Dominate' (conceived as an orientalizing autocracy) sought to fend off decline by enforcing rigid rules which made occupations inheritable. This image is largely a caricature. It is true that, for fiscal reasons, various laws tried to restrain taxpayers from deserting their place of registration, their *origo*. Most notably, the state tried to enforce such rules on peasants, the basis of the so-called colonate. But these measures applied equally to others discharging public obligations, from \*ship's captains and \*actors to members of \*city councils. It is now broadly recognized that the extensive amount of material in the Late Roman law codes, especially the \**Theodosian Code*, pertaining to such rules represents the fiscal strategy of a state with limited powers rather than a truly immobile social system. Indeed what is striking about Late Antique society is the degree of upward social mobility which was possible in the \*civil service or in the clergy. The most notable examples, such as \*Augustine or \*Ausonius, reveal the career paths which might allow those with talent, in particular a rhetorical \*education, to pursue their ambitions on an imperial scale.

**Socrates** (c.380–after 439) Church historian from \*Constantinople and an adherent of the \*Novatian schism. He frequented a literary circle around \*Anthemius the \*Praefectus Praetorio and the sophist Troilus of \*Side in c.400–20 (VII, 1), where he developed contacts with the enemies of \*John Chrysostom. His *History* clearly betrays sympathy for the Novatians and for \*Origenism and an antipathy for Chrysostom. His rather irenic views about the conflicts of his time are the result of the fact that he belonged to a minority group. Contrary to earlier opinions, there is no proof that Socrates was a lawyer by training. He was the first Nicene to continue \*Eusebius' *Ecclesiastical History* in \*Greek; within a decade he would be followed by \*Sozomen and \*Theodoret. He traces events from 324 until 439 in seven books, each dedicated to the reign of an \*emperor. Written from the perspective of Nicene orthodoxy (to which the Novatians claimed to adhere as well), it is mainly the story of the struggle against \*Arianism and its theological variants after the \*Council of \*Nicaea, followed by the dispute concerning John Chrysostom. Published shortly after 439, the work displays the optimism of the middle of the reign of \*Theodosius II: the last book is explicitly \*panegyric about the emperor, in whose reign all the tensions of the past seem to have dissolved, and about the \*Patriarchs of Constantinople, in particular Atticus and \*Proclus. Socrates depicts himself as a critical historian in the classical tradition, noting, for example, that he drew on eyewitnesses and that he corrected his main source \*Rufinus after he had discovered the writings of \*Athanasius (II, 1). He is unusually explicit in providing reference to his sources. In line with Eusebius' practice, Socrates cites numerous documents, which he normally obtained through pre-existing collections. Besides Athanasius, the most important of these was the *Synagoge* of Sabinus of Heraclea, a Homoeousian. As a result, Socrates is very well informed on the development of this branch of Arianism. For secular events and for the chronological framework, he used several chronicles and \*consularia, besides the standard reference work of \*Eutropius. Socrates was not just well read in Christian literature but also well informed about contemporary secular literature, using works of \*Julian and \*Libanius and several (now lost) \*epic poems produced in Constantinople. For his last book, numerous unknown sources need to be postulated; one remarks a particular, albeit partial,

interest in contemporary \*Judaism. Socrates sees his narrative as relating the strife that interrupted the peace established by \*Constantine I, a peace that he considers to be returning towards the end of his *History*. He includes much information on secular affairs, on the ground that church and state events are connected through 'a form of sympathy' (V, praef.). Indeed, in contrast with other church historians, such as his successor Sozomen, Socrates does not emphasize the Church as the driving force of history. Rather, both Church and state have been disrupted by human sins. Socrates' *History* had an extensive afterlife. Having become by the 6th century one of the canonical treatments of the period, it was epitomized, together with Sozomen and Theodoret, in \*Greek by \*Theodore Lector and in \*Latin by \*Cassiodorus/\*Epiphanius (the so-called \**Historia Tripartita*). An early translation and a later abbreviated redaction exist in \*Armenian, whilst fragments of a \*Syriac translation also survive. PVN PLRE II, Socrates 2.

**Sogdiana (Sughd, Sogdia)** Traditional homeland of the \*Sogdians in \*Transoxiana. Narrowly defined, it comprises the Zarafshan and Qashqadarya river valleys, more broadly all territory between the \*Oxus and \*Jaxartes rivers. Important Sogdian cities included \*Bukhara, \*Samarkand, Nasaf, \*Kish, and \*Panjikent. Previously ruled by the Achaemenids, Seleucids, Graeco-Bactrians, and Kangju, Sogdiana emerged as an independent kingdom during the Chinese Han dynasty. The arrival of \*Huns (\*Chionites, \*Kidarites,

\*Hephthalites) c.350 politically disrupted Sogdiana, but the agricultural economy and population grew in the 5th–6th centuries.

Sogdian commercial and cultural influence extended into \*China by the 3rd century and Sogdian territory included \*Chach (Tashkent) by the 5th century. The network of Sogdian \*trade colonies that developed along the \*Silk Road (\*Talas, Suyab, Kucha, \*Turfan, Gansu, Luoyang, and many others) lasted until the 8th century. Sogdiana came under the nominal suzerainty of the western \*Türks (560), Chinese (657), and \*Türgesh (720), although rulers of the Sogdian city states continued to hold power until the \*Arab conquest.

A local form of \*Zoroastrianism was the primary religion, with some Christians also present; the \*Sogdian language and script were widely used. After early raids on Bukhara and Samarkand (674–81), the \*Arab conquest began in earnest under \*Qutayba b. Muslim, resulting in the capture of Bukhara in 705, Samarkand in 712, and Mount \*Mugh in 722 (al-\*Baladhuri, *Futūh al-Buldān*, II, 171–6, 186–90). Although Sogdian resistance to the Arabs continued for decades, Islamization was complete by the 9th century. Sogdiana supplied many troops to the \*Abbasid caliphal armies (al-Baladhuri II, 205; al-\*Yaqubi, 28, 31). Other Arabic and Persian accounts are given by Ibn Khurdadhibi (19–20), al-Yaqubi (109–11), *Hudud al-Alam* (112–13) and al-\*Muqaddasi (240–2, 248–51).

**Sogdian language and literature** Eastern Middle Iranian language spoken in \*Sogdiana up to the \*Arab conquest (8th cent.), after which it was gradually replaced by New \*Persian. Due to Sogdiana's location and Sogdian commercial activity, the language functioned as the *lingua franca* of the \*Silk Road for centuries, particularly in Sogdian \*trade colonies in \*China. The Sogdians played a key part as cultural and religious mediators for the \*Türks and Mongols, from the 6th-century Turkic–Byzantine diplomatic exchanges between the Türks and the Eastern Roman Empire (\*Menander Protector, fr. 10, 1–3) to the later adaptation of the Sogdian alphabet to write \*Uighur and, by extension, Mongolian (9th and 13th cents.). Sogdian was written in the native Sogdian script (descended from Aramaic and used for both secular and religious texts), as well as the \*Manichaean scripts for Christian and Manichaean texts, respectively; minor phonological differences exist between the three scripts. One Sogdian text from \*Turfan was also written in Brahmi script.

Prior to 20th-century archaeological discoveries, the main references to the Sogdian language occurred in the 11th-century \*Arabic author al-Biruni (56–7, 82, 220–2). The earliest Sogdian texts are the Kultobe inscriptions (3rd cent. or earlier), followed by the Sogdian Ancient Letters (early 4th cent.), which give invaluable insights into Sogdian commercial activity in China. These earlier texts use an older form of Sogdian script incorporating Aramaic-based ideograms. Sogdian coins (2nd–8th cents.) provide important data on pre-Islamic Sogdian rulers, while the Mount \*Mugh documents (early 8th cent.) illuminate the Sogdian political situation during the \*Arab conquest. Sogdian graffiti along the Upper Indus (4th–6th cents.) and in Ladakh (9th cent.) further show that traders continued to use the language after the conquest. Many Sogdian \*Buddhist, Christian, and Manichaean texts found in \*Dunhuang and \*Turfan (8th–11th cents.) testify to the central role of Sogdian in transmitting these three religions throughout \*Central Asia, even after the Arab conquest.

**Sogdian religion** The indigenous religion of the \*Sogdians was a local form of \*Zoroastrianism with a pantheon of deities, including the Babylonian goddess Nana, and thus distinct from orthodox \*Sasanian Zoroastrianism, where Ahura Mazda (\*Ohrmazd) predominated. Religious art was influenced by Hellenistic, Mesopotamian, and Indian iconography and murals from \*Panjikent give evidence of localized \*Mithra-worship and a Sogdian funerary cult. Like Persian Zoroastrians, Sogdians utilized ossuaries for burials, but \*fire-altars were much less common than in orthodox Zoroastrianism.

Due to Sogdiana's location on \*trade routes connecting both the \*Persian Empire and \*India with \*China, Christianity, \*Manichaeism, and \*Buddhism became established in urban Sogdian culture by the 6th century. Thereafter, in the course of their trading activities along the \*Silk Road, the Sogdians were active in spreading Christianity and Manichaeism throughout \*Central Asia and China; Buddhism was less popular in \*Sogdiana proper, but was adopted by many Sogdians in China, especially in \*Turfan and \*Dunhuang. However, Sogdian tolerance of religious diversity and concern for maintaining trade relationships resulted in a generally pragmatic approach to all religions.

The 8th-century \*Arab conquest of Sogdiana facilitated the Islamization of the Sogdians, largely completed by the 9th century, although smaller Christian and Manichaean communities continued for some time in larger cities like \*Samarkand. Sogdian Buddhist,

Christian, and Manichaean texts from Turfan and Dunhuang illustrate the importance of these religions to expatriate Sogdians. The *Fihrist* discusses the religion of Sogdia (32–3, 801–3, 824). MLD

**Sogdians** Inhabitants of \*Sogdiana (Sughd), mentioned by Strabo (XI, 11, 2–4) and \*Ptolemy (VI, 12). Although previously under Achaemenid, Seleucid, Graeco-Bactrian, and nomadic (Saka?) Kangju rule, a more distinct Sogdian culture, typified by agriculture, commercial \*trade, and use of the Sogdian script, emerged during the 1st–3rd centuries. Increased irrigation, urbanization, and the development of literature, art, and architecture, coupled with continued expansion of trade networks (northward into \*Chach and the steppes, eastward into \*China), resulted in Sogdian cultural and economic flourishing during the 4th–6th centuries.

After the \*Türks and \*Sasanians defeated the \*Hephthalites c.560, Sogdiana came under nominal Turkic political control, resulting in increased Sogdian cultural influence on the Türks and joint Turco-Sogdian control of much of the \*Silk Road trade, as demonstrated by \*Menander Protector's story of \*Zemarchus (fr. 10, 1–5). With the Chinese defeat of the eastern and western Türks (630, 659), Sogdian trade once again came under Chinese protection. The \*Sogdian language functioned as a *lingua franca* along the Silk Road, Sogdian colonies were found throughout northern China, and Sogdian religious ideas spread to Türks, Chinese, and others. In Sogdiana, cities like \*Bukhara, \*Samarkand, and \*Panjikant had their own rulers, ambassadors, and coinage. Sogdian society consisted of nobles, wealthy \*merchants, warriors, craftsmen, traders, and farmers.

The \*Arab conquest of \*Central Asia (completed by the mid-8th cent.), coupled with the political turmoil of the An Lushan rebellion in China (755) disrupted the Sogdian trade network and changed Sogdian culture irreversibly. Once Sogdiana was pacified, local leaders cooperated politically with the \*Arabs, and Sogdian soldiers entered the \*ʿAbbasid caliphal armies. As \*Islam replaced the previous religious diversity (by the 9th cent.) and New Persian replaced the Sogdian language (by the 10th cent.), Sogdian identity was gradually absorbed into the Muslim Persian world in Sogdiana proper, with expatriate Sogdians eventually assimilating to Chinese or \*Uighur Turkic culture. **Sogdian tombs in China** By the 4th century there were \*Sogdian communities along the \*trade routes into \*China. Tombs dating from the 6th to the 8th centuries have been discovered.

The Sogdians were \*Zoroastrians, whose practices for disposal of the \*dead involved exposure on towers of silence to prevent bodily fluids defiling the earth. The clean bones were placed in ossuaries (see *ASTODAN*). Ossuaries discovered in north-west China suggest the continuation of traditional practices.

In central China, however, local practices were followed. A sloping passageway led to an underground tomb chamber. The earliest contain a stone funerary couch or house-shaped sarcophagus, decorated with carved or painted scenes. They show Zoroastrian, \*Buddhist, \*Manichaean, and Hindu themes. The coffin was placed on a narrow platform, protected from the earth by a stone slab. SWH

P. Wertmann, *Sogdians in China: Archaeological and Art Historical Analyses of Tombs and Texts from the 3rd to the 10th century AD* (2015).

**sogitha (plur. *sogyata*)** Form of \*Syriac poetry consisting of short stanzas, documented from the 5th century onwards. *Sogyata* often take the form of \*dialogues between two persons, and some are \*acrostic. References to *sogyata* are found in the \**Liber Graduum* (4th cent.) and \*Joshua the \*Stylite (6th cent.). In later Syriac manuscripts many poems carry this designation and are provided with melodies. Various metrical schemes have been proposed to define the *sogitha* within the wider genre of \**madrasha* ('hymn' or 'teaching song'), including particular syllable counts (such as 4+4 or 7+7) per distich, or a specific number of distichs (such as two or three) per stanza, but none of these schemes accounts for all cases. The term may therefore have originally designated popular secular songs, and later been applied to various metrical compositions, popular, theological, and liturgical. JWW

**solidi, lightweight** Coins produced from the time of \*Justinian I onwards (\*Procopius, *Anecd.* 22, 36–8), at \*Constantinople weighing less than the 24 \*carats of standard \*solidi, and at \*Thessalonica and \*Ravenna weighing 20 or 22 carats. Later, from the reign of the \*Emperor \*Maurice, they were also minted weighing 23 carats. Few were produced and the actual weight was always indicated on the coin itself.

The introduction of lightweight *solidi* has been explained in various ways. The intention may have been to save expenditure on \*tributes paid to barbarians, or for use in international \*trade, as lightweight *solidi* would fit better with Germanic standards of weight. Equally they may have been meant to ease exchange within the Empire because of changes in the \*gold to \*bronze ratio, or simply to save on the cost of gifts and distributions. FC

F. Carlà, *L'oro nella tarda antichità: aspetti economici e sociali* (2009).

W. Hahn, 'Zur Frage der reduzierten Solidi unter Justinian I', *Geldgeschichtliche Nachrichten* 24 (1989), 164–7.

**solidi gallici** \*Majorian's \*Novel 7.14 (of 6 November 458) mentions as *solidi gallici* \*gold coins which, even though of full weight, must be accepted at a lower value and not be completely rejected, because of a lesser purity in gold content. The identification of such coins presents serious difficulties. The most convincing hypothesis connects them to a series of \*solidi which bear as mark first a small crown and the \*mint mark RA; these were minted in the names of \*Valentinian III, \*Majorian, and \*Libius Severus in \*Gaul, probably by a military authority under the control of the generals \*Aëtius and later \*Aegidius, and were diffused in Gaul and in \*Britain. **Solomon** (d. 544) \*Magister Militum Africae and \*Praefectus Praetorio Africae (534–6 and 539–44). Born near \*Dara, Solomon was a \*eunuch, allegedly as the result of a childhood accident. The \*Domesticus of \*Belisarius, in 533–4 Solomon commanded a unit of \*foederati in the \*Byzantine invasion of the \*Vandal kingdom in \*Africa, described in \*Procopius' *Vandalic War*. When Belisarius was recalled to \*Constantinople, Solomon remained in Africa as the region's civil and military governor. He successfully confronted a \*Moorish insurgency, but discontent within the imperial \*army led to an open military revolt under \*Stotzas that forced Solomon to flee Africa for \*Sicily. In 539, after the suppression of the mutiny, \*Justinian reinstated Solomon to civil and military command. He now purged the army of its disgruntled elements, deported the remaining Vandal population, and oversaw the fortification of Africa. This period also saw a resumption of hostilities with Moors in \*Numidia, \*Byzacena, and \*Tripolitania, in the course of which Solomon was killed near Cillium, while fighting the \*Laguatan. JPC

Pringle, *Byzantine Africa*.

**Sopater** (mid-3rd cent.–before 337) Native of \*Apamea, a \*philosopher and pupil of \*Iamblichus. In the mid-320s, Sopater frequented the \*court of \*Licinius and later that of \*Constantine I. He was said to have told Constantine that it was impossible to make up for his involvement in the deaths of his son and wife. He

was later implicated in a conspiracy formulated by the \*Praefectus Praetorio Ablabius in the early 330s and was executed, probably before Ablabius accompanied \*Constantius II to the East in 335/6. His son, also named Sopater, corresponded with \*Libanius, was a \*city councillor of \*Apamea, and entertained \*Constantius II, the \*Caesar \*Gallus, and \*Julian when they visited \*Syria.

**Sopater Rhetor** Greek teacher of \*rhetoric and author of a manual on \*declamation, who probably lived in \*Athens in the second half of the 4th century. His treatise *On the Division of Questions* gives advice on tackling a large number of \*declamation themes involving historical and fictional situations. It is particularly valuable for its analysis of the question at issue in each speech, showing stasis-theory in action, and for its presentation of often detailed advice, interspersed with sample passages, on how to organize and present the arguments.

A commentary to \*Hermogenes, whose author frequently expresses his disagreements with earlier commentators and with Hermogenes himself, is also ascribed to a Sopater, but differences in approach suggest that it was the work of another rhetorician of the same name. RW

D. Innes and M. Winterbottom, *Sopatros the Rhetor: Studies in the Text of the Diairesis zētēmatōn* (BICS 48, 1988).

**Sophia** (c.530–after 601) \*Empress and wife of \*Justin II. The \*acclamations of the people called the pair the 'two lights of the world' (\*Corippus, *In Laudem Justinini Minoris*, II, 169–73). She played a powerful role in government, and was the first empress whose image appeared alongside the \*emperor's on the \*coinage. After Justin went mad following the capture of \*Dara by the Persians in 573, she secured a one-year truce with the \*Persian Empire in 574, extended to three years, following negotiations by the \*doctor and diplomat \*Zacharias (\*Menander Protector, fr. 18, 2–4 Blockley = fr. 37–8 Müller *FHG*). She was consulted by the \*Senate before in 574 \*Tiberius II was promoted as \*Caesar and designated successor to Justin. Following Justin's death, Tiberius refused to marry her. After she initiated a plot against him, Tiberius removed her from

the \*palace, although she retained the title of Augusta. She is last mentioned in 601. RCW

**sophist** See RHETORIC AND RHETORICIANS.

**Sophronius** (c.550–638 or 639) \*Patriarch of \*Jerusalem 634–8/9, writer of \*saints' lives, \*sermons, and poems, defender of Chalcedonianism.

Two Sophronii are known at this period: Sophronius the Sophist and Sophronius the Patriarch. That they were the same man has been credibly demonstrated. Sophronius was born at \*Damascus and may have been \*bilingual. In Damascus Sophronius 'the Sophist' taught \*rhetoric: its effect can be felt in his writings. This Sophronius became a monk in \*Egypt about 580 and accompanied \*John Moschus on his travels in the eastern Mediterranean. He is mentioned often in Moschus' [*Spiritual*] *Meadow* and the work is dedicated to him. From Egypt he went to the \*Monastery of S. Theodosius near \*Bethlehem. With Moschus he spent ten years on \*Sinai. Thereafter he returned to the New Lavra in \*Judaea. In about 603, with the \*Persian invasion approaching, the pair left Palestine and eventually reached Egypt again, by way of \*Syria and \*Anatolia. Here Sophronius was cured of 'xerophthalmia' at the shrine of Ss. \*Cyrus and John at Menouthis (\*Aboukir). When the Persians captured Jerusalem in 614 Moschus and Sophronius went, it seems, to \*Constantinople. Moschus wrote up the *Meadow* in \*Rome and at his death there entrusted Sophronius with the work, and with conveying his body to Sinai for burial; but, because of the \*Arab conquest, Sophronius buried his friend in the monastery of S. Theodosius. This was either in 619 or in 634.

In about 626 Sophronius was in North \*Africa with \*Maximus the Confessor, but in 633 he was in \*Alexandria and soon in Constantinople and possibly Rome. He returned to Jerusalem, where the see had been vacant since 631, and in 634 was elected patriarch. At the \*Arab conquest it was Sophronius who surrendered Jerusalem to the \*Caliph \*Umar in 638.

Sophronius' literary output contains a narrative of the \*miracles and encomia of Ss. Cyrus and John. With Moschus he wrote a life of S. \*John the Almsgiver (lost but incorporated into the *Life* by \*Leontius of Neapolis). He also composed Anacreontic odes, \*epigrams, and idiomatic verses. His other works are homiletic and dogmatic. Several dubious and spurious works are attached to his name, including a *Life* of S. \*Mary of Egypt.

From 633 his was the main voice against the Monoenergism, favoured by Sergius, Patriarch of Constantinople,

and \*Cyrus, Patriarch of Alexandria, that later developed into \*Monothelitism. Sophronius' strong Chalcedonianism is set out in his *Synodical Letter* issued when he became patriarch. PP

**sors** In Late Roman \*law and the legislation of the Romano-Germanic kingdoms, the \*Latin word *sors* signified either a portion of an \*estate, or a share of land, or a share of the tax revenues or burdens incumbent on that land. PS

W. Goffart, *Barbarian Tides: The Migration Age and the Later Roman Empire* (2006).

**sortes biblicae (sortes sanctorum)** See MAGIC AND DIVINATION, ROMAN AND POST-ROMAN, CHRISTIAN.

**Soshans (MP Sōšāns, Avestan Saoshyant)** The future saviour, or 'revitalizer' in \*Zoroastrian \*eschatology. He was believed to be the third and last of Zarathustra's eschatological sons born at the beginning of the last trimillennium of the world's 12,000-year history. He is ultimately responsible for the final

resurrection (*rist-āxēz*) of humanity which will last for a period of 57 years (*\*Bundahishn*, 34, 7).

The sanctuary of *\*Kuh-e Khwaja* was associated with his coming, and occupied an island in Lake Hamun, whose waters were understood to preserve Zoroaster's semen for the future conception of the saviour. When he first appears, 'for thirty days and nights the sun will stand in the sky' (*Bundahishn*, 33, 34). He is described as 'victorious' and as 'the completer of the renovation through the complete propagation of the praise of the *yazdān*, and the perfect propagation of the pure religion' (*\*Dadistan-e Denig*, 1, 11; 27, 7). With his eschatological helpers he will perform a \*sacrifice and kill a mythical bull, and from its fat they will prepare the white *hōm*, an ambrosia, that they give to the recently resurrected ensuring their immortality (*Bundahishn*, 34, 23). He is often compared to the Judaeo-Christian Messiah, but there are few resemblances.

J. Beaucamp, 'Saint-Michel de Sôsthénion ou Les Argonautes et l'archange', in Caseau et al., *Mélanges Maraval*, 13–23.

**Soterichus** (fl. late 3rd cent.) Poet from *\*Oasis* in *\*Libya* whose writing embraced mythology, history, and \*panegyric. According to the *\*Suda* he produced a \*panegyric on *\*Diocletian* and a *Life* of *\*Apollonius* of *\*Tyana*. He also wrote a poem describing the sack of Thebes by Alexander the Great (the *Python* or *Alexandriacon*). It is not known whether allusion was made to Dionysus in this poem, but the god clearly held centre stage in Soterichus' four-book *Dionysiaca* or *Bassarica*. A poem on Ariadne is also likely to have touched upon the role of Dionysus. Interest in women and the theme of love suggested by the poem on Ariadne is further in evidence in Soterichus' poem on Pantheia of Babylon (the story of the tragic love between Pantheia and her husband Abradatas is told in Xenophon's *Cyropaedia*). Soterichus is known from Tzetzes (Scholia on Lycophron, *Alexander*, 486) to have produced a poem on the Calydonian Boar hunt (*Calydoniaca*). According to

*\*Stephanus of Byzantium* he produced a *patria* poem that celebrated his own city of Oasis. A fragment of a poem on Antinous also attributed to him is preserved on P.Oxy. 4352 (c. AD 298).

**South Cadbury** (Cadbury Castle, Somerset; Cadbury-Camelot) A large multivallate Iron Age hillfort in south-western *\*Britain*. Some Late Roman finds are known but it is most famous for being refortified with a stone and timber defensive rampart in the late 5th century. A large timber feasting hall was built on the summit of the hill and this structure was associated with imported Mediterranean \*pottery. The 'Dark Age' activity appears to have ended in the 6th century.

**South Etruria** Area to the north-west of *\*Rome*, between the River Tiber and the Tyrrhenian Sea, comprising c.1,000 km<sup>2</sup> (386 square miles). It was characterized in the classical period by a dense network of towns, \*villas, and farms, closely connected to Rome. Archaeological surveys and texts indicate important changes in Late Antiquity. The number of \*cities decreased, and the disappearance of public \*inscriptions, coupled with the abandonment of classical monuments, suggests that those that survived developed new functions, especially as ecclesiastical centres. Ceramic evidence indicates that the number of rural settlements increased after a drop in the 3rd century, and the classical pattern of dispersed farms and villas survived into the 5th. The presence of local \*pottery and the growth of imported \*amphorae attest to the vitality of local markets and interregional \*trade, dominated by Rome. Debate remains open over the form of exploitation of land and labour, and documents record the transfer of property to the Church, parallel with the foundation of rural parishes. The number of sites fell after the *\*Byzantine* invasion, reaching its lowest point in the 8th century. In the Middle Ages, the landscape was dominated by large papal \*estates (*domuscultae*) and hilltop settlements (*castelli*).

**Sozomen** (c.400–after 445) The church historian Salamenios Hermeias Sozomenos was born in the \*village of Bethlelea, near \*Gaza. His first name, which is the Aramaic form of his third, indicates that he came from a Semitic background, as his knowledge of \*Arabic and \*Syriac suggests. After legal studies, possibly in \*Beirut, he became a lawyer in \*Constantinople. Proud of his profession, he regularly used the *\*Theodosian Code* as a historical source. As far as we can tell, he did not reach the upper echelons of society. His *Ecclesiastical History*, dedicated to the \*Emperor \*Theodosius II, is an attempt to attract the attention of the \*court and is therefore \*panegyric about the powers-that-be at the time of publication (c.445), in particular \*Pulcheria. It is unlikely that he had any success in this aim: the last book remains unfinished and parts of the rest are unrevised. Having originally planned to write the history of the Church from its very origins, Sozomen settled for a two-book epitome of \*Eusebius (now lost) and a nine-book continuation. The history aimed at covering the same ground as \*Socrates (324–439), who was also his main source. Apart from the hope of social promotion, the reason for rewriting Socrates was a desire to surpass him by presenting a more polished literary product, correcting Socrates' sympathy for the \*Novatians, and countering his antipathy towards \*John Chrysostom. Although Nicene in his Christology, Sozomen actually includes additional information about the Novatians and had contacts among Chrysostom's admirers who allowed him access to original documents and the *Epitaphios* of John Chrysostom by Pseudo-Martyrius. Even more than Socrates, Sozomen presents himself as a historian in the classical tradition, pretending to rely primarily on personal experience, eyewitnesses, and documents. In fact, most of his sources are narrative. Besides Socrates, he consulted \*Rufinus, \*Eunapius, and \*Olympiodorus (especially in his last book), as well as Sabinus of \*Heraclaea and other collections of documents (including the so-called *\*Historia Acephala*). In addition, he drew on a wide range of Christian literature, such as \*Athanasius, the *\*Historia Monachorum*, and Jerome's *Life of S. \*Hilarion*, and classicizing texts, such as the writings of \*Libanius and \*Julian. His style is much more polished than Socrates and he quotes fewer documents, asserting that they would interrupt the flow of his narrative. Although Sozomen did not abandon imperial reigns as an organizing principle, his *History* focuses more narrowly than that of Socrates on the Church. Whereas Socrates emphasizes concord

between Church and state and the importance of peace in both, Sozomen's *History* celebrates the Christian revolution, through which the \*pagan world was converted into a Christian one, marked by the constant increase of the pious. In consequence, Sozomen tends to minimize the importance of \*heresies and to emphasize their disappearance more than their origins, and he highlights the importance of the monks as examples of piety. Unsurprisingly, the last book marks the culmination of this process. Together with Socrates and \*Theodoret, Sozomen became by the 6th century one of the canonical treatments of the period, and was epitomized in \*Greek by \*Theodore Lector and in \*Latin by \*Cassiodorus/\*Epiphanius in the so-called *\*Historia Tripartita*. **Spahbad** Military rank in the \*Persian Empire under the \*Sasanians, denoting an army commander. The earliest attestations of the term, the \*inscriptions of the 3rd century AD, do not determine the authority and functions of the rank. However, the Spahbads known from the 6th-century \*seals of the time of \*Khosrow I are assigned to the four administrative regions (MP *\*shahr*) of the late Sasanian Empire: the North, South, West, and the East. AZ

R. Gyselen, *The Four Generals of the Sasanian Empire* (2001).

## Spain

### Background

In the Iberian Peninsula, the reorganization of the Roman provincial \*administration by the \*Tetrarchy and \*Constantine I was limited to the creation of the \*Diocesis \*Hispaniae with its capital at Augusta \*Emerita (mod. Merida), newly incorporating \*Mauretania Tingitana, south of the Mediterranean and the separation of the \*provinces of \*Carthaginiensis and \*Tarraconensis. The \*Balearic Islands were the last province created, at the end of the 4th century.

The disposition of the army as inventoried in the *\*Notitia Dignitatum* is uncertain, but the *\*cities* of Spain acquired considerable fortifications: Asturica Augusta, Barcino (*\*Barcelona*), Bracara Augusta (*\*Braga*), *\*Gerunda* (mod. Girona), Lucus Augusti, and Tarraco, as well as the smaller *\*Conimbriga*, all gained circuits of walls sometime between the late 3rd and early 5th centuries.

Spanish economic prosperity relied on the *\*annona* and on *\*olive oil* export, but this declined alongside the decline of Mediterranean *\*trade*. Networks of *\*pottery* distribution in the interior became highly localized; aristocratic *\*villas* dotting the countryside, often with private chapels, began to be adapted in the 4th and 5th centuries.

### Religion

Late Roman Spain witnessed two notable religious developments. The first is the *\*heresy* of *\*Priscillian* in *\*Gallaecia* and *\*Lusitania*: after his controversial execution by the *\*usurper* *\*Magnus Maximus* c.385, an episcopal *\*council* was called at Toletum (*\*Toledo*) in 400 to tackle its aftermath, with limited success. Consentius of Minorca records efforts against Priscillianism a decade later, and it was still mentioned in the 6th century. About the same time, *\*Prudentius* of Calahorra (Calagurris in the *\*Basque country*), part of a literary network of Christian aristocrats which spanned the Pyrenees and including *\*Paulinus* of *\*Nola*, published a series of fourteen poems known as the *Peristephanon* describing in classical metres and highly coloured terms the sufferings and deaths of Christian *\*martyrs*; six of the poems are concerned with people and places in Spain.

### End of the Roman period

The historian Paulus *\*Orosius* and the chronicler *\*Hydatius* are the principal sources for the end of Roman Spain. Amidst the chaos of imperial usurpations, *\*Vandals*, *\*Alans*, and *\*Suebes* entered the Iberian Peninsula in 409, initially facing opposition organized by *\*Didymus* and Verinianus, relatives of the *\*Emperor* *\*Honorius*; the dynasty of *\*Theodosius* originated in Spain, and maintained *\*estates* there. *\*Constantius III* temporarily restored Roman authority by employing the *\*Visigoths* to eliminate the Siling Vandals and Alans in 417/18. When the Hasding Vandals departed for North *\*Africa* in 419, the Suebes were left commanding the field, and under their King Rechila expanded outward from Gallaecia, making their capital at Augusta Emerita in 439 and conquering *\*Baetica* and *\*Lusitania* by 441. *\*Rechiarius* succeeded in 448 and became the first Germanic king to adopt Nicene (Catholic) Christianity, perhaps to charm his Hispano-Roman subjects after decades of Suebic pillaging. In 452 he made a treaty with the Roman Empire, but in 455 invaded Tarracensis, the final province under direct Roman rule. This

prompted the Emperor Eparchius *\*Avitus* to dispatch the Visigoths again, under *\*Theoderic II*, who defeated and killed Rechiarius in 456.

### Visigothic settlement

The Visigoths thereafter established themselves in the south and east of Spain, conquering Baetica, Carthaginiensis, and southern Lusitania. There was no clear end to Roman rule in Spain, only decreasing likelihood of imperial authority being restored. The last emperor to set foot in Iberia was *\*Majorian*, who made an *\*adventus* into Caesaraugusta (Saragossa) in 460 but did not attempt to dislodge the Visigoths from control of the Peninsula. The Visigoth King *\*Euric* conquered Tarracensis in 474/6, confining the Suebes to northern Lusitania and Gallaecia; in 464 the Suebes under Remismund negotiated with the Emperor *\*Leo I* for support against the Visigoths, but after the chronicle of *\*Hydatius* ends in 469, disappear from sight for a century. While the first Visigothic kingdom was based at *\*Toulouse*, the *Consularia Caesaraugustana* (*\*Chronicle of Saragossa*) indicates that settlement in Spain intensified in the 490s. With the defeat of the Visigoth *\*Alaric II* by the *\*Frank* *\*Clovis* at the Battle of *\*Vouillé* in 507, Visigothic territory in *\*Gaul*, except for *\*Septimania*, was overrun by Franks and *\*Burgundians*, and Spain became the base of the Visigoths.

The early 6th century was a period of *\*Ostrogothic* hegemony in the western Mediterranean basin. *\*Theoderic the \*Ostrogoth* intervened in the aftermath of Vouillé to establish Amalaric, son of Alaric, as a regent over the Visigoths. After the brief personal rule of Amalaric also ended in defeat by the Franks, the Ostrogothic general *\*Theudis* became king in 531: during his reign numerous provincial church *\*councils* were held. Amidst civil war between Agila I and *\*Athanagild*, the Emperor *\*Justinian I* sent an army to intervene in 552. This *\*Byzantine* invasion established an enclave on the south-eastern coast of Carthaginiensis, but never attempted full reconquest on the scale that was achieved in Africa and *\*Italy*.

Athanagild emerged victorious and moved the Visigothic capital to Toletum (Toledo); his elected successor Liuva I is most notable for appointing his brother *\*Leovigild* as joint ruler in 569, responsible for reunifying Spain under single rule for the first time since 409. As chronicled by *\*John of Biclar*, beginning in the 570s, Leovigild campaigned against the Empire in the south-east, conquered *\*Cordoba*, and suppressed various peoples and local polities which had become independent in the north. He also fought the *\*Basques* in 581, establishing the town of Victoriacum to pacify the area. In imitation of Roman urban foundations, Leovigild also built a new capital at *\*Reccopolis*, named after his son and successor. Most importantly he defeated the

Suebes. They reappear in the mid-6th century in Gallaecia, surrounded by the Visigoths, and were converted from \*Homoean (\*Arian) Christianity under the influence of \*Martin of \*Braga sometime before 561; Martin then presided over Catholic councils at Braga in 561 and 572. The Suebic King \*Miro formed a brief alliance with the Visigothic king. When Miro's son and successor was overthrown, Leovigild invaded in 585, conquering the kingdom.

In 580, Leovigild's son \*Hermenegild revolted, negotiating with the eastern Roman emperor and converting from Homoean (Arian) to Catholic Christianity in 582, but his father defeated him in 584. At the death of Leovigild in 586, the only obstacle to unifying Spain was the religious divide, highlighted by the revolt of Hermenegild. Leovigild's son and successor \*Reccared personally became Catholic in 587, and most Homoean clergy followed his example. Secure after repelling a Frankish attack on Septimania in 589, Hermenegild called the Third Council of Toledo, under \*Leander \*Bishop of \*Seville, which announced the formal conversion of the Visigoths to Catholicism, and by 590 all Homoean resistance had ceased. Reccared adopted the name \*Flavius, a title reminiscent of the dynasty of the Roman Emperor \*Constantine I, as did subsequent Visigothic kings, presenting themselves as successors to the Christian Roman emperors. Indeed, John of Biclar compared Reccared to the emperors Constantine and \*Marcian, and declared that his own church council had surpassed those of \*Nicaea and \*Chalcedon which those emperors had convened.

### Later history

The limitations of the sources make the history of Spain in the 7th century little more than a sequence of kings and bishops. In 601, Liuva II became the fourth member of the same family to be king, but he was deposed after two years by the Visigothic noble Witteric, veteran of an Homoean revolt in Emerita Augusta recounted in the *Lives of the Fathers of \*Merida*. This reaffirmed the elective nature of Visigothic kingship, from amongst a small pool of the Visigothic \*aristocracy, and intrigue and coup characterized the government for the rest of its existence.

Two kings in the first third of the 7th century can stand for much of Spanish society under the Visigoths. \*Sisebut (r. 612–21) was a cultivated man of letters, author of a *Life* of S. \*Desiderius of \*Vienne (*BHL* 2148) and an epistolary poem on \*eclipses addressed to \*Isidore of Seville. He also made attempts to convert the \*Lombards to Catholicism. A sophisticated literary culture characterized Visigothic society: beginning with the religious writings of Leander and Isidore of Seville, and continued by the \*letter collection of \*Braulio of Saragossa, the involved theological treatises of

\*Ildefonsus and \*Julian of Toledo, and the archaizing poetry of \*Eugenius II of Toledo, the bishops of Spain were accomplished scholars. Furthermore the \*Visigothic slates—accounting, legal, educational, and religious texts found in rural obscurity on the northern Meseta—hint that written culture may have been widespread on the ground. Sisebut also renewed Roman legislation against \*Jews, whose legal status became progressively worse during the 7th century, and began the final reconquest of the eastern Roman enclave. His successor \*Suinthila completed this by 624: apart from periodic skirmishes with the Franks, the Visigothic kingdom appeared thenceforth secure from external threat, but in the north, the Astures and Basques were never subdued, and raids and campaigns were a constant source of internal tension.

The institutional Church made repeated attempts to ameliorate the instability arising from the struggle for the kingship amongst the nobility, and the number of regular councils, at Toledo and also in the provinces, are matched only in Gaul. Attempts to furnish the king with spiritual support began with the Fourth Council of Toledo in 633, presided over by Isidore. When Chintila succeeded in 636, he called the Fifth Council, which granted protection to the king and his family. But the coups continued, culminating under \*Chindasuinth (r. 642–53), who executed 700 nobles and forced the remainder to swear \*oaths of loyalty. The Seventh Council of Toledo provided for the excommunication of treasonous clergy in 646.

Alongside this substantial body of \*canon law, a distinctive feature of Spain in the 7th century is the quantity of surviving legislation, yet it is difficult to assess in practice given the almost total absence of any corresponding \*charters. Begun in the reign of Chindasuinth, the *\*Book of Judges (Leges Visigothorum or Liber Iudiciorum)* was promulgated by his son \*Reccesuinth in 654, at least in part a statement of royal authority. The code draws on prior legislation, including the lost *Codex Revisus* of Leovigild, but most notably reflects Roman \*law as mediated through the *Breviarium of \*Alaric II* (issued in 506). The law is emphatically territorial, and applied equally to both Visigoths and Hispano-Romans, who had begun to integrate after 589. Government administration, according to the code, was in the first instance military, with the military commanders, the provincial *\*dux*, and the urban *\*comes* being the key office-holders. \*Taxation was certainly collected, if intermittently.

The reign of \*Wamba (r. 672–80) is one of the best documented in the 7th century, thanks to the account by Julian of Toledo of his suppression of a revolt. Wamba made a number of laws about the military, mandating armed support of the kingdom, but he seems to have been deposed in a clerical coup, to

judge from the curious exercise in legitimizing his successor \*Ervig during the opening of the Twelfth Council of Toledo in 681. Ervig himself promulgated a revised version of the Visigothic law that year.

The combination of coups and the mass of new anti-Jewish legislation in this code, as well as further laws by successive kings against fugitive slaves, has in the past led historians to see the Visigothic kingdom as spiralling out of control in its final years. But such instability was the norm, and the downfall of the Visigoths happened after the death of \*Wittiza in 710, his successor \*Roderic struggled to establish the legitimacy of his reign, and an \*Arab expeditionary force under \*Tariq b. Ziyad invaded in 711. This Islamic \*army defeated the Visigoths in that year at the Battle of Guadalete, where the king and much of the nobility perished. The Arabs quickly secured the submission of the major cities by 713/14, and the unity of the Iberian Peninsula was once more fractured. The nascent emirate of al-Andalus was based at Cordoba in the south and the old capital of Toletum persistently rebelled. In 718/22, \*Pelayo (Pelagius the Visigoth) revolted against Arab rule in the Cantabrian mountains of the north; his foundation of the Asturian kingdom began the Spanish reconquest, at least in the eyes of his descendants. **Spain, churches of** Surviving early churches in \*Spain are diverse but broadly united by their proximity to Roman-period sites and reuse of fine ashlar masonry. In plan they are compartmentalized by solid walls or chancel barriers. \*Reccopolis, \*Quintanilla de las Viñas, S. Comba de Bande, and S. Pedro de la Nave have cruciform central plans augmented by separate rectangular spaces, whereas S. Lucía del Trampal, built over a Roman shrine, and \*S. Juan de los Baños, by a spring, have distinctive separate triple \*apses. S. Frutoso de Montélios may be a cruciform mausoleum. Decoration focuses on friezes that reflect a taste for geometric chip-carving similar to that found on \*jewellery. There is little doubt, on the basis of stylistic as well as scientific

analysis, that some elements of the buildings belong to the \*Visigothic period. Building archaeology has provided much useful data but little agreement on interpretation. Some scholars have proposed dates as late as the 9th or 10th centuries for several of the surviving structures, and the study of these churches forms a highly contested field. RJW

**Spain, churches of, Melque** The Church of Santa María de Melque (\*Toledo) is remarkable for being used under Muslim rule in al-\*Andalus. Part of a large monastic complex, it was constructed of massive ashlar granite blocks, probably reused from a Roman-period \*aqueduct. Its plan is cruciform with a high crossing and broad horseshoe \*arches. The date of its construction is much disputed, but scholarly opinion has moved towards c.800, based partly on analysis of its fragmentary \*stucco decoration. RJW

S. Garen, 'Santa Maria de Melque and Church Construction under Muslim Rule', *JSAH* 51 (1992), 288–305.

**Spain, churches of, Quintanilla de las Viñas** Church, also known as S. María de Lara, at Quintanilla near Burgos in northern Spain. Only the chancel and crossing stand. Excavations indicate it had a three-aisled subdivided nave. The sculptural friezes on exterior and interior may post-date the \*Visigothic period. RJW

M. Cruz Villalón, 'Quintanilla de las Viñas en el context del Arte Altomedieval: una revisión de su escultura', *Antigüedad y Cristianismo* 21 (2004), 101–35.

**Spain, churches of, S. Juan de Baños de Cerrato** Church at Baños de Cerrato in north central Spain. The \*inscription at this church recording its foundation in 662 by King \*Reccesuinth has long been the lynchpin monument for 7th-century churches in \*Spain. Some believe that Reccesuinth's \*villa Gerticos is nearby. However scholars suggest that the standing structure is 9th century and the inscription a copy. Excavations have revealed the foundations of three \*apses of the earlier church, and graves. \*Visigothic-period frieze decoration is visible on what is now an exterior wall. RJW

**Spain, churches of, S. Pedro de la Mata** Ruined church outside \*Toledo, plundered for \*spolia, but

later reconstructed. It is disputed whether it was built before or after the \*Arab conquest of 711. RJW  
Utrero Agudo, *Iglesias tardoantiguas*, 156–7.

**sparapet** Armenian military title derived from Parthian *spādapāt* (MP *spābbed*), denoting the general-in-chief of the Armenian army in wartime. The *sparapet* ranked above all other military offices and coordinated the tactics of the various contingents of the Armenian army. The origins of the office in \*Armenia are unknown, but by the 4th century it had become hereditary in the \*Mamikonian family, as evidenced by the \**Buzandaran Patmuti'wnk'* (*Epic Histories*, 5th cent.). Sources do not permit the delineation of all the prerogatives of the position, but it constituted the most important office at court. The office and title remained in the Mamikonian family until the second half of the 8th century when it was transferred to Smbat \*Bagratuni (d. 775). SVLa

**sparsio** A symbolic form of largesse that featured scattering grain and later tokens or coins to a populace. It was associated from the time of the Republic with such public rites as the celebration of the \*Kalends of January, Roman triumphs, and the celebration of the \*Secular Games. *Sparsiones* might be depicted as sacks of \*gold coins, or as scenes of distribution that resemble \**congiaria*, such as that showing \*Constantine's *liberalitas* on the Arch of \*Constantine at \*Rome. Unlike *congiaria*, which remained principally acts of political munificence, *sparsiones* evoked sacral connections with the divine shower of golden rain that brings fertility to the earth. The opus sectile floor of the Basilica of \*Junius Bassus in \*Rome shows a \*consul sprinkling coins from his chariot; a consular *processus* was described by \*Corippus (*In Laudem Justinii Minoris*, IV, 226) as late as the time of \*Justin II. RLi

H. Nibley, 'Sparsiones', *CJ* 40 (1945), 515–43.

**Sparta and Laconia** (Lakedaimon, Lakedaimonia) Inland \*city and region of \*Greece, enclosed by mountains in the southern Peloponnese, and traversed by the River Eurotas. Prosperous under the High Empire, Sparta recovered sufficiently from the invasion of the \*Heruli in 267–8 to support a monumental building programme which included well-appointed \*houses for affluent landowners. The 5th-century cathedral on the acropolis accords with Sparta's first attested \*bishop in

AD 458. In the later 6th century, in response to incursions by \*Slavs, Spartan citizens emigrated to \*Sicily and Calabria, while pastoralists retreated into the mountains where they preserved a fossilized form of Greek, Tzakonian, extant until recent times. PA

**Spartianus, Aelius** Alleged author of six lives in the \**Historia Augusta*, covering Hadrian and Lucius Aelius, Septimius Severus and Pescennius Niger, Caracalla and Geta. OPN

**Spatharius** From the mid-5th century in the eastern part of the Empire the \*emperor's principal personal bodyguard (from Gk. *spathe*, sword). The first firmly attested \*Spatharius is the \*eunuch \*Chrysaphius under \*Theodosius II. Sometimes the term was also used more loosely to refer to individual imperial guards. HE  
Jones, *LRE* 567–8.

**spectabilis** See TITLES OF HONOUR, ROMAN.

**spices and spice trade** Along with \*incense, precious \*stones, and animal products, the Roman Empire imported spices from south and south-east Asia, as condiments and as medicinal products. While many were luxury consumer products, by Late Antiquity some spices, most notably black pepper, may have been quite widely available. Several kilos of pepper have been excavated from a single storage room at \*Berenice on the Red Sea coast of \*Egypt and it does not appear on the 2nd-century list of tariffed, high-value products entering \*Alexandria (Miller, *Spice Trade*, 279–80). Some spices could also be bought in different qualities, reflecting a stratified market.

Spices are often difficult to recover archaeologically and textual evidence is complicated by the difficulties of identifying what botanical types are indicated by \*Latin and \*Greek terms, especially where these may have changed over time or have been subject to contemporary confusion. J. L. Miller provides an invaluable concordance of terminology and sources, while archaeobotanical research is adding new and quantifiable data. Particular problems continue to surround the identification of spices usually translated as cinnamon and cassia, which are listed as coming from \*Ethiopia and further east in different qualities, and cloves, which

prior to modern transplantation, came only from a tiny range of islands in the Moluccas. It remains unclear from textual or archaeological sources whether cloves had reached the Mediterranean by Late Antiquity.

**spies and spying** The Romans and Persians are both reported as having long-established bodies of state-supported spies (Gk. *kataskopoi*) who infiltrated enemy territory, including the \*palace, to learn of enemy plans (\*Procopius, *Pers.* I, 21, 11; *Anecd.* 30, 12). Disguise as \*merchants is particularly mentioned, consistently with both empires' concern to control cross-frontier \*trade, thereby restricting opportunities for espionage (*Cjust* IV, 63, 4 [408]).

Use of spies on other \*frontiers is less well attested, although northern \*Britain had a unit known as *arcani* ('secret(ive) men') who gathered intelligence about \*tribes beyond the frontier; they were disbanded in 368/9 because they had succumbed to bribery and were passing information to the enemy (\*Ammianus, XXIII, 3, 8).

Regular spies were not always used for such activities: in 359 Ammianus Marcellinus, then an \*army officer, undertook a mission into the Kurdish Alps to observe a Persian invasion (Ammianus, XVIII, 6, 20–7, 2), while in 533 Procopius, then secretary to \*Belisarius, was sent to Syracuse to gather information about the \*Vandal fleet (*Vand.* I, 14, 1–5). \*Embassies might also undertake spying, although the Romans and Persians were alert to this and sometimes restricted their movements.

Lee, *Information and Frontiers*, 166–82.

**spiritual direction** Personal guidance of a philosophical or religious adherent by an experienced figure. Practices of examination of conscience, meditation on specific themes (e.g. death), and the sharing of one's thoughts with a guide were common to both philosophical and Christian movements. Direction could be provided *viva voce*, in written form, or both. Socratic dialogues portray a group form of spiritual guidance paralleled in later Christian \*ascetic and monastic circles. The *Enchiridion* ('Manual') of Epictetus, and Christian analogues such as the trilogy *Praktikos*, *Gnostikos*, and *Kephalaia gnostika* of \*Evagrius Ponticus, offer brief chapters suitable for memorization and meditation, whether or not accompanied by personal

instruction. The letters of \*Barsanuphius and \*John of Gaza (6th cent.) illustrate direction by recluses who never actually met their clients.
